The episcopal see of Rome was not long in attaining a certain priority, Rome being the capital of the empire; but it was merely a priority of honour, and not of jurisdiction. Christ did not appoint a master among His disciples. When He told Peter specially to feed His lambs and sheep, it was to restore to him the function of which he had proved unworthy, and of which he had been deprived in denying Christ. As Peter repented, he deserved to be reinstated, and he was; but it is a mistake to transform this reinstatement as a simple apostle into an exaltation above all the other apostles. The alteration of the constitution of the Church was accomplished by Rome by means of grossly erroneous interpretations of texts; the policy and the ambition of the bishops of Rome did the rest.

Such is the spirit in which the Old Catholics have set about restoring the true conception of the Church and realizing the ecclesiastical reform claimed for such a long time 'in capite et in membris.'

(c) *Union of the Christian Churches.*—This reform

of the Church would have been very imperfect if it had not from the very beginning implied the re-establishment of union among the separate Churches. It has been rightly said that 'it is as difficult to see Christ behind the Church as to see the sun behind the darkness of night.' From the very start of their work the Old Catholics have made it one of their aims to study means of reviving this union. Their efforts during their international congresses, and their writings on this question in their *Revue internationale de théologie* (1893-1910), are well known; great reconciliations have been effected among all the Churches that have taken part in these, and, if the union has not yet been sanctioned, it is because there are still administrative obstacles to be overcome, and especially prejudices of a hierarchical kind to be put down—a matter of time, which more favourable social circumstances will undoubtedly help to bring to a successful issue.

It is already apparent to all eyes that the 'union' aimed at is not the 'unity' which many had at first imagined; that the latter is not necessary; and that, moreover, it is impossible, considering the needs of various kinds which are prevalent among the nations and which form part of human nature itself. The chimera of a false unity being removed, matter-of-fact men will return to the real nature of spiritual union and of the 'bond of peace' (Eph 4³), which will be sufficient to form real Christian brotherhood throughout the world.

A better understanding has already been reached as to the respects in which the Christian Churches ought to be one, and those in which they ought to remain distinct and even different, in order to safeguard the autonomy of each and all. When all are one in loving one another, in working together for the social well-being, in banishing from their theology every trace of anthropomorphism and politics, in becoming more spiritually-minded after the pattern of Christ, and in establishing the reign of God in every individual conscience, then the union in question will be very near being declared: 'that they may be one, even as we are one' (Jn 17²¹).

3. Results attained.¹—(a) *Dogmatic.*—Among the dogmatic results already attained by the Old Catholics we may mention the following: the rejection and refutation of papal infallibility and of the pope's absolute and universal jurisdiction over the whole Church; the rejection and refutation of the other false dogmas taught by Rome in the *Syllabus* and elsewhere; the re-establishment of the true idea of dogma, of its distinction from theological speculation; the restoration in practice of the Catholic test: 'What has been believed everywhere, always, and by everybody is Catholic'; the ruling that purely Western and papist councils are not Ecumenical Councils, the latter being only seven in number (325-787); the declaration of the orthodoxy of the Eastern Church, called the 'Church of the seven Ecumenical Councils' because it has no other faith than that which was taught by them; the bringing into prominence of the union of the Churches, which must be neither a submission to the pope nor a neglect of dogma, but the maintenance of the autonomy of each individual Church in the universality of the whole Church.

(b) *Constitutional.*—Of these we may mention: the reduction of the primacy of the pope to the simple degree of *primus inter pares*—a title which does not confer any authority on him, but which lays on him the duty of attending more carefully than any other bishop to the decisions of the Church, to which he is subordinate; the binding of the pope to renounce every political vocation, and to

¹ On this subject see the present writer's study in *Revue internat. de théol.*, July 1897, pp. 600-621.

confine himself to his essentially religious vocation; the return of the bishops to the simplicity of the early bishops, who were by no means prince-bishops, but who, simply elected by the members and the clergy, remained independent of the pope, and directed their dioceses in union with their synod; the re-establishment of the simple worshippers in their rights as active members of the Church, who also attend to the guarding of the Church's interests and the maintenance of its discipline; and the revival of national and autonomous Churches, Catholic by the unity of their faith: 'una fides, unus Christus, unum baptisma.'

(c) *Disciplinary*.—Among disciplinary results are the following: the right of each individual Church to judge of the manner most useful to itself of applying the canons of discipline formulated in the provincial synods and the Ecumenical Councils; and the right of restoring among the clergy the choice of celibacy or marriage.

(d) *Liturgical*.—The liturgical results are: the return of the proper idea of the sacraments, which are neither empty symbols nor means of producing grace 'ex opere operato,' but simply acts of worship, in which Jesus Christ communicates His grace to well-affected souls; the revival of public penitence and the suppression of papal indulgences; the return of the spiritual conception of the Eucharist, with rejection of material transubstantiation as it was practised during the Middle Ages; the celebration of worship in the national language of each country, as well as the free gift of all religious work.

(e) *Politico-ecclesiastical*.—Lastly, among politico-ecclesiastical results mention may be made of the independence of individual churches towards the political commands of Rome, and towards any political interference whatever, the Church being a spiritual and religious society, and in no way a political society.

4. *Present condition and expectations*.—The Old Catholic Church exists in Germany, Austria, France, Holland, Russia, Switzerland, and America.

In Germany it is managed at the present day by Bishop George Moog, who is also president of the synodal representation. It has parishes in the chief towns of Prussia, Bavaria, the grand-duchy of Baden, Hesse, Saxe, Würtemberg, etc. Every year the episcopal administration publishes official statistics.

In Austria the episcopal administrator, Czech, who is also curate of Warnsdorf, attends to the parishes founded in Bohemia, Moravia, Styria, Carinthia, etc.

In France the Church (called Gallican Catholic) has only two parishes—one in Paris, the other in Nantes.

In Holland Mgr. Gul is the archbishop of Utrecht, and Mgr. Prins and Mgr. Spit are the bishops of Haarlem and Deventer. The archiepiscopal seminary is at Amersfoort. There are about 24 parishes.

In Russia the Church (called Mariavite) has three bishops—John Kowalski at Plock, Prochniewski at Warsaw, and Golenbiowski at Lodz. In the kingdom of Pologne 66 parishes are administered by about 100 priests; in White Russia (Lithuania) there are three parishes, and in Little Russia (government of Kieff) there are also several parishes.

In America Bishop Hodur (Scranton), along with three vicars-general, manages several parishes which are extending daily.

There is a parish in London.

In Switzerland Bishop Eduard Herzog, along with the national synod and the synodal council, manages numerous parishes in twelve cantons.

The organization is excellent. Apart from the faculty of Catholic theology, which forms part of the cantonal University of Berne, and whose funds are administered by the State of Berne, numerous commissions are in full swing, for examinations of the clergy, religious music, the press, the interests of the Church, the care of the sick, reunions of young people, the diaspora, etc. Annually the bishop and the president of the synodal council give an account, with all the necessary details, of the life of the parishes, the religious instruction of the children, etc. Reviews, journals, and instructive and edifying libraries are more or less prosperous.

It may be said that, in spite of the efforts put forth by the Old Catholics, they have not realized all the hopes entertained in their movement at the beginning of their work. But it must be added that political and social circumstances, and, still more, the almost universal religious indifference, have been exceedingly unfavourable to all advance. The stones which may be thrown at them strike all the other Churches at the same time. This is not a justification—far from it; but it is at least an explanation, which may possibly arouse hopes for the future. The Old Catholics are convinced of the truth of their cause. If during the first fifty years of their existence they have not worked with great enough skill, they have the hope that, by dint of struggling against thousands of obstacles, they have learned better how to struggle; that the serious events which are overturning Europe at the present day will not pass without creating new religious and even ecclesiastical conditions, which, with the grace of God and the zeal of the serious Christians of all the Churches, may become fruitful.

OLD PRUSSIANS.—1. *Ethnology*.—The Old Prussians formed the westernmost branch of the group of peoples which is represented to-day by the Letts and the Lithuanians. The Old Prussian language died out in the 17th cent., and the only specimens of it which have come down to us are three catechisms from the 16th cent. and an Elbing vocabulary dating, probably, from the beginning of the 15th. These remains show clearly that Old Prussian belonged to the Indo-Germanic family of languages and was most closely related to Lithuanian. The Old Prussians inhabited the coast of the Baltic, east of the Vistula, but their exact geographical position is hard to determine. Peter von Dusburg (in *Scriptores Rerum Prussicarum*, i. 50, 146) makes the river Memel the boundary between Prussia and Lithuania; but in the chronicles of the Teutonic Order the word 'Prussia' is a political rather than an ethnological term. The eastern boundary of the Old Prussians was probably nearer the river Pregel than the river Memel (cf. H. G. Voigt, *Adalbert von Prag*, p. 128).

In the 2nd cent. A.D. Ptolemy (III. v. 21) mentions the Galindi and Sudini as peoples living to the east of the Vistula. The Galindi are frequently mentioned in later times as a distinct division of the Old Prussians, and the Sudini seem to have been another division of the same kind or at any rate a closely related people.

Another name which occurs more frequently in this region in early times is that of the *Æstii*. Tacitus (*Germ.* 45) describes them as an agricultural people inhabiting the amber coast of the Baltic. They are again mentioned by Cassiodorus (*Var.* v. 2) and by Jordanes (5, 23). It can hardly be doubted that the *Este*, described by King Alfred—in the account of Wulfstan's voyage which he inserted in his translation of Orosius—as inhabitants of the country immediately to the east of the Vistula, are the same people. It is usually held that the *Æstii* were Prussian, though a difficulty is caused by the fact that the name *Æstii* is obviously identical with German *Elsten*, O. Norse *Eistr*, which in later times has denoted the Estonians, a Finnish people belonging to a totally different linguistic family. We have no evidence that the Estonians ever extended so far to the south-west as the Vistula, although the occurrence of the name *Finni* in Ptolemy's map should be noted. Whatever may be the solution of the difficulty, Alfred's account of the *Este* gives reason for believing that they were connected in some way with the Old Prussians. We may note in particular his account of horse-racing at funerals, which finds a curious parallel in the burial customs of the Prussian natives of later time (Lucas David, *Preussische Chronik*, ed. E. Hennig, i. 141). Reference may also be made to the laws ascribed to the *kriwe kirwaite* by Lucas David (p. 23). Both the *Este* and the Old Prussians drank mare's milk and mead (Dusburg, in *Script. Rer. Pruss.* i. 54; Alfred, ed. H. Sweet, London, 1883, pt. i. p. 20 f.). The art of artificial freezing ascribed by Alfred to the *Este* appears to have been known to the Prussians (cf. M. Praetorius, *Deliciae Prussicae*, ed. W. Pierson, pp. 45, 46, and note).

The name '*Pruzi*' is first mentioned in the 10th cent. in Ibrahim ibn Ja'qub's account of the Slavic countries (his journey took place in A.D. 965; cf. W. Wattenbach, *Geschichtschreiber der deutschen Vorzeit*², Leipzig, 1884-1912, xxxiii. 139 f.), and in the lives of St. Adalbert and elsewhere (cf. H. G. Voigt, p. 125 and note).

2. History.—The earliest known incident in Old Prussian history is the unsuccessful attempt made by St. Adalbert, bishop of Prague, in the 10th cent. to introduce Christianity. The saint was martyred (probably on the coast of Samland) on account of his having penetrated into a sacred grove which was forbidden ground to men of alien race and religion. In the 11th and 12th centuries, according to the Polish chronicles, Old Prussians frequently raided Poland, sometimes in conjunction with neighbouring peoples, Russians and Pomeranians. In the 13th cent. Conrad, duke of Masovia, who was greatly harassed by these raids, gave to Christian, bishop of Prussia, part of Culmerland as a fief, and together they founded the Knights Order of Dobrzin. In 1228 Conrad and Christian, who had failed to convert the Prussians either by persuasion or by force of arms, called to their aid the Teutonic Knights (a body of German Crusaders), granting them Culm and any other lands that they could wrest from the heathen. The conversion and conquest of the Old Prussians were gradually effected, within the next fifty years, in spite of vigorous opposition. Their political organization was destroyed and they lived thenceforward as subjects of the Teutonic Knights, who, before this, had made themselves independent of all authorities except the papacy. The lay subjects of the order were now divided into two classes: in the first rank were the German immigrants and the Prussians who had freely submitted, and below them were the Prussians who had resisted to the last and were reduced to a condition of serfdom. In the 15th cent. the power of the Teutonic Order began to decline. The conversion of Lithuania and its alliance with Poland were a serious menace, especially as the discontented Prussian laity had strong Polish sympathies. In 1410 Ladislaus, king of Poland, inflicted a crushing defeat on the Teutonic Knights at Tannenberg. In 1454 the Prussian League (which had been formed in 1440 to resist the rule of the order) offered Prussia to the Polish king.

In 1466 the Peace of Thorn gave W. Prussia to Poland. The order, however, retained E. Prussia as a fief from the Polish king. The Grand Master was to sit on the Polish Diet and half of the knights were to be of Polish race. The E. Prussian brethren, however, continued to choose Germans for their Grand Masters. In 1526 the Hohenzollern Albert of Brandenburg, who was then Grand Master, having become a Protestant, secularized his territories and turned them into a hereditary duchy, to be held as a fief from Poland. In 1618 John Sigismund, elector of Brandenburg, on the death of his father-in-law, Albert Frederick, duke of Prussia, succeeded to his dukedom. In 1655 war broke out between Sweden and Poland. Frederick William, the 'great elector' of Brandenburg, who had made good his claim to the dukedom of Prussia, succeeded by his vacillating and treacherous policy in obtaining the complete independence of both Sweden and Poland. In 1701 the duchy of Prussia was converted into a kingdom by the emperor in favour of Frederick III., elector of Brandenburg.

3. Sociology.—The Old Prussians lived by agriculture, hunting, and fishing. They were acquainted with the art of navigation, and ships from Samland used to visit the commercial town of Birca in Sweden (Adam of Bremen, *Gesta Hammaburg. Eccles. pontificum*, i. 62 [*Script. Rer. Pruss.* i. 239]). According to accounts given by historians of the Teutonic Order, the civilization of the Old Prussians in the 13th cent. was by no means high. The art of writing was unknown to them (cf. Dusburg, in *Script. Rer. Pruss.* i. 53). Human sacrifice was common. Aged and infirm people and weakly or superfluous female infants were put to death (cf. David, i. 22, and papal bull of Honorius III., 1218). Over against German accounts of Prussian ferocity, we have Adam of Bremen's description:

'Pruzi, homines humanissimi, qui obviam tendunt his ad auxiliandum, qui periclitantur in mari vel qui a pyratibus infestantur . . . Multa possent dici ex illis populis laudabilia in moribus' (iv. 18).

The Old Prussians were polygamous, although, according to the laws of the *kirwaite* (cf. David, i. 22), they were limited to three lawful wives. The condition of women was low. Marriage was by purchase or by capture. The wife was the servant of all in the house and did not eat in the presence of her husband (Dusburg, in *Script. Rer. Pruss.* i. 53; cf. also Meletius, *Epist. ad Sabinum*, tr. in *FL* xii. 299 ff.). Marriage of step-mothers was practised by the Old Prussians (David, i. 133).

According to Grunau (*Preuss. Chronik*, i. 98) and David (i. 138), there were three modes of disposal of the dead: the *kunigs*, as the highest noblemen were called, were cremated; noblemen of less exalted rank, called *suppanen*,¹ were buried in their castle-yards together with horses, hunting dogs, gold, and a barrel of mead; the common people were sometimes buried and sometimes cremated. According to Dusburg, both nobles and commons cremated their dead. We learn from the Treaty of Christburg that the dead man's most valued possessions, his animals, and even his favourite servants were burned with him (*Preuss. Urkundenbuch*, Polit. Abth. i. [Königsberg, 1852] 1).

When the Teutonic Knights invaded Prussia, they seem to have found there no central political organization, but a number of separate divisions or kingdoms. We hear, however, of a chief priest called *kriwe*, whose authority was recognized not only by all Prussians, but also by Letts and Lithuanians. The holy oak and fire at Romove, over which he presided, seem to have been the central sanctuary of the Baltic peoples (Dusburg, in *Script. Rer. Pruss.* i. 53). According to Grunau and David (who profess to derive their information from Bishop Christian), Romove, or Rickoyot, was at one time the seat of political as well as of religious authority (cf. Grunau, i. 62; David, i. 24 ff.). The story of king Widovuto and his

¹ It is worth noting that the first of these titles is of Teutonic origin (O. Norse *konungr*, O. Sax. *kuning*). The second is current in most of the Slavic languages, whatever its ultimate origin.

brother Bruteno, the high priest, and of the division of the kingdom among the twelve sons, is generally dismissed as an invention of Grunau, suggested by the Biblical stories of Moses and Aaron and the origin of the twelve tribes of Israel. It seems likely, however, that the legend contains at least a germ of genuine tradition. It is not difficult to find parallels for the double kingship and for the survival of the kingship as a religious institution after it had ceased to have any political significance.

4. Religion. — (a) *Authorities.* — References to Old Prussian religion occur in Lives of St. Adalbert, dating from the end of the 10th cent., in the *Chronicon Polonorum* of Vincent Kadlubek (dating from the beginning of the 13th cent.), and in an original document of the Treaty of Christburg (1249). The *Cronica Terre Prussie* of Peter von Dusburg (dedicated to Hochmeister Werner von Orselm in 1326) contains a treatise entitled *de YdolatRIA et ritu et moribus Pruthenorum*. This is important because heathen ideas and practices undoubtedly survived in Dusburg's time; and he may well have derived his information from men who could speak of the old religion from personal experience. Chroniclers of the 16th cent. have much to say concerning the history and the social and religious life of the Old Prussians; but their evidence is not accepted as altogether trustworthy. Erasmus Stella, who composed in 1510 a treatise *de Borussiae Antiquitatibus*, is not considered a reliable authority; but there is nothing intrinsically improbable in his statements about religion. The *Preussische Chronik*, completed in 1521 by the monk Simon Grunau of Tolkemit, is usually held to be a mass of falsehoods, composed in the interest of Poland. The Chronicle of Christian (who was made the first bishop of Prussia at the beginning of the 13th cent.) which Grunau mentions as the source of his description of Old Prussian religion is dismissed as a product of his imagination. Lucas David, a Protestant historian of acknowledged accuracy and critical ability, also states that Christian's Chronicle was the source of much of the information contained in the first volume of the *Preussische Chronik*, which he wrote in the latter part of the 16th century. It is generally thought that David's only knowledge of Christian's Chronicle was derived from Grunau, although David himself expressly states at times that he is using Christian's Chronicle and at other times gives Grunau as his authority. It has perhaps been taken for granted too readily that Christian's Chronicle never existed. A comparison of the parallel passages in Grunau and David suggests that they used the same source independently. Matthaeus Praetorius (born 1635) states that Christian's Chronicle was used by his great-grandfather, the historian Johann Bretkius, which again raises difficulties in the current explanation (cf. pp. 3, 4, 19, 39). Many of the customs and rites which Bishop Christian is said to have recorded are of a kind that can be paralleled from different religions in other parts of the world. Both Grunau and David describe some pagan festivals and superstitions from personal observation; for in their time the natives, though professing Christianity, continued to perform in secret the rites of their old religion. This was still the case in the following century when Praetorius wrote his *Deliciae Prussicae* in order to supply the lack of information concerning the customs of the Old Prussians by a study of the 'existing superstitious ceremonies of the Nadravians, Zalorians, and Sudavians.'

(b) *Gods.* — The earliest reference to an Old Prussian deity occurs in the Treaty of Christburg (1249) —

'Ydolo quem semel in anno collectis frugibus consueverunt confingere et pro deo colere, cui nomen Curche inposuerunt.' The feminine form Curche was later replaced by the masculine Gurchō. This deity is described as a god of food and drink, and his cult was said to have been derived from the Masurians (Poles).

In a document of 1418 it is stated that the Teutonic Order expelled from Prussia 'gentes servientes demonibus, colentes Patolom, Natrimpe [according to another reading, Pacullum, Patrimpe] et alia ignominiosa fantasmata' (see Usener, *Götternamen*, s.v. 'Natrimpe').

Probably these two deities are to be identified with the Patollo and Potrimpo who are said to have shared with Perkuno the worship at Romove, and who are coupled together as having an especial taste for human blood (David, i. 34). It has been stated that Curche, Patollo, and Natrimpe are the only divinities that we can ascribe to the Old Prussians with any certainty, and that the numerous names that occur in later sources are of Lithuanian rather than Prussian origin. It is, however, impossible to draw a hard and fast line between the religions of the two peoples.

The *Constit. Synod. Evangel.* of 1530 contains the following list of deities who were still worshipped by the Sudavians in Samland:

'Occopirmus, Swalxtix, Ausschauts, Autrympus, Potrympus, Bardoayts, Piluytis, Parcuns, Pecols atque Pocols, qui dei, si eorum numina secundum illorum opinionem pensites erunt Saturnus, Sol, Aesculapius, Neptunus, Castor et Pollux, Ceres, Juppiter, Pluto, Furiae.'

Occopirmus was invoked as the 'mighty god of heaven and stars' (David, i. 147). Swalxtix, 'the god of light' (ib. i. 86), was invoked at agricultural festivals. Ausschauts is probably to be identified with 'Auscautum deum incolumitatis et aegritudinis' (Meletius, *Epist. ad Sabin.*; see *Archiv für slav. Phil.* xviii. 76) and Auschleuts (also Auschauts), 'der Gott aller Gebrechen, Krankheiten und Gesundheit,' who was invoked when there was a poor harvest (David, i. 91). The name Autrympus occurs only here, and is probably a scribal error for Antrimpus, who is frequently mentioned as a god of the sea (cf. Meletius, *loc. cit.*; David, i. 86). Potrympus has already been described. He was a god 'von deme alles Glück keme, in Streitten, Regierung, Hauzhaltung ausm Ackerbau und andern mehr' (David, i. 34). He was a god of fertility, and snakes were consecrated to him (Praetorius, p. 46). He appears to have some connexion with water: 'auch wurden Ime zugeeignet die fliessenden Wasser' (David, i. 87). Perhaps Autrympus and Potrympus should be taken together as different names for the deity identified with Neptune. *Na, po, an* are prepositions; *trumpa* may be connected with Prussian *trumpa* = *fluvius* (cf. Nesselmann, *Thesaurus Linguae Prussicae*, p. 191). Bardoayts is probably the same god as 'Perdoytus deus navium' (see Grienberger, in *Archiv für slav. Phil.* xviii. 78), 'Perdoytus Gott der Kaufleute' (Praetorius, p. 27). He must be connected in some way with 'Gardoaeten deum nautarum' (Meletius, *loc. cit.*) and Gardoaits, the special god of the fishermen living by the Kurische Hafl and the Frische Hafl, of whom Lucas David (i. 116) gives an interesting description. Probably forms in *b* and *g* existed side by side, which might account for the identification of Bardoayts with Castor and Pollux. Piluytis (cf. the Lettish Pilnitis, god of riches) was one of the gods invoked at agricultural festivals. Parcuns is to be identified with the thunder-god Perkun, the most important deity of the Baltic peoples (cf. *NATURE* [Lettish, Lithuanian, and Old Prussian]). The names of the deity or deities connected with death appear in many different forms:

'Pecols atque Pocols'; 'Pluto, Friae' (*Constit. Synod.*); 'Poculum inferni ac tenebrarum deum, Pocollum aëreorum spirituum' (Meletius, *loc. cit.*); 'Pecullus deus inferorum et tenebrarum.' . . . 'Pocullus deus spirituum volantium et cæcodaemonarum' (*Archiv für slav. Phil.* xviii. 79); 'Potollos odes

Pickollos regierte in der Luft' (see *Archiv für slav. Phil.* xvii. 79).

The various forms have been hopelessly confused, but there seem to have been at least two different deities. Peools, who is identified with Pluto (see above), is no doubt related to the Lithuanian *pekla*, 'hell' (cf. Polish *piekło*, 'hell'), and it is possible that he is a personification of the land of the dead. 'Potollos oder Pickollos' is probably to be identified with the god of the Romove sanctuary whom David (i. 33) describes as 'chief god of the Prussians, and he was held to be a god of death and had power to kill.' Pickollos is probably connected with *pickuls*, the Old Prussian word for 'devil' (Nesselmann, p. 128). Cf. also Lith. *piktas*, 'evil'; *pykti*, 'to be angry.' A Nadavian peasant in conversation with Praetorius (p. 20) coupled together Perkunus and Pyeullis as having power over the oak-tree. The heads of a horse and a cow were an accepted offering to Pikullis (Praetorius, p. 26); Patollo had a similar treasure at Romove (David, *loc. cit.*). This deity sometimes appears as the head of a host of similar beings. At the spring festival Perkunus was prayed to strike and drive away 'Pockollos with his companions and underlings' (David, i. 91), 'Patollos das seindt die fliegende Geister oder Teuffel' (ib. i. 87), 'Pocols = Furiae' (*Constit. Synod.*). We are reminded of the Valkyries, and of Odin, the leader of the Wild Hunt.

(c) *Sanctuaries*.—The Old Prussians seem to have had no temples, but there are many references to sacred groves, lakes, hills, etc. Sometimes offerings were made near holy stones.

'In dem Hockerlande soll auch ein Stein sein gewesen, darauf die Fischer wenn sie gefischet den ersten Fisch, so von Inen gefangen werden, gedachten Abgotte dem Kurkos geopfert und verbrant haben' (David, i. 83; cf. also Praetorius, p. 21 f.).

The cult of Gurcho was also connected with the holy oak and perpetual fire at Heiligenbeil and other places, where corn and fruit, etc., were burned as an offering to the god (David, i. 82). Romove, or Rickoyot, which has already been mentioned, was a sanctuary of this type. It is described in detail by Grunau (i. 78) and David (i. 28 ff.). The oak was divided into three parts, each division consecrated to one of the three gods, Patollo, Perkuno, and Potrimpo, and containing his image. Before each god was placed his peculiar treasure. Patollo had the heads of a horse, a cow, and a man; Potrimpo a snake kept in a jar crowned with sheaves of corn; before Perkuno burned the perpetual fire. The oak was surrounded by curtains and round it dwelt priests and priestesses living in virginity, whose duty it was to offer sacrifices, tend the fire, feed the sacred snake, and serve their high priest, the *krive kirvaito*. Although David calls Patollo the chief god, it is always Perkuno who is said to communicate with the chief priest by means of thunder and lightning. Foreign potentates were not allowed to appear before the holy oak (Praetorius, p. 39). Dusburg, Grunau, and David agree in locating Romove in Nadavia. In the *Hochmeister Chronik* (15th cent.) we read that the heathen pope lived in Samland 'in dat dorp dat Romawe heit, end noemden sy alsoe ne Romen' (*Script. Rer. Pruss.* i. 53), and certain documents, written by John, bishop of Samland, in the 14th cent., referring to places in the neighbourhood of the villages of Romelnen and Lenknitten, mention 'Rummove,' 'Campns Rumbow . . . quereum viridem stantem prope sacrum campum' (J. Voigt, *Geschichte Preussens*, Königsberg, 1827-39, i. 644). At the end of the 13th cent. the Teutonic Knights were fighting in a part of Lithuania 'in qua villam dictam Romene que secundum ritus eorum sacra fuit combussit' (Dusburg, p. 159). Place-names compounded with Rom occur frequently in Prussia

and Lithuania. It seems likely that Romove is a common rather than a proper noun, and the evidence of Praetorius leads to the same conclusion:

'Alle Art Bäume, deren Stamm sich von einander gczweiget und wieder zusammen gewachsen gewcsen, sind den Preussen heilig gewesen und sind es manchen noch. So war ein zusammen gewachsener Birnbaum in einem Garten zu Nibudzen, den die Leute rombotha Krauszis nanten und ein Maldinink oder Waidelot aus Zamaiten, der ihn gesehen, betrachtete ihn mit Ehrfurcht' (p. 16). There was also a fir-tree of this kind at Nibudzen 'welche noch anno 1661 gestanden. Bis weit aus Litauen sind die Leute zu diesem Baum gewallfahrt. Sie haben diese Tanne auch Rumbuta genannt und gesagt, wenn sie zu ihr gingen: "eikim Rombhowa." Romove oder nach der altpreussischen Mundart Rombhove von romblu, rombothi zusammen wachsen' (p. 17).

(d) *Priesthood*.—There seems little reason to doubt that the Old Prussians possessed a highly developed priesthood. Its organization was destroyed when the Teutonic Knights burned down the oak at Rickoyot, but the priests exercised their functions in secret for several centuries. In the year 1520 a *waideler* (the usual word for 'priest') was forced to perform a severe penance for having offered up a sacrifice on the shores of Samland (David, i. 117 ff.). Grunau on one occasion found a number of Prussians assembled in a house, performing ceremonies in honour of Perkuno. The *waideler* who presided absolved the people from their sins, and immediately afterwards they all fell upon him, beating him and pulling his hair, and the louder he shrieked the more efficacious was their absolution. The ceremony concluded with the sacrifice of a goat, whose flesh was cooked with oak-leaves (i. 91). As late as the 17th cent. *waidelers* sometimes offered up prayers and sacrifices at the periodic festivals, and exhorted the people to remain faithful to the gods and their ancient customs (Praetorius, p. 23 f.). Even the traditional high-priestly office was not quite forgotten (ib. p. 48). According to the traditions recorded by Grunau and David, the Old Prussians had priestesses as well as priests, who were compelled to live in virginity.

Poggezana, the eponymous heroine of a district in Prussia, 'wohnete in einem Eichwald, und blieb ihre Tag eine Jungfrau, und wardt eine Waidelotinne'; she was said to have danced with the gods (David, i. 72 f.).

(e) *Sacrifice and festivals*.—The papal bull issued by Honorius III. in 1218 contains the statement that the Old Prussians 'immolate captives to their gods.' According to Bishop Christian's account (David, i. 47 f.), it was customary for a Prussian warrior to bind on to his saddle the first man taken in battle, and to burn to death both horse and rider as an offering to the gods. We hear of Teutonic Knights being put to death in this manner (see H. G. Voigt, p. 307, note 596). Apparently it was not unknown for a man to give up a servant, a child, or even himself to be burned alive as a sacrifice (David, i. 23). Horses were also sacrificed in this way (Dusburg, *loc. cit.*). Milk, honey, corn, etc., were thrown into the sacred fire at Heiligenbeil and elsewhere as . . . to (David, *loc. cit.*). David . . . between village festivals and . . . ore pompous ceremonies at Rickoyot. When the holy oak was destroyed, prayer and sacrifice were offered to the gods in other places, but no longer 'with burnt offerings, incense and the guarding of a perpetual fire.' Sacrifices were offered in case of sickness, war, etc., and also in connexion with the regular agricultural festivals. The ceremony usually consisted of invocation of the gods and the partaking of bread, beer, etc., and the flesh of the slaughtered animal—usually a bull or goat (for further particulars cf. David, i. 90-92, and Meletius, in *FL* xii. 293 ff.). Praetorius (pp. 48-69) describes the agricultural ceremonies in great detail. In all of them a drink-offering was poured on the ground, as a libation to Zemynelē, the earth-goddess, who seems

to have taken the place of Pergubrius, Pilwitis, and various other gods mentioned by David and Meletius in this connexion (cf. Praetorius, p. 66).

(f) *The soul*.—Kadlubek (*Monumenta Polonica Historica*, i. 423) tells a curious story of the 'Pollexiani Getarum seu Prussorum genus, gens atrocissima.'

After a defeat by Casimir of Poland certain of their number were captured and held as hostages. The Prussians, however, refused to be influenced by any regard for the safety of these prisoners, because they believed that those who suffered an honourable death would thereby attain a more honourable re-birth, 'est enim Getarum communis dementia exutas corporibus quasdam etiani brutorum assumptione corporum brutescere.'

This is the only reference to an Old Prussian belief in metempsychosis. All authorities, however, attribute to them a strong faith in the immortality of the soul.

'Birth-days and funerals were celebrated alike . . . with the greatest hilarity and rejoicing' (Erasmus Stella, in *Script. Rer. Pruss.* iv. 294; cf. also Dusbürg, *loc. cit.*).

In 1249 the Old Prussians promised to give up 'Tulissones vel Ligaschones,' priests who presided at funerals, and praised the dead for the deeds of violence and plunder that they had done in their lifetime.

'They also declared that they could see, there and then, the dead man flying through the sky on horseback, adorned in shining armour, with iron spear in hand, and together with a great company proceeding into the other world' (Treaty of Christburg, cited by H. G. Voigt, p. 590, note 31).

The *krīwe* was also supposed to see the dead leaving this world for the next (Dusbürg, *loc. cit.*). The dead were connected in some way with the earth-deity:

'Zlamduks ist bei den heutigen Preussen, Nadraven, Zalovenien, Zamaiten, Lithauen noch so viel als ein Herr oder Gott der Erde und derer die in der Erde begraben worden' (Praetorius, p. 7).

At the funeral feast drink-offerings were poured out to Zemynle (the earth-goddess) and prayer was made:

'Be joyful, Zemynle, receive this soul well and guard it well' (ib. p. 101).

Festivals of the dead were held at regular intervals.

ENID WELSFORD.

OLD TESTAMENT.—See BIBLE.

OM.—The origin of the word *om* is wholly uncertain. It has been traced to a pronominal base *av-* and its formation has been compared with that of *ay-am*, 'this,' on the theory that the whole word *avam* was resolved by the process of *sahprasaṛaṇa* into *au-m*, whence came by ordinary euphonic combination *om*. For the development of sense may be cited the fact that *hoc illud* became the French *oui*, *om* having often definitely this meaning. But the evidence in support of this view is quite inadequate, and the most probable explanation is that the word is purely an exclamation, being the nasalized form of *o*, which again is connected with *ā*. This view is strongly supported by the fact that the common phrase *om śrāvaya* alternates with both *o śrāvaya* and *ā śrāvaya*, and the nasalizing of sounds when prolonged in pronunciation is a regular part of Vedic usage. A further suggestion

of its origin is contained in the earliest name given to the sound, the word *praṇava*. It is probable that this term properly denotes the protracting of the last syllable of the offering verse (*yājya*), which was nasalized, the vowel being altered to *o*, and that *om* as an independent exclamation was derived from this use. With this would accord the rule of the grammar (Pāṇini, vi. 1. 95), according to which a short or long *a* before *om* does not as usual result in *aum*, but is omitted.

That *om* is not a primitive exclamation is supported by the fact of its comparatively late appearance in the literature. It does not appear at all in the *Rigveda*, which shows that it does not belong to the earliest sacerdotal literature, and it is equally wanting in the *Atharvaveda*, which shows that it was not an expression in popular use. In the *Taittirīya Saṃhitā* it does not occur in any *mantra* passage, but it is alluded to once as the *praṇava*, in which passage (iii. 2. 9. 6) it clearly denotes the sound at the end of the offering verse uttered by the *hotṛ*. In the *Vājasaneyi Saṃhitā*, on the other hand, we actually find *om* in the phrase *om pratiṣṭha* (ii. 13), and it is stated (xix. 25) that by means of the *praṇavas* the form of the *śastras* is made complete. The *Maitrāyaṇī Saṃhitā* also uses *om* in the phrase *om śrāvaya* (iv. 1. 11) and in a set of exclamations in iv. 9. 21. It is, however, in the *Brāhmaṇas* that we first find the definite use in the asseverative sense; the *Aitareya Brāhmaṇa* (vii. 18), in describing the mode of the recitation of the legend of Sunahṣepa, which was recited on the day of anointing in the ceremony of the consecration of a king, states that the response to each verse of the *Rigveda* employed in the rite by the *hotṛ* priest is to be an *om*, said by the *adhvaryu*, while the response to each *Gāthā* verse is to be a *tathā*, on the ground that the former response is divine, the second human, and this distinction is preserved in the *sūtras* which deal with the rite. The ordinary use as a solemn 'Yes' is found more freely in the *Satapatha Brāhmaṇa* (i. 4. 1. 30, x. 6. 1. 4, xi. 6. 3. 4) and elsewhere. But its use is confined to very formal responses, and normally to responses in the ritual.

Much more important than its use as a particle of asseveration is the development of its use as a mystical symbol embodying in itself the essence of the Vedas and of the universe. The first evidence of this important position of the word is to be found in the *Aitareya Brāhmaṇa* (v. 32), in which it is declared that *om* is the world of heaven and the sun, and where it is resolved into the three letters *a*, *u*, and *m*. These in turn are derived from the three *vyāhrtis*, Bhūh, Bhuvaḥ, and Svar, these from the *Rigveda*, *Yajurveda*, and *Sāmaveda*, these from the gods Agni, Vāyu, and Aditya, and these from earth, atmosphere, and air. The passage may be later than the rest of the text, but it is of special value as it opens a set of speculations which come to a head in the *Upaniṣads*. It is noteworthy that it has no parallel in the *Kaṣṭhīki Brāhmaṇa* or in any other *Brāhmaṇa* text prior to the *Gopatha*.

In the *Upaniṣads* the doctrine of the sacred character of the syllable is steadily developed. The *Taittirīya* (i. 8) declares that it is the Brahman, the holy power which constitutes the universe, and derives this conclusion from the fact that in the ritual *om* takes an important place in each part; thus it is employed by the *hotṛ*, the *sāman* singer, the *adhvaryu*, and the *brahman*, and forms an integral part of the ritual of the *agnihotra*, the most regular of all Vedic offerings. The essence of this treatment of the syllable is to make it a symbol of the Brahman and to substitute meditation upon it in place of study of the Vedas—an idea helped by the doctrine that the word repre-

sents the essence of all three Vedas and of existence which the *Aitareya Brāhmaṇa* first sets out. The *Kāthaka Upaniṣad* (ii. 15) declares that all the Vedas proclaim the syllable *om*, and that it is for its sake that men practise holiness. But the full development of the doctrine is first found in the *Gopatha Brāhmaṇa*, which contains two elaborate accounts of *om*; they are followed by some supplementary and doubtless later remarks on it, and constitute the *Pranava Upaniṣad*. According to the first of these accounts, the Brahman created Brahmā as masculine on a lotus leaf. He in turn created *om* with two letters and four *mora*. The first letter of *om* produced the waters, the second the luminaries; then the first three *mora*, which no doubt represent the three syllables in *o*, pronounced with prolongation, produced earth, atmosphere, and heaven; fire, wind, and sun; the three Vedas; the three *vyāhrtis*; the three metres, *gāyatrī*, *triṣṭubh*, and *jagatī*, and so on. So far the account is in fair accord with that of the earlier texts, but the special Atharvan character of it is made clear by the derivation from the *v* sound (taken from the *o*) of water, moon, the *Atharvaveda*, *om* itself, *janat*, which is the *vyāhrti* of the *anṅiras*, or dreadful formulae, of the *Atharvaveda*, the *anustubh* metre, etc., while from the letter *m* are derived the *Itihāsa Purāṇa* and other categories of literature, musical instruments, singing and dancing, the *brhatī* metre, etc. It is added that with *om* the *brahman* priest is able to make good all defects in the sacrifice, and that the repetition of *om* a thousand times secures all desires. In the second account we learn that in one of their interminable conflicts the *asuras* defeated the gods until the latter followed the leadership of *om*, whence *om* received the reward that no holy text might be recited without it, whether *ṛc*, *yajus*, *sāman*, or *śloka*. In the supplementary remarks other details of the word are given; it is stated to be pronounced differently in the different Vedas, and its four *mora*, which are here differently explained from the account given before—which indeed seems to assume five—are connected with the deities Brahmā, Viṣṇu, Śāna, and Sarva, the two last being forms of Śiva.

The *Upaniṣads* connected with the *Atharvaveda* naturally develop further the views of the *Gopatha*. They devote their attention in large measure to the means of meditation by which the seeker for the Brahman can attain union with the Brahman, and for this purpose set little importance upon knowledge of the scriptures. In the place of such knowledge is set the study of the syllable *om*, which is described in a series of metaphors. Thus it is, in one view, the bow from which the soul as an arrow flies to the Brahman, in another the arrow which is shot from the body as a bow in order to pierce the darkness. It is also the ship on which a man travels over the ether of the heart, and the chariot which bears him to the world of Brahmā. The old analysis into three *mora* occurs in the *Maitrāyaṇī Upaniṣad* (vi. 3), which describes them as fire, sun, and wind, and calls them the essence of all things. The *Praśna Upaniṣad* (v. 5), acting on the same basis, states that he who meditates by one *mora* attains the world of men, by two the way of the fathers (*pitryāna*), and by three the way of the gods (*devayāna*). This conception, however, changes, and, while four or five *mora* are recognized in the *Gopatha*, we now hear of a fourth *mora*-less part which forms the crown of the syllable (*Maitrāyaṇī*, vi. 23). In the latest stage of the Atharvan *Upaniṣads* this is definitely called the third and a half *mora*, and is said to lead to the supreme goal, and to be represented by the point (*bindu*) of the *anustāra*. Its sound is variously described, but normally as some sort of

echo, and some versions turn the half *mora* into a fourth or add to a half *mora* an echo. It is, however, made clear that the meditation on *om* is not the highest stage, which can be performed only in absolute silence; and the syllable is compared with a chariot which is abandoned when the high road ceases and the foot-path begins. *Om* is only, after all, a word, and, ascending from it, man attains to nothingness in that which is not a word.

Side by side with the philosophic development of the symbolism of *om* in the *Upaniṣads* its ritual use is elaborated and closely defined by the *Śrauta Sūtras*. The variety of its employment does not conceal the essential nature of its uses, which are either the solemn affirmation or agreement, as in the response (*pratigara*) of the *adhvaryu*, or the intimation of the commencement and end of a recitation or an offering verse—a usage which explains the statement that *om* separates divine and human utterance. The special nature of the word is marked out by the care taken to define its mode of pronunciation and the treatment of final letters before it, when it ends a sentence. The *Prātisākhya* of the *Rigveda* records its use in approval, while the *Prātisākhya* of the *Vājasaneyi Samhitā* seems to refer to its use as commencing a litany by its assertion that in the Vedas the word *om*, here described by its less usual name *omkāra*, has the same sense as *atha* in the current speech (*bhāṣya*).

In the *sūtras* which deal with the domestic ritual and customary law a different aspect of the use of *om* from that treated in the *Śrauta Sūtras* presents itself. In the latter *om* is merely used as an important part of the recitation of the texts, but as early as the *Baudhāyana Dharma Sūtra* we are told that a man should daily recite the Veda privately, be it only the syllable *om* or the *vyāhrtis*, and that this constitutes the offering to Brahmā. Similarly, while an ascetic is not allowed to give up the study of the Veda altogether, he is permitted to confine himself to the meditation on *om*, which is the root of the tree of the Veda and its essence, and by this means he becomes united with the Brahman (ii. 10. 23 f.). Still more important is the place taken by *om* in connexion with rites of expiation and purification. *Baudhāyana*, in setting forth (iv. 1) the advantages of the suppression of the breath, adds that *om* begins and ends the Vedas, and that *om* and the *vyāhrtis* are the eternal and everlasting Brahman. For him who engages in reciting *om*, the *vyāhrtis*, and the *gāyatrī* no danger exists anywhere. Sixteen suppressions of the breath, accompanied by recitation of the *vyāhrtis* and of *om* repeated daily, after a month purify even the slayer of a learned Brāhman. The same rules reappear in *Vasiṣṭha* (xxv. and xxvi.), and by being repeated in the code of Manu (xi. 249 f.) complete the holiness of the word *om* as part of the ceremonies of purification. On the other hand, the use of *om* is equally necessary to the magic worker: the *Kauśika Sūtra*, that storehouse of Indian magic, in describing (ix. 8 f.) the preparation of the holy water, insists that the preparation shall be accompanied by the use of the syllable.

In the philosophic literature *om* holds its place as the object of meditation in the effort to realize the Brahman. Thus in the *Bhagavad-Gītā* it is identified with Kṛṣṇa as the universe and the Brahman, and the triad *om tat sat* is declared as comprehending the nature of the Brahman. In the system of the Vedānta as interpreted by Bādarāyaṇa (*Sūtra*, iv. 3. 14 f.) it seems that the use of *om* for purposes of meditation falls under the same disadvantage as all meditation on the Brahman by means of symbols: the result is not the clear vision of the Brahman, but only the reward appropriate for the meditation on the particular symbol in each case;

but this doctrine does not harmonize with that of the *Praśna Upaniṣad*, which, as we have seen, declares that meditation on the three *mora* of *om* leads to the *devayāna* and thus, of course, to the Brahman. Nor does it appear that this view of *om* was ever generally accepted, meditation on *om* being regarded as a normal stage in the development of the knowledge of the highest Brahman.

This position of *om* is intensified in the Yoga system as it appears in the *sūtra* of Patañjali (i. 27-29); it is there brought into connexion with Īśvara, God, and, under the name of *praṇava*, declared to express him. The repetition of the word and reflexion on its meaning are enjoined as desirable, and it is stated that the result of this practice is the removal of obstacles and the right knowledge of him who thinks in an inverse way, i.e. of one who does not seek truth in ordinary consciousness. Hence the word has a definite and important place in all subsequent doctrine of Yoga practices.

On the popular side the syllable *om* persists throughout the whole of Indian religion as the proper accompaniment of *mantras*, whether Vedic or not. Thus, on the one hand, it is used invariably to accompany the sacred *gāyatrī* which it is part of the daily duty of the orthodox Hindu to repeat, and, on the other hand, it plays a great part in the innumerable varieties of Tantric *mantras* which form an important feature of the real religion of India. Its popularity depends no doubt in part on the normal equation of its elements with the Hindu trinity of Viṣṇu, Śiva, and Brahmā which is already found in the later *Upaniṣads* and is foreshadowed earlier. On the other hand, despite its popular character, it remains very sacrosanct: at the festival of Śiva on 27th February, when even the lowest castes take part in the rites, while women are permitted to make use of the *mantras*, an exception is made of the syllable *om*, doubtless because of its special holiness.¹ As an auspicious symbol, from the 6th cent. A.D. onwards, the initial letter is found in different forms to denote the commencement of a text in MSS and inscriptions.

To Jainism and to Buddhism the syllable *om* and its use were primarily characteristic of the Brāhman, but the force of the popularity of the syllable is shown by the fact that it became an integral part of the *mantra* of Avalokiteśvara in the Buddhist pantheon, the famous *oṃ maṇi padme*² *hūm*. So in the crypto-Buddhism of the 16th cent. in Orissa we find that from the *śūnya*, or void, is derived the *praṇava*, thus bringing the *praṇava* close to the principle of nonentity of the nihilist school of Buddhism.

In the *Purāṇas* besides assertions as to its general sanctity we find the syllable turned to sectarian use. Thus in the *Līṅga Purāṇa* the *līṅga*, which reduces both Viṣṇu and Brahmā to the recognition of their inferiority to Śiva, bears upon it the sacred syllable. On the other hand, it is said that the three letters represent Viṣṇu himself, his wife Śrī, and the worshipper; that the syllable is the three Vedas, the three worlds, the three sacred fires, and the three footsteps of Viṣṇu; and that by meditation upon it devotees attain supreme bliss.

LITERATURE.—The derivation of *om* from *aram* is defended by F. Max Müller, *Six Systems of Indian Philosophy*, new ed., London, 1903, p. 322 f., but is definitely rejected by O. Böhtlingk and R. Roth, *Sanskrit-Wörterbuch*, Petrograd, 1855-75, i. 1122. For the *praṇava* see J. Eggeling, *SBE* xxvi. [1885] 58, n. 3. *Om* in the *Upaniṣads* is discussed by P. Denssen, *The Philosophy of the Upaniṣads*, Eng. tr., Edinburgh, 1906, pp. 101, 390-392; see also A. Weber, *Indische Studien*, Berlin, 1840-84, ix. 24, 60, 90, 91, 107, 108, 125, 132, 134, 140-143, 159, 160. For the *Purāṇas* see H. H. Wilson, *Viṣṇu Purāṇa*, ed. F. Hall, London, 1864-77, i. 1. *Om* in the Bud-

dism of Orissa is dealt with by Nagendra Nath Vasu, *Modern Buddhism*, Calcutta, 1911, pp. 44, 60, 62, 71, 72. For *om* as a *maṅgala* see G. Bühler, *Indische Paläographie*, Strassburg, 1896, p. 85. For *om* in the formula of Avalokiteśvara see L. de la Vallée Poussin, *Bouddhisme*, Paris, 1909, p. 381. *Om* in the Vedānta is discussed in *SBE* xxxiv. [1890] 169 f., xxxviii. [1890] 193, 196-199, 232 f., xlviii. [1904] 311 f., 362, 664, 682-685.

OMPHALOS (ὀμφαλός).—The Greeks had a story that Zeus, wishing to ascertain the exact centre of the earth, sent forth two eagles to fly simultaneously at equal speed from its eastern and western ends. They met at Delphi, and there in Apollo's temple was set up in commemoration the holy Navel-stone, or Omphalos, with a golden eagle at either side to mark earth's central point.¹

The Delphian Navel-stone is described by Pausanias as 'made of white marble' (x. xvi. 3: λίθον πεποιημένον λευκόν). Strabo says that it was covered with sacred fillets (p. 420: καὶ ὀμφαλός τις ἐν τῷ ναφ̄ τειταίνωμενος). Numerous representations of the Omphalos, especially on coins and vases—on the latter most frequently in connexion with the appeal of Orestes to the protection of Apollo against the avenging spirits of his mother—enabled us to form a good idea of it, even before the recovery of actual specimens. Generally it is represented as in shape like a half-egg standing on a low quadrangular base; sometimes it emerges, as it were, so far as to be nearly like a whole egg with the lower end flattened, to enable it to stand on its pedestal. Sometimes bare, at others it is draped with hanging fillets, at others again covered with a kind of coarse-meshed diagonal network of fillets, which are represented either as plain ribands or as tied tightly at regular intervals so as to look like a string of eggs (see for many representations J. H. Middleton, 'The Temple of Apollo at Delphi,' *JHS* ix. [1888] 295 f.).² These ancient pictorial representations are now superseded by two marble Omphaloi actually found at Delphi by the French excavators, one of them, covered with a network of fillets worked in the marble, having been found near the great altar of the Chians in front of

¹ Cf. Eur. *Ion*, 5 f.: ἴν' ὀμφαλὸν / μέσον καθίζων Φοῖβος ἑνὸς αἵματος ἑταίρου; Plato, *Rep.* 427 C: ὁ θεὸς . . . πάτριος ἐξηγῆται ἐν μέσῳ τῆς γῆς ἐνὶ τοῦ ὀμφαλοῦ καθήμενος ἐξηγῆται. Hence Pindar speaks of the Pythian priestess as 'seated near the golden eagles of Zeus' (*Pyth.* iv. 6: χρυσῶν Αἰδὸς αἰετῶν πάρετρος). According to some, Zeus made use of crows in his investigation (*κόρακας* [Strabo, p. 410 f.]), or swans (*Plut. de Def. Orac.* 1). These variants were prompted by a desire to bring the Omphalos legend into closer connexion with Apollo. In Eur. *Ion*, 224 (στέρμασι γ' ἔνδον) . . . 'temporary res, probably very ancient Gorgon.

² Representations of the Omphalos with eagles on it, or beside it, are rare. See electrum coin (6th cent. B.C.) of Cyzicus in *Nunn. Chron.*, 3rd ser., vii. [1887] pl. 1. 23; and a bronze coin of Megara (reign of Geta) in F. Imhoof-Blumer and P. Gardner, 'Numism. Commentary on Pausanias,' *JHS* vi. [1885] 55, pl. A x., which shows what are meant to be two birds, hardly distinguishable as eagles, perched on the summit. In *Mitt. des arch. Inst. Athens*, xii. [1887] pl. 12, is a beautiful 4th cent. B.C. relief from Sparta, showing Apollo and Artemis (Nike) and between them, on a step base, a low Omphalos with eagle regardant on either side. The two golden eagles were looted by the Phocians in the Sacred War, and consequently are not mentioned by Pausanias. Strictly, Strabo's remark, 'there is shown in the temple a certain Navel decked with fillets, and upon it the images of the legend,' should imply that the eagles, or reproductions of them, were again visible in his day, nearly 200 years after the Phocian war; but he is probably merely copying from older books.

the temple (figured in J. E. Harrison, *Themis*, p. 398).¹

A curious difficulty arises as to the exact position of the Omphalos at Delphi. From *Æsch. Eum.* 391., where the priestess, on her way to the inmost shrine, sees Orestes seated *ἐν ὀμφαλῳ*, we infer, though the passage is not very clear, that it stood within the temple, and probably in the inmost shrine. This is indicated still more clearly in the conversation between Ion and the chorus of women standing without the temple, in *Eur. Ion*, 223 f., as well as by the remark of Strabo, whether or not that was his own observation. On the other hand, Pausanias mentions the Omphalos before he proceeds to the description of the exterior of the temple, and long before he speaks of its contents. He appears, therefore, to place the stone somewhere outside the eastern end of the temple, not far from the altar of the Chians on the left of the Sacred Way (Paus. x. xiv. 7; cf. Herod. ii. 135). If he is right, the Navel-stone must have been moved from its place within the temple in the interval between Strabo (1st cent. B.C.) and Pausanias (c. A.D. 180). The question thus becomes important, as the change may be indicative of a corresponding change in attitude towards the Navel-stone and the ideas with which it was associated.²

Perhaps the ejection of the stone was due to Nero, who played havoc with the temple (Paus. x. vii. 1; so J. G. Frazer, *Pausanias's Description of Greece*, 6 vols., London, 1893, v. 317). But why was the stone not restored when the prophetic chasm, which he had tried to ruin (Dio Cass. lxi. 14), was purified? It has also been suggested (by Verrall, *The Ion of Euripides*, Cambridge, 1890, p. xli) that, when Pausanias mentions as within the main cella an altar of Poseidon, with statues of two Fates,³ he is in fact unconsciously describing the Omphalos itself with its two mysterious figures that were variously interpreted as Gorgons or eagles. If insistence is to be laid upon his disjointed notes,⁴ perhaps we should hold that Pausanias simply mistook a facsimile for the genuine object, which he was not allowed to see in its own place in the *adyton*. It is possible that the excellently preserved specimen mentioned above is the very Omphalos which Pausanias had before his eyes at this point in his description. There is nothing about it to suggest that it is primitive. The original primitive Omphalos, however, was perhaps the oldest object in Delphi, and was probably not movable.⁵

What was the real significance of the Omphalos? In the first place, it is to be noted that, far from being unique, as, according to the logic of the Greek legend, should be the case, the Delphian Navel-stone was but one, though the most famous, of a number of conical or pyramidal sacred stones revered in the Greek world and elsewhere.

At Megara a pyramidal stone (Paus. i. xiv. 2: *λίθος πυραμίδος σχήμα οὐ μεγάλην*) was worshipped under the name of Apollo Karinos; at Sicyon there were images of Zeus Melichios and Artemis Patros, the former in the shape of a pyramid, the latter in that of a column (*ib. ii. ix. 6*). Apollo, god of streets (Agyleus), was generally represented as a conical pillar in front of the house-door.⁶ The image of Aphrodite in her Cyprus was a conical white stone (*ἡ ἱεὴς humana, continuus orbis latiore infit netae modo exurgens*).⁷ Other examples are given by Frazer (*Paus.* v. 318 f.). Nor, again, was the name borne by the Delphian stone peculiar to it. At Phleious there was what was called the Navel,⁸ which, it was claimed, was the centre of the Peloponnese (Paus. ii. xlii. 7: *ὁ καλούμενος ὀμφαλός, Πελοποννήσου δὲ πάσης μέσον, εἰ δὴ τὰ*

¹ A marble Omphalos found in Athens (*JHS* i. [1890] pl. v., *ib. ix.* 209) has a truncated top for the reception of a statue.

² This inference has been drawn, though not with entire success, by A. W. Verrall (note 3 on p. xiv of his ed. of *Æsch. Eumenides*, London, 1908, where he points out that in the time of Pausanias the Omphalos is 'a mere curiosity, and apparently is not even within the building').

³ Note that the temple of Apollo at Delphi consisted of four parts, namely a *pronaos*, a *naos* (or main cella), the *adyton* (inmost shrine or sanctuary), and the oracular vault. The *adyton* was not open to the public (Paus. x. xxiv. 5: *ἐς δὲ τοῦ ναοῦ τὸ ἐσωτέρω παρίστανε τε ἐς αὐτὸ δάιτυς*); and even into the cella apparently not all were permitted to go (cf. *Eur. Ion*, 226 f.). The original place of the Omphalos was the *adyton*.

⁴ Paus. x. xxiv. 4: *Ποσειδῶνος βωμὸς, οὗ τὸ μαντεῖον τὸ ἀρχαιοτάτον κτήμα ἦν καὶ Ποσειδῶνος, ἐστῆκε δὲ καὶ ἀγάλματα Μοῖραν δῖον*.

⁵ His account of Delphi is more confused than any other part of his book. Possibly his loose notes, made on the spot, got mixed up, and he was unable afterwards to arrange them correctly' (Middleton, *JHS* ix. 292).

⁶ It is possible that the original oracular cleft, with its sacred Omphalos, was not at the spot afterwards occupied by the great temple. It would be upon the occasion of the transference that the original grave-mound with its stucco (*λευκωμα*) and cone was translated into stone in the form in which we know it.

⁷ Cf. CGS iv. 148 f. It goes back to the primitive stage 'when pillar and altar and divinity were not clearly distinguished.'

⁸ Note that the Phleasian Omphalos was in close proximity to an *οἶκος μαρτυρικός*, behind the Agora. It apparently is referred to on the coins (B. N. Head, *Hist. Num.*, Oxford, 1911, p. 409). Cf. the object called the Navel of Rome (*Umbilicus Romæ*) which stood behind the *Rostra* in the Roman Forum.

ὄντα εἰρηκασίν); and in Crete, but for a different reason, a certain place bore the same name (Diod. Sic. v. lxx. 4).

Various explanations of the Omphalos have been suggested. It was a really brilliant idea of some of the ancients, or else a remarkable example of tenacity of tradition, when it was held that it marked the grave of the Python or of Dionysos.¹ The Omphalos really was a grave-mound of the sacred snake of Delphi, his abode after death, the seat of his power to aid through his oracular voice. It is a complex of grave and grave-stone, and as the latter it is not merely commemorative but magical. In its aspect as grave-stone it is ultimately of phallic origin. It is thus not confined to Delphi, nor associated only with Apollo.² Its primary connexion is with the primitive earth-deity and the spirits of the dead, who are also in some mysterious way the source of life and fertility for the living.³ Apollo dethroning Gaia from her ancient seat, slaying the snake-daimon Python and usurping the oracle, though he is fain to keep the old machinery—the cleft, the tripod, and the Omphalos—represents the incoming of a new race with different, and, on the whole, higher ideas of religion. To the end, however, Apollinism, as well as the other 'Olympian' cults of Greece, continued to be rooted in the far more ancient pre-Hellenic, in some respect universal, type of religion, characterized by worship of daimonic earth-powers, ghosts of the dead strong for good and evil, exhibiting themselves as the sacred snake whose power is located in his tomb and magic column.⁴

LITERATURE.—J. E. Harrison, *Themis*, Cambridge, 1912, p. 384 f., and art. 'Delphica,' in *JHS* xix. [1899] 205 ff.; J. H. Middleton, 'The Temple of Apollo at Delphi,' in *JHS* ix. [1888] 282 f.; O. Gruppe, *Griechische Mythologie und Religionsgeschichte*, in Iwan von Müller's *Handbuch*, v. ii., Munich, 1897; C. Bötticher, *Der Omphalos des Zeus zu Delphi*, Berlin, 1889; W. Deonna, *REG* xxviii. [1915] 444, remarks: 'La question de l'omphalos est à l'ordre du jour archéologique, ces derniers temps.' He mentions a number of recent papers and books to which access has not been possible for the present writer.

ONTOGENY AND PHYLOGENY.—Ontogeny, in biological language, means the life-history of the individual organism; phylogeny the racial history of the class, order, family, genus, or species to which the organism belongs. Ontogeny is individual development; phylogeny is racial evolution. The usage is due to Haeckel, who formulated the recapitulation-doctrine that ontogeny tends to recapitulate phylogeny. As ontogeny has been discussed under DEVELOPMENT, and phylogeny, in

¹ Varro, *de Ling. Lat.* vii. 17: 'sed terrae medium non hoc sed quod vocant Delphis in aede ad latus est quiddam ut thesauri specie, quod Graeci vocant ὀμφαλόν quem Pythonos alunt tumulum.' Cf. Hesych, s.v. *Τοῖον Βουρὸς*: καὶ ὁ ὀμφαλὸς τῆς γῆς, τάφος ἱστοῦ τοῦ Πυθῶνος. By the *thesaurus* Varro is now taken to mean not, as was formerly supposed, a heathen tomb, like the so-called Treasury of Atreus, but a money-hox of the beehive tomb shape. See H. Graeven, in *Jahrb. des arch. Inst.* xvi. [1901] 160.

² The Omphalos in connexion with the cult of Aphrodite is noticed above. For the snake-twined Omphalos of Asklepios on coin of Pergamos see J. E. Harrison, *Themis*, p. 384. Asklepios is, of course, a snake-daimon of earth, giver of health and fertility through his dream-oracle.

³ Hence H. N. Ulrichs was so far right in interpreting the Omphalos as a fetish stone of the earth-goddess (*Reisen und Forschungen*, i., Bremen, 1840, p. 77 f.). Cf. an inscription of Argos, which tells how the *προφάντες* and *προφῆται* of Apollo Pythios 'established in accordance with the oracle the omphalos of Ga . . . and arranged a *thesaurus* in the oracular shrine' (W. Vollgraff, in *BCH*, 1903, p. 271 f.)—probably a reconstruction of a primitive sanctuary.

⁴ Cf. CGS iv. 193: 'What strikes us as most alien to Apollo in the Delphic ritual is the idea that the source of the inspiration is in the subterranean world, for he of all Greek deities has no part or lot in this.'

but this doctrine does not harmonize with that of the *Prasna Upaniṣad*, which, as we have seen, declares that meditation on the three *morā* of *om* leads to the *devayāna* and thus, of course, to the Brahman. Nor does it appear that this view of *om* was ever generally accepted, meditation on *om* being regarded as a normal stage in the development of the knowledge of the highest Brahman.

This position of *om* is intensified in the Yoga system as it appears in the *sūtra* of Patañjali (i. 27-29); it is there brought into connexion with Īśvara, God, and, under the name of *praṇava*, declared to express him. The repetition of the word and reflexion on its meaning are enjoined as desirable, and it is stated that the result of this practice is the removal of obstacles and the right knowledge of him who thinks in an inverse way, i.e. of one who does not seek truth in ordinary consciousness. Hence the word has a definite and important place in all subsequent doctrine of Yoga practices.

On the popular side the syllable *om* persists throughout the whole of Indian religion as the proper accompaniment of *mantras*, whether Vedic or not. Thus, on the one hand, it is used invariably to accompany the sacred *gāyatrī* which it is part of the daily duty of the orthodox Hindu to repeat, and, on the other hand, it plays a great part in the innumerable varieties of Tantric *mantras* which form an important feature of the real religion of India. Its popularity depends no doubt in part on the normal equation of its elements with the Hindu trinity of Viṣṇu, Śiva, and Brahmā which is already found in the later *Upaniṣads* and is foreshadowed earlier. On the other hand, despite its popular character, it remains very sacrosanct: at the festival of Śiva on 27th February, when even the lowest castes take part in the rites, while women are permitted to make use of the *mantras*, an exception is made of the syllable *om*, doubtless because of its special holiness.¹ As an auspicious symbol, from the 6th cent. A.D. onwards, the initial letter is found in different forms to denote the commencement of a text in MSS and inscriptions.

To Jainism and to Buddhism the syllable *om* and its use were primarily characteristic of the Brahman, but the force of the popularity of the syllable is shown by the fact that it became an integral part of the *mantra* of Avalokiteśvara in the Buddhist pantheon, the famous *om maṇi padme*² *hūm*. So in the crypto-Buddhism of the 16th cent. in Orissa we find that from the *śūnya*, or void, is derived the *praṇava*, thus bringing the *praṇava* close to the principle of nonentity of the nihilist school of Buddhism.

In the *Purāṇas* besides assertions as to its general sanctity we find the syllable turned to sectarian use. Thus in the *Linga Purāṇa* the *linga*, which reduces both Viṣṇu and Brahmā to the recognition of their inferiority to Śiva, bears upon it the sacred syllable. On the other hand, it is said that the three letters represent Viṣṇu himself, his wife Śrī, and the worshipper; that the syllable is the three Vedas, the three worlds, the three sacred fires, and the three footsteps of Viṣṇu; and that by meditation upon it devotees attain supreme bliss.

LITERATURE.—The derivation of *om* from *aram* is defended by F. Max Müller, *Six Systems of Indian Philosophy*, new ed., London, 1903, p. 322f., but is definitely rejected by O. Böhtlingk and R. Roth, *Sanskrit-Wörterbuch*, Petrograd, 1855-75, i. 1122. For the *praṇava* see J. Eggeling, *SBE* xxvi. [1855] 68, n. 3. *Om* in the *Upaniṣads* is discussed by P. Deussen, *The Philosophy of the Upaniṣads*, Eng. tr., Edinburgh, 1906, pp. 101, 390-392; see also A. Weber, *Indische Studien*, Berlin, 1849-54, ix. 24, 60, 99, 91, 107, 108, 125, 132, 134, 140-143, 153, 160. For the *Purāṇas* see H. H. Wilson, *Viṣṇu Purāṇa*, ed. F. Hall, London, 1864-77, i. 1. *Om* in the Bud-

dism of Orissa is dealt with by Nagendra Nath Vasu, *Modern Buddhism*, Calcutta, 1911, pp. 44, 60, 62, 71, 72. For *om* as a *mantrāla* see G. Bühler, *Indische Paläographie*, Strassburg, 1896, p. 85. For *om* in the formula of Avalokiteśvara see L. de la Vallée Poussin, *Bouddhisme*, Paris, 1909, p. 381. *Om* in the Vedānta is discussed in *SEE* xxxiv. [1890] 169f., xxxviii. [1890] 103, 190-199, 232f., xlviii. [1904] 311f., 362, 604, 682-685.

OMPHALOS (ὀμφαλός).—The Greeks had a story that Zeus, wishing to ascertain the exact centre of the earth, sent forth two eagles to fly simultaneously at equal speed from its eastern and western ends. They met at Delphi, and there in Apollo's temple was set up in commemoration the holy Navel-stone, or Omphalos, with a golden eagle at either side to mark earth's central point.¹

The Delphian Navel-stone is described by Pausanias as 'made of white marble' (x. xvi. 3: λεθον πεποιημένον λευκοῦ). Strabo says that it was covered with sacred fillets (p. 420: καὶ ὀμφαλός τις ἐν τῷ ναφ̄ τειταίνωμενος). Numerous representations of the Omphalos, especially on coins and vases—on the latter most frequently in connexion with the appeal of Orestes to the protection of Apollo against the avenging spirits of his mother—enabled us to form a good idea of it, even before the recovery of actual specimens. Generally it is represented as in shape like a half-egg standing on a low quadrangular base; sometimes it emerges, as it were, so far as to be nearly like a whole egg with the lower end flattened to enable it to stand on its pedestal. Sometimes bare, at others it is draped with hanging fillets, at others again covered with a kind of coarse-meshed diagonal network of fillets, which are represented either as plain ribands or as tied tightly at regular intervals so as to look like a string of eggs (see for many representations J. H. Middleton, 'The Temple of Apollo at Delphi,' *JHS* ix. [1888] 295f.).² These ancient pictorial representations are now superseded by two marble Omphaloi actually found at Delphi by the French excavators, one of them, covered with a network of fillets worked in the marble, having been found near the great altar of the Chians in front of

¹ Cf. Eur. *Ion*, 5f.: τὸν ὀμφαλόν | μέ . . . ἐν τῷ ναφ̄ . . . βροτοῖς; Plato, *Rep.* 427C: ὁ θεός . . . τῆς γῆς ἐπὶ τοῦ ὀμφαλοῦ καθήμενος . . . speaks of the Pythian priestess as 'seated near the golden eagles of Zeus' (*Pyth.* iv. 6: χρυσῶν Αἰδὸς αἰετῶν πάτερρος). According to some, Zeus made use of crows in his investigation (κόρακας [Strabo, p. 419f.]), or swans (Plut. *de Def. Orac.* 1). These variants were prompted by a desire to bring the Omphalos legend into closer connexion with Apollo. In Eur. *Ion*, 224 (στρέμμασι γ' ἐνδόν τ' ἄ . . . res, probably very ancient and permanent decor . . . Gorgons. Probably very few pec.

² Representations of the Omphalos with eagles on it, or beside it, are rare. See electrum coin (5th cent. B.C.) of Cyzicus in *Num. Chron.*, 3rd ser., vii. [1887] pl. 1. 23; and a bronze coin of Megara (reign of Geta) in F. Imhoof-Blumer and P. Gardner, 'Numism. Commentary on Pausanias,' *JHS* vi. [1885] 55, pl. A. ix., which shows what are meant to be two birds, hardly distinguishable as eagles, perched on the summit. In *Mitt. des arch. Inst. Athens*, xii. [1887] pl. 12, is a beautiful 4th cent. B.C. relief from Sparta, showing Apollo and Artemis (Nike?) and between them, on a step base, a low Omphalos with eagle regardant on either side. The two golden eagles were looted by the Phocians in the Sacred War, and consequently are not mentioned by Pausanias. Strictly, Strabo's remark, 'there is shown in the temple a certain Navel decked with fillets, and upon it the images of the legend,' should imply that the eagles, or reproductions of them, were again visible in his day, nearly 300 years after the Phocian war; but he is probably merely copying from older books.

¹ E. W. Hopkins, *Religions of India*, London, 1896, p. 453.

² A. H. Francke, *JRAS*, 1915, pp. 237-401.

the temple (figured in J. E. Harrison, *Themis*, p. 398).¹

A curious difficulty arises as to the exact position of the Omphalos at Delphi. From *Æsch. Eum.* 391, where the priestess, on her way to the inmost shrine, sees Orestes seated *ἐν ὀμφαλῷ*, we infer, though the passage is not very clear, that it stood within the temple, and probably in the inmost shrine. This is indicated still more clearly in the conversation between Ion and the chorus of women standing without the temple, in *Eur. Ion*, 2281, as well as by the remark of Strabo, whether or not that was his own observation. On the other hand, Pausanias mentions the Omphalos *before* he proceeds to the description of the exterior of the temple, and long before he speaks of its contents. He appears, therefore, to place the stone somewhere outside the eastern end of the temple, not far from the altar of the Chians on the left of the Sacred Way (Paus. x. xiv. 7; cf. Herod. ii. 135). If he is right, the Navel-stone must have been moved from its place within the temple in the interval between Strabo (1st cent. B.C.) and Pausanias (c. A.D. 180). The question thus becomes important, as the change may be indicative of a corresponding change in attitude towards the Navel-stone and the ideas with which it was associated.²

Perhaps the ejection of the stone was due to Nero, who played havoc with the temple (Paus. x. vii. 1; so J. G. Frazer, *Pausanias's Description of Greece*, 6 vols., London, 1898, v. 317). But why was the stone not restored when the prophetic chasm, which he had tried to ruin (Dio Cass. lxxii. 14), was purified? It has also been suggested (by Verrall, *The Ion of Euripides*, Cambridge, 1890, p. xlvii) that, when Pausanias mentions as *ὡρίσθαι* the main *cella* at an altar of Poseidon, with statues of two Fates,³ he is in fact unconsciously describing the Omphalos itself with its two mysterious figures that were variously interpreted as Gorgons or eagles. If insistence is to be laid upon his disjointed notes,⁴ perhaps we should hold that Pausanias simply mistook a facsimile for the genuine object, which he was not allowed to see in its own place in the *adyton*. It is possible that the excellently preserved specimen mentioned above is the very Omphalos which Pausanias had before his eyes at this point in his description. There is nothing about it to suggest that it is primitive. The original primitive Omphalos, however, was perhaps the oldest object in Delphi, and was probably not movable.⁵

What was the real significance of the Omphalos? In the first place, it is to be noted that, far from being unique, as, according to the logic of the Greek legend, should be the case, the Delphian Navel-stone was but one, though the most famous, of a number of conical or pyramidal sacred stones revered in the Greek world and elsewhere.

At Megara a pyramidal stone (Paus. i. xlii. 2: *λίθος παρυέμενος πυραμίδος σχῆμα οὐ μείζων*) was worshipped under the name of Apollo Karinos; at Sicyon there were images of Zeus Mellichios and Artemis Patroa, the former in the shape of a pyramid, the latter in that of a column (*ib.* ii. ix. 6). Apollo, god of streets (Agyieus), was generally represented as a conical pillar in front of the house-door.⁷ The image of Aphrodite in her great temple at Paphos in Cyprus was a conical white stone (*Ac. Hist.* ii. 3: 'non effigie humana, continuus orbis latiore initio tenuem in ambitum metæ modo exsurgens'). Other examples are given by Frazer (*Paus.* v. 318f.). Nor, again, was the name borne by the Delphian stone peculiar to it. At Phleious there was what was called the Navel,⁸ which, it was claimed, was the centre of the Peloponnese (Paus. ii. xlii. 7: *ὁ καλούμενος Ὀμφαλός, Πελοποννήσου δὲ πάσης μέσον, εἰ δὲ τὰ*

ὄντα εἰρηκαίον); and in Crete, but for a different reason, a certain place bore the same name (Diod. Sic. v. lxx. 4).

Various explanations of the Omphalos have been suggested. It was a really brilliant idea of some of the ancients, or else a remarkable example of tenacity of tradition, when it was held that it marked the grave of the Python or of Dionysos.¹ The Omphalos really was a grave-mound of the sacred snake of Delphi, his abode after death, the seat of his power to aid through his oracular voice. It is a complex of grave and grave-stone, and as the latter it is not merely commemorative but magical. In its aspect as grave-stone it is ultimately of phallic origin. It is thus not confined to Delphi, nor associated only with Apollo.² Its primary connexion is with the primitive earth-deity and the spirits of the dead, who are also in some mysterious way the source of life and fertility for the living.³ Apollo dethroning Gaia from her ancient seat, slaying the snake-daimon Python and usurping the oracle, though he is fain to keep the old machinery—the cleft, the tripod, and the Omphalos—represents the incoming of a new race with different, and, on the whole, higher ideas of religion. To the end, however, Apollinism, as well as the other 'Olympian' cults of Greece, continued to be rooted in the far more ancient pre-Hellenic, in some respect universal, type of religion, characterized by worship of daimonic earth-powers, ghosts of the dead strong for good and evil, exhibiting themselves as the sacred snake whose power is located in his tomb and magic column.⁴

ONTOGENY AND PHYLOGENY.—Ontogeny, in biological language, means the life-history of the individual organism; phylogeny the racial history of the class, order, family, genus, or species to which the organism belongs. Ontogeny is individual development; phylogeny is racial evolution. The usage is due to Haeckel, who formulated the recapitulation-doctrine that ontogeny tends to recapitulate phylogeny. As ontogeny has been discussed under DEVELOPMENT, and phylogeny, in

¹ Varro, *de Ling. Lat.* vii. 17: 'sed terræ medium non hoc sed quod vocant Delphis in aede ad latus est quiddam ut thesauri specie, quod Graeci vocant ὀμφαλὸν quem Pythonos aiunt tumulum.' Cf. Hesych, s.v. Τοῖον Βουρός: καὶ ὁ ὀμφαλὸς τῆς γῆς, τὰφος ἐστὶ τοῦ Πυθῶνος. By the *thesaurus* Varro is now taken to mean not, as was formerly supposed, a beehive tomb, like the so-called Treasury of Atreus, but a money-box of the beehive tomb shape. See H. Graeven, in *Jahrb. des arch. Inst.* xvi. (1901) 160.

² The Omphalos in connexion with the cult of Aphrodite is noticed above. For the snake-twin Omphalos of Asklepios on coin of Pergamos see J. E. Harrison, *Themis*, p. 334. Asklepios is, of course, a snake-daimon of earth, giver of health and fertility through his dream-oracle.

³ Hence H. N. Ulrichs was so far right in interpreting the Omphalos as a fetish stone of the earth-goddess (*Reisen und Forschungen*, i., Bremen, 1840, p. 77f.). Cf. an inscription of Argos, which tells how the *προφάντες* and *προφῆται* of Apollo were seated in the oracular shrine in the oracular shrine—probably a reconstruction.

as most alien to Apollo in source of the inspiration is in the subterranean world, for he of all Greek deities has no part or lot in this.

¹ A marble Omphalos found in Athens (*JHS* i. (1880) pl. v., *ib.* ix. 299) has a truncated top for the reception of a statue.

² This inference has been drawn, though not with entire success, by A. W. Verrall (note 3 on p. xiv of his ed. of *Æsch. Eumenides*, London, 1908, where he points out that in the time of Pausanias the Omphalos is 'a mere curiosity, and apparently is not even within the building').

³ Note that the temple of Apollo at Delphi consisted of four parts, namely a *pronaos*, a *naos* (or main *cella*), the *adyton* (inmost shrine or sanctuary), and the oracular vault. The *adyton* was not open to the public (Paus. x. xxiv. 5: *ἐς δὲ τοῦ ναοῦ τὸ ἐσωτάτω παρίσσι τε ἐς αὐτὸ ὀλίγοι*); and even into the *cella* apparently not all were permitted to go (cf. *Eur. Ion*, 2281f.). The original place of the Omphalos was the *adyton*.

⁴ Paus. x. xxiv. 4: *Ποσειδῶνος βωμός, ἐν τῷ μαντεῖον τὸ ἀρχαῖοτατον κτήμα ἦν καὶ Ποσειδῶνος, ἐστῆκε δὲ καὶ ἀγάλματα Μοιρῶν δύο*.

⁵ His account of Delphi is more confused than any other part of his book. Possibly his loose notes, made on the spot, got mixed up, and he was unable afterwards to arrange them correctly.

⁶ The cleft, with its sacred Omphalos, occupied by the great temple. It would be upon the occasion of the transference that the original grave-mound with its stucco (*ἀεκόμα*) and cone was translated into stone in the form in which we know it.

⁷ Cf. *CGS* iv. 148f. It goes back to the primitive stage 'when pillar and altar and divinity were not clearly distinguished.'

⁸ Note that the Phleiasian Omphalos was in close proximity to an *οἶκος μαντικός*, behind the Agora. It apparently is referred to on the coins (B. V. Head, *Hist. Num.*, Oxford, 1911, p. 400). Cf. the object called the Navel of Rome (*Umbilicus Romæ*) which stood behind the Rostra in the Roman Forum.

part, under EVOLUTION, this article will deal mainly with the relation between them.

1. Ontogeny.—(1) The term must be taken to include the whole life-history of the individual until the adult form is reached, but no precise punctuation is possible. Thus the brain may go on developing in complexity of nerve-cell connexions after all the other parts have reached their climax. It is often possible to distinguish an *embryonic* period within the egg-envelopes, a *larval* period, when the developing organism looks after itself but has not yet assumed the characteristic form of the adult (e.g., caterpillar and tadpole), a *juvenile* period, when it shows the definitive features but is still very immature, an *adolescent* period, when the sexual maturity begins to be attained, and an *adult* period, when development wanes. One period may pass smoothly and gradually into another, or there may be crises of change. When these crises are very marked and involve re-organization—e.g., when a pupating caterpillar gives rise to a butterfly, or a free-swimming Pluteus-larva to a sea-urchin, or a tadpole to a frog—the term metamorphosis is appropriate. It is sometimes useful to distinguish an early period of organ-forming (organogenesis) within the egg from a later period of functional development when the young creature actively uses its various parts.

(2) It is important to recognize that there are usually successive chapters in ontogeny, and that one organism may differ from another in the emphasis that is laid on one or other of these. One chapter may be long-drawn-out and another may be telescoped, and this seems to have come about in adaptation to particular conditions of life. Thus many fresh-water animals, such as the crayfish, have suppressed the larval stages which their relatives in the sea exhibit. This is adaptive, for the risks of being borne into unsuitable places are serious in rivers, but negligible in the open sea. That some river animals, such as caddis-worms, have prolonged larval stages does not affect the argument, for it will be found that they in turn have special adaptations, such as gripping structures or adhesive secretions which secure safety. The echinoderms of Polar seas have in most cases suppressed the free-swimming larval stages which are so characteristic of this class of animals, and this may be reasonably interpreted as adaptive to the inhospitable character of the surface waters. To take a very different illustration, it was observed by Alfred Russel Wallace that the mound-birds, or megapods, of Celebes leave their eggs to hatch, all unattended, in great hotbeds of dead leaves, and that the young birds can fly away on the day of their birth. In other words, a very peculiar condition is met by a precocious development of the flying power; the suppression of incubation has its counterpart in the suppression of the chick stage. The general idea is clear, that the great variety of life-history may be in part described as an elongating or a telescoping of this or that chapter in the ontogeny, and that this may be adaptive to particular conditions of life.

(3) Ontogeny is always a function of the hereditary nature on the one hand, and appropriate nurture on the other. The inheritance cannot be expressed except under the influence of certain environmental conditions and liberating stimuli; and the expression varies in some measure according to the nurture and the use which the organism makes of it from stage to stage. A rich nature may enrich itself; a poor one may impoverish itself. In a general way it may be said that the intrinsic factors implied in the germinal organization are directive, and that the extrinsic factors implied in the environmental or nurtural conditions serve as stimuli or inhibitors, or have a directly modifying influence.

2. How phylogeny may be discovered.—Very little is as yet certain in regard to the detailed phylogeny of living creatures. The construction of elaborate genealogical trees is still premature unless their provisional character is emphasized. Thus, while it is probably safe to say that birds evolved from the extinct deinosaursian reptiles, and from the subdivision Ornithischia, what the precise pedigree has been we do not know. Similarly it is still impossible to speak with definiteness in regard to the relationship of the numerous orders of living birds. It is easy to convince ourselves that swifts are not nearly related to swallows, nor cranes to herons, but it is only in a very tentative way that we can piece the parts of the pedigree together. The difficulties seem to be greatest when we inquire into the origin of the distinctive phyla (or series of related classes)—vertebrates, molluscs, echinoderms, and so forth. We have more definite knowledge of the descent of modern elephants from forms like *Palæomastodon* than we have of the origin of mammals, and we are much more convinced as to the derivation of mammals from reptiles than as to the origin of vertebrates from, let us say, annelid worms.

The establishment of a probable pedigree is an inference from various kinds of evidence. (a) There are the remains of extinct types buried in the fossil-bearing rocks, and, were this record complete and available, the deciphering of pedigrees would simply be a question of time and patience.

But, as Darwin said, the geological record is like 'a history of the world imperfectly kept, and written in a changing dialect; of this history we possess the last volume alone, relating only to two or three countries. Of this volume, only here and there a short chapter has been preserved; and of each page, only here and there a few lines.'

On the other hand, the rock-record is often surprising. A good deal is known in regard to fossil jelly-fishes; certain stages in the life-history of some extinct forms, such as graptolites and brachiopods, are decipherable: the young ichthyosaurs can be seen within their mother; and the actual variations of some fresh-water snails (*Paludina neumayri* and *Planorbis multiformis*) can be studied. W. B. Scott of Princeton remarks:

'The geological record is not so hopelessly incomplete as Darwin believed it to be. Since *The Origin of Species* was written, our knowledge of that record has been enormously extended and we now possess, no complete volumes, it is true, but some remarkably full and illuminating chapters. The main significance of the whole lies in the fact, that just in proportion to the completeness of the record is the unequivocal character of its testimony to the truth of the evolutionary theory.'

(b) The second basis for a pedigree is found in the structural resemblances of living forms. A deep-seated similitude in hip-girdle, hind leg, shoulder-girdle, and skull links modern birds back to the Ornithischia already mentioned, and the affiliation is corroborated by homologies between modern birds and modern reptiles. Thus both have a complex lower jaw which articulates with the quadrate bone; both have an inter-tarsal ankle joint; both have epidermic scales. These three resemblances are merely instances, and they are of unequal importance, the first being more significant than the second, and the second more significant than the third; but it is evident that, secure as may be the palæontological basis for the conclusion that birds have evolved from a reptile stock, we reasonably look for some corroboration in homologies between extant representatives of the two classes. In proportion to the specialization of the modern derivatives of a common ancestral stock will it be difficult to find other than very deep-seated resemblances between them, and in such cases great interest often attaches to vestigial structures—useless dwindling relics—which linger

1 *Origin of Species*, London, 1852, p. 253.

2 *Darwin and Modern Science*, ed. A. O. Seward, Cambridge, 1909, p. 109.

as tell-tale evidences of a superficially obliterated affinity. Thus the vestigial hip-girdle and hind-limb of eelaceans are of some significance in suggesting pedigree.

(c) In trying to discover the phylogeny of a type, recourse may also be had to the study of development. A clue is sometimes to be found here when none is offered either by palæontology or by the anatomical comparison of extant forms. A signal case was Kowalevsky's discernment (1866) of the chordate affinities of ascidians. No one had suspected that these peculiar sedentary animals were retrogressive chordates till Kowalevsky showed that the free-swimming larva had a dorsal nerve-cord, a notochord in the tail region, gill-slits opening from the pharynx to the exterior, and an eye developing from the brain. In the same way Vaughan Thompson's discernment of the position of barnacles among crustaceans was due to his discovery of the life-history. It may be said, however, that the study of development does not usually reveal the pedigree, but serves only to confirm the conclusion arrived at from the study of homologies and connecting links. To sum up, then: our knowledge of the phylogeny of a type rests on three sets of data—those derived from a study of extinct forms, those derived from comparative anatomy, and those furnished by embryology. Interesting corroborations may sometimes be found in other quarters; thus the mingling of the blood of two related types, such as horse and ass, hare and rabbit, is harmonious, while the mingling of the blood of unrelated types is destructive. Or, again, some light has occasionally rewarded the study of variation whether experimentally induced or occurring spontaneously in wild nature. Reversions, for instance, may occasionally serve as finger-posts in inquiries into phylogeny.

3. Relation of phylogeny to ontogeny. —The phylogeny, or racial history, of a type, such as spider or snail, frog or stork, implies a succession of achievements (differentiations and integrations) which, taken as a whole, seem to have required long ages for their establishment. Taking the last example, we think of the remote and obscure origin of back-boned animals or chordates, of the diverging of one vertebrate class after another until reptiles appeared, of the emergence of birds from the bipedal Ornithischian stock, of the appearance of primitive Ciconiiformes, and of the differentiation which led to the stork type at last. Now these successive steps in evolution have been, in a manner which we cannot conceive, enregistered in the germinal organization of the germ-cells by which the lineage is continued from generation to generation. Could we have seen into the details of the germ-cell of a primitive bird, we should probably have discovered more complexity than lay in the germ-cell of the primitive reptile, and much more than in the germ-cell of the primitive vertebrate. Even if microscopical sections of the germ-cells of extinct types were available, the various degrees of germinal complexity lie beyond the limits of visual demonstration, but the probability is that the germinal organization becomes increasingly intricate in an ascending phylogenetic series. (As a matter of fact some germ-cells are visibly much more complicated than others.) The difficult problem is how the enrichment of the germinal organization could come about.

We are adhering to the generally accepted view that the course of evolution has been from the apparently simple to the obviously complex—a process of increasing differentiation and integration except in parasitism, degeneracy, and other paths of retrogression. It may be noted, however, that W. Bateson has recently directed attention to the number of evolutionary changes which may be

interpreted as due to loss, or to the removal of inhibiting factors.

He asks that biologists should consider 'whether the course of Evolution can at all reasonably be represented as an unpacking of an original complex which contained within itself the whole range of diversity which living things present' (President's Address, Brit. Assoc., Australia, 1914; see *Nature*, xciii. [1914] 640). On this view organic evolution has been a sequence of emancipations, a throwing off of shackles; we adhere to the conception of a sequence of experiments in 'creative synthesis,' a series of adventures, often wild, in self-expression. To vary the metaphor, for the problem is hardly as yet discussible in other terms, we think of the living creature as a creative artist with itself as its chief work. Or, again, we think of it as trafficking with its environment, as trading with time, as putting its hereditary talents out to usury, or even speculating with them. In this, it seems important to observe, there need be much less of the fortuitous than is usually supposed. For the variation which arises in a germ-cell is in some measure conditioned by the already established organization—by the already accepted architectural style. Nor is the sifting or selection which decides the fate of the individual expression of the variation in question to be thought of as blind or haphazard; it is in definite and subtle relation to the correlations of organisms, the linkages, the web of life—the *systema naturæ*, in short—already established.

If the course of evolution has been a series of discoveries or inventions, or even a sequence of emancipations, there must have been registrations in the germinal organization, and there are two ways in which this enregistering may be thought of. (1) On the one hand, the experience of the fully developed individual may in some definite way affect the germinal organization. Thus Lamarckians have thought of the germ-cells being continuously enriched or impoverished by the gains or losses of the individual organism, and that in a perfectly specific or representative manner. There are very few facts which lend support to this view, and yet it seems premature to foreclose the question, or to assert that the experience of individuals counts for nothing in the evolution of the race. Many facts suggest that experiences of the individual may serve as variational stimuli to the complex germ-plasm. Though they do not leave representative imprints of themselves, they may pull the trigger of changefulness or sever another of the threads that bind the insurgent life. (2) On the other hand, the available data make it seem likely that most of the raw materials of progress are due to germinal variations or mutations, intrinsic changes in the germinal organization, permutations and combinations of hereditary items. Apart from what may occur during the growth and multiplication of the germ-cells, there are ample opportunities in the processes of maturation and fertilization for fresh shufflings and deals of the hereditary cards. The variations thus arising in the arcana of the germ-cells find expression in the individual life of the developed organism, and are there tested and sifted. If the metaphor be permissible, the germ-cell is the blind artist whose many inventions are expressed, embodied, and exercised in the developed organism, the seeing artist, who, beholding the work of the germ-cell, either pronounces it, in the light of the success which it brings, to be good, or, when it spells ruin, curses it effectually by sinking with it into extinction. There is never any difficulty in understanding how a germinal variation, having arisen, comes to stay. That is provided for in the continuity of the germ-plasm. It is probably, then, by the entailment of the results of intrinsic germinal experiments, and not by the imprinting of the results of individual experiences, that the

steps made in phylogeny become registered in the germ-cells and thus made expressible in ontogeny.

4. *Recapitulation doctrine.*—Long before the evolution idea was accepted by zoologists, the idea was mooted (e.g., by Meckel in 1821) that the stages in individual development corresponded to grades of organization in the animal kingdom. Von Baer called attention to common features observable in vertebrate embryos in early stages, but he indicated at the same time that there was a remarkable specificity almost from the first. Louis Agassiz, in his *Essay on Classification* (London, 1859), expressed his belief in a correspondence between stages in embryonic development and the grades of differentiation recognized in the classification of living and extinct animals. Though no evolutionist, he wrote:

'It may therefore be considered as a general fact, very likely to be more fully illustrated as investigators cover a wider ground, that the phases of development of all living animals correspond to the order of succession of their extinct representatives in past geological times.'

His son, Alexander Agassiz, compared stages in the development of echinoderms with the fossil series, and said:

'Comparing the embryonic development with the palæontological one, we find a remarkable similarity.'

To Haeckel, in particular, credit is due for recognizing the importance of the recapitulation doctrine and stating it clearly in the light of evolution. He called it the 'fundamental law of biogenesis' ('biogenetisches Grundgesetz'), and stated it in the familiar words: 'Ontogeny is a recapitulation of phylogeny.' He also introduced the idea of paligenetic characters, which correspond to those of the ancestral stock, and kainogenetic characters, which are relatively recent additions. The latter, he said, may disguise the former in a perplexing way; in any case, the recapitulation is general, not exact, and often shows great condensation. Fritz Müller was another who did much (e.g., in his *Für Darwin*, Leipzig, 1864) to illustrate and corroborate the recapitulation idea.

This doctrine has suffered considerably at the hands of its friends, who have sometimes stated it in an exaggerated and inaccurate way. When Milnes Marshall said, 'Every animal in its own development repeats its history, climbs up its own genealogical tree,' he was speaking picturesquely, for the recapitulation is general, not detailed; it often shows telescoping, and it is truer of stages in organogenesis than of stages in the development of the embryo as a whole. It is hardly necessary to say that a developing bird is never like a reptile, but only like an embryo reptile. It has also to be remembered that one term in the comparison, the phylogeny, is very imperfectly known, so that assertions as to the exactness of the recapitulation must be taken with much reserve. And, again, the illustrations that have been adduced have not always been very happy. The simplest animals are single cells; there are some balls of cells, like *Volvox*, on the border-line between unicellulars and multicellulars; and there are some very simple two-layered sacs of cells, such as *Protohydra*. But, when we see an animal of relatively high degree, such as the primitive vertebrate *Amphioxus*, beginning its life as a fertilized egg-cell, which develops into a ball of cells (blastula) and a two-layered sac of cells (gastrula), we are probably mistaken in regarding this as a recapitulation of very ancient phylogeny. Reproduction by means of isolated germ-cells need not have any historical reference to the Protozoa; a ball of cells may be the natural result of the cleavage of an ovum when it is not encumbered with too much yolk; and it is possible to account for the formation of a gastrula without dragging in the hypothetical ancestral gastræa.

An important criticism concerns specificity, i.e.

the individuality and uniqueness of every well-defined type. A fish may be identified by a few scales, a bird by a few feathers. The cells lining the windpipe of a horse are readily distinguishable from those of a dog, and the palate of a land-snail from that of a periwinkle. There is pronounced chemical individuality in species, as may be detected in the milk of nearly-related mammals or the juice of the grapes in nearly-related vines. It is most literally true that 'all flesh is not the same flesh.' There is no doubt that increased precision of embryological work has disclosed the individuality or specificity of the organism even in early stages of ontogeny. Thus the number of chromosomes within the nucleus of a cell is, with few exceptions, constant for each kind of organism, and the embryo of a mouse could thus be distinguished from that of a rabbit, or that of an onion from that of a lily. But a recognition of the fact that an organism is from the start itself and no other is not inconsistent with admitting a significant correspondence between steps in individual development and steps in racial evolution. A tadpole is from the first in several ways an amphibian and not a fish, and yet in its two-chambered heart and branchial circulation it is for a time distinctly piscine.

One reason why the ontogenetic recapitulation of phylogeny must be general, not precise, is that the successive gains made in the course of racial evolution are not superimposed one upon another, but are severally incorporated into the organization and unified with it. The additions from millennium to millennium are not like new wings added to a house, for the tenements which we call individuals are continually dissolved, and there is re-unification at the start of each new life. Whatever further saving clauses may have to be appended to the 'recapitulation doctrine,' the broad fact remains that ontogeny is the making explicit of the germinal organization which is what it is because of phylogeny. The past lives on in the present in a manner peculiar to and characteristic of living creatures, and it is because it is determined by the past that an embryo moves towards a goal as if it had the future consciously in view. The ages that are gone have bent the bow in the plane along which the arrow of the individual flies. But ontogeny must not be thought of as the uncoiling of a wound-up spring, or as the unpacking of a marvellous treasure-box; it is a function of the individuality which is somehow condensed within the germ-cell. It is the transformation of the germinal organization into the adult organization, and it implies a series of steps in 'creative synthesis.' The fundamental fact which we are so far from understanding is that the fertilized ovum is at once the repository of ages of organic inventions and a unified individuality in the one-celled stage of its becoming.

J. ARTHUR THOMSON.

ONTOLOGY.—1. Definition.—Metaphysics is traditionally divided into ontology, or the philosophy of being, cosmology, or the philosophy of nature, and psychology, or the philosophy of mind. Ontology, dealing with the most general characteristics of the real, includes those subjects which as common to the other two branches cannot be dealt with by either exclusively; cosmology and psychology study, in a very general way, one or other of the concrete forms which reality takes, while ontology is concerned only with the nature of the real in abstraction from its specific embodiments.

While it is possible to distinguish these branches of metaphysics, it does not follow that they can be kept rigidly apart, for psychological or cosmological conclusions inevitably act upon ontology. The question, What is being itself? implies a previous acquaintance with the *things which are*; and, if we hold that all that is essentially a cosmos organized in a particular way, or if we believe that 'matter' is essentially relative to and constituted by consciousness, our ontological views will be coloured accordingly. Much of recent ontological speculation is vitiated by false psychological or cosmological assumptions.

The idea of being is the most general and consequently the least capable of definition with which philosophy is called upon to deal. As we do not find 'matter in general' in *rerum natura*, but always this or that concrete matter, possessed of specific qualities which differentiate it from other matter, so it is impossible to isolate being and examine its nature directly. 'Being-in-itself' is meaningless, for only that which has a definite nature of its own can be. Nor can we regard being as an additional predicate to be attached to that which is already a complex of various qualities, only lacking this further quality of 'being' in order to become an actual thing. As a complex of qualities, the thing already 'is.' Being is not a quality, but is latent in all qualities. Nor can we expect to show how 'being' itself came to be. We can to a certain extent understand how one thing 'comes into being' and another 'ceases to be,' in the unceasing flux of things, though here, too, further examination reveals change of form, and not creation or extinction; but the question of the origin of being is meaningless, for, presupposing, as it does, a previous complete nothingness out of which being proceeds, it postulates an effect for which there is *ex hypothesi* no cause, and thereby involves self-contradiction. We are compelled, therefore, to take being as given in the fact that 'something is,' and to proceed to investigate what is implied in the fact that something is as well as the special forms which the something may take.

2. Reality and knowledge.—If asked to specify what he regards as being or having existence, the unsophisticated individual would reply that 'things' at any rate existed, and would doubtless admit further that 'minds' might also be said to exist. He would also recognize that there was some relation between the two whereby the mind was aware of the existence of the thing; the precise nature of this relation has formed the crux of much philosophical discussion, and an erroneous conception of it has vitiated much ontological speculation. The question is asked, What must the nature of things be in order that they may be known?, and the answer is given that they must be in some way akin to the mind which knows them. What is this kinship? The mind, it is held, can know only that which is, in some sense or other, within it; and that which is within the mind is an idea; the mind, therefore, can know only its own ideas. It is concluded, therefore, either that things do not exist or that they can never be known. The fallacy lies in the sense at-

tached to 'within the mind,' for 'being within the mind' simply means 'being known.' In direct experience we do not *know* ideas at all. An idea is an act of knowledge, either of a directly presented object or by way of memory, etc., and 'to have an idea of' means nothing more than 'to know.' The proposition that in order to be known a thing must be akin to the mind means simply that in order to be known a thing must be capable of being known.

The same fallacy of the 'mental' nature of things is found in the doctrine which, starting from sensation as given, postulates the activity of thought in ordering and correlating the data of sensation in order to make the object (e.g., Green). There is no reality, we are told, apart from the activity of consciousness: the order of nature is nothing other than the relations which the mind imposes on the crude data of sensation. We do not know things, therefore, but only 'phenomena.' 'Nature,' says Green (*Prolegomena to Ethics*, Oxford, 1883, § 36), 'is the system of related appearances, and related appearances are impossible apart from the action of an intelligence.' Kant's theory implied that the sensations, still undetermined by relations, are 'the work of unknown things-in-themselves, acting in unknown ways upon us' (§ 38). Green, in the interests of the intelligibility of the real world, discards the things-in-themselves as meaningless, because, while claiming to be completely independent of our knowledge and themselves never known, they are yet the cause of our knowledge, and causation, being a relation, is the work of the mind and cannot be predicated of the world of things-in-themselves.

'That sensations therefore, the matter of our experience, should be connected as effects with ... which all that can be said is that they ... than the world of our experience, and subject to which it is relative, is a statement self-contradictory or at best unmeaning' (§ 41).

This indubitably disposes of Kant, but what is left of the doctrine? There are two points to be noted. (i.) The 'sensations' are not 'arranged' by the understanding purely at random or capriciously. Why does the understanding give to one set of sensations a particular spatial order, to another the relation of cause and effect, etc., if it be not because of the inherent nature of the sensations themselves? *I.e.*, the 'sensations' (which really means the different qualities of the thing) come to the understanding already ordered and related in a definite way. (ii.) Any theory which seeks to show that the objects of experience are 'made' by the intelligence is ultimately incapable of accounting for the material out of which these objects are made (*viz.* sensations). For we cannot have any sensations we choose. Hence the argument finally reverts to something not 'made by the intelligence' upon which our sensations are dependent; of this entity idealists are precluded, by their own presuppositions, from giving an account. Green, e.g., after criticizing Kant's things-in-themselves, is driven to speak of 'the exciting cause of sensation' (§ 59), the 'afflection of the sentient organism by matter external to it' (§ 60), and 'a sensation excited by an external irritant' (§ 64). There is, then, after all an external matter which causes sensations; it can have no relations or qualities, for these are the work of the mind; it is therefore open to all the objections which Green alleges against Kant's things-in-themselves.

This confusion is due to the attempt to identify perception with object, and the failure to recognize that perception is the act of relating the mind to its object. A similar fallacy underlies the identification of reality with experience.¹ Experience

¹ Cf. F. H. Bradley, *Appearance and Reality*, London, 1903; A. E. Taylor, *Elements of Metaphysics*, do. 1903.

cannot be an ultimate and self-existent entity, because it implies two elements beyond itself: (1) the mind which experiences, and (2) the object which is experienced. Doubtless we cannot know reality without the mind; but this in no way implies that it is a general characteristic of reality to be incapable of existence apart from the mind or to be *psychical* matter of fact. In this type of argument the word 'experience' is used ambiguously as (a) the fact that we do have an experience, and (b) the object of which we have experience, and that which is true of (a), viz. that it cannot exist without the mind, is illegitimately transferred to (b).

The conclusion is, then, that the mind is capable of knowing an 'external' reality with qualities and relations of its own which are independent of their being known;¹ and the argument involves equally the reality of space and time.

3. Forms of being.—To investigate all the characteristics of reality would be to exhaust the contents of all the sciences. Ontology is concerned with only the most general *formal* characteristics, or categories. The widest possible interpretation was given to the idea of category by Hegel, who attempted to exhibit the framework of reality in the development of categories from the simplest (being) to the most complex and adequate (the absolute idea), which summed up and included all the others. Apart from criticisms on details of this deduction, it may be doubted whether the deduction itself is really valid. It would certainly be possible to show that one category is more complex than another; it might even be possible to arrange the categories in the order of their complexity; but to deduce them from a primary category of being without reference to the actual constitution of particular things is fundamentally impossible, for (1) we cannot tell *a priori* what the forms of things are to be, and (2), while some forms are united by mutual implication, others are united only by their simultaneous actualization in a concrete whole, and their connexion in consequence can be discovered only by experience. Hegel's deduction is in fact an attempt to correlate categories discovered in experience, and not a true deduction.

4. Being as a unity.—A fundamental characteristic which meets us in examining reality is the fact that 'things' are not isolated but interrelated. Philosophy seeks to exhibit this interrelation as the concrete development of one unifying principle: the ontological categories are subordinate types of order or unity, abstracting particular aspects of things; they are ways in which the 'manifold' reveals its inner unity. How that which is 'many' can also be 'one' was a problem which caused the Greeks much trouble before it was realized that it is not one and many in the same respect, and that a unity is essentially a union of many elements, not an undifferentiated whole.² The puzzle of the one and the many is a puzzle only when relevant considerations, which even language recognizes, are neglected; e.g., a heap of apples is one heap of many apples, but not many heaps.

In the infinite variety which being presents there are features which transcend mere heterogeneity and reveal system. A system is a unity in which diverse elements are held together by a common principle. Some important types of unity must be indicated.

(a) The primary unity is the substance, or inde-

pendent, self-existent being. A substance is commonly regarded as that which exists in its own right, while its attributes are dependent upon it and incapable of existence apart from it. The implied separation between substance and attribute must not be pressed too far, for the substance is itself incapable of existing apart from attributes, and ought to be regarded as their unity rather than as something to which they are merely attached, for attributes are nothing more than the activities of substance, and consequently the ways in which it is. It is evident, however, that no particular thing is a complete unity, or really self-dependent, for it always carries us beyond itself; it is related to other objects in the universe, and is what it is only because the laws of the whole universe are operative in constituting it. The only substance, therefore, in the sense of completely self-contained and independent reality is the whole, the cosmos, and, when we call particular things substances, we do so in a relative sense only, referring to their indifference to particular relations, not to an absence of all relation.

(b) If a thing is not completely independent, neither is it 'constituted by its relations.' We cannot suppose an entirely unrelated 'thing' subsequently entering into relations, but neither can we adopt the notion that relations alone are constitutive of reality, for a relation implies at least two terms between which it maintains itself, or which by a union of certain of their aspects constitute it, and which are therefore *logically* prior to the relation. There can be no relation if there is nothing to relate. A relation is a particular unity of two or more terms, not necessarily something common to them, though it may be based on their common possession of some particular nature (as existence in space); or the one may be complementary to the other (as in the subject-object relation); the relation is the being of one term in so far as it concerns itself with the being of another. This connexion may be permanent or temporary, essential or unessential: the general types of relation of which a thing is capable remain unaltered, but particular relations may vary without change of the thing itself. Those who deny this include in the essence of the thing every relation in which the thing happens to be at any given moment, which contradicts the notion of essence. A relation is dependent on the mind only when the mind enters into it as a term; there is frequent confusion between the mind's presence as a term in the relation of knowing and the presentation to the mind of the relation known.

(c) A most important type of relation is that of subsumption under the same universal. A thing or quality is not merely itself; it is a particular instance of a general type which also exemplifies itself in other ways. A universal is no mere creation of the mind, even though it cannot be handled; it has no existence apart from particulars, but it exists in its particulars: a book is not merely 'this,' it possesses a nature identical in some respects with that possessed by other objects. Berkeley rejected the theory of general ideas formed by abstraction, because he thought of them as general mental images, and he could not picture to himself a triangle which was neither equilateral nor isosceles nor scalene. So far he was right, but a universal is not a mental image; nor is it an idea formed by abstraction, for before we can begin to abstract we must already have recognized the common nature which is the universal. It is a form or law of being, a general nature which is capable of expressing itself in a variety of ways. We cannot 'picture' this kind of being; and, though we may have a conception of it, the universal is not merely our conception; it is implied

¹ These are not always perceived as they are: if a stick is thrust into water, it appears to be bent, but we know that it is straight. Thought corrects perception.

² We may find a lingering trace of this mistake in the efforts of materialists and idealists alike to render reality more explicable by reducing it to a single element, matter or mind. It is not sameness that makes unity, but union of differences.

in the universal that it is a real type of existence, a unity which holds together its particulars in a unique relation. Reality shows itself in definite, recurring forms, which the particular sciences make it their business to classify.

(d) From what has been said under (a) and (c) it follows that each particular thing is a unity of universals.

(e) Not only are existences united by similarity; their diversity also is essential to their systematization. Diverse material things 'interact' upon one another in an infinity of ways, whereby changes arise in their constitution; these changes are not fortuitous, but proceed according to a definite system, as is inevitable from the fact that each factor has a definite nature of its own, and consequently their interactions, which are determined by their natures, are also definite. This phenomenon of definite changes is generally known as causation; this implies more than the mere succession of one phenomenon upon another to which it has sometimes been reduced. It is implied that the earlier phenomenon is directly concerned in initiating the existence of the later; their relation is not merely temporal; there is involved an activity in the first phenomenon which deposits the second. The cause is thus strictly the whole collection of conditions necessary to the production of a phenomenon; but it is usual to regard as cause either the last added in time or any one of the conditions which happens to be prominent for any other reason, permanently present conditions being neglected. Laws of causation which thus provide the connecting link between dissimilar phenomena are themselves only a case of that unity in difference which is the nature of the universal; and they constitute an order throughout which one general principle prevails. Being in its universal nature remains the same amid the flux of particulars; everything changes, yet the types remain.

(f) It is evident that experience is a unity of subject and object, but it has also been argued that mind is the source of *all* unity, that, in knowing, the mind unifies the data of sense and forms them into an object, unifies phenomena into universal law, etc. This contradicts the very idea of knowledge, which implies the mind's attitude to something already there, and not the production of an object. Mind in its cognitive aspect selects its objects, doubtless, and may take a thing now in its unity, now as an element in a wider unity, but only because it already is such a unity or element; in its activity of will, however, mind is constantly engaged in organizing its objects for the realization of its own purposes and thus does create unities in which a number of material objects are united as instruments with mind for the attainment of an end. Reason and emotion unite minds in common purposes, which are limited only by the boundaries of mind itself. There is, then, an ever-expanding system of unities, from the unity of the mere thing to the unity of minds in society, and finally to the ultimate unity of nature and mind in the whole.

(g) Can anything be said as to the nature of this final and supreme system? Parmenides, Plato, Spinoza, Leibniz, and Hegel are among the names that one recalls in this connexion, but with little of secure and accepted result. Attempts have been made to exhibit the whole, the absolute, as a complete, perfect, harmonious, and self-consistent system, but thereby considerable violence is done to the details of reality in order to force them to take their place in an idealistic universe. For Bradley, *e.g.*, the real is the self-consistent; but all the particulars with their relations are found to be self-contradictory and therefore only appearances. Hence the absolute, while containing and

forming the ground of all appearances, does not reproduce them as they appear to us; they are transmuted, fused, merged into something harmonious and consistent. Anything which falls short of the whole is self-contradictory (this is untrue; to be at the same time whole and part would be self-contradictory) and therefore unreal to that degree in which it does fall short. As self-contradictory it cannot directly take its place in the absolute, yet it is *something* and consequently must be represented in the absolute, in which all contradictions are reconciled and to the perfection of which all imperfection is contributory. The puzzles of time and space, relation and causation, good and evil, etc., are solved by the process of merging these phenomena in an absolute which knows them not. A satisfactory metaphysic can hardly be raised on such a basis. If nothing is what it appears to be, and each appearance is only a quite indescribable element in an unknowable whole, the fact that this whole is perfect and harmonious and contains the answer to all our questions does not afford much consolation. For, as soon as we begin to describe the absolute, the contradictions of experience are nothing to the irrationalities which emerge. For Bradley attempts to describe the whole in language applicable to the parts only, and consequently self-contradictory, while the parts, having been transmuted, are no longer the same, and the whole is not the whole of these parts. Such a procedure ignores the 'systematic' character of reality.

Accepting, as we must, the reality of the particular elements, with their incompleteness and unsatisfactoriness, we are precluded from any easy acquiescence in a complete and perfect whole already present. We must regard the whole as being itself a developing system, in which nature and mind are organic to each other, and ideals not themselves final are not yet finally realized. The real must not be identified with the ideal; the real is not, but is striving to be, the rational. We cannot recognize completeness apart from value, as Plato showed when he made the Good the mainspring of the system of reality; and that finite values are also ultimate and rooted in the nature of things seems to be a necessary condition of their being recognized as values at all. Whether the development as a whole is teleological or organic, whether all ideals exist final and complete in the mind of God and form the plan of development, or this is only the outcome of an internal necessity inherent in the finite, are questions which transcend the limits of ontology.

Prichard, *Kant's Theory of Knowledge*, do. 1909.

J. TURNER.

OPHITISM. — This is a designation, taken over from the Patristic writers, for an important phase of the Gnostic movement. The name *Ophite* properly belonged to one particular sect, but it was extended to a large group of sects whose practices and beliefs appeared to resemble those of the Ophites. With these other sects, however, the cult of the serpent, which the name denotes, had a quite subordinate place.

Our knowledge of the original Ophite sect is derived mainly from Origen's work *contra Celsum* (vi. 24-38) and his account is supplemented by Irenaeus (*adv. Har.* i. 30), Epiphanius (*Har.* xxxviii.), and pseudo-Tertullian (ii.). No document emanating from the sect itself has been preserved. Celsum had attributed to the Christians certain beliefs which he had found embodied in a

cannot be an ultimate and self-existent entity, because it implies two elements beyond itself: (1) the mind which experiences, and (2) the object which is experienced. Doubtless we cannot know reality without the mind; but this in no way implies that it is a general characteristic of reality to be incapable of existence apart from the mind or to be *psychical* matter of fact. In this type of argument the word 'experience' is used ambiguously as (a) the fact that we do have an experience, and (b) the object of which we have experience, and that which is true of (a), viz. that it cannot exist without the mind, is illegitimately transferred to (b).

The conclusion is, then, that the mind is capable of knowing an 'external' reality with qualities and relations of its own which are independent of their being known;¹ and the argument involves equally the reality of space and time.

3. Forms of being.—To investigate all the characteristics of reality would be to exhaust the contents of all the sciences. Ontology is concerned with only the most general *formal* characteristics, or categories. The widest possible interpretation was given to the idea of category by Hegel, who attempted to exhibit the framework of reality in the development of categories from the simplest (being) to the most complex and adequate (the absolute idea), which summed up and included all the others. Apart from criticisms on details of this deduction, it may be doubted whether the deduction itself is really valid. It would certainly be possible to show that one category is more complex than another; it might even be possible to arrange the categories in the order of their complexity; but to deduce them from a primary category of being without reference to the actual constitution of particular things is fundamentally impossible, for (1) we cannot tell *a priori* what the forms of things are to be, and (2), while some forms are united by mutual implication, others are united only by their simultaneous actualization in a concrete whole, and their connexion in consequence can be discovered only by experience. Hegel's deduction is in fact an attempt to correlate categories discovered in experience, and not a true deduction.

4. Being as a unity.—A fundamental characteristic which meets us in examining reality is the fact that 'things' are not isolated but interrelated. Philosophy seeks to exhibit this interrelation as the concrete development of one unifying principle: the ontological categories are subordinate types of order or unity, abstracting particular aspects of things; they are ways in which the 'manifold' reveals its inner unity. How that which is 'many' can also be 'one' was a problem which caused the Greeks much trouble before it was realized that it is not one and many in the same respect, and that a unity is essentially a union of many elements, not an undifferentiated whole.² The puzzle of the one and the many is a puzzle only when relevant considerations, which even language recognizes, are neglected; e.g., a heap of apples is one heap of many apples, but not many heaps.

In the infinite variety which being presents there are features which transcend mere heterogeneity and reveal system. A system is a unity in which diverse elements are held together by a common principle. Some important types of unity must be indicated.

(a) The primary unity is the substance, or inde-

pendent, self-existent being. A substance is commonly regarded as that which exists in its own right, while its attributes are dependent upon it and incapable of existence apart from it. The implied separation between substance and attribute must not be pressed too far, for the substance is itself incapable of existing apart from attributes, and ought to be regarded as their unity rather than as something to which they are merely attached, for attributes are nothing more than the activities of substance, and consequently the ways in which it is. It is evident, however, that no particular thing is a complete unity, or really self-dependent, for it always carries us beyond itself; it is related to other objects in the universe, and is what it is only because the laws of the whole universe are operative in constituting it. The only substance, therefore, in the sense of completely self-contained and independent reality is the whole, the cosmos, and, when we call particular things substances, we do so in a relative sense only, referring to their indifference to particular relations, not to an absence of all relation.

(b) If a thing is not completely independent, neither is it 'constituted by its relations.' We cannot suppose an entirely unrelated 'thing' subsequently entering into relations, but neither can we adopt the notion that relations alone are constitutive of reality, for a relation implies at least two terms between which it maintains itself, or which by a union of certain of their aspects constitute it, and which are therefore *logically* prior to the relation. There can be no relation if there is nothing to relate. A relation is a particular unity of two or more terms, not necessarily something common to them, though it may be based on their common possession of some particular nature (as existence in space); or the one may be complementary to the other (as in the subject-object relation); the relation is the being of one term in so far as it concerns itself with the being of another. This connexion may be permanent or temporary, essential or unessential: the general types of relation of which a thing is capable remain unaltered, but particular relations may vary without change of the thing itself. Those who deny this include in the essence of the thing every relation in which the thing happens to be at any given moment, which contradicts the notion of essence. A relation is dependent on the mind only when the mind enters into it as a term; there is frequent confusion between the mind's presence as a term in the relation of knowing and the presentation to the mind of the relation known.

(c) A most important type of relation is that of subsumption under the same universal. A thing or quality is not merely itself; it is a particular instance of a general type which also exemplifies itself in other ways. A universal is no mere creation of the mind, even though it cannot be handled; it has no existence apart from particulars, but it exists in its particulars: a book is not merely 'this,' it possesses a nature identical in some respects with that possessed by other objects. Berkeley rejected the theory of general ideas formed by abstraction, because he thought of them as general mental images, and he could not picture to himself a triangle which was neither equilateral nor isosceles nor scalene. So far he was right, but a universal is not a mental image; nor is it an idea formed by abstraction, for before we can begin to abstract we must already have recognized the common nature which is the universal. It is a form or law of being, a general nature which is capable of expressing itself in a variety of ways. We cannot 'picture' this kind of being; and, though we may have a conception of it, the universal is not merely our conception; it is implied

¹ These are not always perceived as they are: if a stick is thrust into water, it appears to be bent, but we know that it is straight. Thought corrects perception.

² We may find a lingering trace of this mistake in the efforts of materialists and idealists alike to render reality more explicable by reducing it to a single element, matter or mind. It is not sameness that makes unity, but union of differences.

resemblance sufficient to distinguish them from the classical types of Gnosticism. How are we to account for these points of agreement and difference? According to the generally accepted view, the Ophite sects represent the primitive Gnosticism, which was gradually developed and transformed into a religious philosophy by a series of historical teachers. Hippolytus, our chief Patristic authority, regards the Naassenes and the kindred sects as the fountainhead of Gnosticism; and this judgment has been endorsed and worked out as a scientific hypothesis by a number of modern scholars (cf. Bousset, Reitzenstein). A different view has lately been advanced, in the light of a searching examination of the sources, by de Faye (*Gnostiques et gnosticisme*). He holds that the Ophite sects arose comparatively late, and were ultimately based on the anti-Biblical teaching of Marcion. Their variety he attributes to a process of mutual infiltration, at a period when the great Gnostic schools had begun to break up and to fall into new and often incoherent combinations. It is the merit of this theory that it recognizes the many accretions which have found their way into the systems, in the form in which we now possess them. They cannot, in any case, be accepted as anything but composite creations, borrowing largely from one another and from rival types of Gnosticism. But on several grounds preference must be given to the older view. (a) The Ophites are already known to Celsus, who wrote about A.D. 170, and it is improbable that at so early a date the great schools should have disintegrated. (b) The influence of Marcion, if it is indeed accountable for the anti-Biblical tendency, is at best superficial. In the rôle assigned to Ialdabaoth, the oppressor of mankind, we have primarily to do with ideas derived from astral religion; and the identification with the God of the OT is of the nature of an after-thought. (c) It is impossible to ignore the strong affinities between the Ophite doctrines and those of the pagan sects which are known to us through the Hermetic literature. These sects were probably pre-Christian, and were certainly anterior to the emergence of historical Gnosticism. (d) In spite of occasional details which suggest the influence of the great Gnostic schools, we have scarcely a trace in Ophitism of their more characteristic developments—e.g., the reonology, the fall of Sophia. If the Ophite myths had arisen from a re-combination of the larger systems, these features would almost certainly have found a prominent place.

On these grounds it may be concluded that Ophitism, although at a later time it may have been modified by the influence of other Gnostic schools, represents in the main a primitive phase of the Gnostic movement. It had its true antecedents in those theosophical sects which had grown up in Egypt and the East during the age of syncretism, and it marks the beginning of the alliance of those alien sects with Christianity. In this consists the historical importance of Ophitism. It reflects the Gnostic movement in its earlier stages, and helps us to determine the sources and intrinsic character of its beliefs. From the evidence which it thus affords we may reasonably infer that Gnosticism, although it assumed the form of a Christian heresy, was in substance non-Christian, and that its speculations were for the most part a mere colouring for mythological ideas.

Dependent as we are on ecclesiastical writers who composed their notices with little understanding, from insufficient and perhaps garbled data, we have no means of ascertaining the history of Ophitism. The investigations of de Faye seem to make it clear that the original systems were gradually modified by contact with one another,

with orthodox Christianity, and with the great Gnostic schools. At the same time, they seem to have maintained themselves, though with diminishing numbers and ever-lessening importance. By the middle of the 3rd cent. they had ceased to constitute a danger to the Church, and it had become difficult to discover their precise beliefs. That they continued to exist, and to exercise a certain influence even on the latest phases of Gnostic thought, may be gathered from the many coincidences between their mythology and that of the *Pistis Sophia* (q.v.) and other Coptic writings.

LITERATURE.—The subject is treated, more or less fully, in almost all the works enumerated under Gnosticism. The following are of special value for the study of Ophitism: A. Hilgenfeld, 'Der Gnosticismus und die Philosophumena,' in *ZWT* v. [1862] 400 ff.; R. A. Lipsius, 'Über die ophitischen Systeme,' *ib.* vi. [1863] 410 ff.; A. Hönig, *Die Ophiten*, Berlin, 1839; R. Liechtenhan, art. 'Ophiten,' in *PRE³*; W. Bousset, *Hauptprobleme der Gnosis*, Göttingen, 1907; R. Reitzenstein, *Poimandres*, Leipzig, 1904; E. de Faye, *Gnostiques et gnosticisme*, Paris, 1913.

ORACLES.—See DIVINATION.

ORÃOONS. — 1. Introduction. — The Orãoons (Orãoñ, Orão) are a cultivating tribe numbering at the present time 751,983, of whom the greater part inhabit the Rānchi and Palamāu districts included in the province of Bengal, and some of the tributary States of Orissa, with a small number of emigrants in the Assam districts of Jalpaiguri and the Darjiling Tarāi, where they have gone to work in the tea-gardens. They call themselves Khurūfik or Kūrukū, a Dravidian term of uncertain origin, connected by some with the word *horo*, 'man,' or with *kuruk*, 'a crier,' or one capable of speaking, in contradistinction to the other races, whose language is not intelligible to them (for other explanations see Sarat Chandra Roy, *The Orãoons of Chōtā Nāgpur*, p. 3 ff.). This word *horo* is probably the origin of the name Orãoñ, which in other forms appears in the titles of kindred tribes, like the Kol, Korwa, and Korku. The eastern branches of the Kol tribe, according to Driver (*JASB*, 1891, pt. i. p. 25), use the initial *h*, while those farther west prefer *k*. If the names Orãoñ and Khurūfik be derived from the same root, the tribal names, like that of the allied Malē tribe, simply mean 'men'; and some have supposed that Orãoñ was a title conferred upon them by the Aryan invaders, possibly that of one of the septs with whom the newcomers first came in contact. Dalton (*Descriptive Ethnology*, p. 245) thinks that it may have been a nickname conferred upon them in reference to their roving propensities.

2. Racial characteristics. — The Orãoons are Dravidians of the full blood.

The colour of most Orãoons is the darkest brown, approaching to black; the hair being jet black, coarse, and rather inclined to be frizzy. Projecting jaws and teeth, thick lips, low narrow foreheads, broad flat noses, are the features which strike a careful observer as characteristic of the tribe. The eyes are often bright and full, and no obliquity is observable in the opening of the eyelids. No signs of Mongolian affinities can be detected in the relative positions of the nasal and malar bones, and the average naso-malar index for a hundred Orãoons, measured on the system recommended by Mr. Oldfield Thomas, comes to 113.6 (the average cephalic index is 75.4) (Risley, *Tribes and Castes of Bengal*, ii. 139; cf. his *Tribes and Castes in Bengal: Anthropometric Data*, Calcutta, 1891, f. 402 ff.; Roy, pp. 17 ff., 80 ff.).

Taking him all round, the Orãoñ is a heavier and stronger man than the Mūndā or Santāl.

3. Traditions of origin. — The remarkable fact about the Orãoons is that, as will be seen below (§ 4), they speak a language quite distinct from that of the Mūndā tribes which surround them. This has been taken to suggest that their settlement in their present home is of comparatively recent date. According to Dalton (p. 245), whose view was

'diagram,' or graphic presentation; and Origen recognizes the diagram as one current among the *Ophianoi*, whom he describes as an insignificant body, with no title to rank as Christians. Within this sect, he tells us, the God of the OT was known as 'the accursed God,' and the serpent which had led men to transgress His commandments was an object of reverence. The members of the sect made use of a seal, bearing the formula, 'I have been anointed with white ointment from the tree of life,' and mystical observances of various kinds played a great part in their worship. Their myths, so far as it can be deciphered from the diagram which Origen sets forth in detail, seems to have been closely similar to that of the anonymous 'Gnostics' of Irenæus. But it may be gathered that the sect laid little stress on doctrine, and was a *τελετή*, or mystery-association, rather than a school. From the notice of pseudo-Tertullian it would appear that actual worship was offered to the serpent. Epiphanius describes the chief rite as a Eucharist, in which a serpent was released from a box and was allowed to entwine itself round the sacred elements.

This shadowy sect, however, was only one of many which are classed together under the comprehensive name of Ophites. The following are usually assigned to the group: (1) Cainites, (2) Perates, (3) Sethians, (4) 'Gnostics' of Irenæus, (5) Naassenes, (6) Barbelo-Gnostics, (7) Severians, (8) Nicolaitans, (9) Archontics, and (10) Justinians. In all these systems a place is given to the serpent, though its rôle is never much more than incidental. For the most part, as in Ophitism proper, it appears as the enlightener, and therefore the benefactor, of men; and by the Perates and Sethians it is identified with the Logos principle which at last manifested itself in Jesus. The 'Gnostics' of Irenæus view it under two contrary aspects. At first the benefactor of man, it shared in the punishment inflicted on him by the hostile God, and henceforth became his enemy. But, while the serpent is thus brought into connexion with the Biblical story, it is associated in some of the systems with a different order of ideas. It is the symbol, not so much of man's emancipation, as of the vitalizing principle of nature, or soul of the world. Thus the Naassenes described the serpent as a moist substance pervading everywhere and informing all existence. The Sethians conceived of a wind in the form of a serpent entering into the mingled world of light and darkness and begetting *voûs*. In the system of Justinus the serpent has a similar significance, which may be traced likewise in the figure of Leviathan, the circle enclosing the concentric spheres of the archons, in the Ophite system proper. In view of the wide-spread prevalence of serpent symbolism in Oriental religion, it is possible that this cosmical conception was the primary one, and that the Biblical interpretation was adopted later, as the result of Christian influence.

The figure of the serpent, however, has only a minor place in the Ophite systems, and their employment of it cannot be singled out as their common characteristic. It is impossible, indeed, to define the various members of the group in terms of any one distinguishing feature. They are best regarded simply as the anonymous Gnostic systems, contrasted with those which bear the names of historical teachers. The fact that they thus stand apart from the classical forms of Gnosticism is highly significant, though its significance, as we shall presently see, may be interpreted in two different ways.

While the Ophite sects are marked out by no definite peculiarity, they broadly resemble one another in so many respects that their inclusion in

a common group is justified. Like the Gnostic schools generally, they rest on the conception of a cosmical disaster, whereby a portion of the heavenly light has become imprisoned in the lower world of darkness. The redemption of this higher essence is achieved by a being who descends out of the heavenly world, and who accomplishes his work partly by a weakening of the hostile powers and partly by the communication of a mystical gnosis (see Gnosticism). But, apart from the doctrines which they share with all forms of Gnosticism, the Ophite sects present a number of features which are more specially characteristic.

(1) The highest being is generally designated by the name *Anthropos*, the First Man. (2) A prominence is given to a female principle (*Μήνη*), who is conceived as presiding over the work of redemption. The figure of *Sophia*, the fallen divinity, plays an altogether minor part, and was probably absent from Ophite teaching in its original form. (3) In almost all the systems a triad stands at the beginning of the cosmical process. Thus the Sethians commence with Light, Spirit, Darkness; the 'Gnostics' of Irenæus and the Naassenes with the Father and the Son, to whom the Holy Spirit is added, as a female principle. (4) The systems are mythological rather than speculative, and the occasional attempts to construe the myths in a philosophical sense are naive and unsuccessful. The mythology is based mainly on astral conceptions—e.g., the archons are planetary divinities, of whom Saturn (*Ialdabaoth*) is the chief. There is little trace of the æonology which is so conspicuous in the more elaborate systems, and the various powers are conceived as originating from each other by a process of generation. (5) A cardinal importance is attributed in all the sects to magical rites, sacraments, secret watch-words, charms, and amulets. It is apparent that the beliefs embodied in the myths were little more than a background for the mystical observances in which the true gnosis consisted. (6) A peculiar feature of the sects is their anti-Judaistic bias, in which they appear to reflect, in exaggerated form, the attitude of Marcion. *Ialdabaoth*, the chief of the archons who hold man in bondage, is identified with the God of the OT, and opposition to his decrees is held to be incumbent on the true Gnostic. For this reason honour is rendered not only to the serpent, but also to the characters which stand condemned in Biblical history—Cain, the Sodomites, Esau, Korah, Judas. In some of the sects the revolt from the OT expresses itself in the encouragement of licentious practices; but the general tendency is towards a rigid asceticism. The God of the OT is viewed primarily as the Creator, responsible for the material universe, out of which the higher natures seek to be delivered. (7) The Ophite systems are impregnated with Christian ideas to a far less extent than the classical Gnostic schools. In some of them (Ophites of Celsus and Origen, Nicolaitans, Archontics) the figure of the Redeemer is entirely absent. In others (e.g., Perates) no historical function is given to the Redeemer, who is a being of purely mythological or metaphysical nature. Even in systems which assume the identity of the Redeemer with Jesus the Christian elements seem to be little more than an embroidery on a pagan groundwork. Of this we have a striking evidence in the Naassene document preserved by Hippolytus, where the pagan original can be detached, without much difficulty, from the Christian commentary with which it is interwoven.

In Ophitism, therefore, we have a group of widely diversified systems—built up out of the debris of Babylonian, Persian, Syrian, and Egyptian mythologies—which yet possess features of

resemblance sufficient to distinguish them from the classical types of Gnosticism. How are we to account for these points of agreement and difference? According to the generally accepted view, the Ophite sects represent the primitive Gnosticism, which was gradually developed and transformed into a religious philosophy by a series of historical teachers. Hippolytus, our chief Patristic authority, regards the Naassenes and the kindred sects as the fountainhead of Gnosticism; and this judgment has been endorsed and worked out as a scientific hypothesis by a number of modern scholars (cf. Bousset, Reitzenstein). A different view has lately been advanced, in the light of a searching examination of the sources, by de Faye (*Gnostiques et gnosticisme*). He holds that the Ophite sects arose comparatively late, and were ultimately based on the anti-Biblical teaching of Marcion. Their variety he attributes to a process of mutual infiltration, at a period when the great Gnostic schools had begun to break up and to fall into new and often incoherent combinations. It is the merit of this theory that it recognizes the many accretions which have found their way into the systems, in the form in which we now possess them. They cannot, in any case, be accepted as anything but composite creations, borrowing largely from one another and from rival types of Gnosticism. But on several grounds preference must be given to the older view. (a) The Ophites are already known to Celsus, who wrote about A.D. 170, and it is improbable that at so early a date the great schools should have disintegrated. (b) The influence of Marcion, if it is indeed accountable for the anti-Biblical tendency, is at best superficial. In the rôle assigned to Ialdabaoth, the oppressor of mankind, we have primarily to do with ideas derived from astral religion; and the identification with the God of the OT is of the nature of an after-thought. (c) It is impossible to ignore the strong affinities between the Ophite doctrines and those of the pagan sects which are known to us through the Hermetic literature. These sects were probably pre-Christian, and were certainly anterior to the emergence of historical Gnosticism. (d) In spite of occasional details which suggest the influence of the great Gnostic schools, we have scarcely a trace in Ophitism of their more characteristic developments—e.g., the æonology, the fall of Sophia. If the Ophite myths had arisen from a re-combination of the larger systems, these features would almost certainly have found a prominent place.

On these grounds it may be concluded that Ophitism, although at a later time it may have been modified by the influence of other Gnostic schools, represents in the main a primitive phase of the Gnostic movement. It had its true antecedents in those theosophical sects which had grown up in Egypt and the East during the age of syncretism, and it marks the beginning of the alliance of those alien sects with Christianity. In this consists the historical importance of Ophitism. It reflects the Gnostic movement in its earlier stages, and helps us to determine the sources and intrinsic character of its beliefs. From the evidence which it thus affords we may reasonably infer that Gnosticism, although it assumed the form of a Christian heresy, was in substance non-Christian, and that its speculations were for the most part a mere colouring for mythological ideas.

Dependent as we are on ecclesiastical writers who composed their notices with little understanding, from insufficient and perhaps garbled data, we have no means of ascertaining the history of Ophitism. The investigations of de Faye seem to make it clear that the original systems were gradually modified by contact with one another,

with orthodox Christianity, and with the great Gnostic schools. At the same time, they seem to have maintained themselves, though with diminishing numbers and ever-lessening importance. By the middle of the 3rd cent. they had ceased to constitute a danger to the Church, and it had become difficult to discover their precise beliefs. That they continued to exist, and to exercise a certain influence even on the latest phases of Gnostic thought, may be gathered from the many coincidences between their mythology and that of the *Pistis Sophia* (q.v.) and other Coptic writings.

LITERATURE.—The subject is treated, more or less fully, in almost all the works enumerated under GNOSTICISM. The following are of special value for the study of Ophitism: A. Hilgenfeld, 'Der Gnosticismus und die Philosophumena,' in *ZIT' v.* [1862] 400 ff.; R. A. Lipsius, 'Über die ophitischen Systeme,' *ib.* vi. [1863] 410 ff.; A. Hönig, *Die Ophiten*, Berlin, 1889; R. Liechtenhan, art. 'Ophiten,' in *PRE³*; W. Bousset, *Hauptprobleme der Gnosis*, Göttingen, 1907; R. Reitzenstein, *Poimandres*, Leipzig, 1904; E. de Faye, *Gnostiques et gnosticisme*, Paris, 1913.

ORACLES.—See DIVINATION.

ORÆONS. — 1. Introduction. — The Orāons (Orāōn, Orāo) are a cultivating tribe numbering at the present time 751,983, of whom the greater part inhabit the Rānchi and Palamāu districts included in the province of Bengal, and some of the tributary States of Orissa, with a small number of emigrants in the Assam districts of Jalpaiguri and the Darjiling Tarāi, where they have gone to work in the tea-gardens. They call themselves Khurūnk or Kūruk, a Dravidian term of uncertain origin, connected by some with the word *horo*, 'man,' or with *kuruk*, 'a crier,' or one capable of speaking, in contradistinction to the other races, whose language is not intelligible to them (for other explanations see Sarat Chandra Roy, *The Orāons of Chōtā Nāgpur*, p. 3 ff.). This word *horo* is probably the origin of the name Orāon, which in other forms appears in the titles of kindred tribes, like the Kol, Korwa, and Korku. The eastern branches of the Kol tribe, according to Driver (*JASB*, 1891, pt. i. p. 25), use the initial *h*, while those farther west prefer *k*. If the names Orāon and Khurūnk be derived from the same root, the tribal names, like that of the allied Mālē tribe, simply mean 'men'; and some have supposed that Orāon was a title conferred upon them by the Aryan invaders, possibly that of one of the septs with whom the newcomers first came in contact. Dalton (*Descriptive Ethnology*, p. 245) thinks that it may have been a nickname conferred upon them in reference to their roving propensities.

2. Racial characteristics. — The Orāons are Dravidians of the full blood.

'The colour of most Orāons is the darkest brown, approaching to black; the hair being jet black, coarse, and rather inclined to be frizzy. Projecting jaws and teeth, thick lips, low narrow foreheads, broad flat noses, are the features which strike a careful observer as characteristic of the tribe. The eyes are often bright and full, and no obliquity is observable in the opening of the eyelids. No signs of Mongolian affinities can be detected in the relative positions of the nasal and malar bones, and the average naso-malar index for a hundred Orāons, measured on the system recommended by Mr. Oldfield Thomas, comes to 113.6' (the average cephalic index is 75.4) (Risley, *Tribes and Castes of Bengal*, ii. 139; cf. his *Tribes and Castes in Bengal: Anthropometric Data*, Calcutta, 1891, i. 402 ff.; Roy, pp. 17 ff., 80 ff.).

Taking him all round, the Orāon is a heavier and stronger man than the Mūndā or Santāl.

3. Traditions of origin. — The remarkable fact about the Orāons is that, as will be seen below (§ 4), they speak a language quite distinct from that of the Mūndā tribes which surround them. This has been taken to suggest that their settlement in their present home is of comparatively recent date. According to Dalton (p. 245), whose view was

accepted by Caldwell (*Dravidian Grammar*², p. 40), their traditions connect them with the Konkani, the lowland strip along the western portion of the Bombay Presidency, lying between the range of the W. Ghâts and the sea. Thence they are said to have wandered eastward along the central range of hills forming the backbone of the peninsula, and finally to have reached that portion of the range which overlooks the Gangetic valley in the province of Bengal, known as the Kaimûr hills. Here for a time they settled in the plateau of Rohtās in the Shahābād district. When they were expelled from his refuge by the Muhammadans, the tribe is believed to have split into two divisions—one, under the leadership of their chief, following the course of the Ganges and finally settling on the Ajmahāl hills, the other, led by his younger son, going up the valley of the Son into alamān, turning eastward along the river Koel, and taking possession of the north-west portion of the plateau of Chotā Nāgpur. The Malē or Maler tribe and the Pahārias, who still occupy the Rajmahāl hills, are closely connected with the Orāons and speak an allied language.

'Some say that they expelled the Mundas from this portion of the country, and forced them to retire to their present settlements in the south of Lohardagā; but this statement is not borne out by local tradition, nor can it be reconciled with the fact that the few Mundas found in the Orāon pargands on the plateau are acknowledged and looked up to as the descendants of the founders of the villages in which they live' (Risley, ii. 239; Roy, p. 17 ff.).

The Orāons, again, are identical with the Dhāngars, whose name implies that, like the Pahārias, they are highlanders.

4. Language.—The traditions of the tribe are in some degree confirmed by their language. The old theory that the non-Aryan tribes of this part of India can be divided into a Dravidian and a Kolarian branch has broken down before the evidence of anthropometry. The distinction between the so-called Kolarian and Dravidian branches is purely linguistic, and does not correspond to any differences of physical type. Sarat Chandra Roy, however, disputes this assertion, and remarks that 'any one who has lived long enough amongst them and observed them with some attention can in most cases distinguish a genuine Orāon from a genuine Mūdā' (p. 82). The Dravidian branch, which includes the Orāons, speaks a Dravidian language, while that of the Kolarians is now designated Mūdārī. Kurukh, the Orāon tongue, is decidedly a Dravidian language, and is still spoken by over 500,000 people, though more than 100,000 Orāons have substituted Hindi or Mūdārī for their mother-tongue.

The Orāons, then, are closely allied to their neighbours the Malē Pahārias and Dhāngars, and seem to have emigrated to this part of the country later than the Mūdārī tribes which surround them. The most primitive branch of the tribe is that known as the Bergē or Bergā Orāons, who occupy the State of Gangpur, the long undulating table-land, which gradually slopes down to the north from the higher plateau of Chotā Nāgpur. They are a savage, fierce-looking people, probably a mixed race who have lived for centuries isolated from their brethren, and now speak a dialect distinct from theirs.

5. Religion: general characteristics.—

'The religion of the Orāons is of a composite order. They have, no doubt, retained some portion of the belief that they brought with them from the Mūdās and the Mundas and the Jhārs, but they have to a great extent blended them with their own beliefs.'

They differ from the Mūdās in always possessing some visible object of worship—a stone, a wooden post, or a lump of earth. Their religion in its general outline is a form of animism, closely

allied with that practised by their Dravidian brethren (see DRAVIDIANS [North India]).

6. The worship of Dharmesh, or Dharmē.—The head of their pantheon is a spirit known as Dharmī, Dharmē, or Dharmesh. One of the writers of this article, Hahn, is disposed to regard this name as philologically distinct from the Skr.-Hindī *dharma*, 'virtuous,' 'godly,' and to translate it 'creator.' But there seems to be no sound evidence in support of this view, and it appears safer to regard the name as borrowed from the Hindus of the Plains. The name as used by the Orāons is feminine; but Dharmē is more generally regarded as a male, the husband of Dhartī Mātā, or Mother Earth. The worship of a deity with a similar name, Dharmarājā, is common in Bengal. There he is by some identified with Yama, the Hindu god of death-land, by others with the sun. Others, again, who have been more fully Hinduized, regard him as a snake-god, and some as a form of Śiva or Viṣṇu. He is a god of the lower castes, worshipped, not through Brāhmins, but by a member of one of the castes who adore him (Gait, *Census Report Bengal, 1901*, i. 201). He has, again, been identified with Buddha in that debased form of Buddhism which still survives among the Sārā tribe in Orissa (*ib.* i. 204). As the Orāons regard Dharmē as manifest in the sun, the identity of these two forms of belief may be regarded as established. Dharmē, in fact, seems to represent one member, the male, in the androgynous cultus of a pair of deities, of whom the female is represented by Mother Earth.

Dharmē is regarded as the source of light and life. If sacrifice is made to him, which is usually done in the harvest season or in performance of a vow, it must, under the usual principle of imitative magic, consist of fowls or goats white in colour. The existence of the world, the gift of children, the growth of the fruits of the earth, are all believed to be due to him. The Orāon turns his thoughts to him in times of sickness or other calamity, when sacrifices to the evil spirits have proved to be of no avail. At such times the usual prayer offered to him runs: *Ana Dharmē akkun ninim ra'adāi*, 'O God! now all rests with thee.' Sacrifices are vowed to him in order to obtain children and for the cure of diseases of the reproductive organs.

In the legends of the tribe he is described as slaying the monstrous dragon into whose mouth the human race entered, believing it to be a cleft in the rocks. The body of this creature was destroyed by a rain of fire, by the heat of which the Hanumān ape (*Semnopithecus entellus*) got the black marks on his face which he bears to this day, and the mahogany tree (*Diospyros melanoxylon*) its black wood. Only one boy and one girl escaped destruction by hiding themselves in a crab shell, where the hounds of Dharmē, which were of all the colours of the rainbow, as befitted those of the sun-god, discovered them. To this pair Dharmē presented a pumpkin which contained the seeds of all varieties of corn, vegetables, and fruit. Thus the world was peopled.

Another legend of Dharmē is etiological, explaining the peculiarities of certain birds. Some Asuras, a Bengal tribe which still practises the art of iron-smelting, were at work and the smoke of their furnace incommoded the god. He first sent the wagtail to remonstrate with them; but they twisted its tail so that it has gone on wagging ever since. Next he sent the crane; but they caught it by the head and dragged it, so that its neck became as long as it is now. Then he sent the robin redbreast; but they caught with a pair of red-hot pliers, and hence he comes to have a scarlet breast. Finally, he sent his son in the form of a leprosy youth. He entered the furnace, pulled out some ingots of gold into which the iron had become converted, and came out cured of his disease. He had then no difficulty in tempting the Asura men to enter the furnace themselves, while their women worked the bellows to make the fire blaze more fiercely. But they all perished, and their wives craved the mercy of Dharmē, who banished them to the forests, where their spirits are propitiated with animal sacrifice and rice, and with oblations of spirituous liquor.

The most important rite in the worship of Dharmē consists in his emblematical marriage to Mother Earth, which is celebrated at the annual *Ktaddi* festival, *ktadd* meaning 'offspring' or the

sprouting of plant life. This is one of the common rites of imitative or symbolical magic by which the fertility of the soil and the growth of the crops are promoted. Here Dharmē is clearly symbolized by the sun, because at sowing time the sower faces the sun and throws the first handful of seed towards it in order to secure the blessing of Dharmē. His union with the Earth Mother is celebrated in the spring, when the *sāl* (*Shorea robusta*), one of the sacred trees of the tribe, puts forth its blossoms.

Dharmē is represented for the occasion by the tribal priest, and his consort by Kālo Pakko, the spirit which occupies the sacred grove attached to every Orāon village. Hither the priest, accompanied by his wife and other villagers, repairs, and, after sacrificing a fowl and offering rice and flowers, daubs the roots of an old *sāl*-tree with vermilion and oil, and, tying a cord round the trunk of the tree, weds Mother Earth to himself as representing Dharmē. He then daubs his own forehead, arms, breast, and ears with vermilion, as is done to this day in the Hindu marriage service—a survival of the original blood-covenant. Then he sacrifices a second fowl, and utters this prayer: 'O Kālo Pakko, may there be abundance of rain and fruitfulness in our houses and fields!' Next several fowls are sacrificed to evil spirits in general, and all the people eat and carouse as at an ordinary marriage feast. Towards evening the priest is carried on a strong man's back to his house, where his wife meets him and washes his feet. Next morning he goes round the village, and at every door the women meet him, wash his feet, and present him with an offering of rice and money, of which he returns part, and it is kept for good luck. His assistant throws water on every roof, and some of this is taken inside with the object of bringing prosperity. After this all eat and make merry, dance, and sing obscene songs, and indulge in orgies during which all self-respect and decency are forgotten.

This is the feast of fertility, and the season for marriages in the tribe. After it closes evil spirits are at rest, and a time of quiet and enjoyment is ushered in, which lasts until the rainy season sets in during June and July.

In his account of this feast under the name of *Sarkūl* Dalton adds an incident which explains the significance of one part of the ceremony. When the priest visits each house, he dances with the women and places some of the *sāl*-flowers in their hair and over the door.

'The moment that this is accomplished, they throw the contents of their water-vessels over his venerable person, heartily dousing the man whom a moment before they were treating with such profound respect. But to prevent his catching cold they ply him with as much of the home-brew as he can drink, consequently his reverence is generally gloriously drunk before he completes his round' (p. 261).

It is clear that we have in this one of the rites of symbolical or imitative magic, in which pouring water over a sacred or tabued personage is regarded as a charm which will produce abundant rain (*GB*³, pt. i., *The Magic Art*, London, 1911, i. 247 ff.; Crooke, *PR* i. 73 ff.).

7. The worship of malevolent spirits.—While Dharmē is a benevolent deity, the chief interest of the Orāon centres in the malignant spirits by which he deems himself to be surrounded. These demand regular periodical propitiation to prevent them from doing mischief. They are known in the Kurukh language as *nād*, which is practically equivalent to the *bhūt* of the Hindus. The following are the chief spirits of this class.

(a) Darhā, whose abode is generally in an ancient grove of *sāl*-trees or of the *bel* (*Aegle marmelos*), where he is represented by a ploughshare or a piece of bamboo fixed in the earth in a slanting position near the root of a *sāl*-tree. Darhā is regarded as the tutelary deity of the village. He is evidently one of those vague impersonations whose titles and functions are not clearly defined and merge in those of other deities. Dalton (pp. 129, 220) identifies him with Dharti, or earth, and with the Dūr Pahār of the Cheros, Kharwārs, and Birhors. According to the same writer (p. 238), Darhā is the only spirit propitiated by the Orāons in some parts of the country.

'If fowls are offered to him, they must be of divers colours, but once in three years he should have a sheep from his votaries;

and once in the same period a buffalo,' the flesh of which is shared with the tribal priest.

But it is believed that at some of his more important shrines, in spite of the pressure of British law, human sacrifices are still sometimes offered. It is said that this rite should be performed once in a generation, and that in default of it great misfortunes will fall upon the tribe. The arrangements are made at a secret council of elders, and certain persons are said to be selected to catch a victim, generally a boy or girl, who is called *ondkā*, 'seized,' 'eaten.' Dalton further remarks (p. 258) that those members of the tribe who are known as *bhagat* (Skr. *bhakti*, 'faith,' 'devotion'), i.e. those who have adopted the worship of the Hindu deity Śiva, have traditions of human sacrifice.

'I have been informed,' he says, 'by a Christian convert, who formerly belonged to the Bhagat fraternity, that in some villages near Lohardāgga, they usually make an image of a man in wood, put clothes and ornaments on it, and present it at the altar of a Mahādeo. The person who officiates as priest on the occasion says: "O Mahādeo! we sacrifice this man to you according to ancient custom! Give us rain in due season, and a plentiful harvest!" Then, with one stroke of the axe, the head of the image is cut off, and the body is removed and buried. The Gonds make a similar offering to their Baradeo, and it was not always in effigy that the human sacrifice is made. There are grounds for concluding that the practice was observed by all the peoples of Dravidian origin.'

This is clearly akin to the well-known rites of propitiatory human sacrifice among the Khonds, or Kandhs (*q.v.*).

(b) The *Deshwālī nād*, the 'evil spirit of the land,' is a female. She is attached to every village, and is represented, like other Orāon deities, by a wooden peg. Every third and tenth year sacrifices must be made to her of buffaloes and fowls. If this rite be neglected, she will cause mischief and bring disease on men and cattle. She lives in the *sarnā*, or sacred grove, attached to each village.

(c) The *Khūntā*, or 'peg,' is the special *nād* of the three clans found in every village. It is represented by a small wooden peg fixed in the ground. Every third year, when the rice seedlings are being transplanted, a goat is sacrificed to the *Khūntā nād*, and yearly a fowl is offered to him at the same season. Every village has its own *Khūntā nād*, of which the residents alone know the secret name. This *nād* is of irritable temper, and, if his name is not kept secret, he is offended. In fact, no other *nād* more resents neglect.

(d) Kālo Pakko, Jhakrā Būrhī, or Sarnā Būrhī is the 'old woman' of the *sarnā*. She has already been mentioned in connexion with the cult of Dharmē (§ 6). She is represented among the Mūndās by Jāhīr Erā and Desauli (Dalton, p. 261). Every year, at the *Khaddī* festival, a black fowl is sacrificed to her with some rice and rice-beer, and an earthen pot of water is placed at the stem of a *sāl*-tree for her refreshment. If, during the night, there has been a considerable evaporation of water from the jar, it portends, according to the usual system of symbolical magic, a failure of rain during the coming year. Again, if the fowls destined for sacrifice pick up some of the grains of rice offered to Kālo Pakko, it is an omen that she accepts the offering and will give them abundant rain and a good harvest. This forms an interesting parallel to the *tripudium* of the Romans (Cicero, *de Div.* ii. 71; F. Granger, *Worship of the Romans*, London, 1895, p. 189 f.).

Some authorities connect the worship of Kālo Pakko with that of the spirits of the Asuras who were slain because they offended Dharmē (§ 6), or suggest that the worship was intended to propitiate the ghosts of a people, the autochthones of the country, dispersed and slain by the later Dravidian and Mūndā settlers. On the other hand, the close connexion of Kālo Pakko with the *sarnā*, or sacred grove, seems to make it clear that she is the im-

personation of the tree-spirit, many representatives of which are found in N. India. They are, like Kālo Pakko, closely connected with the rainfall and the fertility of crops and cattle (*GB*³, pt. i., *The Magic Art*, ii. 47 ff.). Hence, among the Orāons, she is often identified with Mother Earth, and her marriage and union with Dharmē are solemnized.

8. Evil spirits which need only occasional propitiation.—Among this class the following are the most important.

(a) Barandā is the hill *nād*, or spirit. When he leaves the mountain, his usual abode, and takes up his residence with men, he brings misfortune and poverty with him. He demands propitiation by an occasional sacrifice. He can be prevented from entering a house by the inmates eating sour or unsavoury food; this disgusts him and he leaves the place. According to Dalton (p. 258), he is propitiated with a sacrifice of bullocks or buffaloes because he is an evil spirit, 'who, when malignantly inclined, frustrates God's designs of sending rain in due season to fertilise the earth.' In Palamāu, according to Gait (i. 197), Barandā is believed to be a female formerly resident in Nāgpur, while in Rānchi he is thought to be, as already described, a malevolent male living in the hills, and always endeavouring to enter a house in order to bring misfortune upon the inmates. In Palamāu he is propitiated once in three years at the harvest-home. Each family has a service of its own, which is conducted by the *baigā*, or aboriginal priest. A she-goat is sacrificed after being induced to eat rice from the hands of the priest, the idea being that it is a willing victim, and that the responsibility for its death will not fall upon the person who arranges the sacrifice. The victim is cooked and consumed then and there by all present, the priest receiving a double share.

(b) The Addi or Erpā *nād* is the spirit of the household and of the landed property which it owns. The oldest among the owners keeps its representative in the shape of a wooden peg suspended in a tiny basket from the roof of his house. Whenever disease occurs to any member of the family, a fowl or goat is sacrificed to the *nād*. Some of the blood is sprinkled on the peg, and a feather of the fowl or a bone of the goat, with a few grains of rice and small coins, is placed in the basket which contains it.

(c) Chandī, the moon-goddess, is identical with Chando Omol of the Mūndās, and with Chando Bonga of the Santāls (Dalton, pp. 186, 214). Among the Orāons she is the goddess of hunting, and to her sacrifices of fowls and goats are offered to ensure success at the tribal hunting parties which take place yearly about the time of the full moon in Mareh (see Roy, pp. 220 ff., 224 ff., 239 ff.).

(d) The *churel* is the ghost of a woman who has died in childbirth or in a state of impurity. When such a woman is buried, her angry ghost is appeased by the sacrifice of a black fowl performed on her grave, on which grains of rice are scattered to appease the spirit. As usual (see BENGAL, § 26), she appears as a woman with her feet turned backwards. She is constantly endeavouring to enter houses where a baby has been born, appearing as a black cat which tears the mother and infant. She also entices away youths and girls at night. When such dangers are feared, special sacrifices are offered at her grave, and the father of the child remains awake to repel her attacks.

(e) The *mūā*, 'the dead ones,' are, like the *bhūt* of the Plains, the ghosts of people who have died a violent death. The most common variety is the *baghaut*, the ghost of a man who has been killed by a tiger. In the place where such a tragedy has occurred a cairn is erected, to which every passer-by

adds a stone. Occasionally a fowl or goat is sacrificed there, or on the spot where a murder has been committed, or where a person has been executed, in order to appease the restless malevolent spirit.

9. Minor spirits and apparitions.—Among these are Barando, the spirit which causes whirlwinds, a disgusted restless *nād*, which goes whirling about in search of a fresh resting-place. The Orāon scares him by shouting *Hādī!*, 'Be off!' The *ekh*, or nightmare, is also a restless spirit of the departed, seeking for repose by entering the body of a sleeping person. The *bai* is another ghost which causes delirium, epilepsy, fainting fits, and lunacy. Charms and spells must be used to scare it. Aerolites and meteors are also departed spirits wandering about in search of a resting-place. In fact, the Orāon is surrounded by a world of spirits, some of which appear in dreams, some while he is awake, in the shape of giants or huge pillars without heads and arms.

10. Tree-worship.—The Orāon conceives trees to be the abode of spirits. Near every village a small fragment of the primeval forest, known as the *sarnā*, or *jāher*, is preserved as a refuge for the tree-spirits which have been disturbed and disestablished when the jungle was cut down. The trees of this grove are guarded by a most effective tabu, and no one dares to cut them down or even to collect the fallen branches (Roy, pp. 108, 172). In this grove the *sāl* is regarded as the most sacred tree, and it is the abode of Kālo Pakko or Sarnā Būrhī, the 'old woman' of the grove. Its flowers, as we have seen (§ 6), are used in the rite of rain-making, and from its branches is made the bower under which the marriage ceremonies are performed. The *karam*-tree (*Nauclea parvifolia*) is another sacred tree, worshipped as a benevolent godling. The *karam* festival is held at the beginning of harvest, about the end of August.

After purifying themselves by fasting, the youths and girls of the tribe go singing and dancing to the forest to fetch a branch of the tree. This is brought in triumph to the village dancing-place (*ākhrā*). Some of the lads, beating drums and clanging cymbals, seem to become possessed by the tree-spirit and throw themselves on the ground, shrieking and moving their heads and limbs in a state of frenzy. The branch, which is stuck into the ground in the centre of the arena, is decorated with flowers and lights. There it is watched by persons told off for the purpose, while the rest of the villagers hold high revel. When the feast is ended, one of the elders is seated on a stool close to the tree. An umbrella is held over him, and the people take their places round him. He recites the tribal legends, in return for which a collection is made for him among the audience. Dancing, drinking, and merriment go on all night. Next morning the tree is taken, with singing, dancing, and beating of drums, to the nearest river or stream, into which it is plunged. While the tree is fixed in the arena, the people worship it by bowing before it, and the priest sacrifices a victim.

The festival is believed to bring good luck and prosperous harvests, and it is regarded as a sort of thanksgiving at the first gathering of the crops. The flinging of the branch into water at the conclusion of the rite seems to indicate that its primary object is to act as a rain-charm.¹

11. Totemism.—The Orāon tribe is divided into a number of septs of which a catalogue is given by Risley (*TC* ii. 113 f.). As in the case of many of the allied Dravidian tribes, these septs are named after various animals, plants, or material objects, such as the tiger, the wild dog, the squirrel, the cobra, the cel, the *bar*-tree (*Ficus Indica*), the *pūsā*, or fruit of the *kusum*-tree (*Schleichera trijuga*), and so on, each of which the members of the tribe are prohibited from cutting, eating, burning, carrying, using, and so forth (*ib.* i. Introd. p. xliii). But totemism, as it appears among the Orāons, is recognized at present merely as a mode of defining the exogamous groups, and, if in ancient times it exercised influence over their religious beliefs, it has now been so completely overlaid by other

¹ For other accounts of the *karam*-tree rites among the Orāons, Mūndās, and allied tribes see Dalton, pp. 193, 239; Gait, i. 191; *PR* ii. 94 ff.

superstitions and usages that it is no longer possible to recognize it. The question of totemism is fully discussed by Roy, p. 324 ff.

12. Ancestor-worship and the condition of the dead.—Dalton (p. 257) was of opinion that the Orāons 'have no belief whatever in a future state.' But this assertion is opposed to the results of his own investigations into their death customs and to other facts which have been brought to light by subsequent research. The body is carefully oiled and shrouded to placate the spirit; offerings of rice and copper coins, the latter probably intended as a viaticum to help the spirit on its way to the other world, are placed in the mouth of the dead, or thrown upon the funeral pyre and grave, both modes of disposal of the dead being recognized among them. After cremation the fragments of the bones are carefully gathered, placed in a new earthen jar, and brought ceremoniously to the village, the mourners scattering parched rice along the road, probably not, as Dalton supposed (p. 261), to mark the route, but rather to pacify the angry vagrant spirits which might trouble the ghost of the man whose obsequies are being performed. The cinerary urn is suspended to a post in front of the residence of the dead in order that the ghost, when so disposed, may have easy access to them. In the following December or January the solemn rite is performed of removing the bones of all those who have died during the last year to the tribal cemetery, which from the first establishment of the community has been appropriated to this purpose. Orāons are extremely tenacious in this matter.

'And even when one of them dies far from his home, his relations will, if possible, sooner or later, recover the fragments of his bones, and bear them back to the village, to be deposited with the ashes of his ancestors' (Dalton, p. 263).

Thus they recognize a conscious life of the departed. The dead are conceived as forming a community, and by the removal of his bones to the tribal cemetery the dead man obtains admission to their society. At the cemetery the bone jar is buried in a shallow grave, over which a slab is placed or an oblong stone is erected as a monument.

The death tabu is also recognized. During the time when the bones of the dead are retained in the village no marriage can take place. The persons who have had occasion to touch the body are regarded as unclean, and must wash their hands and feet after the funeral. One of the degraded Mahili tribe, whom Orāons despise and with whom they will not eat, acts as funeral priest (*kartā*).

The subsequent rites are intended to ascertain if the spirit has really departed to death-land, and to prevent it from returning to trouble the survivors. The first object is attained by spreading ashes on the floor of the house after the removal of the body. The door is carefully shut, and, when the mourners return from the cremation ground, the ashes are examined to ascertain if any foot-prints are visible upon them. If anything appears which suggests the footprint of a man, it is supposed that the wandering spirit has failed to attain its desired rest, and must be appeased by offerings of food at the grave. The same belief prevails among many of the lower castes in N. India (*PR* i. 176, ii. 72 ff.). If the imprint on the ashes resembles the footprint of a cat, it is believed that the ghost has become an evil spirit, in which event sacrifices must be offered to appease it.

From this it would appear that ancestor-worship, in the true sense of the term, does not exist among the Orāons. The dead are regarded not as superior beings, but as dependent upon the living for food and other necessities. Though they are propitiated to induce them to remain in death-land and to refrain from troubling the living, this placation does not reach the dignity of worship. The

grave-stone erected over the place where the ashes and bones have been deposited is daubed at festivals with vermilion (possibly the survival of an earlier blood-sacrifice), and with oil and milk. Sometimes a fowl is sacrificed near these stones to secure the good will of the dead. At each of the tribal festivals fragments of food, with some liquor, are put outside the house, or allowed to fall upon the floor for the refreshment of the ancestors. In the same way, when the new rice is cooked, before any one dares to partake of it a portion is laid aside for them, and a fowl is offered. In times of danger or distress prayers are made to them, and these are accompanied by sacrifices. Some people drop at every meal a fragment of all the food, even tobacco, for the use of the dead.

13. Exorcism.—Dalton, as we have seen, was mistaken in supposing that 'the sole object of their religious ceremonies is the propitiation of the demons, who are ever thwarting the benevolent intentions of Dharmesh'; but it seems correct to say that, like all races in a similar stage of culture, 'they have no notion of a service of thanksgiving; and so far we may regard the religion of the Mundas as of a higher order than theirs' (p. 257). Exorcism of evil spirits forms an important part of their religious practices. When sickness or other misfortune befalls a man, he has recourse to the *ojhā*, or exorcist. Various devices are employed to remove the spirit agency to which they attribute disease. Thus, all the pots in use in the house, brooms, winnowing-fans, and other articles of the same kind, are carried to the cross-roads, and with them it is supposed that the spirit will be expelled. Another method illustrating the principles of contagious magic is for the sick man to place a cotton thread across a road by which travellers pass, and whoever touches the thread is sure to carry away the malady with him. When disease appears among the cattle, a sacrifice is made to the *nād* which haunts the village, and some of the blood of the victim is sprinkled on the wooden bell worn by the leader of the herd, or some streaks are made with lime upon it, and it is then hung round the neck of the herdsman. By this method the disease spirit is transferred to him, and he becomes possessed, rushing about wildly and striking at any one who comes in his way. The villagers then beat him gently with sticks and drive him over the village boundary. By this method the spirit is believed to abandon the village, never to return. By and by the man comes to himself, and all return home assured that no further evil will happen.

Other forms of disease are treated in the same way. Obstinate colic, supposed to be due to a demon entering the body of the patient, is cured by the *deorā*, or medicine-man, who mutters some spells and then sucks the navel of the afflicted person. By and by the mucus in the mouth of the exorcist is believed to assume the form of tiny worms or bones, which, being the root of the malady, he spits out, and recovery is assured. The exorcist deals with a case of snake-bite by sacrificing a fowl, the head of which he cuts off, to the spirit of the snake, while he recites some *mantras* bidding it be gone. Then he sucks the navel of the patient, and flings his spittle on the fowl which he has sacrificed. If the patient recovers, the *deorā* is credited with having expelled the poison with the evil spirit. In ordinary cases of disease the exorcist adds to the recitation of his spells and the sucking of the patient's navel the rite of fanning him with the stalks of thatching grass as a means of expelling the evil influence.

There are various methods of identifying the evil spirit or witch to whose machinations troubles are confidently attributed.

One plan is to sacrifice a fowl, and make an offering of rice in a winnowing-fan, the *mystica vannus Iacchi*, which is everywhere regarded as a wonder-working implement. Over the rice is placed an inverted saucer, such as is used for an oil lamp. The exorcist recites spells, calling on various evil spirits or witches whom he suspects to appear before him. Meanwhile he continues staring into a lighted lamp, moving his head violently all the time. By and by the shadow of an evil spirit or of a witch appears to his view. He then announces which spirit is to be propitiated, or names the witch who is working black magic against the patient. Should this method fail, he becomes himself possessed, shakes his head and body violently, jumps about, moving his limbs, in a state of frenzy, until he falls into a trance, during which he calls out the name of the spirit or of the witch.

It is difficult to say how far these practitioners believe in their own art. When they begin their career, they doubtless believe what they have been taught; but by and by they are tempted to adopt fraudulent practices in order to gratify their own vanity, or help another to satisfy a private grudge.

14. Witchcraft.—Like all the Dravidian races of this part of India, the Orāons believe firmly in witchcraft. The knowledge is said to be communicated to neophytes at annual meetings when witches, riding on broomsticks, assemble and dance. Most reputed witches are old, cranky, deformed women, whose curses upon an enemy, accidentally uttered and apparently fulfilled, show that they know and practise the art. They often deal in poisonous or narcotic drugs, and are hence known as *bisāhā*, or *bishāi*, 'poisoners.' They are believed to exercise their dangerous power over those whom they desire to injure through the hair-clippings and nail-parings of their victims. After reciting their wicked spells over things like these, they are believed to conceal them in a hollow tree, or bury them beneath the threshold of the person against whom their art is directed, with the result that he and his cattle pine and waste away. They are also reported to possess the power of extracting something from, or inserting something into, the body of their victim, which causes disease or death. Dropsy, consumption, and barrenness in women and cattle are popularly attributed to their malevolence. Others claim, or are said to possess, the power of turning themselves into tigers and other beasts of prey, and thus destroying their enemies or their cattle.

The intense dread of witchcraft is shown by the cruelty with which it is punished. In olden times, before the pressure of British law checked outrages of this kind, the punishment was invariably death. Nowadays the penalties are fine, excommunication, refusal to intermarry with them, and personal violence. The witch ordeals in use are as severe as the actual punishments. In one the suspect is bound to two large stones with his knees drawn up to his chin, and a fire of straw is lighted below him. The tests by hot iron, boiling oil, and flinging the suspected person into the village pond are also used. In fact, witchcraft is still a living superstition in the tribe, and it is only by the greatest vigilance that the authorities can repress the outrages which are its natural result.

15. Minor beliefs and superstitions.—Much attention is paid to dreams, which forebode the future, and the appearances observed each indicate some coming event—a snake announces a visit, the fall of a tree a death in the neighbourhood, and so on. It is dangerous to touch an epileptic, as the spirit causing the fit may be able to transfer itself. Curses are much feared. Oaths are taken over a little rice and cow-dung placed in an open space, by touching the shoulder of a mother or son, or by standing on a tiger-skin. In the last form they believe that, if the witness forswears himself, he will be killed by the animal. They strongly believe in omens. A seed of the castor-tree falling on a person walking below it, the

branch of a tree breaking, a jackal passing the road from right to left, are all omens of disaster. Thursdays and Saturdays are unlucky. A house must not be built facing the north, the direction of death-land, and, when a house is being erected, an egg is broken on the site to propitiate the spirit, which is disturbed when the foundations are being dug.

16. The priesthood.—

In an Orāon village 'a priest there must be; an Orāon community cannot get on without one. The fate of the village is in his hands; in their own phraseology it is said that he "makes its affairs." He is also master of the revels, which are for the most part connected with religious rites. The doctrine of the Orāons is that man best pleases the gods when he makes merry himself; so that acts of worship and propitiatory sacrifices are always associated with feasting, drinking, dancing, and love-making' (Dalton, p. 247).

The tribal priest is known as *naigā* or *pāhān*, both being names which seem to be borrowed from the Hindus (Skr. *nayaka*, *pradhāna*, 'leader'), while the exorcist has borrowed his titles from the same source, *sokhā* (Skr. *sūkshma*, 'subtle') or *ojhā* (Skr. *upādhyāya*, 'spiritual teacher'). From this fact it may be argued that the differentiation of the priest from the medicine-man took place in comparatively recent times and under Hindu influence. The duty of the *pāhān* is to perform all the regular sacrifices made to tutelary deities and the special acts by which evil spirits are propitiated. The office is not necessarily hereditary, but is usually conferred on a member of the *pāhān khūnt*, or priestly sept. On the occasion of the resignation, death, or apostasy of a *pāhān* the headmen of the village select two or three members of the priestly sept as suitable candidates. Then a round pebble is taken from the roadside and rolled in the direction of the houses occupied by the priests' sept. The person at whose door the stone stops is selected. He goes at once to the house of the late priest to receive the winnowing-fan, the symbol of his sacred office (§ 13). He is also provided with a knife, with which he sacrifices fowls, and an axe for decapitating goats, both made by the village blacksmith. As sacrificer, his duty is to behold the victim with a prayer that the good or evil spirit in whose name the offering is made will accept it and grant the favour which is desired. Among those members of the tribe who have come under Hindu influence his place is taken by the *pūjār* (Skr. *pūjā-kāri*, 'doer of worship'). The *sokhā* is the witch- and spirit-finder, who ascertains the person who has worked black magic on the patient or the *bhūt* which is offended with him. Any one may learn this art, and the son often succeeds his father. The *deorā* or *ojhā* is the exorcist and medicine-man, who deals with spirits after they have been marked down by the *sokhā*. The knowledge of the craft passes down in a single family, but an exorcist of good repute may form a school and instruct disciples. Often, however, the duties of these functionaries are not carefully discriminated. In fact, there is reason to believe that the distribution of duties between priest, exorcist, and medicine-man is comparatively modern. In former times these varied duties seem to have been combined in a single official.

The priest is supported by a glebe, known as *naighāl* or *pahānket*, 'priest's field.' It is held rent-free, and, if it is occupied by a member of the priestly clan who is not acting as *naigā*, he has to remunerate the actual holder of the office. In some villages a patch of land is reserved, the profits of which are devoted to paying the expenses connected with public sacrifices and tribal feasts. Other patches are sometimes left uncultivated and reserved as a refuge for *bhūts* and evil spirits, who, with the *churel* and the *mūā*, haunt the cremation and burial grounds.

17. Christianity.—Christianity has gained many converts among the Orāons, and its influence has undoubtedly tended to elevate their moral character. The conclusions of Dalton (p. 257) are interesting as describing the situation in the infancy of the Christian Church.

'If we analyse the views of most of the Orāon converts to Christianity, we shall, I think, be able to discern the influence of their pagan doctrines and superstitions in the motives that first led them to become catechumens. The Supreme Being who does not protect them from the spite of malevolent spirits has, they are assured, the Christians under His special care. They consider that, in consequence of this guardianship, the witches and *bhūts* have no power over Christians; and it is, therefore, good for them to join that body. They are taught that for the salvation of Christians one great sacrifice has been made, and they see that those who are baptized do not in fact reduce their live-stock to propitiate the evil spirits. They grasp at this notion; and long afterwards, when they understand it better, the atonement, the mystical washing away of

sin by the blood of Christ, is the doctrine on which their simple minds most dwell.'

LITERATURE.—The classical account of the Orāons is that by E. T. Dalton, *Descriptive Ethnology of Bengal*, Calcutta, 1872, p. 245 ff., to which all subsequent writers, including H. H. Risley, *Tribes and Castes of Bengal*, do. 1891, ii. 133 ff., and W. W. Hunter, *Statistical Account of Bengal*, London, 1877, xvi. 279 ff., are largely indebted. A large amount of fresh information, the result of fifteen years' intimate acquaintance with the tribe, including three years' special inquiries about their customs and usages, has been collected by Sarat Chandra Roy, *The Orāons of Chōtā Nāgpur*, Ranchi, 1915, who promises a second volume devoted to their religion and magico-religious system, domestic ceremonies, usages, and folklore. For their language see F. Hahn, *Kurukh Grammar*, Calcutta, 1900; R. Caldwell, *A Comparative Dravidian Grammar*, London, 1875, pp. 39, 518 f.; E. A. Gait, *Census Report Bengal*, 1901, Calcutta, 1902, i. 327 ff.; G. A. Grierson, *Census Report India*, do. 1901, i. 283. The country occupied by the Orāons has been well described by F. B. Bradley-Birt, *The Story of an Indian Upland*, London, 1905.

ORDEAL¹ (Introductory and Primitive).—The method of trying an accused or suspected person by subjecting him to a 'physical test fraught with danger, such as the plunging of the hand in boiling water, the carrying of hot iron, walking barefoot and blindfold between red-hot plough-shares,' and the like, the result in injury, more or less or none, being 'regarded as the immediate judgement of the Deity,'² has been practically universal³ during a long period of social evolution. This period may be approximately decided by the facts that the Australian aborigines do not practise the ordeal, and that the peoples of Europe abandoned it shortly after the mediæval age. Before the development of Roman methods the ordeal was the logical conclusion of all legal procedure, and, as such, its history constitutes an important chapter in the book of justice. It should be noted that the ordeal was a concluding method, not a preliminary nor an invariable form, the essential condition of its use from the most primitive to the latest examples being that other more 'legal' methods of deciding the issue shall have failed. With the ordeal in use, verdicts of not-proven and disagreements of the jury were discounted.

'The Malay laws direct that the combat or ordeal shall be had recourse to in the absence of evidence. . . . "If one accuse and another deny, and there be no witnesses on either side, the parties shall either fight or submit to the ordeal of melted tin or boiling oil."'⁴ In W. Africa 'all judicial cases are settled by the people in their collective capacity'. Witnesses are used, and give evidence under an imprecatory oath. But the ordeal is 'preferred'. 'Conscious of their own want of candour and honesty it is but natural that very little confidence is felt in the veracity of others.'⁵ Among the early Teutonic peoples exculpation was possible either by oath, in which *cōjurantes* were admitted, or by ordeal. The whole principle of their administration of justice was diametrically opposed to that of

Roman law, which eventually superseded it. It knew nothing of evidence or trial proper; 'what it knew was proofs,' viz. oaths and ordeals, both being appeals to the supernatural. 'The *Beisurteil*' . . . awarded that one of the two litigants must prove his case, by his body in battle (bilateral ordeal), or by a one-sided ordeal, or by an oath with oath-helpers, or by the oaths of witnesses. The court had no desire to bear or weigh conflicting testimony.⁶ In ancient India the king judged 'by means of questions and even of ordeals.'⁷ Among barbarous peoples the head-man, or more usually the medicine-man, superintends or administers the ordeal. In the early ages of Christian Europe the bishop or priest had a semi-official connexion with its administration, and in India the Brāhman. A special feature of the Teutonic ordeal was that 'the accused should perform its ritus himself; in no case could it be placed in the judge's hands.'⁸ This to some extent prevented the inherent liability to abuse, which is instanced throughout—e.g., in Africa, where the only chance of the accused person is to square the medicine-man. A recurring feature of the ordeal system is that the innocent are apt to demand the test, whereas the guilty dare not. As often as not, therefore, the innocent might be punished, but in many systems refusal to submit to the ordeal was itself regarded as tantamount to proof of guilt. In some cases the administrator submits to the test; in others proxies are allowed.⁴

Before describing the ordeal by its varieties, one or two ethnological points may be noted. At no time did Roman law have anything to do with the ordeal. It was known to the Greeks in its 'Aryan' forms,⁹ but here again the law ignored it. The Chinese and American Indians similarly refused to develop the system. It is forbidden in the Qur'ān. The great spheres of prevalence of the ordeal are the Indian, African, and Teutonic peoples. In Africa the poison method predominates, in India and Europe the water, iron, and similar varieties; the freemen of early Europe preferred the battle ordeal.

It does not seem possible to detect any sequence of development in the different modes of ordeal either generally or in particular countries. Special conditions often dictate the mode adopted, as will appear below.

1. The poison ordeal.⁶—(a) This mode, predomi-

¹ Ordeal' is a modification of O.E. *ordl* [ordael] or *ordl*, the O.E. equivalent of a general Teutonic term, surviving in mod. Germ. *Urteil*, and having the original meaning of 'allotment,' 'dealing out,' 'judgement' (*OED*). Med. Lat. adopted the term as *ordaliū*, *ordela*, but the more technical terms were *examinatio*, *purgatio*, *judicium* (du Cange, *Glossarium*, Niort, 1883-87, s.v. 'Ordela').

nant in W. Africa, is closely connected with the prevalent phase of superstition, viz. the belief in witchcraft, according to which every death, other than violent, and every sickness is the result of evil magic. 'If you will read witchcraft as poison,' this state of affairs is better understood; and it is suggestive that the best remedy for witching is a 'brisk purgative and emetic,'¹ while the stock ordeal-water has similar properties.

Of the 'red-water' ordeal of N. Guinea J. L. Wilson wrote an account which deserves to rank as classical for the study of the primitive ordeal.

From the results of this ordeal 'there is and can be no appeal. Public opinion has long since acknowledged its perfect infallibility.' The 'red-water' is a 'decoction made from the inner bark of a large forest tree of the *mimosa* family.² The bark is pounded in a wooden mortar and steeped in fresh water. . . . It is of a reddish colour, has an astringent taste, and in appearance is not unlike the water of an ordinary tan-vat. . . . It is both an astringent and a narcotic, and when taken in large quantity is also an emetic.'

'A good deal of ceremony' is used in connexion with the administration of the ordeal. The people . . . form themselves into a circle, and the pots containing the liquid are placed in the centre. . . . The accused then comes forward, having the scantiest apparel, but with a cord of palm-leaves bound round his waist, and seats himself in the centre of the circle. After his accusation is announced, he makes a formal acknowledgment of all the evil deeds of his past life, then invokes the name of God three times, and imprecates his wrath in case he is guilty of the particular crime laid to his charge. He then steps forward and drinks freely of the "red-water." If it nauseates and causes him to vomit freely, he suffers no serious injury, and is at once pronounced innocent. If, on the other hand, it causes vertigo and he loses his self-control, it is regarded as evidence of guilt. . . . A general howl of indignation rises from the surrounding spectators. Children and others are encouraged to hoot at him, pelt him with stones, spit upon him, and in many instances he is seized by the heels and dragged through the bushes and over rocky places until his body is shamefully lacerated and life becomes extinct.³ 'On the other hand, if he escapes without injury, his character is thoroughly purified and he stands on a better footing in society than he did before he submitted to the ordeal.' Later he arraigns his accusers, and these in their turn must submit to the ordeal or pay him a large fine. 'There is seldom any fairness in the administration of the ordeal. No particular quantity of the red-water is prescribed, and the amount administered always depends upon the state of feeling in the community towards the accused. . . . They are not fond of examining witnesses or scrutinising the evidences. . . . They suppose that the red-water itself possesses intelligence, and is capable of the clearest discrimination in all these doubtful cases. They suppose that when taken into the stomach, it lays hold of the element of witchcraft and at once destroys the life of the man.'⁴

In S. Guinea a decoction of the root of the shrub *nkazya* is used. 'If it acts freely as a diuretic it is a mark of innocence; but if as a narcotic and produces dizziness or vertigo, it is a sure sign of guilt. Small sticks are laid down at the distance of eighteen inches or two feet apart, and the suspected person, after he has swallowed the draught, is required to walk over them. If he has no vertigo, he steps over them easily and naturally; but, on the other hand, if his brain is affected, he imagines they rise up before him like great logs, and in his awkward effort to step over them, is very apt to reel and fall to the ground.'⁵

Among the Yoruba peoples the accused 'drinks *orisha*,' if there is not enough evidence. The *orisha* is a decoction of *odum* bark, and the priest is able to make it harmless or not. This powerful poison, if not at once rejected by the stomach, causes death, thus proving guilt. Its emetic effect often renders it harmless.⁶ By boiling the infusion, by regulating the amount, or by allowing the poison to settle before administration, the witch-doctor is able to control to a considerable extent the action of this and other poisons.⁷ In Calabar the famous 'Calabar bean' is used for the ordeal-water, or eaten without infusion.⁸ As usual, if the recipient vomits, he is accounted innocent. A form of wager of law is reported, each litigant eating half a bean.⁹ The 'great ju-ju' ordeal of Calabar, however, is *mbiam*. The accused recites a long imprecation, on these lines: 'If I have been guilty of this crime, then, *mbiam*! thou deal with me.' The drink is compounded of blood and filth. In its action auto-suggestion seems to have an influence, as in other drinking and eating ordeals. The *mbiam* and other

tests are also applied in the swearing of witnesses.¹ The Malay for their ordeal used the very poisonous *tanahin* nut (see ORDEAL (Malagasy)). Poison ordeals were used by the ancient Indians, arsenic or aconite being the medium, and absence of injurious effect proving innocence.²

(b) Pseudo-poisonous doses are frequently used; in some cases these are emetic, in others they act by superstitious auto-suggestion.

In ancient Greek folklore bull's blood was regarded as a poison. Before prophesying the priestess at *Ægira* drank a dose of this. Pausanias regarded it as an 'ordeal' or test of her chastity, Pliny as a means of inspiration.³ As a method of legal ordeal the Masai drink a mixture of blood and milk. Possibly their custom of avoiding the combination of milk and flesh has something to do with the choice. The accused swears: 'O God, I drink this blood; if I have stolen the cattle this blood will kill me.' If he lives for a fortnight, he is regarded as innocent.⁴ The Temimberese drink their own blood after a sword has been dipped in it. In Aru (also of the Dutch E. Indies) a mixture of arrack, blood, and sea-water is employed.⁵

The following cases show the active principle of superstitious fear.

The Brāhman was exempt from the ordeal of the 'sacred libation'; so, too, were atheists (the condition is significant).⁶ In this ordeal the accused drank water in which the images of 'terrible deities' had been bathed. While and after drinking, he faced the images, and said: 'I have not done this.' A fortnight was allowed for calamity to overtake him or not, as the case might be.⁷ In an Ashanti ordeal 'an angry head is placed in a small vessel with some water; the person holding it puts his right foot against the right foot of the accused, who invokes the power of the head to kill him if he is guilty, and then takes it into his mouth with a little of the water.'⁸ The Melanesian magicians do a regular trade in legal ordeals. One method is for the accused to swallow a magic stone, supplied and heated by the magician. If no harm follows, innocence is proved.⁹ In a Khond ordeal each of two litigants claiming a piece of land swallows a bit of earth therefrom; if it is supposed to slay the false claimant.¹⁰ According to certain Rabbis, the drinking by the Israelites of the dust of the golden calf was an ordeal; the guilty men were exposed by their beards turning red.¹¹ It is possible that the term 'bitter,' used of 'the water of jealousy,'¹² may imply a decoction similar to those of W. Africa, but there is no hint of such a drug in the accounts. When a woman was accused of adultery (for which alone the ordeal was employed), she was required to drink water in which dust from the Temple floor and a curse on parchment had been steeped and which had stood in the sacred laver. If innocent, she remained uninjured; if guilty, injury to thigh and belly (the instruments of the sin) was the result.¹³

Ancient and modern India and mediæval Europe employed a test which depends on the influencing of the masticatory processes.

In the rice ordeal the Hindu took into his mouth some grains of rice and ejected them on a *pipal*-leaf. If the grains were dry, his guilt was established. If they were moistened with saliva, he was innocent. Previously the rice was consecrated or charmed.¹⁴ The same ordeal is employed in Indonesia.¹⁵ In the Anglo-Saxon *cornd* or *nedbread* ordeal the accused ate morsels of bread and cheese consecrated and administered from the altar. If these were swallowed, innocence was proved. In the case of guilt 'God sent the angel Gabriel' to stop the victim's throat; and he would 'fall, dry-mouthed and choking through terror, to get it down.'¹⁶ The mediæval ordeal of the

Eucharist was similar. The accused received the host, saying previously the 'intention' of the ordeal—'Si aliter est quam dixi et juravi, tunc hoc Domini nostri Jesu Christi corpus non pertranseat guttur meum, sed haereat in faucibus meis, stranguet me suffocet me ac interficiat me statim in momento.'¹

2. Water ordeals.—The plunging of a litigant or accused person in a river or lake is one of the most ancient tests among the Indo-European peoples, and, by a curious revival, also the latest to survive in Europe itself. It is mentioned in the Code of Hammurabi. The accused was required to plunge into a flowing stream; he was adjudged guilty if the water bore him away.³ The usual proof of innocence is that the person immersed should sink; if he floats very soon after the plunge, he is guilty, 'rejected by the water.'⁴

This view is as early as the ancient Hindu ordeal; Manu says: 'He whom the water does not cast up is to be taken as truthful in his oath.'⁵ Similarly, the Iranians held that Lake Frazdān 'receives what a righteous man throws in, but rejects the gift of the unrighteous.'⁶ In modern times the Hindu has been called upon to repeat his oath while standing in a sacred tank—e.g., that of the Lachman Kund in Ayodhya.⁷ The ordeal of immersion among the early Germanic peoples saw the principle of rejection of the guilty by the water well developed: 'si aqua illum velut innoxium reeperit—innoxii submerguntur aqua, culpabiles supernant.'⁸ As was also the case in the boiling-water ordeal, the conditions of immersion were regulated by law. Even in the 9th cent. Hincmar recommended that 'he who is let down into the water for trial is to be fastened by a rope that he may not be in danger if the water received him as innocent.' A knot was tied on the rope to mark the depth of immersion proper to the case. The person was let down gently (*suaviter*) so as not to disturb the water.⁹ Previously the water was blessed and a special mass was said. The accused was bound, perhaps to allow the water and his person to interact naturally. Possibly, in view of the preference of this ordeal in the trial of witches, which was the case even in the Middle Ages, the idea of the 'natural action' of an element was connected with the belief in the unnatural character of the witch—a principle which seems to have much to do with the modes of ordeal in general. The water ordeal was regarded in medievalism as plebeian; the hot iron and the duel were patrician.¹⁰ The epidemic superstitious fear of witchcraft, which is so curious a feature of the 16th and 17th centuries of European history,¹⁰ reveals a mentality little superior to that of W. Africa, where the witch-doctor goes his rounds after every death. King James I. of England wrote in his *Daemonology*: 'It appears that God hath appointed for a supernatural signe of the monstrous impietie of witches, that the water shall refuse to receive them in her bosom that have shaken off them the sacred water of baptism.'¹¹ The practice of 'ducking,' 'swimming,' or 'feeting'¹² witches became almost a popular sport. The witch was 'stripped naked and crossbound, the right thumb to the left toe, and the left thumb to the right toe [large].'¹³

Both in India and in the E. Indian islands the test has been employed of keeping the head under water longer than the adversary. This is a naively harmless ordeal.

In Ceylon the litigants hold on to stakes fixed in the water; after taking their oaths they duck their heads below the surface, and the man first to emerge is adjudged the culprit. In Aru each litigant holds *sirih* in his hand, and the river of immersion is 'holy.'¹⁴ The Dayaks have a similar test.¹⁵ In the Hindu ordeal the parties entered the water; then a man shot an arrow, upon which they ducked under the water; to secure a favourable verdict it was necessary to remain under water until a man brought the arrow back. A sacred tank was a favourite scene for this ordeal.¹⁶

3. Boiling-liquid ordeals.—As is also the case with certain hot-iron or metal tests, the natural action of the heated element is set against the chance, infinitesimal but real, of escaping injury, by the reaction, hitherto not satisfactorily studied, of the skin; fire-walking 'miracles' and the harmless immersion of the hand in molten metal of a certain temperature are cases in point. But, as

a rule, guilt or innocence is shown by greater or less proportion of injury done.

Hot water or oil is the mode most frequent in primitive ordeals.

In the Dutch E. Indies the test was to take an egg out of a vessel of boiling water or to touch molten lead.¹ The Dayaks employed boiling water,² the Malays boiling oil or molten tin.³ In W. Africa the ordeal of boiling oil is usual for theft and adultery. The accused plunges an arm first in cold water and then in the hot oil; scalding is a proof of guilt. Wilson found that in some cases no scalding resulted, and thought that some special application was used. African chiefs periodically tested the virtue of their wives by this ordeal.⁴ The Japanese and Ainu used the test of boiling water.⁵ Dapper gives a vague account of a Sierra Leone ordeal, 'the water of cursing.' The water was a decoction of bark and herbs. The witch-doctor dipped his staff in this and dropped a little of the water on the accused saying, 'Is he guilty of this? If yes, then let it scald or burn him till the very skin come off.'⁶ A Hindu method was to take a *masha* weight of gold out of boiling oil.⁷ The Zend-Avesta speaks of the ordeal by boiling water, 'the truth-knowing water.' In it were placed incense, brimstone, and molten gold.⁸ One of the most remarkable ordeals recorded is the Iranian ordeal of molten brass, in which a stream of molten metal was poured over the chest. Atūrpa, son of Māhraspand 'appealed to God's ordeal,' and had molten brass poured on his breast; he was unscathed. The words recited were, 'O Good Spirit, Ahura Mazda, by thy fire thou decidest between the opponents, according to the greater degree of piety and sanctity.'⁹ It was also employed as an individual test of piety. Thus, Zoroaster underwent a series of ordeals administered by angels, and among them was this ordeal of molten brass.¹⁰ Zoroaster, by the way, was said to have authorized 83 methods of ordeal.¹¹ The Germanic peoples continued a primitive method in the 'ordeal of the caldron.' This was to take a stone out of a vessel full of boiling water. As is frequently the case, the element was invoked to declare the truth—'O creature of water.' Two refractions appeared at an early date: the depth of immersion varied according to the enormity of the offence, and the measurement was made by tying a piece of string round the arm; or the stone was hung on a cord of a certain length. Another method was to use a weight (*cacabus*) instead of a stone. This varied in weight and required more or less time to extract. After immersion the scalded member was bandaged. The bandages were removed after three days, and the verdict was given according to the nature of the wounds.¹²

4. Hot-iron ordeals.¹³—The continued prevalence of this method, in various forms, is a remarkable feature of the history of ordeals.

Burckhardt has a suggestive observation in this connexion. The Bedawin as an ordeal make disputants lick a hot iron spoon; the one whose tongue is uninjured wins his case. If the iron is clean, and thoroughly white-hot, no injury need be received; if it is only red-hot, it would touch and burn the tongue (we italicize a significant word). Probably, he adds, administrators are aware of this difference and may know also of the possibility of dipping the hand with immunity in molten metal of a certain temperature.¹⁴ Albertus Magnus, in his *de Mirabilibus*, wrote a receipt for protecting the skin. Central Africa is familiar with 'the ordeal of the hatchet.' The accused person repeats the words, 'If I have stolen the property of so and so, or committed this crime, let Mulungu [the deity] respond for me; but if I have not stolen, nor done this wickedness, may he save me.' The superintending witch-doctor passes the red-hot iron 'four times over the flat hand of the accused; and the people believe that if he is guilty his hand will be burned, but that, if innocent, he will suffer no injury.'¹⁵ In ancient India also a red-hot hatchet was used. According to the *Upanishads*, the man knowing himself to be guilty is really burned when he grasps the heated axe, while the man who knows himself to be innocent is unharmed.¹⁶ A ploughshare was also used; ¹⁷ this the accused licked with his tongue.¹⁸ In the E. Indian islands the headman places a piece of hot iron on the hands of the accused; while it is being heated, prayer is made to the coals.¹⁹ Another method is for the accused to carry a ball or mass of hot iron a certain distance. The Greeks were familiar with this. In ancient India the accused walked, carrying the iron, through seven concentric circles,²⁰ distant apart so far that each was reached with a step. Some

accounts suggest that the distance between each two circles was a foot. He was allowed to have leaves on his hands.¹ This ordeal was much in favour among the early Teutonic and Scandinavian peoples.² It is noteworthy that the principle of taking so many steps is found here as well as in India. The mass or bar of red-hot iron was carried a distance of nine feet or nine steps. Next to the wager of battle this ordeal had the most elaborate regulations.³ It was allowed only to freemen, and only to such as were unable through sickness or such incapacitation as the loss of a limb⁴ to take the wager of battle; it was also allowed to the clergy. The Laws of Athelstan give very full details. The person fasted before the test, bathed, made confession, and received absolution. His hand was 'sealed'⁵ for some days previously, to prevent the use of methods to render the skin proof. These methods were discussed and believed in. As with other ordeals, the priests superintended and managed the test, and a special mass with special benediction of the iron was said. The hand, just before the test, was sprinkled with holy water, after the seal had been removed. According to the theory of *lada* or *purgatio*, used in all ordeals, the test was *simplex* for lesser charges and *triplex* for greater. Here the difference was in the weight of the iron, one or three pounds. The person carried the iron the proper distance and deposited it. His hand was bound up and sealed, and examined on the third day for verdict. The Danes seem to have used an iron glove, heated. The Teutons also used nine red-hot ploughshares; one step was taken on each, and the whole sole was to be pressed on it.⁶ Melanesians have a curious ordeal in which the two litigants throw catches to one another with a red-hot stone, supplied by the shaman. The worse injured loses.⁷

5. Fire ordeals.—Walking⁸ through a mass of burning fuel is a not infrequent ordeal.

It has always been known in India, a heap of burning *pipal*-leaves being used.⁹ The virtuous Sitā proved her innocence to her husband Rāma by passing through the fire.¹⁰ The Iranians seem to have used not only the ordeal in which molten metal was poured on the chest, but also walking on fire.¹¹ The Siamese walk over a pit of burning charcoal.¹² The Hindu theory personalized the fire, as it did the water; the fire, rather than harm the innocent, restrained its natural action; he whom the blazing fire burns not, whom the water forces not to come up, must be held innocent.¹³ In early Europe the hand was held in a fire, or the person walked between two masses of burning logs.¹⁴ It is possible, as has been suggested, that the folk-custom of leaping over bonfires is a survival or playful adaptation of these ordeals.¹⁵

6. Ordeal by combat.¹⁶—This is the most famous of legal wagers, and is a natural development from the most elemental method of settling a quarrel. As an ordeal, in which victory proves the justice of a cause, it embodies the principle that might is right; but, in order to be specifically an ordeal, combat must involve the element of supernatural interference. The victor wins, not by his own strength, but by the help of the god of justice. In mediæval theory chance was eliminated, though, curiously enough, it is probably the idea of chance, of risking a fall, that lies at the root of the ordeal-method generally. The result of the wager of battle, in mediæval theory, was an immediate judgment of God; the savage might ascribe it to the action of superior *mana*, magic, or spirits. We frequently, however, find restrictions imposed with the object of handicapping force by luck.

According to the *hagalangang* custom of some natives of Borneo, 'both parties are placed in boxes at a distance of seven fathoms opposite one another, the boxes being made of nibong latbands so high as to reach a man's breast. Then both receive

a sharpened bamboo of a lance's length to throw at each other at a given signal. The wounded person is supposed to be guilty.'¹

The connexion between the ideas of pure chance and absolute fairness is well illustrated by such cases.

The Homeric Greeks practised what resembled the wager of battle, and it was known to the Japanese.² It does not seem to have been developed by the Indians. The Scandinavian and Teutonic peoples have chiefly exploited it. A curious exception is the Anglo-Saxons, and the wager of battle was unknown in England until introduced by William the Conqueror.³ The duel was an ordeal among the Teutons in pagan times when there was any doubt as to the guilt of the accused person. It was one application of the Scandinavian *hólmgangr*. As the Christianized peoples of N. Europe developed their civilization, this institution became more popular and was the *judicium Dei par excellence*. The Church connived at it, though in theory denouncing it.⁴ Confined to freemen, it was assisted towards its popularity by the general character of chivalry and especially by the tourney, which lent it all the pomp and circumstance of knightly contests. In its turn the judicial duel supplied forms for the joust and the tourney. The *gaige de bataille* was flung down, and the words '*Laissez aller*' were the signal for commencing. The fight was *à outrance*; the body of the vanquished was hung in chains or mutilated.⁵ The arms of the combatants were previously blessed. The intention was to saturate them with sanctity or to increase their natural sanctity.⁶

Each person confirmed the assertion of the justice of his cause 'by a solemn oath on the Gospels or on a relic of approved sanctity, and called upon God to grant victory to the right. . . . Defeat was thus not merely the loss of the suit, but also a conviction of perjury, to be punished as such.'⁷

One merit of combat was that of correcting 'the abuses of compurgation by oath.' A Burgundian king gave as a reason for authorizing the wager of battle that men might 'no longer take oaths upon uncertain matters, or forswear themselves upon certain.' Charlemagne and Otto II. delivered similar pronouncements.⁸ It was thus an attempt to obviate the inherent defects of Teutonic law, and was a considerable obstacle accordingly to the development of Roman judicial principles. After the abolition of other legal ordeals in England in the 13th cent., the wager of battle survived unimpaired.⁹ The right to demand this ordeal was actually claimed in England in 1818 by a man accused of murder. It was then formally abolished.¹⁰

Single combats between champions of armies have some similarity to the wager of battle. That between David and Goliath involved supernatural interference. It was a Frankish custom for the respective princes to fight one another if their armies could not decide the battle.¹¹

'In most European countries,' Westermarck sums up, 'the judicial duel survived the close of the Middle Ages, but disappeared shortly afterwards. . . . From an early period Councils and popes had declared against it, but with little success; many ecclesiastics, indeed, not only connived at the practice, but authorised it, and questions concerning the property of churches and monasteries were decided by combat. There were other more powerful causes at work—the growth of communes, devoted to the arts of peace, seeking their interest in the pursuits of industry and commerce, and enjoying the advantage of settled and permanent tribunals; the revival of Roman law, which began to undermine all the institutions of feudalism; the ascendancy of the royal power in its struggle against the nobles; the increase of enlightenment, the decrease of superstition. But though finally banished from the courts of justice, the duel did not die. In the sixteenth century, when the judicial combat faded away, the duel of honour began to flourish.'¹²

Thus there was a return to the conditions from which the wager of battle arose. See, further, art. **DUELLING**.

7. Miscellaneous ordeals.—From a large assort-

ment of ingenious tests a few of the more conspicuous may be mentioned, as bearing upon the principles and origin of the ordeal.

There is a Melanesian ordeal in which the accused person is shot at with arrows from a certain distance. A hit means guilt.¹ At the other extreme is the Indo-Iranian ordeal of holding and swearing by a twig of a sacred tree. Here superstitious fear and a guilty conscience are in view. Leaves of basil, sacred to Vishnu, were used by the Hindus.² A very practical ordeal was invented by some Melanesian medicine-men; the accused person had to swim across a river infested with alligators, after these had been specially summoned by the medicine-man.³ The same people worked also on the guilty conscience; and, since fear of tabu is known to cause sickness and death, it may be concluded that similar success attended the practice of the ordeal. The accused touched a spear and swore, 'If I did the thing, may I die with this spear.' Or the medicine-man sang a *saka* song, and the accused said, 'Well, that song is for me; if I did that, let me and my children suffer.'⁴ Other tests of endurance besides that of holding the head under water are found. In early Europe there was the ordeal of the cross. The two litigants stood before a cross, with arms out-stretched (like the cross which they faced), and the first to let his arms drop was the vanquished.⁵ In a Hindu ordeal the two persons stood on one leg, which was fixed in the ground, till one or other gave in.⁶ A curious ordeal, which can hardly be credited with any success due to influence upon the nervous system, is that of the balance. In this Hindu ordeal the accused was weighed in a large pair of scales. His weight was taken by a basket of stones or other equivalent, and he then re-entered the scale. If he was lighter than before, he was innocent; if heavier, guilty.⁷ The ordeal of *examen in mensuris* is mentioned in early European *benedictiones*, but its meaning is doubtful. Possibly it was a comparison of measurements of the accused taken at intervals.⁸ The Hawaiian ordeal of *wai haalulu* involved a nervous reaction; the accused had to hold his hands over a bowl of water; if the water shook, he was adjudged guilty.⁹ In the ordeal, or rather confrontation, known to the early English as *bier-right* the accused had to approach or touch the corpse of the murdered man. If he was guilty, the wounds bled afresh. In the *Nibelungenlied* the wounds of the dead Siegfried break open when Hagen approaches. Shakespeare uses the same motive. The phenomenon of blood liquefaction has been suggested as the principle of this ordeal. Or there may have been a belief that the soul remains near the body till vengeance is taken; by the murderer's touch it was roused to indignation and appeared in the form of blood.¹⁰

8. Ordeal by lot.¹¹—The principle of chance enters into many ordeals; in some it seems to be the main element.

In a Hindu ordeal a ring and a live cobra were placed in a pot full of earth; the accused had to find and take out the ring with his hand. In another he had to draw one of two small images from a vessel, the image of justice or that of injustice, *dherem* or *adherem*.¹² In the *borru* ordeal of the Niam-niam the witch-doctor moistens two pieces of polished wood and slides one upon the other. If it glides smoothly, the man is innocent.¹³ The W. African witch-doctor uses a pot and its lid. Repeating the names of suspected persons he takes off the lid

at each name and looks in the pot. When the lid sticks, the name then uttered is that of the guilty person. This kind of symbolic work shows that the witch-doctor is absolute master of the law. The crudest case perhaps is his going round the village ringing his bell, which stops at the hut of the guilty person. The natives' only method of obtaining justice, as also of avoiding punishment when guilty, is to bribe the doctor.¹ Indians of the N.W. Provinces balance two arrows; one of these moves in the direction of the hand of the accused.² Mediaeval Europe had a test in which a loaf of consecrated bread was hung between two witnesses by means of a stick passed through it. If it turned round, the accused was guilty. A similar method was that of the sieve, though used only unofficially, both by the ancient Greeks and by Europeans of the Middle Ages.³ Held by the two middle fingers, the sieve turned over when the name of the culprit was mentioned.⁴ Similarly a Psalter or Bible was hung by a key tied in it at Ps 50:18—'When thou sawest a thief, then thou consentedst with him.' The ring of the key was balanced on the fingers, and the book turned or fell at the mention of the guilty person's name. Sometimes the ruling was that, if it turned from west to east, guilt was established; if from east to west, innocence.⁵ In the above cases there may have been at work the same phenomena of muscular suggestion as in table-turning. In a Burmese ordeal plaintiff and defendant took candles of equal length, and lighted them simultaneously; judgment was for him whose candle lasted the other out.⁶ Possibly some kind of lot ordeal is involved in the narrative of Jos 7:13ff.; 1 S 14:1 proves the existence of such a test. A Dayak ordeal between litigants reduces the method to an almost frivolous plane. Each man is represented by a shell-fish on a plate; these are irritated by a sprinkling of lime juice, and the first to wriggle settles the innocence or guilt according to prearrangement.⁷

9. Origin of the ordeal.—Apart from the abuses which discredited the ordeal, the method possesses a real psychological merit. It challenges the accused person who protests his innocence to put that innocence to a dangerous physical test. The man conscious of guilt must be very strong-minded, in a superstitious, or any, age, to run the risk. If, as often happened, he refused to do so, the law punished him with torture or retribution appropriate to his crime. The demerit of the method is in its treatment of the innocent. He is bound by mere considerations of self-preservation to embrace the ordeal. In a superstitious age he has full confidence in its fairness, i.e. in its upholding of the right. Apart from superstition, he is in the position of a gambler who has a 'certainty,' and cannot refuse to put it to the touch. And the records again and again hint that self-confidence or consciousness of innocence has, at least occasionally, served as a mysterious factor of immunity.

In social psychology the ordeal has connexions with torture, divination, oath, and wager. Metaphor consistently repeats the idea of torture, not only risked, but, as a rule, undergone. This is a popular recognition of the great odds against immunity. The guilty person who submits to the ordeal and is injured is *ipso facto* in receipt of a punishment. But the idea of punishment does not appear to have connected itself with the ordeal, except in some European refinements, where a litigant outsworn was bound to submit to an ordeal, the result of which had no bearing on his case.⁸ With regard to torture, Lea remarks that ordeal and torture are 'virtually substitutes for each other'; they have rarely co-existed.⁹ In W. Africa, when an accused person denies his guilt, but refuses to submit to the ordeal, he is tortured. This is quite a logical conclusion from the principle of the ordeal.¹⁰ It amounts to a compulsory submission to the ordeal. Psychologically, the successful endurance of torture applied, e.g., for the extraction of evidence, is equivalent to the passing of an ordeal by an innocent man, and popular language describes both in similar terms.

¹⁰ Kingsley, p. 464.

Most observers have noted the similarity between the ordeal and the primitive oath. The Nahuas, who practised no ordeals, made witnesses swear an oath, putting the forefinger to the earth and then to the tongue.¹ An oath has been regarded as an ordeal.² Tylor acutely observed that an oath, of the primitive concrete variety, becomes an ordeal when the curse takes effect at once.³ Conversely, many ordeals involve waiting days, weeks, or months, before their issue is revealed. Westermarek has developed the connexion of the ordeal with the oath.

The ordeal is essentially a magical ceremony. In many cases at least, it contains a curse or an oath which has reference to the guilt or innocence of a suspected person, and the proper object of the ordeal is then to give reality to the imprecation for the purpose of establishing the validity or invalidity of the suspicion.⁴

An oath was 'an indispensable preliminary' to every wager of battle, and failure was perjury, to be punished as such. It is curious that one object of the judicial duel was 'to correct the abuses of compurgation by oath.'⁵

In W. African ordeals great importance is attached to the reciting of the oath.⁶ The point of these oaths is the imprecation of the special result of the ordeal; but, when this result is practically certain, the oath is rarely used. In India one word, *śapatha*, denoted both 'oath' and 'ordeal,'⁷ but the fact proves nothing but similarity. The oath, with its conditional curse (see art. CURSING AND BLESSING), is certainly a variety of the same species as the ordeal, but neither need be derived from the other. They proceeded on separate lines, the one on verbal, the other on physical. Both, in all probability, are derived from the elemental factor of a belief in luck or chance.

A distinction may be noted between the primitive and the barbarous conceptions of the ordeal. In mediæval Europe there was an appeal to the immediate judgment of God. Later, both oath and ordeal were 'appeals to the moral nature of the divinity.' But in savage theology the god, or his equivalent, is a mere tool in the hand of the person invoking him. Thus Westermarek rightly concludes that the idea of ordeal is not 'primordially based on the belief in an all-knowing, all-powerful, and just god, who protects the innocent and punishes the guilty, but that it largely springs from the same notion as underlies the belief in the efficacy of an oath,'⁸ i.e. the mechanical power of cursing.⁹

Lea observes that the ordeal in its appeal to the supernatural or to chance made a great step towards practical justice. Tylor emphasizes the relation between the ordeal and the idea of chance; and there is little doubt that the concept of luck, itself patently primitive, is the root element in the ordeal. Many ordeals shade into divinatory processes, and the wager element, the risking of odds, is absent from no form of ordeal. The mechanism of magic seems to be quite secondary—to be, in fact, the mechanism by which luck works or may be worked by the operator. And this possibility of 'working the oracle' is no less prominent in primitive than in civilized affairs. When the Australian bier-carriers ask the dead man who bewitched him, and the bier moves to touch the guilty person, or when the W. African corpse causes the bearers to dash against the house of the murderer,¹⁰ there is 'special knowledge' being applied in what is apparently a 'gamble.'

Even Roman law in classical times approved the method of the wager at law. The concept of abstract justice and fairness seems to have developed from a primary notion of chance. One of its embodiments is the ordeal; magic and religion came in as reinforcing agents.

A. E. CRAWLEY.

ORDEAL (Arabian and Muhammadan).—I. ARABIA.—The heathen Arabs, like many other primitive peoples, had recourse to ordeals when the truth could not be detected by other means.

1. Oaths.—In the first place, the oath, strengthened by imprecations, was generally regarded as a sort of ordeal. He who swore invoked by means of magical formulae the wrath of God and all sorts of misfortunes, either upon himself if he was lying or upon others if they had committed some crime against him. Often fifty of his nearest relatives had to swear with him in order to strengthen the magical effect of the oath. No one doubted that the supernatural powers would punish the perjurers. The following instance is mentioned by Bukhārī:

A man of the Hudhail was slain by a Yemenite. The Hudhailites brought the murderer before 'Umar. The defence was that the slain, being formerly expelled by the Hudhailites themselves, was an outlaw. Fifty men of the Hudhailites swore that this was a lie, and the murderer was condemned. But divine judgment followed soon after; for, when the party returned, the perjurious Hudhailites were killed by the falling in of the cave in which they had taken shelter from rain (*Ṣaḥīḥ*, Leyden, 1908, iv. 323 [ḍiyāt 22]; cf. J. Wellhausen, *Rechte arabischen Heidentums*, Berlin, 1897, p. 188, for another example).

The judicial oath in early Arabia was taken by the plaintiff, or by the defendant, or sometimes by both. The old Arabic names of the oath, *jamīn* (i.e. the right hand, held forth in magical attitude) and *casāmāh*, show clearly the connexion between exorcism and oath (see R. Dozy, *Supplément aux dictionnaires arabes*, Leyden, 1877-81, ii. 345^b; and J. Pedersen, *Der Eid bei den Semiten* [*Der Islam*, iii., Supplement], Strassburg, 1914, p. 11 ff.). Magical practices resembling the oath were employed also in order to get back stolen property. If a man missed something, he proclaimed it in the market or some other place of assembly, cursing the unknown thief if he should refuse to restore the stolen object (Wellhausen, p. 192). Among the Bedawin tribes many of the old ceremonies are still in use. A person suspected of having committed a crime is placed in a magical circle drawn on the ground and must swear an oath (several instances of this custom are given by J. L. Burekhardt, *Notes on the Bedouins and Wahabys*, London, 1831, i. 127 ff.; C. Landberg, 'Notes sur quelques serments et pratiques sacramentales chez les Bédouins de l'Arabie,' *Arabica*, v. [Leyden, 1898] 121 ff.; A. Jaussen, *Coutumes des Arabes au pays de Moab*, Paris, 1908, p. 188; A. Muhl, *Arabia Petraea*, Vienna, 1907-08, iii. 338; Pedersen, p. 152).

2. Fire ordeal.—The fire ordeal was also well known in early Arabia. Every tribe, says Abū 'Ubaidah (ap. Jauhari, *Qāḥāh*, Cairo, 1282, s.v. 'Haul'), had a sacred fire with a priest. When a question was to be decided, the two disputants were placed at the fire and swore to their statements. The one who was in the right had nothing to fear; but his adversary was often hurt or even devoured by the fire. An instance of the fire test in Yemen is found in Ibn Hishām (ed. F. Wüstenfeld, Göttingen, 1859, i. 17; see, further, Wellhausen, p. 189).

In modern Arabia the fire ordeal (*bishā'ah*) has

¹⁰ E. J. Eyre, *Journals of Expeditions of Discovery into Central Australia*, London, 1845, ii. 244; Wilson, p. 231.

another form. The litigating parties come before the so-called *mubasshi*, who heats a sword, a spoon, or some other object, in the fire. Each of the disputants must lick the hot iron, and the one whose tongue becomes severely hurt loses his case (see Burckhardt, i. 121; Landberg, p. 162 ff.; I. Goldziher, 'Das Strafrecht im Islam,' *Zum ältesten Strafrecht der Kulturvölker: Beantwortung der Fragen zur Rechtsvergleichung*, ed. T. Mommsen, Leipzig, 1905, p. 108).

3. The *'arrāf*.—Another ordeal was applied by the *'arrāf*, the holy man in early Arabia, who was said to be endowed with special talent for detecting crimes. He placed the suspected persons in a circle, took a jug between his index fingers, uttered magic formulae, and went along the row with the jug. When he came to the thief, the jug began to turn by itself in the *'arrāf's* hand (see Maidāni, *Arab Proverbs*, Cairo, 1310, and many edd., ch. xviii. no. 103, ch. xxiv. no. 494; G. W. Freytag, *Einleitung in das Studium der arab. Sprache*, Bonn, 1861, p. 159; Wellhausen, p. 207; other methods of detecting witches, murderers, thieves, and other sinners by means of ordeals are described by H. von Maltzan, *Reise nach Sūdārabien*, Brunswick, 1873, p. 263 ff.; Wellhausen, pp. 189, 207; and C. M. Doughty, *Travels in Arabia Deserta*, Cambridge, 1888, ii. 188).

II. ISLĀM.—Islām forbade all sorts of exorcism and, properly speaking, the ordeals which are still in use among the Bedawin tribes are in opposition to the precepts of Islām. The only survival of the old ordeals in Muslim legal procedure is the judicial oath, either of the defendant or of the plaintiff; witnesses, according to Muhammadan law, do not swear an oath that they will speak the truth (see art. LAW [Muhammadan], vol. vii. p. 880).

In two special cases the old form of the heathen oath with imprecations is still used in Islām. (1) When a husband suspects his wife of infidelity, he may accuse her of adultery and contest the legitimacy of her child, invoking God four times as a witness that he is speaking the truth and calling down His curses if he has lied; then the marriage is dissolved, and the wife must be punished for adultery, unless she swears four times by Allāh that her husband has lied, invoking God's wrath upon herself if her husband has spoken the truth (see Qur'ān, xxiv. 6-9). This is called *li'ān*, 'mutual imprecation.' (2) When a person is killed and his next of kin accuses somebody of the murder without being able to prove his accusation, two cases are to be distinguished. When the circumstances under which the murder took place make it probable that the accuser is right, the judge requires him to confirm his accusation fifty times by oath (*casāmah*), and, when the accuser has sworn these oaths, the accused person is regarded as guilty and must pay the blood-price. But, when the charge seems unfounded, the accused person is liberated if he swears fifty times that the accuser is in the wrong. In both cases the fiftyfold oath seems to be a Muhammadan form of the old heathen *casāmah*, sworn by fifty men of a tribe.

The Muslim feeling is that the perjurer will not escape the evil consequences of his sin, but the law does not prescribe a special punishment for him, the oath rather being by itself an ordeal.

LITERATURE.—This is sufficiently cited throughout.

TH. W. JUYNBOLL.

ORDEAL (Babylonian).—Although magic forms an extremely important element in the religion of the Sumero-Babylonians, nevertheless their sound sense of justice and high development of law prevented the adoption of the ordeal in judicial procedure, except in those cases where the truth could not be discovered by real evidence. The only

survival of this primitive practice which is recognized in the great Code of Hammurabi, a code adopted as the foundation of all Babylonian and Assyrian practice at law, is the test of the water ordeal for witchcraft. The second law of this code records the following ritual:

'If a gentleman has cast the accusation of witchcraft against a gentleman and failed to prove it against him, he against whom the accusation of witchcraft has been cast shall go to the river; having plunged into the river, if the river overcome him, his accuser shall seize his house. But if the river declare that gentleman clean and he be rescued, he that cast the accusation of witchcraft against him shall be put to death. He that plunged into the river shall seize the house of his accuser.'

Although we possess many tablets which record the settlement of all kinds of lawsuits, yet none has been found to exemplify this law for the examination of sorcerers. It is probable that the law is only an antiquated remnant of an ancient ceremony no longer practised. But the water ordeal probably survived, and was apparently resorted to in some less dangerous form to settle disputes to which the ordinary methods could not apply.

E.g., in the Cassite period the king Adadshumiddin bestowed an estate of a man who died without heirs upon the deceased's brother. The son of the deceased's daughter contested against his great-uncle, and the king rejected his claim; the son of another sister of the deceased sued for a portion of the estate in the reign of eided against him. In the reign of in man (Aḥudaru) who claimed to be owner, and he accused the owner kings of having been no brother owner was now dead, his son was in possession, and the reigning king, obviously in doubt, not only called in the surviving brothers of the original owner, but ordered an ordeal² between the son of the confirmed owner and the pseudo-brother of the original owner.³ But the pseudo-brother did not come to the ordeal,⁴ and died the same year. Thereupon the king put the son of this pseudo-brother to the ordeal with the son of the previously confirmed owner.⁵ The ordeal took place in the city Parakmāri, but the ritual is not described. The result was that the son of the owner confirmed by two preceding kings was declared clean.⁶ Obviously the ordeal, if it consisted in plunging into the river, did not involve the drowning of the guilty man as in the ordeal of the wizard in the Code.

We have probably to do here with a modified form of the water ordeal. That it really is a water ordeal performed on the bank of a river is proved by a passage in the Babylonian Job, where the triumphant sufferer proclaims his deliverance from unjust torture.

'At the shore of the river where (men) ban⁷ the lawsuits of mankind,

My forehead was sheared of the mark of a slave. . . .'⁸

The Babylonian scholars wrote the following comment upon this passage:

'"Shore of the river" means "oracle of God."'

We have here the same phrase for the ordeal as that employed in the Cassite lawsuit described above.⁹ As late as the 7th cent. we find a lawsuit settled by this water(?) ordeal in the reign of Shamash-shum-ukin.¹⁰

¹ The nominal verb employed here, *mu-ub-bi-ir*, really means 'he who accuses of sorcery.' The verb *habāru* > *ebēru* means originally 'to blind,' 'to surround,' and is employed in the *pī'el* for 'to blind by a curse,' 'to ban,' 'to accuse of banning,' and also in the reduced sense of 'to accuse' simply, and may be employed of ordinary accusations.

² That the passage refers to an ordeal was recognized first by Peiser, *OLZ* xiv. 477. The phrase is written partly in ideograms *ḫar ša DINGIR*, and means 'oracle of god.'

³ *Dup-pa ana tēti ša ilī ilūraššunūtīmma*, 'he wrote them a tablet (ordering them) to an oracle of god' (L. W. King, *Babylonian Boundary Stones and Memorial-Tablets in the British Museum*, London, 1912, p. 16, iv. 33).

⁴ *Ana tēti ša ilī ilī ilik* (ib. v. 4).

⁵ *Ib.* p. 17. 14.

⁶ *Ina tēti ša ilī ilī ilik Parak-māri ilu Marduk-kudurri-ur izkamma*, 'by the oracle of god, in the city Parakmāri, Marduk-kudurri-ur was clean' (ib. p. 17. 17 f.).

⁷ *Ibbirru*, lit. 'they bind,' i.e. put a case to a magic test.

⁸ Text not wholly certain (V. Rawlinson, 47b, 30).

⁹ In the reign of Nabu-mukin-apli of the VIIth dynasty occurred a long and intricate lawsuit in which the king took part. Here again the king orders two litigants in a minor affair to pass the ordeal (*ana tēti ilī išpurna*, 'he sent them to the oracle of god') and one of them 'was found clean' (*izkamma*) (King, p. 66. 3-5).

¹⁰ Peiser, *Keilschriftliche Bibliothek*, iv. [189a] 163, no. II. 6-7.

More often the ordeal of the oath was employed in cases which could not be settled by direct evidence.

E.g., in the reign of Sînuballit of the 1st Babylonian dynasty the heirs of an estate sued the business partner of their father and obtained the value of the father's business. The case was settled in the temple of the sun-god before nine witnesses, and the heirs signed an agreement not to complain again. But, having suspicion that this business partner was still retaining part of the estate, they sued him again before a judge who caused him to come to the temple of the sun-god and pass the ordeal of the oath. 'Erib-sin he gave over to the temple of Shamash for cleansing. At the great gate he swore "Whatever belonged to Gírragamil from straw to gold is not in my possession," and so annulled their complaint.'¹

The Code of Hammurabi also recognizes the ordeal of the oath as a means of self-rectification when no evidence can be adduced.

E.g. § 20 provides for the case of a man who has captured a runaway slave and failed to guard him until he could be handed over to his owner. The captor was supposed to have exercised all possible care to prevent the escape of the slave, and he is put to the ordeal of the oath. If he swears in the name of a god that such was the case, he clears himself of suspicion.

The Code provides the same ordeal for an agent who, when travelling for a merchant, is robbed of his money or goods. In that case, the agent being alone, no evidence could be adduced to prove that he had been robbed or that he had disposed of the goods for his own benefit. If he takes an oath in the name of a god that he has been robbed, he establishes his innocence.²

The ordinary legal expression for taking the ordeal of the oath is 'to make a cleansing' before god.³

Thus § 206 of the Code provides for a shepherd whose flock has been visited by some scourge or preyed upon by a lion. In either case he is not responsible to the owner for the loss. 'The shepherd before god shall make a cleansing and the owner of the sheepfold shall take upon himself the damage to the fold.'

In the division of inheritance the eldest brother usually acts as executor, and he often submits to the ordeal of the oath before the emblem of a god, obviously to free himself from any suspicion of having defrauded the other heirs.⁴ Owing to the terminology and the practice here described, the place in the temples where men took the ordeal of the oath was called 'the place of cleansing.'⁵

LITERATURE.—F. E. Peiser, 'Zum Ordeal belden Babyioniern,' *OLZ* xiv. [1911] 477-479. On the closely related subject of the oath see OATH (Semitic).

S. LANGDON.

ORDEAL (Celtic).—The main references to the use of the ordeal among the Celts occur in the Irish and Welsh laws and in one of the Irish mythico-romantic tales. There are also some apparent references to it in classical sources.

i. Classical references.—Cæsar, in describing the funerals of the Gauls, says that, when a man of rank dies, if the circumstances of his death are suspicious, his relatives hold an examination of his wives after the method adopted towards slaves, and, if their guilt is discovered, they are tortured and put to death.⁶ Probably some kind of ordeal was used as a method of discovering guilt. Julian speaks of the Rhine as an 'incorruptible judge of infants' among the Celts dwelling on its banks, drowning the child of an unfaithful wife, but restoring it to its mother's arms when the birth was legitimate.⁷ The method used is described in a poem in the Greek anthology. The child was put on a shield by the husband and thus consigned to the river. This ordeal is connected with the Celtic cult of rivers—the divine river acting here as a judge.⁸

¹ M. Schorr, *Altbabylonische Rechtsurkunden*, Leipzig, 1913, no. 232 f.

² § 103; for another ordeal by oath see also § 249 of the Code.

³ *Ubbutu*. ⁴ Schorr, no. 194 f.

⁵ *Ib.* no. 170. 16. The ordeal of the oath in case of a murder will be found in A. Ungnad, *Babylonische Briefe*, Leipzig, 1914, no. 218.

⁶ *De Bell. Gall.* vi. 19.

⁷ *Ep.* xvi., *Orat.* ii. (ed. F. C. Hertlein, Leipzig, 1876-76, pp. 495, 104).

⁸ *Anth. Græca*, ix. 125 (ed. Didot, ii. 24).

Aristotle speaks of the Celts plunging infants at birth into the cold waters of a river in order to harden them,¹ but does not mention the ordeal. Elsewhere, among Teutons, Hindus, etc., the water ordeal was decided differently. If a person floated, he was judged guilty, the water rejecting him; if he sank, he was innocent, though he was drowned, for in this case the water received him. This method was used both judicially and popularly in the case of witches until comparatively recent times.²

The duel as a means of settling disputes is also referred to. Poseidonios stated that formerly in Gaul at feasts the strongest seized the thigh of the animal served up, and, if any other warrior attempted also to take it, the two fought and the victor received the meat.³ Among the Celtiberians of Spain, in 206 B.C., P. Cornelius Scipio Africanus found that recourse was had to the duel by two sons of kings who as brothers had held the same throne, in order to settle the succession. They refused Scipio's arbitration and wished as judge only the god of war. Much later Silius Italicus said that this duel was conformable to the national custom.⁴

2. Irish ordeals.—The well-known Irish mythical story of King Cormac's adventure in the land of promise with the god Manannan contains a list of ordeals which has a close correspondence to those referred to in the Irish law-books and serves to explain them. Some of the ordeals in the list and the explanations given of their origin are doubtless mythical, though that only serves to show how firmly the use of the ordeal was fixed in Celtic custom. Morann, son of Carpre Cat-head, is said to have been born with a membrane over his head, which ultimately became a collar when he was placed in the sea and the magic 'ninth wave' passed over him. A covering of gold and silver was now placed on it, and it was used to test guilt or innocence. Placed round the neck of a guilty man, it choked him, but in the case of the innocent it expanded and dropped to his feet. Another collar of Morann's came out of a fairy mound, and, placed on the foot or hand of a guilty man, it cut the member off. He obtained a third collar from St. Paul, and wore it round his neck when delivering judgment. Then he never uttered falsehood. Mochton's adze was placed in a fire of black-thorn until red-hot. The tongue of the accused was then passed over it, when it burnt him if guilty, but did him no harm if he were innocent. Another ordeal was that of Scnela, who cast two lots out of the fire, one for the accused, one for the king. If the accused was guilty, the lot cleaved to his palm. A poet's incantation was first said over the lots. The vessel of Badurn was one which his wife obtained from a fairy mound beneath a well. If a man uttered three false words under it, the vessel separated into three parts, but, if three true words were spoken, these united again. The ordeal of the three dark stones consisted of filling a bucket with bog-stuff, etc., and placing in it three stones, white, black, and speckled. If a man drew the white stone out, he had spoken truth; if the black, falsehood; the speckled stone denoted that he was half-guilty. In the ordeal of the cauldron the vessel was filled with boiling water, in which the accused placed his hand. He was scalded if guilty, unhurt if innocent. Another ordeal was that of the old lot of Sen. Three lots were cast into water—the lord's lot, the ollave's lot, and the lot of the accused. If he was guilty, his lot sank; if he was innocent, it floated, as in the case of the child in the Rhine. Still another was that of Luchta's iron. This iron was seen by Luchta in

¹ *Politica*, vii. 15. 2.

² Hincmar (9th cent.) says: 'The water receives certain persons and thus proves them innocent; it rejects others and proves them guilty' (*PL* cxxv. 623). Cf. J. Grimm, *Teutonic Mythology*, tr. J. E. Stallybrass, London, 1852-53, pp. 1077, 1025.

³ Athenæus, iv. 40.

⁴ Livy, xxviii. 21; Sil. Ital. xvi. 137 f.

Brittany and obtained by him. It was hallowed by wizards, then made red-hot and placed on the palm, with results similar to those of the adze ordeal. The ordeal of waiting at an altar consisted of going nine times round it and then drinking water over which a wizard's incantation had been said. If the person was guilty, the token of sin was manifest on him; if innocent, the water did him no harm. This ordeal is said to have been brought by Cai Cainbrethach out of the land of Israel, and it has some similarity to that described in Nu 5^{11a}. The text then goes on to tell the story of Cormac and how he obtained his cup from Manannan. The cup broke when three words of falsehood were spoken, but was restored if three true words were spoken. Manannan showed its properties to Cormac and then gave him the cup, and he afterwards used it to distinguish truth and falsehood with the Gael.¹

Stokes observes that, if Morann's three collars are different aspects of one collar, and, if Badurn's and Cormac's vessels are identical, this would reduce the number of the ordeals to nine—the number of the *divyāni pramāṇāni* in later Hindu law-books.

A passage in one of the Brehon law tracts speaks of the ordeals of the adze, of the chip of an old tree, of the Lestar Baduirn (Badurn's vessel), of the three stones in the dark, of standing at the altar, of the cauldron, and of the holy draught, and they are said to be tests established by St. Patrick in the reign of King Laegaire to decide the disputes of the men of the land.² The method of using some of these is also explained, though in some instances the explanation is obscure.

The tongue was put across a red-hot adze. 'A chip of an old tree' is glossed as 'of the horse-rod of the patron-saint, or of his coffin, or of the consecrated tree.' Probably it was some species of lot. 'Lestar Baduirn,' is glossed, 'i.e. ba, "good," for durn, "on the hand," it used to break on the hand, i.e. it used to open or burst asunder, but it remained perfect on the hand of the upright.' Two myths of its origin are then given, one corresponding to that in the story of Cormac, except that here Dornn or Badornn is the name of the woman who obtained the vessel, not of her husband. The gloss on the three stones in the dark is, 'i.e. to put three stones in a dark place, a speckled stone, a white stone, and a black one.' These were pagan tests. On the other hand, the ordeals used by Christians and instituted by St. Patrick were lot, *airisem*, and cauldron. *Atrisem* seems to mean standing at the altar, glossed as 'standing at the stone of adoration'; hence it must have been pagan in origin. Of the cauldron it is said that 'what makes pagan tests of them is to bring *suba* to them'—probably the use of some old pagan incantations or charms.³ The holy draught is obscurely glossed as 'the book drink, such as the long book of Leithglinn, its perusal on water.'⁴

The ordeal of the red-hot adze is specifically mentioned in one MS in connexion with the case of a woman clearing her character from charges affecting it, when she had failed to find living purgators. She rubbed her tongue on a red-hot adze of bronze or on melted lead (not iron—a proof of the archaic character of the ordeal). The adze was heated in a fire of rowan or black-thorn, magical trees with the Irish Celts. The MS describes this as 'a druidical ordeal.'⁵ The red-hot metal ordeal is of wide occurrence—among the Arabs, Hindus, and Chinese. The ordeal of the cauldron has been sufficiently explained in the reference from the story of Cormac. The phrase used for it is *fir cairé*, 'the proof of the cauldron.' Instances of its use in the laws are found in the case where distraining or distress is deferred until the *fir cairé* has taken place in connexion with some other process, but only when the man has gone into an 'externe territory' for it.⁶ Again, the *dubhfinc*, i.e. the uncertain family or members of the tribe smuggled in surreptitiously or concern-

ing whose pedigree donbt had arisen, could receive no share of the family land until they tendered the proof of the cauldron.¹ Again, the illicit offspring of a harlot or of a woman who absconded from her husband must not settle among the tribe without invitation or the test of the cauldron or of the holy expurgation.² In the case of the *dubhfinc* the proof of the cauldron is called *fir dé*, 'test of God,' showing that the older pagan rite had been Christianized. In earlier times the water itself gave judgment; now God gave judgment through the water. This ordeal, which is of wide occurrence,³ is referred to by St. Gregory of Tours in the case of two ecclesiastics, one heretical, one orthodox. One of them suggested the judgment of boiling water. A cauldron was to be placed on a fire and a ring dropped into the boiling water, and each was to attempt to draw it forth.⁴ The ordeal of the lots cast into the water has a certain parallel in one suggested by King Laegaire to St. Patrick and the Druids. They were to throw their respective books into water, and he would honour him whose books were unhurt. Patrick agreed, but the Druids dissented because the saint regarded water as a god (probably a reference to baptism). The ordeal by fire was offered by St. Patrick. A Druid was to go into a closed house with the saint's chasuble round him, and one of his clerics was to wear the wizard's tunic. Then the house was to be set on fire so that 'God might deal dooms.' The wizard was burnt, though he had gone into that side of the house which had been moistened.⁵

The idea of water, cold or hot, serving for an ordeal is further illustrated by the fact that it and air, sun, moon, etc., were taken as sureties for fidelity to an oath. They destroyed the oath-breaker, as in the case of King Laegaire, who demanded tribute after thus promising not to do so. 'God's elements gave a doom of death on the king.'⁶

The casting of lots was used by the Druids and in much later times was common both among the Irish Celts and in Brittany.⁷ But it is referred to in the *Laws* as an ordeal, its technical name being *crann-chur* (*crann*, 'tree,' 'wood,' 'stick'); hence, perhaps, small pieces of wood were used, though it is said in O'Curry's *Manners and Customs of the Ancient Irish* that the *crann-chur* consisted of putting in a box or pot black, white, and red pebbles, from which the accused drew until he drew either black or white. Black meant guilty, white innocent.⁸ This is the ordeal of the three dark stones in the story of Cormac, and doubtless there were various methods of the *crann-chur*. The *Laws* refer to its use in a variety of cases—e.g., in that of the *dubhfinc*, alternately with the proof of the cauldron; in that of an animal killed in a pound by other animals; and in several others.⁹ The lot was approved of by canon law in Ireland.¹⁰

The duel or combat was also recognized and is mentioned in the *Laws*, but it had to be gone through according to strict rule. It was illegal to fight without verbal engagements, viz. 'without proper security by word of mouth for restoring or righting the thing about which he gives the challenge.'¹¹ This appears to have been in a case of debt, and hence the duel after verbal engagements, literally 'contracts of the lips,' was legal. Elsewhere the consent of relatives to the duel

seems to have been necessary, and, where that consent was obtained, the victor who slew his opponent was not charged with murder.

'If it be a sensible adult that is drawn into the combat-field with the consent of his family, and if there was no crime charged upon the person who drew him, or though there were a charge he avowed it, whether life-wound or death-wound ensue, he is exempt.'¹

Witnesses were also necessary, as the gloss upon a story of two men about to engage in combat shows: 'There was nothing to delay them from engaging in the combat except that they had not a witness.'² Where the combatant was 'lawful spoil,' his arms and clothes were also lawful spoil to the victor.³ Canon law attributed to St. Patrick the regarding of the duel as an offence meriting excommunication—e.g., in the case of a debtor who, in spite of proof, denied his debt and had recourse to combat.⁴

3. Welsh ordeals.—The Welsh codes do not mention ordeals, but a late treatise states that there were three ordeals by the law of Dyrnwal Moelmud, for theft, for *galanas* (murder or composition for murder), for treason to a lord. They consisted of the hot iron, the boiling water, 'by putting the limb that did the deed therein,' and combat to such as should demand it lawfully. There was no punishment for the victor in the combat, for it stood instead of proof. But in amending the laws Hoel the Good and his judges observed that this was not just, and they established proof by men.⁵ These three ordeals correspond to those already described in Irish procedure, and, though the reference is a doubtful one, this likeness tends to prove that the ordeal had actually been in use among the Brythonic Celts.

LITERATURE.—This is cited throughout the article.

J. A. MACCULLOCH.

ORDEAL (Chinese).—The use of the judicial ordeal in China is now mainly confined to the mountainous districts of the south-west, where numerous tribes of non-Chinese origin still maintain themselves in semi-independence. The decay of the ordeal is due partly to a growing disbelief in the superstitions which supported it and partly to the painful teachings of experience which compelled men to realize its fallibility as a test of truth. Its disappearance, however, leaves Chinese legal principles unaffected; Chinese law never accorded it theoretical recognition, but merely granted it a more or less grudging tolerance as a concession to immemorial custom. The fact that the notions and practices relating to ordeal have been regulated and modified by custom, not by law, explains why very few explicit references to the subject are to be found in the Chinese law-books.⁶

There is, however, an interesting passage in that constitutional handbook of the Chou dynasty known as the *Chou Li* (ascribed to the 12th cent. B.C.), from which we learn something of a legal practice that seems to have closely approximated to what we understand by ordeal. We are told that before a litigant in a civil suit was allowed to state his case in court he was required to hand in a sheaf of arrows (50 or 100), and that in criminal prosecutions initiated by private individuals the accusers were called upon to deposit in court a specified quantity (30 catties or Chinese pounds) of copper.⁷ According to the best interpretation

of this procedure, when a litigant or prosecutor handed in a sheaf of arrows or 30 catties of copper, his action was equivalent to (and was probably, indeed, accompanied by) a solemn declaration of the justice of his cause and a self-condemnation to righteous punishment if he were guilty of uttering untrue statements or making false accusations. The arrows were emblematic of unswerving and unerring truth. 'Straight as an arrow' was, and is, as well understood an expression in China as it is in the West, and the arrow's flight was regarded as an unmistakable symbol of moral rectitude. Similarly, the prosecutor who brought accusations against another was expected to show proof that he was willing to abide by the consequences of a complete elucidation of the rights and wrongs of his case. The metal which he deposited in court was a symbol of the justice to which he made his appeal. In demanding justice against his opponent he invoked retributive justice upon himself if his accusations were false. Hence the man who shrank from an appeal to the test of the arrows or the copper was confessedly uncertain of the truth or justice of his cause, or was secretly aware that his opponent was in the right. Thus, if only one of the parties to a case ventured to submit to the test, judgment went against the other by default.

'Certain ordeals,' as Tylor has said, 'are closely related to oaths, so that the two shade into one another. Let the curse which is to fall on the oath-breaker take effect at once, it then becomes a sign condemning the swearer—in fact, an ordeal.'¹ Lack of detailed information makes it difficult to decide whether the arrow and metal tests referred to in the *Chou Li* should be regarded as ordeals or merely as quaint and picturesque methods of oath-taking. It is certainly true, however, that in China, as elsewhere, many of the usages connected with oath-taking are almost identical with some forms of ordeal, and it is not always easy to draw distinctions between the two.

A Chinese chronicle contains an account of the following episode, which it assigns to the middle of the 13th century.

There was a certain man whose trade it was to sell temple-incense. His wares were of inferior make, but, when any of his customers grumbled at their price or expressed doubts as to their quality, he was in the habit of certifying to their excellence by means of the following oath: 'If this incense is not as excellent as I say it is, may a goblin meet me on the road and annihilate me!' One day, as he was crossing a bridge behind his shop, he was seen suddenly to fall prone on the ground as though he had been tripped up by some uncanny spectre visible to himself alone. When the bystanders ran to his assistance, he was already dead.

Stories of this kind, turning on a solemn invitation to the powers of the spiritual world to bring sudden death or calamity on the swearer if his words are untrue, are very common in Chinese annals. Confucius himself, on a certain memorable occasion, is said to have uttered such an oath.

rendered by Biot 'gold or (other) metal.' In this passage the word can hardly mean gold. The amount to be paid into court would have been prohibitive; and the obligation to pay the same amount in all cases, irrespective of the nature and magnitude of the interests involved, would have implied the creation of an arbitrary and irrational uniformity which could hardly have failed to defeat the ends of justice. The original uses the character *chin*, which in modern Chinese usually signifies gold, but which formerly indicated metal of any kind, and was applied indifferently to gold, silver, copper, tin, and iron. A modern Chinese commentator (not cited by Biot) explains the word as signifying, in this particular passage, iron. Iron certainly suits the context well enough, for that metal would aptly symbolize the inflexibility of justice; it is perhaps more probable, however, that the metal was copper, which, indeed, was often known as *huang t'ieh*, 'yellow iron,' and which, though a ductile metal, has an exceptional degree of tenacity. We learn from other sources that copper was in ancient times frequently used in connexion with judicial procedure, and there would therefore be nothing exceptional in its use here. English readers will find a reference to the use of copper in judicial proceedings in J. Legge, *Chinese Classics*, Hongkong, 1861-72, vol. iii. pt. II. p. 695.

(1886) p. cii; see also E. B. Tylor, *FC*, London, 1893, i. 141. Montesquieu, *De l'Esprit des lois*, xxviii. 16 (*Œuvres complètes*, Paris, 1875-73), remarks that under the Salic law trial by ordeal was not a thing legally ordained, but was privately agreed upon and legally permitted.

⁷ See F. Biot, *Le Tchou-Li*, Paris, 1851, il. 311; and *SBE* xvi. (1852) 103. The Chinese word here translated 'copper' is

* Confucius went to pay a visit to a lady whose moral character did not stand high in public estimation. A disciple ventured to remonstrate with him for having done so; whereupon Confucius cried out with an oath, "If I have done anything wrong, may God strike me dead, may God strike me dead!"

In a Chinese lawsuit, when the statements made or evidence given by the two parties are irreconcilable, and the truth cannot be elicited by ordinary methods, the parties sometimes adjourn from the law-court to a temple, and there perform the ceremony known as *tu chou*—the 'ordeal (or rather wager) by imprecation.'

The swearer unplaits his queue (if he has one), and lets his hair fall down over his shoulders, as though he were a criminal condemned to death. He then kneels before the altar, and utters the words upon the truth of which he is ready to stake his life. 'If I am guilty of the charge, or if my evidence is untrue, or if I have made a false accusation [as the case may be], I call upon the god to strike me dead before his altar.' The procedure varies in detail according to local custom or special circumstances. Sometimes the oath-taker proceeds by writing on a piece of paper the *pa-ko-tzu*, the 'eight characters' denoting the essential facts relating to his personal identity and time of birth. After lighting a stick or two of incense he kneels before the altar, and, uttering a set form of words, condemns himself and all his family to death if the statement to which he has sworn is perceived by the god to be untrue. The 'eight characters' are ceremonially burned, and the oath-taker's life is then wholly at the disposal of the deity addressed.

The procedure known as *fa-huang-piao*, 'the sending of a yellow missive,' is similar to this.

The swearer writes his accusation or evidence, accompanied by an oath-formula, on a piece of white paper. He also writes his name, address, and residence, the name of the temple where the ceremony is to take place, and the name of the divinity invoked. The oath-formula varies according to circumstances, but is usually framed in such terms as these: 'If I did so-and-so, may I die before sunset to-day!' or 'If I have spoken falsely, may I never be able to stand up again!' The white paper is folded up and enclosed in a covering or envelope of yellow paper, which is then committed to the flames. When it has been wholly consumed, the belief is that the message has reached its destination and that it will receive the due attention of the god whose intervention has been invited.²

As a rule, the deity in question is the *ch'ing-huang*, the 'city god,' who presides over the fortunes of the walled town in which the district magistrate's court is situated.³ The ceremony may, however, be performed in other temples besides that of the *ch'ing-huang*, and the deity invoked may be almost any one of the numerous gods, spirits, or canonized personages who throng the Taoist pantheon.

It is well known that a Chinese witness will often claim the right to consecrate his oath by cutting off the head of a fowl. This is a symbolical way of saying, 'If I am lying, may I be killed as I kill this cock!'⁴ This rite is still fairly common in inland China and is not unknown in the annals of British law-courts in Hongkong and the 'mixed courts' of the treaty-ports. Sometimes the killing of a real cock is dispensed with and a paper image of the animal substituted. The image is held up in front of the setting sun, and the swearer cuts off the head of the image just as the sun sinks below the horizon. According to another practice, the witness puts a number of beans into a basin and pounds them into a paste. By this action he condemns himself to be clubbed to death if his evidence is false. Yet another old custom was the ceremonial breaking of an arrow, which signified that the witness was willing to be broken in two if he committed perjury. Another practice was to blow out a candle-flame and to utter the words, 'If I have lied, may I be extinguished like this candle' (*ssü ju huo mieh*).

It is obvious that even the most solemn forms of oath-taking will be of little practical value in

helping a magistrate to discriminate between true and false evidence, unless he feels justified in assuming the sincerity of the witness's belief that perjury will involve him in serious difficulties with the unseen powers. A guilty man will hesitate to send a 'yellow missive' to the spirit-world if he feels morally certain that the spirits will receive it and will take him at his word. But, though many Chinese—perhaps the great majority—are rather sceptical in these matters, conscious guilt is liable to reveal itself involuntarily in some slight outward sign, such as the blanching of the cheek or tremor of the hand. These signs will be instantly noted by an attentive and experienced magistrate, who in spite of his own scornful disbelief in the objective efficacy of an elaborate oath-taking ceremonial, will often draw shrewd and valuable deductions from the appearance and general bearing of the parties and their witnesses.

The suggestion that the parties should adjourn to the city temple to swear oaths and dispatch 'yellow missives' usually comes not from the magistrate himself but from one of the parties concerned—not always the innocent one. But cases have been known when a clever magistrate has elicited the truth by making the parties undergo a bogus ordeal of his own devising. The following is an instance of how a magistrate succeeded by this means in unmasking the guilt of a man who had been accused of theft.

He informed the accused that he must prove his innocence by successfully undergoing the 'bell-touching ordeal.' He explained that in a certain temple there hung a bell which had the singular power of detecting the presence of thieves. When touched by a thief, he said, it would give forth sound, but, when touched by other persons, it would remain silent. The magistrate then gave orders that all the prisoners in his gaol, including the man accused of theft, should be marched off to the temple and made to stand in front of the temple-bell. He himself followed them, and gave a touch of solemnity to the proceedings by approaching the bell with reverence, as though it were a symbol of divinity, and uttering a short prayer suitable to the occasion. Having then caused a large curtain to be suspended in front of the bell so as to conceal it from view, he gave secret orders that the portion of the bell nearest to the curtain should be smeared with ink. This having been done, he bade the prisoners advance one by one and touch the bell by thrusting their hands under the curtain. A number of prisoners did as they were told, and as each of these withdrew his hand the magistrate noted that it was stained with ink. Then came the turn of the suspected thief. Believing that the magistrate's words would come true and that the bell, which had hitherto remained silent, would emit a sound if he touched it, he put his hand under the curtain as the others had done, but carefully abstained from bringing it into contact with the magic bell. He withdrew his hand, but his satisfaction at the success of his manoeuvre was short-lived. Observing that there was no trace of ink on the man's fingers, the magistrate promptly declared that the case was closed and the guilt of the accused made manifest. Thereupon, we are told, the outwitted thief made a full confession.

That such bogus ordeals may often be far more useful than real ones will be readily conceded. The drawback is that the more successful and ingenious they are the smaller will be the likelihood that they can be resorted to on subsequent occasions with the same prospects of success.

There is a curious book of Chinese medical jurisprudence known as the *Hsi-yuan-lu*, which was formerly in the hands of all Chinese coroners and was widely used in official circles up to a very recent date. Though the book was compiled as late as the 13th cent. of our era, many of its prescriptions and directions are manifestly based on very ancient folk-lore and the surviving traditions of pre-historic magic, while some of the methods which it prescribes for discovering the truth in matters affecting criminal procedure are strongly suggestive of ordeal. We may cite, e.g., the test of 'the yin-yang water,' which was no less irrational than the Christian ordeal of the Bible and the key. It is, or till recently was, Chinese law that, if a man finds his wife in the arms of a lover, he may, with impunity, put her to death, provided he does it immediately on discovery, before his natural

³ Cf. a story in the *Liao Chai*, tr. H. A. Giles, *Strange Stories from a Chinese Studio*, Shanghai, 1908, p. 212f.

⁴ Cf. Legge, vol. v. pt. i. p. 5; and Giles, *Strange Stories*, p. 858.

wrath has had time to cool, and provided he kills the lover at the same time. The proper way to effect the killing is to cut off both heads, if possible, by a single blow of a sword. To kill one of the guilty parties only will not excuse the homicide, for it will show that he acted with cool deliberation and might therefore have restrained himself from killing either. The reason why the killing is condoned is not that Chinese law regards human life as a thing of small account (for that is the opposite of the truth), but that it recognizes the weaknesses of human nature and makes allowance for acts committed under an ungovernable impulse. It sometimes happens, however, that the husband may be called upon to prove, in court, that his wife and her paramour were really guilty of the offence for which he killed them; and he may have serious difficulty in satisfying the magistrate of this, if the relatives of the dead man or woman insist that no act of adultery had been committed or was meditated. In that case the homicide may offer to abide by the results of the *yin-yang* test, which the *Hsi-yüan-lu* describes as follows:

'Take a water-jar and fill it with water, one half from the river and the other half from the well.¹ This is called "yin-yang water." Take a stick and stir the water into a swiftly whirling eddy. Then take the heads of the decapitated corpses of the man and woman and place them without delay in the water. If the pair were really guilty, the heads will turn nose to nose; but, if they were innocent, they will turn back to back, one above and the other below in the jar.'²

Strictly speaking, this is not a case of ordeal, but of divination, or rather it is a kind of *post mortem* ordeal if we regard it primarily as a test of the guilt or innocence of the slain wife, and divination if we regard it as a test to prove the guilt or innocence of the surviving husband.³

There is reason to believe that ordeal by fire was not unknown in China in former days, though the ceremony of walking over hot coals, which is occasionally practised in certain localities, is not necessarily, if ever, connected with judicial procedure. In Buddhist annals there is a legend that tells us of a victory obtained by Buddhism over Taoism by means of a fiery ordeal. The incident is assigned to the 1st cent. A.D.

Certain distinguished members of the Taoist priesthood strongly objected to the emperor's patronage of Buddhism, and offered to prove that theirs was the true religion by an appeal to miracle. 'Take the books of the barbarians [i.e. the Indian missionaries of Buddhism] and our own holy writings,' they said, 'and set them afire. If theirs are consumed, let them be banished; if ours are burned, we are prepared to suffer death.' This suggestion met with the emperor's approval, but to the surprise and mortification of the Taoists, who relied for their success on their proficiency in magic arts, all their books except one were utterly consumed in the flames. The sacred objects of the Buddhists, on the contrary, were preserved intact; for 'the flames were miraculously transformed into petals of water-lilies, by which all the books and images were enfolded and supported.'⁴

It was remarked at the outset that the ordeal is nowadays confined mainly to the tribes of non-Chinese origin which inhabit the mountainous regions of the south-west. These tribes form a

¹ This is because the river is *yang* (active and therefore male) and the well is *yin* (passive and therefore female).

² E. T. Williams, in *JRAS*, N. China Branch, xxxviii. [1907] 91.

³ Ordeal and divination are both 'methods resorted to for discovering the truth'; but 'the ordeal is undergone by the person accused to vindicate his innocence,' whereas 'divination is practised by third parties to fix the guilt of a crime on a particular person' (C. S. Burne, *The Handbook of Folk-lore*, new ed., London, 1914, p. 131).

⁴ R. F. Johnston, *Buddhist China*, London, 1913, p. 137 ff. Cf. the Zoroastrian story of the ordeal successfully undergone by Atūrpāt in the reign of Shāhpūr II. about A.D. 330 (*SBE* iv. [1895] p. xlvii). For an amusing account of the rivalry between the two orders of friars in Salamanca in the reign of Philip II., and the fiery ordeal which resulted, see Goldsmith, *Citizen of the World*, Letter cxi. Giles (*Strange Stories*, p. 243) tells the story of the Buddhist monk who 'was to be thrown into a cauldron of boiling water in a fiery pit, when suddenly a lotus-flower came forth, the fire was extinguished, and the water became cold.'

considerable proportion of the population of Yunnan, Kuei-chow, and western Ssu-chuan. It may be observed that the ordeals known among these scattered communities are identical with many of those practised by the peoples of the Shan States, Siam, Cambodia, and Burma. This is readily accounted for by the fact that some of the Indo-Chinese races are ethnologically connected with the Lolo, Miao, Moso, and other tribesmen of the Chinese south-west, and that the latter, in spite of many centuries of isolation in an alien environment, have maintained many of the social usages and traditions of their more prosperous kinsmen.¹

Writing of the Lolo, Colborne Baber says:

'Trial by ordeal is common. An article of value having been stolen and the thief remaining undiscovered, the people of the place are assembled by the medicine-men, and a handful of raw rice is served out to everyone. A solemn period of mastication follows, after which the resultant is spat out, and a stala of blood on the chewed mouthful infallibly betrays the culprit. It is affirmed that the gums of the guilty bleed, and that a confession always ensues.'²

The following is an account of a trial by ordeal which took place among a community of Black Miao as recently as 1911.

A quarrel arose between two women, the elder of whom objected to the younger coming to her house, on the ground that the younger woman's visits always brought bad luck. Her husband, for instance, had died after one such visit and her son after another. The younger woman's indignation at this charge was so intense that violent hostility broke out between the two households. Finally the relatives of the accused woman demanded the right of vindicating her character by means of the ordeal of boiling millet. 'A day was appointed and a great crowd gathered to see this trial. A large cauldron was brought out and set over a rudely prepared fireplace. Into this a mess of millet was put to boil and an axe-head was laid in the bottom of the cauldron. When the contents began to boil, the young woman's champion stripped his arm bare. His duty was to reach down into the boiling porridge and snatch out the axe-head with his naked hand. If the skin were blistered, then the young woman's cause was lost; if not, her honour was vindicated. Each side had also wagered a stake of some Tls. 25 [i.e. about 63s.]. To snatch out the axe-head was the work of an instant and the man's hand and arm came out uninjured from the scalding bath. It was clear therefore that the young lady was not the minister of bad luck.'³

We may conclude by citing a somewhat similar case of ordeal which took place still more recently in one of the tribal districts of N. Yunnan. Writing under the date of 20th June 1915, a correspondent of a Shanghai newspaper thus describes the proceedings:

'Some Chinese workmen were engaged in putting up some school buildings in connexion with missionary work. A twenty-cent piece was missing one day, and the owners, the carpenters, accused the masons of theft. The masons stoutly denied the charge, and then there was an appeal to trial by ordeal. At night, when the missionary was not about, a large iron pan of boiling water was got ready, and into this a half-dollar was thrown. The selected representative of the accusing carpenter first put his hand and arm into the water and took out the coin. Then the head mason had to follow suit. The carpenter's arm received no injury, but the mason was so badly burnt that it was many weeks before he could resume work. I examined the two arms and do not know why one was badly burnt and the other escaped injury. The carpenters concluded that the masons were guilty, and claim that the missing coin was returned to them on the quiet while they were sleeping. Such trial by ordeal is quite common in these parts.'⁴

LITERATURE.—This is indicated in the article.

R. FLEMING JOHNSTON.

¹ For an account of the ordeals practised among the Siamese and neighbouring peoples see G. E. Gréin's art. on the subject in *The Asiatic Quarterly Review*, 1895.

² 'A Journey of Exploration in W. Ssu-chuan,' *Royal Geographical Society, Supplementary Papers*, London, 1880, I. 70. Precisely the same test existed in Vedio India (see ORDEAL [Hindu], 3 (c)).

³ *FL* xxii. [1911] 234. The boiling-water test is common throughout the Far East. For Japan see art. DIVINATION (Japanese), vol. iv. p. 895. It is also noteworthy that an axe was used in ancient Japanese ordeals as it is used to-day among the tribes of S.W. China, though in China the axe is placed in a tub of boiling water, whereas in Japan the axe 'was heated red-hot and placed on the palm of the hand' (ib.).

⁴ *North China Daily News*, Shanghai, 6th July 1915. In Vedio India there was an ordeal whereby an accused person was 'required to take a gold-piece from a vessel of heated ghi and oil.' See art. DIVINATION (Vedio), vol. iv. p. 830a, and ORDEAL (Hindu), 3 (c).

ORDEAL (Christian).—The word 'ordeal' corresponds to the German *Urteil*, meaning 'judgment,' or 'doom.' In German law *Urteil* has kept its general sense and *Ordal* is used with the same signification as the English 'ordeal,' viz. 'judgment of God.'

The subject of ordeals has been treated too much as a unity, whereas it is really a combination of several modes of procedure. The main idea is, undoubtedly, that supernatural powers are called upon to decide in a case, instead of leaving the decision to human wisdom. We find, however, that, notwithstanding this unity of the fundamental conception, three different methods are employed in order to reach the result. The three corresponding types are: (1) the practices grouped round the idea of struggle, the outcome of which is, of course, influenced by the divine power; (2) the group of appeal to chance (casting lots); and (3) the group of appeal to miracle; this group falls again into two subdivisions: (a) appeal to a direct manifestation of God's judgment; and (b) appeal to miraculous support against a human presumption.

1. The idea of struggle.—The idea of struggle leads to the trial by battle, which presents features both of self-help and of a judgment of Providence. The Bavarian law (cl. 2, sect. 1), *c.g.*, treats of a case of trying a man who is accused of conspiracy

takes place. There must be three

If there be one witness only and if his statement be denied by the accused, that witness will have to prove by combat that what he has said is true: 'Cui Deus dederit victoriam illi credite.'

The treatment of battle in Bavarian law is also curious in other respects: a man could fight by a substitute; the struggle is not self-help in this case; we find even that the decision which of the two champions shall fight for which side is left to chance.

Thus (cl. 9, sect. 2), if a freeman be charged with stealing an ox or a milk-cow, either he must purge himself by oath with six oath-helpers, or else two champions will have to fight, but lots should be cast to decide to whom God will assign the stronger of the two champions. *Cl. Lex Baiuvar. Additio* (Synod of Nihinga, cl. 4): lots shall not be cast in the case of a duel before the champions are ready, lest they might be insidiously hampered by incantations, diabolical devices, or 'magic arts.'

As another instance of the struggle-ordeal, the ordeal of the cross may be mentioned.

The contending parties having to hold up their hands, the decision is arrived at according as one or the other could hold out longer with outstretched arms (see *Capitulary of Charlemagne* of 806 on the division of the empire among his three sons [Boretius, *Capitul. Reg. Franc.* i. 129, cl. 14]). It is noticed

as to the *Capitulary* to the limits of the three kings stand and hold up their hands, but it had to be done through champions).

2. Appeal to chance.—The most interesting case of this is presented by the Frisian laws (sect. 14):

A man has been slain in a crowd; the man who claims composition does not know who is the slayer; he must ask Providence to decide. He is allowed to charge up to seven men, each of whom will have to purge himself by an oath with eleven oath-helpers. Thereupon all should go to a church (or to a saint's relics), and two sticks, one of them marked with a cross and both wrapped up in clean wool, should be put on the altar or the relics. Then, after prayers that God may show 'through an evident sign' if the oaths have been truthfully taken, a priest (or an innocent boy) should take one of the sticks. If it be the one marked with a cross, the seven are discharged. Otherwise each of the seven men should mark a separate stick with a sign, all these seven sticks should be wrapped up in wool and put on the altar (or on the relics), and then taken, one after the other, by the priest (or the innocent boy). The man whose stick is last to be taken will have to pay the composition. If the first seven

appeal to lots. Lot appears also in a combination where it would not *a priori* be expected, and that is in the case of slaves.

A good example is *Pactus de tenore pacis domin. Hildeb. et Chlot.* 5. If a slave is suspected of a crime, but there is no proof against him, his fate will be decided by lot. The freeman would in such a case clear himself with oath-helpers.

The Salic law represents here an ancient point of view; it does not try to make the thing easier for the slave, but it cannot let him have oath-helpers. (Of course, torture very soon develops for slaves—*e.g.*, in the *Lex Visigothorum*, which was compiled under strong Roman influence.)

Lot in its very essence is based on equal possibilities for both sides.

3. Appeal to miracle.—(a) *Appeal to miraculous manifestation of the truth.*—A conspicuous example of such a manifestation is presented by the trial of the bier. There is a description of such a trial in Walter Scott's *Fair Maid of Perth*.

Oliver Proudfoot has been killed because he had been mistaken for Henry Smith. Nobody knows who committed the murder. The body is laid in state in a church and suspected persons have to approach it and to swear that they are innocent of the murder. Should the murderer dare to approach it, it is expected that the veins of the slain will open and blood will flow.

Within the group of miraculous manifestations may also be ranged the trial of cold water, often used in cases of witchcraft; it consisted in noting whether a person thrown into water will be submerged as a token of innocence, or whether the water refuses to receive him because he is guilty.

An example of the trial of bread and cheese is found in the Laws of Aethelred (8. 22):

If a clerk in lower orders is charged and has no 'friends,' *i.e.* no relatives, and, therefore, 'has no oath,' *i.e.* cannot for that reason take an oath with compurgators, then he must try to swallow bread and cheese, 'and let him meet with what God willeth.' As an exception, the accused can take the Sacrament; evidently the choice of the procedure depended on the decision of the court (Liebermann, *Gesetze der Angelsachsen*, i. 266).

The ceremony of trial by bread and cheese included the prayer of which we have an English example in the following words:

'Deprecor te, Domine sancte, Pater omnipotens, aeternae Deus, qui celum formasti et terram fundasti, mare limbitibus terminasti, solem et lunam in splendore lucere fecisti, ut intelligentes astantes, quia tu es (Deus), qui facis mirabilia. Et te dominum Iesum Christum humiliter prece deprecor, ut qui furtum istud commisit vel qui consentaneus est, gula eius vel lingua seu fauces suae sic flant contritae et obligatae, ut panem vel caseum istum non praeualeat manducare' (ib. i. 425, cl. 5).

In all such cases the position in which the accused is placed presents no natural difficulty, and only bad conscience would make the trial a dangerous one.

(b) *Appeal to miraculous salvation.*—In this group of practices there is quite a different set of possibilities, and the position of the accused is from the outset a difficult one. Let us take *Lex Salica*, ch. 14.

The man who cannot find oath-helpers must go to the trial of the cauldron, *i.e.* take a ring or a stone out of boiling water; otherwise he will have to pay a heavy fine (62 shillings). This clause relates to the trial of a Roman who is accused of having robbed a Salian Frank, and cannot find the prescribed number of oath-helpers, while the truth of the charge does not appear certain.

Another important example is presented by the Riparian law (sect. 31. 5).

If a stranger be accused within the Riparian land and cannot find oath-helpers, let him clear himself by the fire or by the lot.

Why should such a difficult form of trial be imposed? Because he has no friends and, therefore, has only a low standing in society.

Another feature which illustrates strongly the fact that miraculous purification is adjudged only in exceptional circumstances is that a man who has been condemned to that form of trial may buy himself out. Here *Lex Salica*, ch. 53, is in point.

If the succumbing party would have to pay 600 shillings, the accused can, before the trial, redeem himself by a fine which amounts to one-fifth of the sum. Cl. 4 makes an interesting addition: if the accused gives more than one-fifth to his adversary, he may do so, but the peace-money will have to be paid to the public officer in such case. The public authority takes care that it should not be cheated of its rights (cf. 2 Aethelstan, 21 [Liebermann, i. 162]; if a man wants to make

an agreement about an ordeal, let him make an agreement about the private compensation but not about what we may call the 'criminal fine'.

One may ask, why should not the accuser await the event of the trial and then claim the whole sum, instead of accepting a part? There was certainly the fear that the accused might be successful and thus his accuser would get nothing, but perhaps also an important motive was provided by the consideration that the accused might turn out to be insolvent.

One more characteristic feature is disclosed by Aelfred, 4 and 4. 1 (Liebermann, i. 50). When a man has conspired against the life of the king either directly or by harbouring exiles or their vassals, he has forfeited his life and all that he owns. If he wants to clear himself, he must swear with oath-helpers. Now, in Aethelred, 5. 30 (*ib.* i. 244), we read: 'He has to clear himself through threefold ordeal.' In one of the MSS (*ib.* 245, col. 1) he must clear himself in the 'deepest' manner which the witan can ordain. In Cnut, ii. 57 (*ib.* i. 348-350), this occurs again and the oath disappears. Thus we can observe a gradual change: first, there is only the oath; then, the oath and the ordeal; finally, only the ordeal.

Of course, the tremendous importance of the accusation is decisive in this case. From our point of view it may seem strange to make the defence more difficult because the accusation is more grave, but this is not uncommon in human psychology, and we may not be justified even in thinking that we are not sometimes acting under the same psychological motive—in some respects it holds good even to-day.

In Aethelstan, ii. 7 (*ib.* i. 154), we find that those who are often subject to accusations are to be driven to the simple ordeal. This relates to thefts. We see the same thing in Eadward, i. 3 (*ib.* i. 140), concerning a person who is not worthy to take an oath. What is expected here is conviction, unless the accused is freed by a miracle.

The worst form is the triple ordeal, occurring, e.g., in *Leges Henrici*, 64 (*ib.* i. 584). In regard to the misdoings of corrupt people and to conspiracies of perjurers, these should be subject to a more strict and difficult formula of oath. But it is so much feared that they may be unable to take the oath (as they would lose if they made a slip) that they prefer the ordeal. In its 'deepest' form as a triple ordeal it took the shape of lifting a red-hot bar of iron of three times the weight of the one used in simple ordeal, or plunging the arm instead of the hand into boiling water. The following was among the prayers used in Anglo-Saxon times (*ib.* i. 419, cl. 5) before the trial by red-hot iron was started:

'Deus, iudex iustus, qui auctor pacis es et iudicis equitatem, te suppliciter rogamus, ut hoc ferrum, ordinatum ad iustam examinationem cuiuslibet dubietatis faciendam, benedicere et sanctificare digneris, ita ut, si innocens de prenominate causa, unde purgatio querenda est, hoc ferrum ignitum in manus acceperit (vel pedes immerit), illius appareat, et si sit culpabilis atque reus, iustissima sit ad hoc iuris tua in eo cum veritate declarandum, quatinus iusticie non dominetur iniquitas, sed subdatur falsitas veritati.'

There are some further points to which attention is due. We find that sometimes the accuser has to bear the burden of proof. This happens if the accuser requires something extraordinary—e.g., if he challenges witnesses. *Lex Salica*, ch. 94, is here in point.

If one bring the charge of false testimony, he shall put his hand into the cauldron, and, if he takes out the hand not burnt, the accused shall pay 15 shillings; if, on the other hand, the hand is burnt, the accuser shall pay a like sum.

Such cases show that popular tribunals in the Middle Ages were not so passive as we might have thought. The court could assign the burden of proof to one party or the other, and this was a great power. The burden of difficult proof is

generally assigned to the party making an improbable assertion.

Certain facts seem to be due to later development. Thus in 2 Aethelstan, 23. 2 (Liebermann, i. 162-164), it is ordered that in the case of an ordeal there should stand on each side no more than twelve men; and, if the accused have with him more than twelve, then the ordeal shall be lost for him unless they be willing to go from him. It is not said distinctly that these supporters are kinsmen, but they were probably kinsfolk. The accused might have produced oath-helpers in this case, and yet ordeals had become so common that resort is had to them instead of to an oath.

Another fact worth noticing is that in later times the miracle is invoked for the decision of private disputes and has settled down into something which might be called judgment of God at private law. The *Domesday Book* gives a number of such cases; we shall take only two examples:

'Vultis probare offert se portatum iudicium quod non ita est sicut dicunt' (l. 333). 'Hanc terram calumpniatur esse liberam Vichetel homo hermeri, quorumque modo iudicetur licet bello licet vel iudicio. Et alias est presto probare eo modo quod jacuit ad ecclesiam die qua rex E. obiit; sed tunc hundredus testatur eam fuisse terram regis et ad sanctum adelf' (ll. 334).

Judicium and *bellum* are thus contrasted and the former admitted in a civil trial, but such cases seem to have occurred particularly when the testimony of the neighbourhood was challenged.

How did people in those days look on those forms of procedure? From our modern point of view it seems preposterous to ask a person to take up red-hot iron or to plunge his hand into boiling water. We may quote Lea on the subject:

'In general . . . as the result depended mostly upon those who administered the ordeal, it conferred an irresponsible power to release or to condemn, and it would be expecting too much of human nature to suppose that men did not yield frequently to the temptation to abuse that power. When Sigurd Thorlaksson was accused by Saint Olaf the King of the murder of his foster-brother Thoralf, and offered to clear himself by the red-hot iron, King Olaf accepted his offer, and appointed the next day for the trial at Lyngra, where the bishop was to preside over it. When Sigurd went back at night to his ship, he said to his comrades that their prospects were gloomy, for the King had probably caused himself the death of Thoralf, and then brought the accusation against them, adding, "For him it is an easy matter to manage the iron ordeal so that I doubt he will come ill off who tries it against him"; whereupon they hoisted sail in the darkness and escaped to their home in the Faroe Islands (Olaf Haraldsson's Saga, chiv., Laing's Heimskringla, ii. 210). The injustice thus hinted at must often have been practised, and must have shaken the most robust faith, and this cause of disbelief would receive additional strength from the fact that the result was not seldom in doubt, victory being equally claimed by both parties' (*Superstition and Force*, p. 331).

Pseudo-Cnut, *de Foresta*, 11. 2 (Liebermann, i. 622), shows that in the 12th cent. ordeal was regarded as an *ultimum refugium* of uncertainty; the purgation by red-hot iron shall nowise be admitted, unless the naked truth cannot be otherwise investigated. Eadmer, in his *Historia Novorum*, says about William the Red that he declared *iudicium Dei* to be worth nothing, because it can be plied either one way or the other:

'Quod pro voto cuiusque hinc inde plicatur' (ed. Rolls ser., lxxxi. 102).

The last stage is reached when a very important canon of the Fourth Lateran Council (1215) forbade priests to give their blessing to ordeals on any account:

'Nec quisquam purificationi aque ferventis vel frigide; seu ferri candentis ritum cuiuslibet benedictionis aut consecrationis impendat: salvis nihilominus prohibitionibus de monachis sine decessis antea promulgatis' (cap. 15, 'De iudicio sanguinis et decessis clericis interdicto').

The ordeal continued to linger for a long time in local tradition (e.g., M. Bateson, *Borough Customs* [Selden Society Publications, vols. xviii. and xxi.], London, 1904-06, gives examples of it in later times) But the rule of the Lateran Council exerted a powerful influence; it cleared

the atmosphere and had much to do with abolishing that particular form of procedure in the principal courts.

PAUL VINOGRADOFF.

ORDEAL (Greek).—The appeal to God for the settlement of a difficulty in human affairs is deeply ingrained in human nature, and therefore we find examples of trial by ordeal among all the tribes of the world (see J. Kohler, 'Die Ordalien der Naturvölker,' *ZfVw* v. [1884]).

In particular the Greeks seem to have developed many practices based on the idea of a direct appeal to a pronouncement of the gods. Forms of procedure of that kind were freely used in archaic Greece, and lingered on in many localities. The procedure of enlightened States like Athens, however, discarded this line of development, and we do not find direct testimony in this respect. This is natural enough, as the evidence of the classical period comes from a rationalistic age. The facts reported from other localities, however, are very characteristic. The cult of the Erinyes, the goddesses of revenge, was specially apt to call forth the direct manifestation of divine power. We learn from Pausanias (vii. xxv. 7) that a man who had committed homicide, or some other crime involving religious pollution, was supposed to become insane if he dared to enter the sanctuary of the Erinyes at Cerynea. Here punishment is coincident with the manifestation of guilt. And the same idea of immediate retribution appears in the story told by Philostratus in his biography of Apollonius of Tyana (i. 6). It relates to the water, *ὕδωρ ὀρκίου Διός*, which brought blindness and sickness to the man who had committed perjury. The same kind of superstition was attached, it seems, to the Horkos-stream in Bithynia: that stream was considered a most horrible one to swear by, as it used to pull the perjurer towards its whirlpools. A very curious development of this idea is presented by the legend relating to the water of the Styx. Hesiod tells us (*Theog.* 782 ff.) that the gods themselves used a form of ordeal to make sure of the truth in cases of dispute.

Iris was sent by Zeus to bring to Olympus a can of water from an underground stream (the Styx). The litigants had to drink of that water and the god who had made a false assertion would be overtaken by 'sleeping sickness' which lasted a year. When the ordeal had in this way led to a declaration of guilt, the delinquent convicted of the crime had to suffer further punishment for nine years and was, during that time, deprived of the food which conferred immortality on the gods.

We have no such detailed description as to an appeal to the Styx by mortals, although the oath by the water of the Styx was regarded as an especially terrible form of imprecation. The Horkos-stream in Thessalia is described thus:

ὄρκου γὰρ δεινὸν Στυγὸς ὕδατος ἔστιν ἀπορρέειν (Il. ii. 765); ὅς τε μέγιστος ὄρκος δεινότητος τε πέλει μακάρεσσιν θεοῖσιν (ib. xv. 371.).

In a very definite form the practice of ordeal is described in Sophocles, *Antigone*, 264 ff.:

ἦμεν δ' ἔτοιμοι καὶ μύδρους αἰρεῖν χερσίν,
καὶ πῦρ διέρπειν, καὶ θεοῦ ὄρκω μωρεῖν
τὸ μήτε δρᾶσαι μήτε τῷ ἔννειδέναι
τὸ πρᾶγμα βουλευσάντι μὴτ' εἰργασμένῳ.

The μύδρου remind us forcibly of the ordeal of red-hot iron which was so widely diffused in mediæval practice, and there can be no doubt that in this case a regular form of procedure before umpires was gone through. This particular ordeal may even have left a trace in Athenian practice, if the oath by the fire alluded to by Demosthenes (liv. 40) may be referred to the trial by red-hot iron.

The scantiness of information about actual trials

must not lead to the conclusion that the recourse to these or similar practices was very rare. The extreme decentralization of Greek life and custom made it possible for the minor commonwealths to keep up ancient rites which had almost disappeared from the principal cities. We may notice in this connexion that the practice of finding out the guilt of a murderer by watching the oscillations of a suspended battle-axe (*axinomantia*) is reported (Pliny, *HN* xxxvi. 19), although it is impossible to settle the exact area in which such a practice was used. Something of the same kind was also used in connexion with shells, in the movement of which popular superstition discovered indications as to suspected guilt.

PAUL VINOGRADOFF.

ORDEAL (Hebrew).—The only OT practice which involves the application of an ordeal in the proper sense of that term is described in Nu 5¹¹⁻³¹. It was resorted to in order to disclose the guilt or the innocence of a wife accused by her husband of adultery. The ordeal was administered by the priest, who placed in the woman's hands the 'jealousy offering' (כֶּזֶב קִנְיָה), consisting of barley meal (אֵרָאָה), without oil or incense upon it. Some of the dust of the tabernacle was placed in a vessel full of water, and the solemn oath of purgation was administered to the woman. Thereafter the oath (called in v. 21 *קִנְיָה קִנְיָה*, 'oath of cursing') was written on parchment, and the writing was then blotted out with the dust-impregnated water, which the woman was compelled to drink. If she was innocent, no effect followed; if guilty, 'the water that causeth the curse shall enter into her and become bitter, and her belly shall swell, and her thigh shall fall away' (וְקִנְיָה בִּקְנָה וְקִנְיָה בִּקְנָה)—the punishment thus falling upon the instruments of her sin.

It is evident that the efficacy of the ordeal described is regarded as due entirely to divine intervention; the ingredients employed are innocuous. No doubt fear of the result often led to a confession of guilt. It is equally clear that the result is expected to show itself speedily (cf. *Sôṭah*, iii. 4, where an interval of from two to three years is allowed). Unlike many of the prescriptions of the Levitical code, which were rather theoretical than practical, the 'jealousy' ordeal was really employed by the Jews (*Jer.* 63a; *Eduy.* v. 6; *Sôṭah*, i. 58). According to Jewish testimony (*Sôṭah*, ix. 9), it was efficacious only when the husband himself was innocent, and it was applied only in doubtful cases, and solely at the request of the husband (*ib.* iii. 6, iv. 2). It is said to have been abolished in the 1st cent. A.D., at the instigation of Johanan ben Zakkai, because adultery on the part of husbands became so common that the 'bitter waters' had no effect when administered to an unfaithful wife (*ib.* ix. 49). Johanan grounded his action on Hos 4¹⁴.

It is possible that the 'jealousy' ordeal is only a particular instance of the water ordeal, which Robertson Smith and others believe to have been widely practised by the Hebrews (cf. *Rel. Sem.*², London, 1894, p. 181). It does not appear to the present writer that there is any allusion to an ordeal in Ex 32²⁰ (the children of Israel compelled to drink the dust of the golden calf), or in Ex 22⁷⁻¹⁰ (*Eng.* 2²¹), or Jg 17² (cf. Lv 5¹).

ORDEAL (Hindu).—1. In Vedic texts.—So little of the early judicial procedure of the Indians is revealed to us by the Vedic texts that it is hardly to be wondered at if the traces of any use of the ordeal as a means of establishing disputed facts are of the slightest character. The oath in a similar use is seen by native tradition in one passage of the *Rigveda* (vii. 104. 14 f.), and it has been suggested that there are traces of the fire and water ordeals of later India in the story of Dirghatamas (*Rigveda*, i. 158. 4), while one hymn (ii. 12) of the *Atharvaveda* has been interpreted as intended to accompany the performance of the fire ordeal. But in all three cases the suggestion of an ordeal is inadmissible, and it is in the *Brāhmaṇa* literature that we find not only the oath (*Aitareya Brāhmaṇa*, v. 30), but also the closely connected ordeal. In the *Pañchaviṃśa Brāhmaṇa* (xiv. 6. 6) we are told that Vatsa established his purity of origin against a taunt by a rival by walking through the fire—a phrase exactly parallel to that used in the *Antigone* (264) of Sophocles.¹ In the *Chhândogya Upaniṣad* (vi. 16), a work of the close of the Vedic period, we learn of the ordeal of carrying a heated axe as applied in a case of theft, and a parallel to this passage has been seen in the *Rigveda* (iii. 53. 22), but without any real ground. The *Kaustika Sūtra* (lii. 8) seems to refer to the ordeal by the hot piece of gold. Finally, in one passage of the *Satapatha Brāhmaṇa* (xi. 2. 7. 33) there has been seen a reference to the balance ordeal as practised in later India. There remain, therefore, as proved for the Vedic period, say to 500 B.C., no more than one voluntary ordeal and one apparently judicial, and neither of these accords with the ordeals of the jurists.

2. In the early jurists.—The unimportance of ordeals in the Vedic period receives confirmation from the slight place which they occupy in the early jurists. In the *Dharma Sūtras*, which belong to the period from 500 B.C. onwards, they are passed over in silence by all except the latest of all, Āpastamba, who (ii. 11. 29. 6) merely refers to the use of ordeals as one way of deciding disputed cases. In the code of Manu the ordeal for the first time appears as a definite part of judicial procedure. It stands in the closest connexion with the oath, and it is plain that the ordeals mentioned are merely more stringent forms of the oath, a characteristic which holds good of Hindu ordeals throughout their history. The commentators see in the passage of Manu a reference (viii. 114–116) to the fire and water ordeals normal later, but this cannot be correct: the reference is merely to the person subjected to the ordeal escaping burning by the fire, and to his not being thrown up by the water; and, as the former ordeal is illustrated by the case of Vatsa, it seems clear that we have merely a case of fire-walking, and the second form was presumably nothing more or less than the ordinary Teutonic ordeal in which the person was thrown into the water and held innocent if he sank. The commentators say, in accord with the later usage, that these ordeals were reserved for graver cases.

3. In the later juristic literature.—The *Mānava Dharma Śāstra* was probably redacted in its present shape before A.D. 200, and the first evidence for the development of a system of ordeals is found in the *Smṛtis* of Yājñavalkya and Viṣṇu, dating probably from before A.D. 300. From that time on the *Smṛtis* develop the subject in increasing detail and on the same lines. The most important accounts are those of Nārada (c. A.D. 500), preserved in two versions, Brhaspati (c. A.D. 600), Kātyāyana, and Pitāmaha, who are possibly the former rather earlier, the latter rather later, than

Brhaspati. The later text-books of law rely on the *Smṛtis*, and the continuity of practice is illustrated by the fact that in 1783 the chief magistrate of Benares was actually carrying out ordeals in the manner prescribed in the texts. In the course of time many changes took place in the mode of carrying out the ordeals, the number was increased, and detailed rules for their administration multiplied—for the most part, it must be noted, in the direction of making the ordeal less onerous on the person by whom it was carried out. As usual, the texts differ in innumerable details, but the following are the chief points of importance in their accounts of the circumstances under which ordeals could be applied.

(a) *Conditions of application.*—The form of procedure contemplated in all cases is one by formal plaint expressed in writing, to which the defendant lodges a formal reply; the mode of proof is then decided upon, and the decision is based on the success or failure of the defendant, or plaintiff, as the case may be, to make good his contention. The normal modes of proof recognized by the *Smṛtis* are documents and witnesses, with a preference for the former, and it is only when these two means fail to yield guidance, through insufficiency or equality of weight, that the ordeal can have a place, according to Yājñavalkya; the same rule seems usually to be recognized by the other *Smṛtis*, if not explicitly stated, while Kātyāyana goes so far as to rule that, even if only a part of the case can be established by witnesses, nevertheless the ordeal may not be applied. Even, however, when an ordeal is permissible, there is one important limitation on its use: it implies normally that the other party shall undertake as part of the proceedings to accept the penalty appropriate, be it merely a fine or even corporal punishment. To this rule there are two kinds of exceptions: in the first place, if a man desires to justify himself, he may undertake, according to Nārada, the ordeal without the other party undertaking to pay the penalty; in the second place, in cases of accusation of grave offences, which would be classified as crimes in modern jurisprudence, the king is allowed to decide that the ordeal shall be imposed without the accuser undertaking to bear the penalty, which would be, often at any rate, a capital one. These cases are given by Yājñavalkya as treason and great sins, by Viṣṇu as offences against the king and offences of violence (*sāhasa*); with this view Kātyāyana agrees, and Pitāmaha allows in these cases the application only of the ordeal by sacred libation. Nārada has two different accounts: in the first he restricts the administration of the ordeal without the other party accepting the penalty to cases of high treason and to the king's own servants; in the second he allows it in all cases of persons suspected by the king or denounced as criminals by intercourse with robbers. This version is noteworthy by reason of the stress laid on the rule that the ordeal should never be resorted to without the consent of the plaintiff, and by the statement that the ordeal is superior to human methods of proof. Brhaspati prescribes the ordeal for ruffians, adulterers, forgers of gems, pearls, or coral, and those who withhold deposits, and authorizes its employment for serious crimes or the appropriation of a deposit even when there are witnesses. But, though he asserts the superiority of ordeals properly administered to witnesses, he still restricts the use normally to cases where doubt arises as to a document or oral evidence and where ratiocination fails. Apparently in the special cases mentioned the ordeal might be imposed without the other party accepting a penalty, but this point is left obscure by the text. Pitāmaha shows that ordeals were not regarded universally with confidence, as

¹ O. Gruppe, *Griechische Mythologie*, Munich, 1906, p. 877; cf. above, p. 521a.

he provides for the case where there is no human evidence and where the two parties do not wish to resort to ordeal, in which event the king is to decide. The cases which thus are left to be dealt with by ordeal—normally only in the absence of human means of proof—are offences against the king, serious crimes, especially those of violence and adultery, theft and robbery, the withholding of a deposit or denial of an obligation, and matters done in secret, in the interior of a house, in a forest, or so long ago that there can be no evidence, and cases where the human evidence is perjured or otherwise suspect.

Even when an ordeal is permitted, however, it need not take any more severe form than that of an oath, the *Smṛtis* being all agreed that the oath is a form of ordeal suited for the lesser cases. Strictly speaking, it would seem from Manu that the test of the truth of the oath was whether any calamity came to the swearer, but, as no time within which the test was to be made good is specified in the later *Smṛtis*, and, as the oath is reserved for cases of less weight, it seems probable that in point of fact the sanction of the oath itself was considered to be sufficient.¹ Viṣṇu specifies in detail the oaths for smaller offences, estimated in money-value as not exceeding 5 *kṛṣṇālas* in the case of a Śūdra; for an offence valued at or exceeding 5 *kṛṣṇālas* but under half a *suvarṇa* the ordeal by sacred libation is imposed; for any more serious case any of the other four, the balance, fire, water, and poison. In the case of a Vaiśya the rates are increased twofold, for a Kṣatriya threefold, for a Brāhman fourfold, but he is exempt from the ordeal by sacred libation unless as a test of his future conduct in a transaction; any one convicted previously of crime must be subjected to an ordeal, however trifling the amount. Brhaspati prescribes for persons of the lowest order the poison ordeal when property worth 1000 *paṇas* has been stolen, the fire ordeal where the value is 750, the hot oil where the value is 400, the ordeals by rice, sacred libation, and *dharma* and *adharmā* for values of 300, 150, and 100 respectively, and the ordeal by the ploughshare for the theft of a cow. These sums are doubled and quadrupled for persons of superior merit. Nārada and Piṭāmaha agree in ascribing the rice ordeal to cases of larceny. The other *Smṛtis* leave the matter to the discretion of the king or the presiding judge.

Normally the ordeal fell to be performed by the defendant, but Yājñavalkya and Nārada clearly permit it to be performed, by mutual agreement, by the plaintiff, the defendant then undertaking the payment of the penalty. This, however, seems distinctly to be contrary to the views of Viṣṇu, Kātyāyana, and Piṭāmaha. Kātyāyana alone appears to allow a substitute to undertake the performance of the ordeal, but only if the person concerned is an unbeliever, or guilty of one of the mortal sins, or of a mixed caste, or outside the Brāhmanical community.

(b) *Limitations of the use of ordeals.*—Certain restrictions are imposed on the use of ordeals according to the caste or the personal condition of the person concerned or the time of year. Nārada, in one version, Hārta, and Piṭāmaha seek to provide that the ordeals by the balance, fire, water, and poison shall be assigned to the Brāhman, Kṣatriya, Vaiśya, and Śūdra respectively; and Kātyāyana, while giving as an alternative the use of all kinds for all castes, exempts the Brāhman from the water ordeal. Elsewhere Nārada states that ordeals should not be imposed on persons performing vows, ascetics, women, distressed persons, and those who are disensed; that the poison ordeal is not to be inflicted on the young, the old, ascetics, distressed

persons, and madmen; that the balance is the suitable ordeal for eunuchs, distressed and afflicted persons, infants, old men, and the blind, and the balance and the sacred libation for women. He also forbids the use of poison for bilious people, water for those distressed, and fire for lepers, the blind, and those with bad nails. Viṣṇu prescribes the balance for Brāhman, women, infirm old men, sick persons, and persons deficient in an organ of sense, and forbids the use of fire in the case of lepers, infirm persons, and blacksmiths, of poison for lepers, bilious persons, and Brāhman, of water for persons affected by phlegm or other illness, the timid or asthmatic, or those who live by water, and of sacred libation for atheists or in time of disease. Kātyāyana agrees in forbidding the use of fire for blacksmiths and water for fishermen, and adds a prohibition of poison in the case of sorcerers, presumably because their native element would be too favourable to the accused.

As regards time, the rule is that the fire ordeal is appropriate in the rains and the cold and chilly seasons, the water ordeal in summer and autumn, the poison ordeal in the cold and the chilly seasons, while the balance is improper only in stormy weather; but these rules are, it is clear, rather counsels of perfection than binding regulations. An ordeal should never be performed in the afternoon, at noon, or at the twilight, but in the morning, and in a suitable public place.

(c) *The numbers and kinds of ordeals.*—Yājñavalkya gives a list of five ordeals: the balance, fire, water, poison, and sacred libation; and this list is also found in Viṣṇu. Nārada, however, in one account adds to it the ordeals of rice and the hot piece of gold, and Kātyāyana agrees with this account; Hārta, who also gives seven, has that of choosing lots in place of the hot piece of gold. Brhaspati and Piṭāmaha bring up the number to nine by adding to Nārada's list the ordeals of the ploughshare, and *dharma* and *adharmā*. These nine alone are recognized as admitted by the law as legal means of proof, and the *Smṛtis* expressly state that irregular ordeals are quite improper. In all cases the ordeals are essentially religious in nature, and certain features derived from this characteristic are common to all forms. The person affected must, as in the case of a great sacrifice, fast the day before, and he must bathe and perform the rite in wet garments; each ordeal is accompanied by prayers, which, according to Yājñavalkya, are to be said by the accused, but, according to the other *Smṛtis*, by a Brāhman; in each case offerings are made, and the presiding judge is actually compared to the *adhvaryu*, or sacrificing priest, while in the case of the ordeal by balance the balance is treated in a manner analogous to the use of the sacred post at the normal sacrifice. The place must be public, in the hall of justice, or before the king's palace, or a temple, or at cross roads, just as a royal sacrifice is public.

In the ordeal by balance two posts are erected, 6 ft. high, and a transverse beam is placed over them 3 ft. long; from it by an iron hook is suspended the beam of the balance, which is 7 ft. long, and from the two ends of which scales are suspended, the ends working in arches to permit of the accurate marking of the position of the scales. Then the defendant is put on one side and on the other an equal weight of stone, earth, etc., the position of the scales is marked, the defendant descends; the judge then adjusts the man charged with the weighing and the balance, and the defendant is re-weighed, being acquitted if he proves lighter than at the first time. If he is of equal weight, he is condemned, according to Viṣṇu and Nārada, but re-weighed, according to Brhaspati, who provides for his condemnation if the scales break, while Nārada acquits him and Viṣṇu requires a re-weighing.

In the fire ordeal the defendant is required to walk at an even pace across seven circles of 10 *angulas* in diameter and separated by an equal distance, carrying in his hand a piece of iron of 60 *palas* in weight, made red-hot. The number of circles is given as eight and nine by Nārada and Piṭāmaha respectively, but in each case the defendant stands in the first, and in the second

¹ So in Greece (Hesiod, *Theog.* 735 ff.).

case he drops the ball in the last.¹ The bands are marked before the ceremony to show any abrasions, and, before the iron is placed on them, seven leaves of the fig-tree are put on, and, according to some authorities, grains, *śamī* and *dūrā* leaves, and curds also. If the bands on examination show no sign of burning, the ordeal is a proof of innocence. Before the iron is placed in the defendant's hands, the judge addresses a prayer to the fire to decide the case. If the defendant drops the iron, the test must be repeated.

In the water ordeal the defendant is required to plunge under water while holding on to a man standing upright in the water, and to keep below the surface until a runner fetches an arrow shot from a bow at the place of immersion. This ordeal, which was obviously a very severe one in its simplest form as it appears in Yājñavalkya and Vignu, is rendered less unfair by the rule of Nārada and Bhṛhaspati that three arrows are to be shot from a bow of middle strength, that the midmost of the three arrows is to be chosen, and that two men are to be used, one to go to it and one to return. A further refinement noted by Nārada makes the distance one of 225 ft., while Kātyāyana allows the innocence of the defendant to be recognized although the top of his head may be seen above the water before the return of the runner. In this case the prayer is addressed to the water before the defendant enters it.

The ordeal by poison consists in the administration of seven *yavas* of the poison of the *śṛṅga* plant from the Himālaya or the *Vatsanābha* (*Aconitum ferox*) mixed in *ghī*; the accused is kept in a shaded place for the rest of the day without food, and is acquitted if he shows no signs of untoward effects. Nārada mitigates the severity of this rule by limiting the time for untoward symptoms to the period occupied by 500 hand-claps, and then allows the use of antidotes. In this case the prayer is addressed to the poison itself.

The ordeal by sacred libation consists in drinking three mouthfuls of water in which images either of dread deities or of the man's special deity have been bathed. The test of innocence is the freedom in the following 7, 14, or 21 days from any calamity such as illness, fire, death of kin, or punishment by the king, the latter provision affording considerable room for unfair treatment of the accused, which seems to be avoided by Bhṛhaspati and Pītāmaha, who omit this detail. In place of a prayer the accused denies the charge formally.

The rice ordeal consists in chewing a number of unhusked rice-grains mixed with water in which an image of the sun has been bathed. The accused states the charge and faces east, i.e. towards the sun, as he eats; injury to the gums, the appearance of blood when he spits out the grains on a leaf, or trembling is a proof of guilt.

The ordeal by the hot piece of gold consists in taking out a hot piece of gold or a signet-ring from a pot of boiling *ghī*, or *ghī* and oil, with the thumb and forefinger; innocence is proved by absence of injury to the finger, and the prayer is addressed to the boiling liquid.

In the ploughshare ordeal a piece of iron, twelve *palas* in weight, is formed into a ploughshare, and made red-hot; the thief must lick it with his tongue, and is acquitted if it escapes injury.

In the ordeal by *dharma* and *adharma* images of these two powers are painted on leaves, which are duly worshipped and then wrapped in balls of earth and placed in a jar, from which the defendant must draw one. If he draws the *dharma* lot, then he is to be honoured by the assessors before whom the trial takes place, just as in the case of the five main ordeals Nārada prescribes that, if the defendant is successful, he is to receive a sum of 150 *paṇas* as a reward—from what source is not clear.

4. In non-juristic literature.—The evidence of the jurists is supported by the occasional references to ordeals found in other portions of the literature. Thus in the *Mahābhārata* (iii. 134. 27 ff.), which is parallel in time with Manu, we hear of a man proving an assertion by entering the water, and a fire ordeal seems also to be referred to in Sītā's vindication of herself in the *Rāmāyaṇa* (vi. 116), but only in the vague sense of the ordeal as found in Manu. It is in harmony with this that the ordeals play no part in the *Artha Śāstra*, which may² belong to the period before the Christian era. On the other hand, in act ix. of the *Mṛchchhakatikā* we find a criminal trial conducted upon the model laid down by Nārada and Bhṛhaspati, and decided by evidence, while the condemned man alludes to the four ordeals of fire, water, poison, and the balance. The *Pañchatantra* (i. 403) expresses the rule of the *Smṛtis*, which prefer documents to witnesses and witnesses to ordeals as a means of proof. Hiuen Tsiang (7th cent.) mentions the fire, water, poison, and balance ordeals, but his account of the poison and water ordeals differs considerably; in the latter the process adopted was to fling into

water the man tied in one sack and a stone tied in another, and innocence could be proved only by the man sinking and the stone floating. Snleiman (A.D. 851) mentions the fire ordeal and that with boiling fluid. Al-Bīrūnī (11th cent.) has a full account (*India*, tr. E. Sachau, London, 1888, ii. 159 f.); he states the preference for documentary proof, then the use of witnesses, failing whom divine tests are resorted to. The defendant must normally swear, but he may also tender an oath to the suitor, and the form of test ranges from the oath to the ordeal in the narrower sense of the word. The first ordeal is that by fire, the second that by water, in which the proof of innocence is afforded by the accused escaping drowning when thrown into a deep well or a deep and rapid river. The third is the drinking of holy water, guilt being proved by the vomiting of blood. The fourth is the balance, innocence being proved by increase of weight, not decrease. The fifth and sixth are the ordeals of the hot piece of gold and the fire in the usual forms. It is clear that the local practice varied; thus the *Smṛtichandrikā* (c. A.D. 1200) states that the water and the poison ordeals were obsolete at that time, but this statement can have applied only to the school of lawyers in whose circles that work was produced. Right down to the introduction of the rule of British law which forbids ordeals, there is abundant evidence in India of the practice of many different ordeals. Thus 'Alī Ibrahim Khān gives as practised at his own time, ostensibly in accordance with older texts, variants of the ploughshare and poison ordeals. As tests of witches we hear of the use of the ordeal of handling hot balls, the walking over hot coals and heated ploughshares, the throwing into water, the test by tying a bag of cayenne pepper over the head (if it failed to suffocate, guilt was held to be proved), and the rubbing of the eyes with capsicum (failure to shed tears was thought to establish innocence).

LITERATURE.—For the Vedic period see H. Zimmer, *Alt-indisches Leben*, Berlin, 1879, p. 1831; M. Bloomfield, *JAOB* xii. (1887) p. cxxi ff.; A. Weber, *Indische Studien*, Berlin, 1850-98, ix. [1865] 441, x. [1865] 731; R. Fischel and K. F. Geldner, *Vedische Studien*, Stuttgart, 1888-1901, ii. [1892] 159; A. A. Macdonell and A. B. Keith, *Vedic Index*, London, 1912, i. 381 f. The passages of Manu, Vignu, Nārada, and Bhṛhaspati dealing with ordeals are translated by G. Bühler and J. Jolly in *SBE* xxv. [1886], vii. [1880], and xxxiii. [1889]. Of the accounts of ordeals in the later juristic literature the most important are those in the *Mitākṣarā* (c. A.D. 1100), a commentary on the *Yājñavalkya Smṛti*, in the *Smṛtichandrikā* of Devanabhāṭa, in the *Divyātattva* of Ragbunādana (c. A.D. 1600), and in the *Vṛamitrodaya* of Mitrāmīśra (c. A.D. 1700). Of modern accounts the most important are those of A. F. Stenzler, *ZDMG* ix. [1855] 661-682, E. Schlagintweit, *Die Gottesurtheile der Indier*, Munich, 1866, and J. Jolly, *Recht und Sitte*, Strassburg, 1890, pp. 144-146. The question of the connexion of Indian and other Indo-European ordeals is discussed by A. Kaegi, *Alter und Herkunft des germanischen Gottesurtheils*, Zürich, 1887, and E. W. Hopkins, *Religions of India*, London, 1896, pp. 275-279. The modern witch ordeals mentioned are given by W. Crooke, *PR*, 2, do. 1896, ii. 271 f.

A. B. KEITH.

ORDEAL (Iranian).—At what period in the history of Irān the practice of the ordeal originated we have no means of determining. Tradition, as reflected in the legendary portion of Firdansī's *Shāhnāmāh*,¹ assigns to that custom a vogue in very remote antiquity. The innocence and purity of Siyāvush, or Siyāvakhsh, son of Kaikāus, the second in the line of the so-called Kaianian kings, could be vindicated only by the use of the fire ordeal, to which he elected to submit himself. Two colossal walls of wood² were erected at just

¹ Ed. T. Macan, Calcutta, 1829, i. 396-398; tr. A. G. and E. Warner, London, 1905 ff., ii. 218 ff.

² A tradition associated the scene of this ordeal with Herghuh, a city 80 miles south-west of Isfahan, that there existed both regard this custom but with aqūt, ed. F. Wüsten-

¹ The number 7 is here the primitive number, and this fact tells against a historical connexion with the 9 in Teutonic ordeals (K. Weinhold, *Die mystische Neunzahl bei den Deutschen*, Berlin, 1897, p. 53).

² A. B. Keith, *JRAS*, 1916, p. 137.

such a distance apart as would barely allow a horseman to pass between them. Siyāvush, however, emerged from between the flaming walls without scar or burn, thereby placing his honour beyond cavil, while his slanderess, Sūdābch, had not Siyāvush magnanimously interceded for her, would have been put to death.

1. Sources.—The existing portions of the Avesta contain few allusions to ordeals; and the passages usually so interpreted (Ys. xxxi. 3, xliii. 4, li. 9 [SBE xxxi. (1887) 41, 100, 181 f.]; Vend. iv. 46, 54 [SBE iv.² (1895) 46, 48 f.]), with, perhaps, the exception of *Vendīdād*, iv. 46, 54, are not sufficiently explicit to render beyond doubt a reference to an ordeal as essential to their right understanding (but see below). If, therefore, we had formed our ideas of the place of the ordeal in the legal and religious life of the Iranians from the meagre and somewhat ambiguous references to that rite in the existing parts of the Zoroastrian scriptures, we should have erred grievously. It is to Pahlavi literature that we owe our knowledge of the very extensive and important use of the ordeal in early and later Iranian times. The Pahlavi *Dinkart* has preserved a brief account of the contents of the lost *nasks* of the Avesta, and, although details are, unfortunately, wanting, we are thus able, in a measure, to form a conception of the prevalence and the elaborate development of ordeals and their ceremonies in Avestan times. The *Dāstān-i-Dīnik*, *Shāyast la-Shāyast*, and *Zāt-Sparam* also materially supplement our knowledge.

2. Origin and history.—The institution of the ordeal is attributed to Zoroaster in the *Dinkart* (VII. v. 4-6 [SBE xlvii. (1897) 74 f.]):

'And one marvel is the provision, by Zarātūst, of the achievement of the ordeal, that indicator of the acquitted and incriminated . . . of which it is said in revelation there are about thirty-three kinds. These, too, the disciples of Zarātūst kept in use, after that time, until the collapse of the monarchy of Iran.'¹

Whether that statement represents historical fact or not cannot, of course, be definitely ascertained.² That the ordeal in some of its forms was practised in the Prophet's time and by him has much probability. And the veneration with which it is spoken of in so many of the references to it is due, perhaps, only in a lesser degree to the belief in its institution and use by Zoroaster than to its being the instrument of a divine communication.

3. Purposes and functions.—The general purpose of the ordeal, properly so called, was to discover guilt and innocence where other evidence was absent or insufficient. It was an invocation to God to judge and reveal His decision where human knowledge failed. Hence the appropriate and descriptive character of the German term *Gottesurtheil* for this rite.

But among the Iranians, at least, the ordeal had another, though kindred, function. It served as a test not merely of the innocence or guilt of a person, but of the truth or falsity of a religious system or a religious movement together with the veraciousness of the apostle or leader of such a religion. Its function in Zoroastrianism was identical with that of miracles for the Christian and Jewish religions and of the *mu'jizāt* in Muhammadanism. In the *Zāt-Sparam* Zoroaster is represented as undergoing a form of the fire ordeal with this purpose:

'The archangels exhibited three kinds of achievement [for ordeal] for the religion; first, by means of fires, and Zarātūst walked three steps on them, with the words, "good thoughts, good words, and good deeds," and was not burnt' (xxi. 24 [SBE xlvii. 185 f.]).

The *Dinkart* exemplifies the performance of the ordeal of molten metal for the same end by a reference to the deed of Atūrpat, son of Māhraspand, under the Sasanian king Shāhpūhr II. (A.D. 309-379), when the Zoroastrian faith was in conflict with the Manichaean heresy.

'These, too [i.e. the ordeals], the disciples of Zarātūst kept in use, after that time . . . and the custom of one of them is that of pouring melted metal on the breast, as in the achievement of the saintly Atūrpat, son of Māhraspand, through whose preservation a knowledge about the religion was diffused in the world; and of the manifestation, too, through that first wonder, this is also said, on the same subject, in the good religion, that of those, many, when they behold that rite of ordeal, it convinces the wicked' (VII. v. 5 [SBE xlvii. 74 f.]).

4. Forms.—The *Dinkart*, as already mentioned, states that revelation (meaning thereby, no doubt, the Avesta) recognized about 33 kinds (VII. v. 4 f.). If so many were in use at any period, only comparatively few of that number are mentioned in any documents. There would seem to have been a general classification into hot and cold ordeals. According to the *Shāyast la-Shāyast*¹ (xiii. 17 [SBE v. (1880) 360]), there were six hot ordeals. Fire itself would, naturally, constitute at least one, and, in various forms, possibly more than one of the six. The instance, already referred to, in which Zoroaster is described as walking on fires, would seem to indicate that such a form involved bodily contact with that element²—its sacred character notwithstanding. On the other hand, if we accept a reference to an ordeal, so called, as implicit in Ys. xxxi. 3, no physical contact is presupposed. The revelation, or 'decision' between the 'disputants,' for which the prophet prays, was evidently expected by the discernment, through the spirit, of the form or colour or some other visible feature of the sacred fire. In the strict and narrower sense of the term the process was not a case of ordeal; it was rather an instance of divination, the ordeal being really a species of divination (see also art. DIVINATION [Vedic], vol. iv. p. 829). But in the Pahlavi books the name 'ordeal' (*varih*) is applied to both indiscriminately. The sacred twig, or *barsom*, ordeal (*barsomōk varih*), mentioned more than once in these books, belongs to the same category (see *Dink*. VIII. xxxviii. [SBE xxxvii. 121 f.]). Whether we should deduce from the passage, 'The *Gāthās* for an ordeal of the spiritual existence' (ib. IX. xvii. 8), that those hymns had a similar function it is impossible to determine. It may be nothing more than a metaphorical expression. The whole passage is obscure.

The clearest and most explicit reference to an ordeal in the existing portions of the Avesta is to another of the heat ordeals, namely, boiling water.

'Before the boiling water publicly prepared, O Spitama Zarathushtra! let no one make bold to deny having received [from his neighbour] the ox or the garment in his possession. . . . Down there the pain for his deed shall be as hard as any in this world: to wit, the deed of a man, who, knowingly lying, confronts the brimstoned, golden, truth-knowing water with an appeal unto Rashnu and a lie unto Mithra' (Vend. iv. 46, 54 [SBE iv.² 46, 48 f.]).

The water employed for this ordeal contained incense, brimstone, and molten gold. The formula recited at the performance of this rite was as follows:

'Before the Amshaspand Babman, before the Amshaspand Ardibehesht, here lighted up . . . I swear that I have nothing of what is thine, N. son of N., neither gold, nor silver, nor brass, nor clothes, nor any of the things created by Ormazd' (SBE iv. 40, note 2).

Among the cold ordeals, one of the most frequently resorted to would appear to be that by poison. From the illustration in which the *Dāstān-i-Dīnik* (xxxvii. 74 [SBE xviii. (1882) 102,

¹ That work also claims to incorporate much material from lost *nasks* of the Avesta. See M. Haug, *Essays on the Sacred Language, Writings, and Religion of the Parsis*, London, 1897, p. 100.

case he drops the ball in the last.¹ The hands are marked before the ceremony to show any abrasions, and, before the iron is placed on them, seven leaves of the fig-tree are put on, and, according to some authorities, grains, *śamī* and *dūrva* leaves, and curds also. If the hands on examination show no sign of burning, the ordeal is a proof of innocence. Before the iron is placed in the defendant's hands, the judge addresses a prayer to the fire to decide the case. If the defendant drops the iron, the test must be repeated.

In the water ordeal the defendant is required to plunge under water while holding on to a man standing upright in the water, and to keep below the surface until a runner fetches an arrow shot from a bow at the place of immersion. This ordeal, which was obviously a very severe one in its simplest form as it appears in Yājñavalkya and Viṣṇu, is rendered less unfair by the rule of Nārada and Bhṛhaspati that three arrows are to be shot from a bow of middle strength, that the midmost of the three arrows is to be chosen, and that two men are to be used, one to go to it and one to return. A further refinement noted by Nārada makes the distance one of 225 ft., while Kātyāyana allows the innocence of the defendant to be recognized although the top of his head may be seen above the water before the return of the runner. In this case the prayer is addressed to the water before the defendant enters it.

The ordeal by poison consists in the administration of seven *yavas* of the poison of the *śṛga* plant from the Himalaya or the *Vatsanābha* (*Aconitum ferox*) mixed in *ghī*; the accused is kept in a shaded place for the rest of the day without food, and is acquitted if he shows no signs of untoward effects. Nārada mitigates the severity of this rule by limiting the time for untoward symptoms to the period occupied by 500 hand-claps, and then allows the use of antidotes. In this case the prayer is addressed to the poison itself.

The ordeal by sacred libation consists in drinking three mouthfuls of water in which images either of dread deities or of the man's special deity have been bathed. The test of innocence is the freedom in the following 7, 14, or 21 days from any calamity such as illness, fire, death of kin, or punishment by the king, the latter provision affording considerable room for unfair treatment of the accused, which seems to be avoided by Bhṛhaspati and Pitāmaha, who omit this detail. In place of a prayer the accused denies the charge formally.

The rice ordeal consists in chewing a number of unhusked rice-grains mixed with water in which an image of the sun has been bathed. The accused states the charge and faces east, i.e. towards the sun, as he eats; injury to the gums, the appearance of blood when he spits out the grains on a leaf, or trembling is a proof of guilt.

The ordeal by the hot piece of gold consists in taking out a hot piece of gold or a signet-ring from a pot of boiling *ghī*, or *ghī* and oil, with the thumb and forefinger; innocence is proved by absence of injury to the finger, and the prayer is addressed to the boiling liquid.

In the ploughshare ordeal a piece of iron, twelve *palas* in weight, is formed into a ploughshare, and made red-hot; the thief must lick it with his tongue, and is acquitted if it escapes injury.

In the ordeal by *dharma* and *adharma* images of these two powers are painted on leaves, which are duly worshipped and then wrapped in balls of earth and placed in a jar, from which the defendant must draw one. If he draws the *dharma* lot, then he is to be honoured by the assessors before whom the trial takes place, just as in the case of the five main ordeals Nārada prescribes that, if the defendant is successful, he is to receive a sum of 160 *panas* as a reward—from what source is not clear.

4. In non-juristic literature.—The evidence of the jurists is supported by the occasional references to ordeals found in other portions of the literature. Thus in the *Mahābhārata* (iii. 134. 27 ff.), which is parallel in time with Manu, we hear of a man proving an assertion by entering the water, and a fire ordeal seems also to be referred to in *Sitā's* vindication of herself in the *Rāmāyana* (vi. 116), but only in the vague sense of the ordeal as found in Manu. It is in harmony with this that the ordeals play no part in the *Artha Śāstra*, which may² belong to the period before the Christian era. On the other hand, in act ix. of the *Mṛcchhakatikā* we find a criminal trial conducted upon the model laid down by Nārada and Bhṛhaspati, and decided by evidence, while the condemned man alludes to the four ordeals of fire, water, poison, and the balance. The *Pañchatantra* (i. 403) expresses the rule of the *Smṛtis*, which prefer documents to witnesses and witnesses to ordeals as a means of proof. Hiuen Tsiang (7th cent.) mentions the fire, water, poison, and balance ordeals, but his account of the poison and water ordeals differs considerably; in the latter the process adopted was to fling into

water the man tied in one sack and a stone tied in another, and innocence could be proved only by the man sinking and the stone floating. Suleiman (A.D. 851) mentions the fire ordeal and that with boiling fluid. Al-Bīrūnī (11th cent.) has a full account (*India*, tr. E. Sachau, London, 1888, ii. 159 f.); he states the preference for documentary proof, then the use of witnesses, failing whom divine tests are resorted to. The defendant must normally swear, but he may also tender an oath to the suitor, and the form of test ranges from the oath to the ordeal in the narrower sense of the word. The first ordeal is that by fire, the second that by water, in which the proof of innocence is afforded by the accused escaping drowning when thrown into a deep well or a deep and rapid river. The third is the drinking of holy water, guilt being proved by the vomiting of blood. The fourth is the balance, innocence being proved by increase of weight, not decrease. The fifth and sixth are the ordeals of the hot piece of gold and the fire in the usual forms. It is clear that the local practice varied; thus the *Smṛtichandrikā* (c. A.D. 1200) states that the water and the poison ordeals were obsolete at that time, but this statement can have applied only to the school of lawyers in whose circles that work was produced. Right down to the introduction of the rule of British law which forbids ordeals, there is abundant evidence in India of the practice of many different ordeals. Thus 'Alī Ibrahim Khān gives as practised at his own time, ostensibly in accordance with older texts, variants of the ploughshare and poison ordeals. As tests of witches we hear of the use of the ordeal of handling hot balls, the walking over hot coals and heated ploughshares, the throwing into water, the test by tying a bag of cayenne pepper over the head (if it failed to suffocate, guilt was held to be proved), and the rubbing of the eyes with capsicum (failure to shed tears was thought to establish innocence).

LITERATURE.—For the Vedic period see H. Zimmer, *Altindisches Leben*, Berlin, 1879, p. 183 f.; M. Bloomfield, *JAS* xiii. [1887] p. exxi ff.; A. Weber, *Indische Studien*, Berlin, 1850-98, ix. [1865] 44 f., x. [1868] 73 f.; R. Pischel and K. F. Geldner, *Vedische Studien*, Stuttgart, 1888-1901, ii. [1892] 159; A. A. Macdonell and A. B. Keith, *Vedic Index*, London, 1912, i. 364 f. The passages of Manu, Viṣṇu, Nārada, and Bhṛhaspati dealing with ordeals are translated by G. Buhler and J. Jolly in *SBE* xxv. [1886], vii. [1880], and xxxiii. [1889]. Of the accounts of ordeals in the important are those in the

mentary on the Yājñavalkya
Devavabhāṭta, in the *Divyātattva* of Raghunandana (c. A.D. 1600), and in the *Vīramitrodaya* of Mitrāmīśra (c. A.D. 1700). Of modern accounts the most important are those of A. F. Stenzler, *ZDMG* ix. [1855] 661-682, E. Sehlagintweit, *Die Gottesurtheile der Indier*, Munich, 1886, and J. Jolly, *Recht und Sitte*, Strassburg, 1898, pp. 144-146. The question of the connexion of Indian and other Indo-European ordeals is discussed by A. Kaegi, *Alter und Herkunft des germanischen Gottesurtheils*, Zürich, 1887, and E. W. Hopkins, *Religions of India*, London, 1896, pp. 275-279. The modern with ordeals mentioned are given by W. Crooke, *PR*², do. 1896, ii. 271 f.

A. B. KEITH.

ORDEAL (Iranian).—At what period in the history of Irān the practice of the ordeal originated we have no means of determining. Tradition, as reflected in the legendary portion of Firdausi's *Shāhnāmāh*,¹ assigns to that custom a vogue in very remote antiquity. The innocence and purity of Siyāvush, or Siyāvakhsh, son of Kaikāus, the second in the line of the so-called Kaianian kings, could be vindicated only by the use of the fire ordeal, to which he elected to submit himself. Two colossal walls of wood² were erected at just

¹ Ed. T. Macan, Calcutta, 1829, i. 396-398; tr. A. G. and E. Warner, London, 1905 ff., ii. 218 ff.

² Parsi tradition associated the scene of this ordeal with Abarguh, or Abarguh, a city situated about 80 miles south-west of Yazd, where Ibn Haukal and Yāqūt say that there existed extensive heaps or a large hill of ashes, and both regard this phenomenon as connected not with Muhammadan but with Parsi history (Yāqūt, *Geographisches Wörterbuch*, ed. F. Wüsten-

¹ The number 7 is here the primitive number, and this fact tells against a historical connexion with the 9 in Teutonic ordeals (K. Weinhold, *Die mystische Neunzahl bei den Deutschen*, Berlin, 1897, p. 53).

² A. B. Keith, *JRAS*, 1916, p. 137.

such a distance apart as would barely allow a horseman to pass between them. Siyāvush, however, emerged from between the flaming walls without scar or burn, thereby placing his honour beyond cavi, while his slanderess, Sūdābeh, had not Siyāvush magnanimously interceded for her, would have been put to death.

1. Sources.—The existing portions of the Avesta contain few allusions to ordeals; and the passages usually so interpreted (*Ys.* xxxi. 3, xliii. 4, li. 9 [*SBE* xxxi. (1887) 41, 100, 181 f.]; *Vend.* iv. 46, 54 [*SBE* iv.² (1895) 46, 48 f.]), with, perhaps, the exception of *Vendidad*, iv. 46, 54, are not sufficiently explicit to render beyond doubt a reference to an ordeal as essential to their right understanding (but see below). If, therefore, we had formed our ideas of the place of the ordeal in the legal and religious life of the Iranians from the meagre and somewhat ambiguous references to that rite in the existing parts of the Zoroastrian scriptures, we should have erred grievously. It is to Pahlavi literature that we owe our knowledge of the very extensive and important use of the ordeal in early and later Iranian times. The Pahlavi *Dinkart* has preserved a brief account of the contents of the lost *nasks* of the Avesta, and, although details are, unfortunately, wanting, we are thus able, in a measure, to form a conception of the prevalence and the elaborate development of ordeals and their ceremonies in Avestan times. The *Dāstān-i-Dīnik*, *Shāyast la-Shāyast*, and *Zāt-Sparam* also materially supplement our knowledge.

2. Origin and history.—The institution of the ordeal is attributed to Zoroaster in the *Dinkart* (vii. v. 4-6 [*SBE* xlvii. (1897) 74 f.]):

'And one marvel is the provision, by Zarātūst, of the achievement of the ordeal, that indicator of the acquitted and incriminated . . . of which it is said in revelation there are about thirty-three kinds. These, too, the disciples of Zarātūst kept in use, after that time, until the collapse of the monarchy of Irān.'¹

Whether that statement represents historical fact or not cannot, of course, be definitely ascertained.² That the ordeal in some of its forms was practised in the Prophet's time and by him has much probability. And the veneration with which it is spoken of in so many of the references to it is due, perhaps, only in a lesser degree to the belief in its institution and use by Zoroaster than to its being the instrument of a divine communication.

3. Purposes and functions.—The general purpose of the ordeal, properly so called, was to discover guilt and innocence where other evidence was absent or insufficient. It was an invocation to God to judge and reveal His decision where human knowledge failed. Hence the appropriate and descriptive character of the German term *Gottesurtheil* for this rite.

But among the Iranians, at least, the ordeal had another, though kindred, function. It served as a test not merely of the innocence or guilt of a person, but of the truth or falsity of a religious system or a religious movement together with the veraciousness of the apostle or leader of such a religion. Its function in Zoroastrianism was identical with that of miracles for the Christian and Jewish religions and of the *mu'jizat* in Muhammadanism. In the *Zāt-Sparam* Zoroaster is represented as undergoing a form of the fire ordeal with this purpose:

'The archangels exhibited three kinds of achievement [or ordeal] for the religion; first, by means of fires, and Zarātūst walked three steps on them, with the words, "good thoughts, good words, and good deeds," and was not burnt' (xxi. 24 [*SBE* xlvii. 155 f.]).

The *Dinkart* exemplifies the performance of the ordeal of molten metal for the same end by a reference to the deed of Ātūrpat, son of Māhraspand, under the Sasanian king Shāhpūr II. (A.D. 309-379), when the Zoroastrian faith was in conflict with the Manichean heresy.

'These, too [*i.e.* the ordeals], the disciples of Zarātūst kept in use, after that time . . . and the custom of one of them is that of pouring melted metal on the breast, as in the achievement of the saintly Ātūrpat, son of Māhraspand, through whose preservation a knowledge about the religion was diffused in the world; and of the manifestation, too, through that first wonder, this is also said, on the same subject, in the good religion, that of those, many, when they behold that rite of ordeal, it convinces the wicked' (vii. v. 5 [*SBE* xlvii. 74 f.]).

4. Forms.—The *Dinkart*, as already mentioned, states that revelation (meaning thereby, no doubt, the Avesta) recognized about 33 kinds (vii. v. 4 f.). If so many were in use at any period, only comparatively few of that number are mentioned in any documents. There would seem to have been a general classification into hot and cold ordeals. According to the *Shāyast la-Shāyast*¹ (xiii. 17 [*SBE* v. (1880) 360]), there were six hot ordeals. Fire itself would, naturally, constitute at least one, and, in various forms, possibly more than one of the six. The instance, already referred to, in which Zoroaster is described as walking on fires, would seem to indicate that such a form involved bodily contact with that element²—its sacred character notwithstanding. On the other hand, if we accept a reference to an ordeal, so called, as implicit in *Ys.* xxxi. 3, no physical contact is presupposed. The revelation, or 'decision' between the 'disputants,' for which the prophet prays, was evidently expected by the discernment, through the spirit, of the form or colour or some other visible feature of the sacred fire. In the strict and narrower sense of the term the process was not a case of ordeal; it was rather an instance of divination, the ordeal being really a species of divination (see also art. DIVINATION [Vedic], vol. iv. p. 829). But in the Pahlavi books the name 'ordeal' (*varīh*) is applied to both indiscriminately. The sacred twig, or *barsom*, ordeal (*baresmōk varīh*), mentioned more than once in these books, belongs to the same category (see *Dink.* viii. xxxviii. [*SBE* xxxvii. 121 ff.]). Whether we should deduce from the passage, 'The *Gāthās* for an ordeal of the spiritual existence' (*ib.* ix. xvii. 8), that those hymns had a similar function it is impossible to determine. It may be nothing more than a metaphorical expression. The whole passage is obscure.

The clearest and most explicit reference to an ordeal in the existing portions of the Avesta is to another of the heat ordeals, namely, boiling water.

'Before the boiling water publicly prepared, O Spitama Zarathushtra! let no one make bold to deny having received [from his neighbour] the ox or the garment in his possession. . . . Down there the pain for his deed shall be as hard as any in this world: to wit, the deed of a man, who, knowingly lying, confronts the brimstone, golden, truth-knowing water with an appeal unto Rashnu and a lie unto Mithra' (*Vend.* iv. 46, 54 [*SBE* iv.² 46, 48 f.]).

The water employed for this ordeal contained incense, brimstone, and molten gold. The formula recited at the performance of this rite was as follows:

'Before the Amshaspand Bahman, before the Amshaspand Ardibehesht, here lighted up . . . I swear that I have nothing of what is thine, N. son of N., neither gold, nor silver, nor brass, nor clothes, nor any of the things created by Ormazd' (*SBE* iv. 49, note 2).

Among the cold ordeals, one of the most frequently resorted to would appear to be that by poison. From the illustration in which the *Dāstān-i-Dīnik* (xxxvii. 74 [*SBE* xviii. (1882) 102,

¹ That work also claims to incorporate much material from lost *nasks* of the Avesta. See M. Haug, *Essays on the Sacred Language, Writings, and Religion of the Parsis*⁴, London, 1907, p. 106.

² But see *Dink.* viii. xx. 42 (*SBE* xxxvii. [1892] 59).

feld, Leipzig, 1866, i. 86; F. Spiegel, *Erän. Alterthumskunde*, ed. 1871-78, i. 96, 598; A. V. W. Jackson, *Persia Past and Present*, New York and London, 1906, p. 311 f.).

¹ Cf. *Dink.* vii. vii. 2 (*SBE* xlvii. 82).

² See Jackson, *Zoroaster*, New York and London, 1893, p. 97.

and note, p. 102f.]) refers to this ordeal, it would appear that the two litigants chose each a particular kind of poison, and each took or was supposed to take his own and his opponent's poison. Frequently, however, a dishonest litigant substituted an innocent powder for his own poison. But nemesis always followed, since he could not avoid taking his opponent's. The more cautious litigant took his opponent's poison, but trusted to being able to diagnose the nature of that poison, and then selected as his own one that was its antidote, and thus himself survived.

Associated with the ordeal of walking on fires and that of pouring molten metal on the bosom, and devoted to the same purpose, was the surgical ordeal:

'Cutting with a knife and the vital parts becoming visible. . . with a flowing forth of blood; and, after the hands had been rubbed over it, it became healed' (*Zāt-Sparam*, xxi. 26 [*SBE* xlvii. 159]).

One further aspect under which the Iranians practised ordeal was that of excessive eating (*pāūrū-khūrānō*). The *Dinkart*, detailing the contents of the *Nikādum Nask*, attributes to it the efficacy of causing escape from distress by bailiffs (VIII. xx. 33).

5. Regulations governing performance of ordeals.—The choice of, and preparation for, as well as the actual performance of, an ordeal were subject to very detailed and carefully systematized rules, embodied mainly, it would appear, in the *Sakādum* and *Nikādum*¹ *Nasks* (see *Shāyast la-Shāyast*, x. 25). Scarcely any of the rules themselves, but only an enumeration of the points upon which regulations existed, are given in the Pahlavi analyses of those *nasks*. As regards the choice of the ordeal, several questions would emerge—among them, probably always, whether the ordeal was to be severe or one that was not severe (*Dink*. VIII. xxxviii. 64). Whether the rank of the subject influenced that decision in Irān, as was the case elsewhere (see art. DIVINATION [Vedic]), we have but little if any documentary evidence upon which to base any conclusion. The *Dinkart* speaks of an ordeal that was 'not that for their own station, but that for the station of others' (VIII. xx. 12 [*SBE* xxxvii. 55]). But that passage admits of various interpretations.

The priest or righteous man presided over the performance and acted as judge of the outcome of the ordeal (*ib.* 56, 67). Attendants had their prescribed functions, probably to attend to the various appliances (*ib.* 16). In the case of the ordeal by fire, wood of a particular character was prescribed and used after special preparation (*ib.* 41).

References to certain rules—such, e.g., as those for protecting the limbs during ordeal (*ib.* 14)—shed some light on the extent to which, after all, the system of ordeals was really believed in as an instrument of divine revelation.

6. The ordeal in relation to eschatology.—The authors of the Avesta (*Ys*. xliii. 4, li. 9), and the followers of the 'good religion' generally, evidently believed that Ahura Mazda would bring his mighty work to its final consummation by a great ordeal by fire and molten metal (*ayah khsrušta*) through which the righteous and the wicked were destined to pass, and which was to act as the great sifter and final separator of true believers from those who had refused to believe (see *Bundahishn*, xxx. 20 [*SBE* v. 126]; A. V. W. Jackson, in *PAOS*, Oct. 1890, pp. 58-61; J. H. Moulton, *Early Zoroastrianism*, London, 1913, p. 158, note 1).

LITERATURE.—To the works referred to in the course of the article it remains to add W. Geiger, *Civilization of the Eastern Iranians in Ancient Times*, tr. Dastur Peshotan Sanjānā, London, 1885-86, pp. 43-45. E. EDWARDS.

¹ The *Hūspāram* and *Babō Nask*s also had references to ordeals.

ORDEAL (Malagasy).—The custom of judicial trials or judgments of God, i.e. ordeals, was widespread throughout the island of Madagascar down to the time of its conquest by France; it took the place of inquiry and trial in criminal matters.

Whenever a person was accused of a crime in Madagascar (murder, theft, and especially witchcraft), and had not been taken *in flagrante delicto*—which was usually the case with pretended sorcerers, to whom were attributed illnesses, misfortunes of all kinds, and even death—recourse was had to the ordeal. Among certain tribes—e.g., the Merina—all the slaves employed in the interior of the palace, before being allowed to exercise their respective functions, had to submit to it in order to show if they had any evil intentions or if they were sorcerers, and, down to the time of Radama II., princes and persons of high rank took the same precautions with regard to their cooks; otherwise they would not have touched the food served to them.

The 'guilty' were always put to death by being beaten with sticks and stones, for the shedding of a sorcerer's blood—impure blood, which was supposed to defile the earth—was avoided, and, as a rule, his body was not buried, but given as food to the dogs and wild animals; it was imperative that no part of him should remain on this earth, that he should be completely annihilated, and that even his *manes* might not come in contact with those of honest men. Not only were his belongings confiscated and divided among the chief of the country, the magistrate, and the accuser, but often his wives and children were regarded as participants in his 'crime' and were sold as slaves; they, however, and his near relatives, had to abjure all complicity with the criminal. On the other hand, an indemnity was paid by the accuser to the one who came forth victorious from the ordeal.

Ordeals by poison, by boiling water or red-hot iron, by wild animals (crocodiles), as well as by sacred food or water, were in use in Madagascar until the year 1895. The earliest inhabitants mentioned in history—the Vazimba—did not make use of ordeals, as we know not only from traditions in Imerina, but also from the stories of those who still inhabit the Menabé; but, since the 17th cent. at least, they have been in use throughout the whole island, although all the tribes did not have recourse to the same ones. They seem to be due in the east, north, and west, and afterwards in Imerina, to the Jewish immigrants who came from Yemen long ago, and in the south to the Arabs who have come to settle in those districts since the 16th century. To the former are due the ordeal by poison, by the *tanghin*, which is similar to the bitter waters of the Jews, and which was practised in the north and the centre, and to the latter those by red-hot iron, boiling water, and crocodiles, which were practised in the south.

Until recent years the Malagasy believed in the infallibility of these tests, which they applied to all crimes and to all classes of individuals; innocent persons themselves often requested to be subjected to them when they felt that they were being suspected. They were applied sometimes to isolated persons, sometimes to groups, villages, or even whole cantons.

1. Ordeal by poison (*tanghin* or *kisompa*; north of 20° S. lat.).—(a) The *tanghin* (*Tanghinia venenifera*) is a beautiful tree of the family of Apocynaceæ, which grows abundantly in the wooded parts of the east and north; its fruit, which is of a yellowish colour and the size of a small peach, forms towards the middle of November and is ripe at the end of December; in the middle of a soft greyish pulp, which has a bitter, disagreeable taste, it contains a woody nut, with a rough surface;

inside the nut is a highly poisonous kernel, which changes in colour, when ripening, from white to a brownish-red; the red kernels are the most poisonous. The poison, whether inoculated under the skin or introduced into the stomach, produces the same effects, only not so quickly in the latter case; it stops the movements of the heart and is a general convulsant; the symptoms are considerable difficulty in breathing, uneasiness, nausea, and vomiting, increasing weakness, without convulsions or cries, but with some moaning; death is due to paralysis of the heart. The *tanghin*, which in large doses is a very violent poison, in small doses acts as a powerful emetic; the riper the kernel, and the nearer it is scraped to the germ, the greater is its toxicity. The *mpanozon-doha* (lit. 'he who administers') had therefore every facility for grading the dose of the poison according to his interests.

On the east coast, when a person was accused or even merely suspected of witchcraft, he was called upon to undergo the *tanghin* test: the kernel of a fruit gathered on the ground, and therefore very poisonous, was simply rubbed on a stone, over which a little water was then poured; this the accused drank, and his death decided his guilt. The wife and children of the guilty man became the slaves of the accuser. In the north-west, among certain tribes—the Bezanozano, the Sakalava, and the Antankarana—the *tanghin* was given to young chickens when a stranger arrived in order to find out whether he had good or bad intentions, and whether it was wise to form a connexion with him.

The *tanghin* ordeal was brought, as was said above, by the colonists who came from Yemen. During the reign of the third king of Javanese origin, Andrianjaka (1640-65), the chief, Andrianentoarivo, who had got some *tanghin* nuts from Ravo, a Sakalava king of the north-west, introduced it among the Vonizongo, whence it spread throughout the remainder of Imerina in the reign of Andriamasinavalona (1696-1740).

After making sure of the efficacy of the 'drink,' as they called it, by making a chicken (*mamono sotry*) swallow some of the gratings of the *tanghin* kernel, they put some of it into a *sosoa* ('rice-soup'), which the accused person ate; if he fell ill, he was declared guilty, and if he vomited, without any other discomfort, he was declared innocent.

The grandson of Andriamasinavalona, Andriambelomasina (1755-76), introduced modifications into this practice—notably that the accused had to swallow three pieces, the size of a finger, of the skin of an aroida, the *songo*; if he vomited the three pieces, he was declared innocent; if not, he was recognized as guilty, and was put to death. Under Andrianampoinimerina (1787-1810) these were replaced by three fragments of the skin of a hen, each two centimetres square, and for the rice-water (*ranom-bary*) they substituted the *ranon-koba* ('flour-soup'); it was also in the reign of this king that in lawsuits and disputes the *tanghin* was given to dogs or fowls.

Since the beginning of the 19th cent. the circumstances connected with the ceremony of the administration of *tanghin* have changed very little; they were always marked by great solemnity.

The men who were present did not wear *sadika* (Malagasy breeches), and the women had bare shoulders, the *lamba* being fastened under the arms; the magistrate went to the person who was denounced as a sorcerer or a rebel, and arrested him wherever he was, saying to him: '*Sarobabay!*' ('Alas! I am very sorry [to arrest you, but it is the king's command]'), and the *tanghin* was administered on the spot. The test took place during the day, but the house was hermetically closed in order that the darkness might be complete; a candle was lit, and there were brought a calabash full of water which had been put underground during the night, 'not having seen the sun,' two

chickens, which had to undergo the preliminary test to find out the toxicity of the poison, a hen, which was killed in order to get the three pieces of skin, and a *tandroho* ('fishing-net'), in which the suspect was to vomit. The accuser had then to swear that he was not accusing for the purpose of harming an enemy, but that he was telling the truth. Then two *tanghin* kernels were taken, and, in order to make sure of the uniformity of the poison, a half of each of them was rubbed on a stone or on a sort of rasp moistened with a little juice taken from the trunk of a young plantain during the repetition of cabalistic words. The suspect had first to swallow a little rice; then the officiant, placing his hand on the accused's head, addressed an invocation to the *tanghin*, beginning with the words: 'Listen, listen carefully! Be attentive! *Manamango!* You are only a simple seed, quite round, without eyes, and yet you see clearly, without ears and you hear, without a mouth and you speak! By means of you God shows us his wishes!' They watched the suspect to see the effect of the *tanghin*, or gave him a drink of rice-water, and what he vomited was carefully caught in the basket in order to see if he put up the three pieces of skin, which had not only to be thrown up, but to be untouched, neither chewed nor rolled. Neither must he, in his efforts to vomit, fall with his head to the south—which was an 'evident' proof that he was a sorcerer. When his guilt was declared, his relatives, who had all been present at the test, retired, showing all the horror with which he inspired them from that time.

The number of victims to the *tanghin* is considerable, and difficult to estimate exactly. The popular belief is that one person in every five of those who take it dies. Now, during last century about one-tenth of the population of Madagascar were subjected to the test—which means the death of 40,000 to 50,000 individuals in a generation, i.e. 1500 to 2000 every year.

(b) In the west, in Menabé and further north, where the *tanghin* does not grow, the inhabitants used instead the root of the *kisomparavy* (lit. 'the female *kisompa*' [*Menaboa vcnenata*]), which acted on the medullary nervous system; only the members of a certain family had the right to gather it, and it was very carefully guarded in the house in which were kept the *jiny*, or relics of the dead Sakalava kings.

The accused was led to the north of the enclosure of the king, and his *aoaly* ('talisman') were removed, his hair was untwisted, and made to stand on end, and he was placed on the ground; one of the great chiefs of the country rubbed a piece of the root mentioned on a flat stone, slightly damp, invoking the ancestors of the king, the dead Maroseranana. When a sufficient dose of poison was rubbed down, another chief made some pellets of rice which had been cooked the previous night; the patient swallowed them, and then lay on his face and licked up and swallowed the poison paste on the stone. He was next led into one of the huts situated in the western part of the village, where *fihetsa* ('soldiers') kept him in sight, watching his movements—for he had not to scratch himself, to chase away a fly with his hands, to rave, or to vomit, under pain of being instantly put to death by blows of *akalo* ('drum-sticks'), sticks, and stones. As a rule, the corpse was dragged outside the village, on the west side, and abandoned as food for the dogs and wild animals.

2. Ordeals by red-hot iron, boiling water, or crocodiles.—These ordeals were sometimes practised indifferently by one and the same tribe, sometimes one or other of them was peculiar to a particular tribe. Before subjecting the accused to the test, the officiant always addressed a prayer to God to ask Him to make known the truth—a prayer which, except for the constant repetitions and redundancies in all Malagasy speeches, was always practically the same:

'Pay great attention, iron (or boiling water, or crocodile), listen carefully to what I am going to say to you. Do not burn (or do not kill) without reason. We have not caught the accused in the act; we have only suspicions, but, if he is really a sorcerer, an assassin, a thief, may his tongue be burned (or may his hand be scalded, or may the crocodiles devour him), let him die! But, O God of our fathers, if he is innocent, do not let him succumb, one, two, three, four, five, six times let him come forth triumphantly from this test, but the seventh, if he is guilty, may his tongue be burned (or may his hand be scalded, or may the crocodile devour him), and let him die.'

(a) In the ordeal by red-hot iron the iron was usually heated with wood of a special kind, during the prayer of the officiant, who afterwards touched the tongue of the accused three times (Antambahoaka), four times (Mahafaly and Antandroy), or seven times (Betsimisaraka of the south and the Antanosy), or else made him lick the iron once

(Antifheranana and Betsileo), after a few scrapings of a royal *hazomanitra* ('sacred wood') had been put on it.

(b) In the ordeal by boiling water the accused, as a rule, had, without burning his hand, to take a pebble out of a pot half-full of boiling water, into which had been thrown some cow-dung and a few tamarind leaves (if, during the preparations, two dogs fought, if a crow flew over the gathering, if a house in the village went on fire, if bad news was heard, or if the accused let the stone fall, he was at once declared guilty); he had afterwards to lay down the stone beside the royal *hazomanitra* and cover his hand for twenty-four hours, but during all that time he was watched so that he might not apply a remedy. If he then had blisters on his hand, he was declared guilty.

(c) In the ordeal by crocodiles the accused was conducted to the bank of a river, which, after the necessary harangue, he crossed twice; if he came out of this test unharmed his accusers usually paid him as indemnity two oxen, then two others, one for the chief and one for the magistrate.

ORDEAL (Roman).—The nature of an ordeal has been explained above (p. 507), and all that is necessary here is to bring into line such vestiges of primitive ritual relating to ordeals as can be discovered in the Roman tradition, and the legendary stories which appear to show that a system of ordeals was at one time familiar to the Italian peoples. Not only are the materials scanty, but the elucidation of them is the more difficult because Latin literature is so largely dependent upon Greek models that it constantly tends to represent as native what is actually of alien origin. This qualification must always be borne in mind, even where the evidence is not on the surface such as to awaken suspicion.

1. Fire ordeal.—One of the commonest forms of ordeal is that in which the guilt or innocence of an accused person is tested by fire, *i.e.*, according to his ability or failure to endure unscathed the contact either of the fire itself or of a substance such as iron made red-hot by fire. Vergil puts into the mouth of the Etruscan Arruns the statement that his countrymen, while worshipping Apollo on Mt. Soracte, were enabled, owing to the strength of their piety, to walk through the flames, bearing live embers (*Æn.* xi. 785 ff.). It is probable that Vergil is alluding to the survival of an ancient rite in which Apollo had succeeded to the place of honour previously occupied by Vediovis in his capacity of an under-world god (G. Wissowa, *Religion und Kultus der Römer*, Munich, 1902, p. 191). Pliny (*HN* vii. 19) describes the immunity from the effects of fire as belonging to certain households known as Hirpi, who on that account were exempt from military and other State burdens. Varro (*ap. Serv. in Verg. loc. cit.*) ascribed their insensibility to the use of an ointment which they spread over the soles of their feet before exposing them to the fire. From Silius Italicus (v. 175 ff.) we get a clearer impression of the ritual: the celebrant was required to pass three times through the fire bearing offerings to the god, which, if successful, he deposited on the altar. One might guess that the aspirant to initiation in the order of the Hirpi, before securing his admission, made public celebration of his proficiency.

The word *hirpus* signified 'a wolf' in the Sabine dialect (Strabo, p. 250), and an aetiological explanation of the rite preserved by Servius declares that wolves robbed the *exta* from the altar of Dis pater, that they were pursued by the shepherds as far as a hollow which emitted pestilential vapours, that an epidemic followed, and that an oracle promised relief to the sufferers on condition that they imitated the wolves by living on plunder. We infer that the wolf-priests, who, so far as their name is concerned, may be compared with the Luperci Quinctiales and Fabiani in Rome (Wissowa, p. 483, n. 6), were the human representatives of the malignant power whose anger it was essential to appease.

A number of similar cases of walking through fire from India, China, and elsewhere have been collected by Frazer (*GB*³, pt. vii., *Balder the Beautiful*, London, 1913, ii. 1-20), who concludes that the fire-walk was in its origin a form of purification, the flames being thought either to burn up or to repel the powers of evil (see also W. F. Otto, in Pauly-Wissowa, viii. 1934 f., and art. FIRE-WALKING, vol. vi. p. 30). So far as the evidence goes, the Latin rite had not become an ordeal in the sense that its successful performance was used to establish the innocence of an accused person, and is therefore an incomplete parallel to the proceedings referred to by Sophocles (*Ant.* 264 ff., as quoted above, p. 521^a). The case of Mucius Scaevola voluntarily thrusting his arm into the flame (Livy, ii. 12f.) is essentially different; his purpose was not to declare his innocence by immunity, but to prove his courage by suffering. Nor can we attach any importance to the statement of the scholiast on Soph. *Ant.*, *loc. cit.*, who, in attributing the practice of touching molten iron to the Romans of his own day, was apparently speaking of the Byzantine period (R. Hirzel, *Der Eid*, p. 199). It is probable therefore that allusions to walking through fire as a type of extreme danger (Prop. i. 5. 5; Hor. *Carm.* ii. 1. 7) should be regarded as literary reproductions due to Greek influence.

2. Other similar tests.—There are more definite traces of the employment of other tests similar to the fire ordeal. An isolated instance of what Grimm called the *iudicium offæ* is recorded by the Horatian commentator Acron (on Hor. *Epist.* i. 10. 10). When slaves were suspected of theft, they were taken to a priest, who gave to each of them a crust of bread magically drugged. The culprit was discovered by the bread sticking in his throat. 'To pour water into a sieve' was a proverbial image used to express futile labour (Plaut. *Pseud.* 102); yet it was said that Tuccia, a Vestal virgin charged with unchastity, had successfully cleared her character by the invocation of Vesta to become her witness by enabling her to draw water from the Tiber and convey it thence in a sieve to the temple of the goddess (Val. Max. viii. 1, abs. 5; Pliny, *HN* xxviii. 12; Dion. Hal. *Ant. Rom.* ii. 69). Another Vestal, Emilia, who, while in charge of the sacred fire, had temporarily entrusted it to a novice, with the result that it became extinguished, freed herself and the whole community from the suspicion of an undiscovered taint by submitting to the judgment of the goddess as a test of her purity. Although the altar was absolutely cold and not a spark remained among the ashes, a sudden flame at once broke out and spread itself over the linen girdle which the priestess had thrown on the slab (Dion. Hal. *Ant. Rom.* ii. 68). A similar story was current regarding Claudia Quinta, a Roman matron of blenished reputation, who successfully accomplished the self-imposed task of drawing off from a sandbank in the Tiber the ship which had struck there when conveying to Rome the statue of the Great Mother (Ov. *Fast.* iv. 305 ff.). Another chastity ordeal is recorded in connexion with a dragon's cave in the precinct of the temple of Juno at Lavinium (*Ælian, Nat. An.* xi. 16). On

stated occasions the priestesses entered the cave blindfolded, bearing a barley-cake to be consumed by the dragon. So long as they remained chaste, the sacred animal accepted their offering; but, if it was sensible of pollution, the cake was left untouched, and was subsequently broken into small fragments and removed from the precinct by the ants which acted as cleansers. The guilty woman was then traced and punished.

In some of these cases the offer immediately to submit to the test converts a protestation of innocence on oath into a trial by ordeal. For the test of an ordeal as contrasted with an oath lies exactly in the willingness of the swearer to invoke the immediate fulfilment of the curse (E. B. Tylor, in *EBR*¹ xx. 174, s.v. 'Ordeal'; Hirzel, p. 211). An example of what is actually an ordeal, though known as an oath, may be taken from the mysterious cult of the Palici in Sicily (Verg. *Æn.* ix. 585). Their sanctuary contained a fountain which rose to the height of some 10 ft. and again subsided. Here a sacred oath might be taken, with the result that, when its terms were inscribed on a tablet and thrown into the water, the tablet would float, if the words of the oath were true, but, if they were false, it would sink, and the perjurer was consumed with fire (Steph. Byz. p. 496, 14; [Arist.] *Mir. Ausc.* 58).¹ The scantiness of the literary evidence suggests that the practice of ordeals disappeared at a very early time, probably owing to the encouragement which the system offered to the fraudulent devices of the priests. According to the best authorities, there is no trace of them to be found in the Roman criminal law, and the nearest approach to one was the custom of allowing a criminal who was thrown over the Tarpeian rock to go free if he escaped unhurt after the execution of his sentence (H. F. Hitzig, in *Zum ältesten Strafrecht der Kulturvölker* [Fragen zur Rechtsvergleichung gestellt von Th. Mommsen], Leipzig, 1905, p. 44). So far as private law is concerned, it has been conjectured that the oldest form of civil process (*legis actio sacramento*) was the survival of an earlier ordeal (R. von Ihering, *Scherz und Ernst in der Jurisprudenz*, Leipzig, 1891, p. 385 ff.). In general, however, the place of ordeals was taken by the oath in the case of citizens and the torture applied to extract the truth from slaves (W. Smith, *Dict. of Gr. and Rom. Antiquities*, London, 1890-91, ii. 852^b). The exculpatory oath (*iusiurandum in iure*), if accepted by either party when proffered to him by his opponent, furnished a complete defence (*exceptio iusiurandi*) to any further proceedings on the same issue. In primitive jurisprudence oaths were of the highest importance, but in the developed system of the later republic and the early empire the challenge to an oath and its refusal had become so entirely the instruments of the pleader's chicanery that Quintilian discusses (*Inst. Or.* v. 6) the various ways in which an orator should make use of them.

3. Ordeal by battle.—The custom of ordeal by battle has left traces more easily recognizable. We are informed that the Umbrians down to historical times were accustomed to submit their private disputes to decision by fighting in full armour, and that the disputant who succeeded in slaying his opponent was considered to have established the justice of his case (Nicol. Damasc. *ap. Stob. Flor.* x. 70 [*FBG* iii. 457]). This has been compared with the survival until recent times of the Vehmgericht in Westphalia and the blood-fend in the mountains of Corsica and Sardinia (H. Jordan, *Die Könige im alten Italien*, Berlin, 1887, p. 44 f.). That the same principle extended to

claims to office may be seen from the famous example of the *Rex nemorensis* at Nemi; and the legends which tell of the violent deaths suffered by several of the Roman kings (Livy, i. 14, 48; Dion. Hal. *Ant. Rom.* iv. 38) have suggested that they habitually gained the throne by success in mortal combat (*GB*³, pt. i., *The Magic Art*, London, 1911, ii. 321). However this may be, there are not infrequent examples in early Roman history in which the decision of a quarrel between two nations is made to depend upon the result of a single combat between champions selected from the armies of either side.¹ The idea seems to be that the selection of champions who are equally matched or at any rate representative of the power of the respective opponents leaves the issue to the decision of the gods, who, as it is believed, will award the victory to the just cause.² In the contest between Æneas and Turnus, which in its details clearly suggests that it was an ordeal by single combat between representatives of the Trojans and Rutulians, the judgment of heaven is figured by the balance in the hands of Juppiter—an image borrowed by Vergil from Homer (*Æn.* xii. 725 ff.). Romulus, the legendary founder of the city of Rome, was challenged to single combat by Acron, the king of the Cæminenses, and his success was the occasion of the earliest dedication of the *spolia opima* (Plut. *Rom.* 16). The desire to procure an equal arbitrament appears clearly in the arrangements made for the combat between the Horatii and the Curiatii, who were selected as equally matched in number, age, and strength (Livy, i. 23 f.). T. Manlius took up the challenge of a gigantic Gaul, who, when the opposing armies were ranged opposite to each other on either side of the Anio, offered to decide the issue by the result of a duel between himself and the bravest man on the Roman side. The Gaul was slain and Manlius earned his cognomen Torquatus from the collar which he stripped from the neck of his fallen enemy (*ib.* vii. 9 f.). On a later occasion of the same kind M. Valerius received the manifest favour of the gods in the appearance of the raven which, by settling on his helmet, harassed and discomfited his adversary (*ib.* vii. 28).

LITERATURE.—Besides the references given throughout see K. H. Funkhanel, 'Gottesurtheil bei Griechen und Römern,' *Philologus*, ii. [1847] 385-402; R. Hirzel, *Der Eid: ein Beitrag zu seiner Geschichte*, Leipzig, 1902, esp. pp. 182-220.

A. C. PEARSON.

ORDEAL (Slavic).—Ordeal plays a part in the customs of almost all branches of the Slavic race, and of the Balkan Slavs especially. The attitude of Russia towards judicial combat and ordeal seems to show the influence of Scandinavian custom, and is therefore less typical of Slavic mentality.

Ordeal appears to have been known to the Czech peoples at an early day; thus, in Bohemia in the early 11th cent., under Duke Brzctislav, the *judicium Dei* seems to be the only form of evidence in a case where proof was difficult, as in a charge of cruelty brought against a husband by a wife. In the early 14th cent. redaction of Bohemian law by Rosenberg (called rather unwarrantably *Práva Země Česká*, or 'Law of the Czech Country,' by A. Kucharski, *Älteste Denkmäler der slowenischen Rechte*, Warsaw, 1838, pp. 227-335) ordeal has apparently disappeared, and its place has been taken by the system of compurgation. In a still later redaction of the same century, the *Rad prava zemského*, or *Ordo iudicii terræ*, the

¹ Good examples of single combats as applied in Germany and Spain to the settlement of public and private quarrels are given by Tac. *Germ.* 10 and Livy, xxviii. 21. 4 ff.

² Cf. Prop. iv. (v.) 6. 51 f. Such is also the implication of the familiar *Mars communis* (Cic. *de Orat.* iii. 167). The decision in battle is given by a veritable judgment of God: 'tunc ea habenda fortuna crit quam di dederint' (Livy, xxx. 30. 22).

¹ The account of Polemo followed by Macrobius (v. 19. 21, 26 ff.) is more indefinite.

chief test is the duel; thus, in a charge of murder, a judicial combat could be ordered. It was conducted with great formality, and was attended with ceremonies peculiar to the Czechs; the victor cut off the head of the vanquished, and placed it between the knees of the dead body; he then laid two dollars on the body and departed, safe from pursuit by the avengers of blood (tit. 26; Kucharski, *op. cit.* p. 436). Here too appears another peculiarity of Bohemian duelling customs; a woman over eighteen years of age, or a widow, could claim to fight her own duel, and was indeed encouraged to do so, in preference to choosing a champion, lest the life of an innocent man might be endangered. Her adversary was handicapped by being made to stand in a pit up to the waist; both man and woman were similarly equipped with sword and buckler (tit. 40; *ib.* p. 440). The peasant who, in fighting against a noble, had formerly been limited to a stick and small shield was now allowed to use sword and full-sized shield (tit. 37; *ib.* p. 440). Offences of damage done to harvests and gardens were once tested by ordeals of boiling water or red-hot iron; but now the iron ordeal was abolished, the redactor being of opinion that it had been instituted as a deterrent to the people rather than from any fear of God (tit. 53; *ib.* p. 446). Polish custom of the 13th cent. under Boleslav V. was very similar to Bohemian as regards the duel, which was not obligatory, but could be claimed by an accuser unconvinced by the witnesses. Ordeals of hot iron and of hot and cold water seem to have been merely alternatives to the duel.

Among the South Slavs ordeal is varyingly found. Stephen, founder of the Hungarian monarchy early in the 11th cent., apparently did not know of it; but after the conversion of the Magyars it is well established in the laws of the end of the same century (cf. I. de Batthyán, *Leg. Eccles. Hung.*, Claudiopolis, 1785, i. 439, 454). It is unknown in the monuments of the 13th cent.; the statute of Matthew of Slavonia (1273) knows oath and judicial combat, and that of Vinodol (1288) recognizes oath only. Serbian law, however, had full cognizance of ordeal, and the code of the emperor Stephen Dushan in the 14th cent. gave great prominence to it. Hot-water ordeal is held in such respect that a man convicted by means of it has no possibility of appeal or justification (tit. 64; Kucharski, *op. cit.* p. 186). This was the test for any charge against a commoner, but the oath was sufficient for a nobleman (tit. 78; *ib.* p. 189). A man charged with theft had to carry hot iron from the door of the church to the altar; this ordeal, formerly known as the *pravod sheljézo*, is now designated by a word of Turkish origin, *mazija*, and the hot-water ordeal (*na vodon*) is still practised in Serbia and Bosnia.

The ordeal is known in Russian law, but never plays a very important part. The earliest written monuments, the treaties between Russia and Greece of the 10th cent., show no sign of ordeals, but use only the oath; this may, however, be due to consideration for the Greeks, or to the lack of scope for such tests in treaties primarily commercial. The first Russian code, the *Russkaia Pravda* of Jaroslav in the 11th cent., reflects much of Scandinavian judicial ideas, but it is not until a 12th cent. revision of it that ordeals by iron and water appear (tit. 28; cf. J. Esneaux, *Hist. de Russie*, Paris, 1830, i. 181). The first mention of the judicial duel is in treaties of the 12th cent. between the princes of Novgorod and the Germans, and it does not appear as fully regulated until the late 15th cent., in the Decree of Pskov. Ivan III. attempted in his *Oulogenia* of 1497 to harmonize the old law with the new influences which had come in from

the Mongols, and more especially from Byzantium; the result was that the judicial duel is secondary to oral and written testimony and to the oath as a means of proof, and is further robbed of its danger to life by being fought with a short club for sole weapon (cf. Rambaud, *Hist. de la Russie*, tr. L. B. Lang, London, 1879, i. 248). Judicial duel thus lessened in importance, but still persisted until the reign of Ivan the Terrible, when the new code of 1550, the *Soudebnik*, completed the transformation from the tolerant native customs to a criminal code of the harshest severity. The attitude of the Russian Church, influenced by the Greek clergy, favoured this change, and may be contrasted with the early favour shown to ordeal by the Roman Church, the most striking instance of which occurs in the 12th cent. and is reported by Helmold (*Chron. Slav.* i. 24; Leibniz, *Script.*, Hanover, 1710, ii. 608); when Bishop Geroldus converted the Slavs of Mecklenburg, he replaced their primitive belief in oath-taking by trees, stones, and fountain with the custom of bringing criminals to the priest for examination by red-hot iron or by the hot ploughshares.

LITERATURE.—A. Rambaud, *Hist. de la Russie*, Paris, 1878, tr. L. B. Lang, London, 1879; R. Dareste, *Hist. du droit*, Paris, 1889, chs. vii.-x. M. E. SEATON.

ORDEAL (Teutonic).—Like most primitive peoples, the Teutons were adherents of the principles of the ordeal, and it seems possible to trace certain distinguishing characteristics of their mentality in the forms of ordeal particularly affected by them; thus the judicial duel was an attempt, by regularizing the blood-feud, to bring into play a rough and elementary kind of justice; so too the *corsned* of the Anglo-Saxons displays in the conditions of the test their shrewd, though perhaps only instinctive, common sense. It is doubtful whether the evidence on Teutonic ordeal throws any light on the two conflicting theories held on the origin of ordeal, the first and most generally accepted regarding it as an appeal to divine judgment, the second as 'an intrusion of magic into a purely legal idea' (cf. *MI* ii. 687, 690). If anything, the Teutonic evidence would appear to favour the religious origin, according to which divine aid is invoked in cases where man's knowledge is lacking, his judgment at fault, or his means of procuring reliable testimony limited. The use of inanimate objects in revealing the divine decision would be perfectly natural to people who had been familiarized by primitive belief and magic practices with the idea of supernatural qualities inherent in inanimate nature. As Hobhouse (*Morals in Evolution*², London, 1916, ch. iii. § 9, p. 116) suggests, the practice of the oath probably preceded that of the ordeal; but it did not carry conviction so forcibly, for its results were not immediately manifest; thus in early Scandinavian law the oath is called 'man's ordeal' in contradistinction to God's ordeal, 'and if a man first offer God's ordeal, he shall have no right afterwards to man's ordeal' (*Norges Gamle Løve*, i. 389).

There is very little actual evidence for Teutonic ordeal in pre-Christian times. Classical authorities throw little light upon it; there is a cursory reference in Velleius Paterculus (*Hist. Rom.* ii. 118) to the regulation by justice of disputes which the Germans formerly decided by arms. Tacitus (*Germ.* 10) does indeed describe a single combat, but its conditions are so different from that of the true ordeal that it must be regarded as a means of determining angry rather than justice. We can, however, assume the familiarity of the Teutonic peoples with ordeal from several circumstances: first, the prevalence of similar forms of ordeal among various Indo-Germanic peoples,

which points to its being a general Indo-Germanic institution (cf. Brunner, *Deutsche Rechtsgesch.* ii. 400). Certain customs and forms preserved in ordeals may indeed carry us back to great antiquity; F. W. Maitland (*Collected Papers*, Cambridge, 1911, ii. 448 f.) points out that the use of wooden weapons in certain judicial duels may indicate an origin before the Iron Age. It is very noteworthy that the names for the various ordeals in the different vernaculars are entirely free from any Christian significance. Again, this assumption is supported by the fact that one of the earliest extant Teutonic laws, the first text of the *Salic Law*, which was promulgated so soon after the introduction of Christianity among the Franks as to be practically unaffected by Christian belief, has two references to the *æneum*, or trial by boiling water, references so casual and so devoid of detail as to presuppose great familiarity with the circumstance (*Lex Salica*, i. 52, ed. J. M. Pardessus, Paris, 1840, pp. 30, 313). The early propagandists of Christianity among the Teutons did their best to put down ordeal, as against the spirit of Christian belief. Thus in the early 6th cent. Avitus, bishop of Vienne, remonstrated with King Gundobad on the importance assumed by the judicial duel in the Burgundian laws. In the 9th cent. Agobard, archbishop of Lyons, wrote in vigorous protest against all forms of ordeal, and against the judicial duel in particular (cf. *PL* civ. 113-126, 251, 254 B). Throughout the 9th and 10th centuries the ordeal was the subject of various condemnatory papal decrees; but the Church, unsuccessful in its early attempts, had been forced to adopt and adapt ordeal, and had done it so thoroughly that the lesser authorities proved reluctant to give it up, and disregarded the successive papal and episcopal enactments against it (cf. Lea, *Superstition and Force*, p. 355). The opposite point of view, that ordeals were not known to Germanic peoples, but were introduced by the Church, is upheld by Karl von Amira (Paul, *Grund. der germ. Phil.* vol. iii. sect. ix. B. 7, pp. 218-220).

The forms of ordeal vary slightly from one Teutonic people to another, although the chief kinds seem to have been known to all. Those chiefly practised by the Scandinavians were the duel (*hólmganga*), the carrying of hot iron (*jarnburðr*), the walking on hot ploughshares (*af skraganga*), and the passing under the turf-arch (*ganga undir jarðarmen*). The fullest account of wager by battle occurs in *Kormaks Saga*, 10, where the reference to the accompanying sacrifice of a steer and to the use of a ritual formula proves its religious significance, and the strictly regularized and safeguarded conditions of the fight testify to its legal validity (see *DUELING*). Saxo (v. 153) gives one enactment of the so-called Law of Froði: 'Any quarrel whatsoever should be decided by the sword'; but few of the many wagers by battle of which he speaks are strictly ordeals (see F. Y. Powell's *Introd. to O. Elton's tr.*, London, 1894, p. 38f.), many being merely those trials of strength in which the champions delighted. In the same way the alleged power of the berserks to bite steel, to swallow hot coals, and to go through fire (cf. Saxo, vii. 221) were probably confused in the popular mind with the corresponding ordeal-trials, although exhibited for no other purpose than proof of supernatural strength or endurance. The fight between Thór and Oláfr Tryggvason at Randsey may perhaps be regarded as a trial of strength, but also surely as a religious test, similar to Elijah's test between Baal and Jahweh (see *Saga Ólafs Konings Tryggvasonar*, 150 [*Fornmanna Sögur*, i.]).

The carrying of hot iron appears as a religious ordeal in the famous story of Bishop Poppo and King Haraldr Gormsson of Denmark, whom he

converted to Christianity. There are many discrepancies in the various versions of the tale (cf. J. Grimm, *Deutsche Rechtsalterthümer*, p. 576 f.), but one of the most trustworthy (Adam of Bremen, *Gesta Hammaburg.* ii. 33; *Mon. Germ. Script.* vii. 318) represents the heathens as demanding the sign ('cum barbari suo more signum quaerent'). Vigfusson, however, considers the ordeal by hot iron to have been introduced into Scandinavia from Germany with the advent of Christianity, and to have superseded the *hólmganga* and the *ganga undir jarðarmen* (R. Cleasby and G. Vigfusson, *Icelandic-English Dictionary*, Oxford, 1874, s.v. 'Bera' A. iii.). One interesting use of the ordeal by hot iron was to establish a claim to paternity, a use to which it was frequently put during the civil wars in Norway, in order to prove the pretensions of claimants to the throne; thus in *Sverris Saga*, 59 (*Fornm. Sögur*, viii.), Eiríkr carries red-hot iron *ser til fadernis*, i.e. to prove his claim to be the son of King Sigurðr. Sometimes the test of endurance was further complicated by the obligation of hurrying the hot iron into a trough placed at a set distance; the iron is variously spoken of as a bar (*jarnslá*) or as a kind of gauntlet ('*ferrum . . . in modum chirothecae*'). A variant form of the *judicium ferri candenti* was that of walking on hot ploughshares; but this is found only rarely in Scandinavia; it does occur, however, as a paternity test (*Saga Sigurðar Jörðsalafara*, 47 [*Fornm. Sögur*, vii.]).

That form of the ordeal of boiling water which consisted in feeling for a stone in a kettle (*ketillak*, *ketilfang*) was not practised in Sweden and Denmark, but in Norway it assumes importance as the legal variant for *jarnburðr* in the trial of women. There is a noteworthy traditional instance of it in the Poetic Edda (*Guðrúnarkviða*): Guðrún, to clear herself of a shameful accusation, demands this ordeal, but asks King Atli to send for Saxi, lord of the Southmen, who understands the necessary ritual. This would seem to point to this form of ordeal not being Scandinavian in origin. In this version of the tale the stone is called *jarknastein*, properly a milk-white opal, a name which would seem to point to magic properties, for it is the word applied in *Völundarkviða*, 25, to the stones made by Völundr from the eyes of children. In Frisian law the ordeal of *keszselfang* was a last resort to convict the perjurer in a case where two opposing parties persisted in contradictory oaths on a conviction for theft (cf. *Asega Buch*, ed. T. D. Wiarda, Berlin and Stettin, 1805, p. 236).

The ordeal of throwing the accused into deep water (*judicium aquae frigidae*) is unknown in Scandinavian practice, although, as Grimm points out (*op. cit.* p. 586), some connexion may be traced with the sacrificial drowning at Upsala mentioned in Adam of Bremen (*Gesta Hammaburg.* iv. 26, Sch. 134; *M.G. Script.* vii. 379). The purely Scandinavian practice of creeping under a *jarðarmen*, or strip of turf detached from the ground, was not invariably a form of ordeal, but sometimes simply an infliction of disgrace (cf. 'jugum subire'); but it does occur as an ordeal in *Laxdæla Saga*, ch. 18. These forms of ordeal appear in all Teutonic countries with certain local variations and with the additions and deviations which ingenuity could suggest, or Christian practice could sanction. Thus Frisian law seems to be unique in recognizing an ordeal of twigs, a kind of drawing of lots, carried out with ecclesiastical ritual to discover a homicide (*Lex Frisionum*, 14. 1; *Mon. Germ. Leges*, iii. 631 ff.). Ordeals were early forbidden in Scandinavian countries; *hólmganga* was suppressed early in the 11th cent., although isolated instances of it occur later, and the vogue

revived in feudal times; ordeals in general were abolished in Norway in 1247 by Valdemar II.

In Old English usage the judicial duel was practically unknown, but curiously enough it became legally established in the very century in which it was abolished in Scandinavia (see *DUELLING*). The importance attached to ordeal is proved by the fact that in a treaty dating from the 10th cent., between the Anglo-Saxons and the Welsh, ordeals were appointed to settle all disputes between the two nations (*Ordinances of the Dunsetas*, 2; B. Thorpe, *Anc. Laws of England*, London, 1840, p. 150). Ordeals by hot water and hot iron were most frequent, and were strictly legalized and regulated by the laws of Edward, Æthelstan, and Æthelred. According to these enactments, ordeal was open to the freeman if he was unable to obtain the necessary number of compurgators for the oath (Æthelred, i. 1; Thorpe, p. 119). The serf was not given the choice of the oath, but forced to undergo the ordeal, unless his lord bought him off, and swore on his behalf (*ib.*); so too the coiner of false money (Æthelstan, i. 14; Thorpe, p. 88), or the freeman who by a former perjury had already forfeited the confidence of the community (Edward, 3; Thorpe, p. 69). In both water and iron ordeals an attempt was made, apparently peculiar to English law, to regulate the test, not only according to the nature of the offence, but also to the character of the offender. For a first offence the iron was of one pound weight, and the stone was hung to the depth of the wrist; for an offender whose character could not be vouched for by oath threefold ordeal was prescribed, in which the weight of iron was increased to three pounds, and the stone was hung to the depth of the elbow (Æthelred, i. 1; Thorpe, p. 119; Æthelstan, iv. 7; Thorpe, p. 96). Certain offences, such as incendiarism and murder, were proved by threefold ordeal only, but the accuser in this case had the choice of water ordeal or of iron ordeal (Æthelstan, iv. 6; Thorpe, p. 95). Like oaths, ordeals were not to be held on festivals and fasts (Edward and Guthrum, 9; Thorpe, p. 74); and in the ecclesiastical law the procedure both for the accused and for the officiating priest was fully described (Æthelstan, iv. 7; Thorpe, p. 96). Iron ordeal reappears in the laws of William the Conqueror and of Henry I. as an alternative to the duel in cases of dispute between individuals of French and English nationality (William I., iii. 12; Thorpe, p. 212; Henry I., lxxv. 6; Thorpe, p. 253). If Liebermann is correct in his contention that, in the Laws of Ine, 37 and 62 (Thorpe, pp. 54, 62), the word *ceape* should be emended to *ceace* ('kettle'), it would seem that the hot-water ordeal was prevalent in England at a much earlier date than is generally supposed (Liebermann, 'Kesselfang bei den Westsachsen im 7^{ten} Jahrh.', *SBZW*, 1896, ii. 829-835). References in the laws to water ordeal do not always make it clear whether the cold- or the hot-water ordeal is intended; but supplementary evidence can be gained from the rituals, which sometimes, by a reference such as that to the passage of the Israelites through the Red Sea, make it clear that the cold-water ordeal is in question (cf. Liebermann, *Gesetze der Angelsachsen*, vol. i. p. 404, § 20, vol. ii. pt. ii. s.v. 'Kaltwasser'). The late prevalence of this test in charges of witchcraft proves the tenacity of the idea of ordeal in the popular mind.

A form of ordeal which found particular favour in England was that of swallowing a morsel of bread or cheese (*judicium offae*); this was generally consecrated, but not always, and the lack of religious significance in the names given to the ordeal (*corsned*, 'trial-portion,' *nedbread*, 'forced bread') suggests that the test was practised in pre-

Christian times. This ordeal should not be confused with the oath taken on the sacrament, which was a more definitely religious ceremony, and almost entirely confined to the clergy (cf. Liebermann, vol. ii. pt. ii., under 'Geweihter Bissen,' 'Abendmahlsprobe'). The ordeal of walking on hot ploughshares does not occur in Old English law; but there is the famous story, traditional, though not well authenticated, of Queen Eilma, mother of Edward the Confessor, who thus cleared herself of an accusation of misconduct (J. Brompton, in R. Twysden, *Hist. Ang. Script.*, London, 1652, i. 942). The bier ordeal does not appear in Old English custom, although it is frequent in later practice as the conviction of a murderer. The ballad of 'Earl Richard' (Walter Scott, *Minstrelsy*, ii. 421) has one of the fullest of the many literary references to this belief that in the presence, or at the touch, of the murderer, the wounds of the dead body would 'open their congeal'd mouths and bleed afresh' (Shakespeare, *Richard III.*, i. ii.). A reference by James I. (*Daemonology*, III. vi.) shows the persistence of this belief; and W. Henderson (*Folk-lore of the Northern Counties*, London, 1879, p. 57) traces to this ordeal the custom lately prevalent in Durham, that every visitor to see a dead body should touch it, even though there might be no suspicion of violence.

Evidence is clear that ordeals soon fell into disrepute with the Norman kings; William Rufus declared his incredulity of the iron ordeal, as Eadmer tells in horror (*Hist. Nov.* 102, Rolls Series). Henry II. permitted the water ordeal to clear a man of a specific charge, but he nevertheless took the precaution of banishing him if he were of ill-repute (*Ass. Clar.* c. 14). The almost complete disappearance of ordeals from the records after the reign of John testifies to the thoroughness with which England, for the time entirely submissive to the papacy, accepted the decree of the fourth Lateran Council in 1215, excluding the clergy from participation in ordeals.

Ordeal plays so large a part in the law and customs of the remaining Teutonic peoples, especially of the Franks, that it is impossible to do more here than give a short summary of its course, and touch on representative examples; the later instances are so entirely ruled by ecclesiastical procedure that there is little distinctively Teutonic about them (cf. Ducange, *Glossarium*, Niort, 1883-87, s.vv. 'aquæ judicium,' 'ferrum candens,' 'ordallium'). The Visigoths, more influenced by Roman custom, seem to have favoured torture rather than ordeal as a means of proof, to judge by the absence of ordeal from the earlier redactions of the *Lex Visigothorum*; but in a 7th cent. code, probably by King Egica, there is an ordinance for hot-water ordeal, interesting for its wide territorial scope, and for the proof which it gives of trust in the validity of this form of test (*Lex Visigothorum*, VI. i. 3.; *M.G. Leges*, 1893, p. 250).

The Langobard treatment of ordeal is interesting in its variety. The Laws of Rothair (A.D. 643) make no mention of ordeal other than the duel, and that only in case of obstinacy on the part of an offender (Rothair, 198; *M.G. Leges*, iv. 342).

Luitprand (A.D. 731) ordains the duel as a test in a charge for the murder of a freeman, but at the same time he shows his distrust of a method retained only because of its antiquity: 'Quia incerti sumus de iudicio Dei, et multos audivimus per pugnam sine iustitia causam suam perdere, sed propter consuetudinem gentis nostrae Langobardorum legem ipsam vetare non possumus' (Luitprand, 118; *M.G. Leges*, iv. 156). It is not until the Langobard submission to the Franks that element ordeals play any part in Langobard

laws, as a result of their important place in Frankish codes. The Franks soon after their conversion Christianized the element ordeals, one of which had already appeared in the Salic Law (see above, p. 531*), but the Church strove against the duel; the Burgundian code, however, persisted in giving special prominence to it, and in the 6th cent. it was again legally recognized. Charlemagne was a convinced upholder of ordeal, especially of the unilateral forms. He recognized the duel, but attempted to replace it by a new form of bilateral ordeal, that of the cross, in which both plaintiff and defendant stood motionless, with arms outstretched against a cross; whichever first moved or let fall his arms was judged guilty. This is obviously a Christian ordeal, but its heathen prototype is found in the *stapfsaken*, or asseveration, with right hands outstretched, described in *de Populi Leg.*, tit. 6 (*M.G. Leges*, iii. 465). The cross ordeal first appears in Frankish law under Pepin (A.D. 753), for a claim of a woman against her husband. In Charlemagne's laws for the Franks it is the test for theft and for disputes of boundaries (*M.G. Capit.* i. 129); for the Lombards he makes it the alternative to the duel (*M.G. Leges*, iv. 511, tit. 130), but for other charges, such as certain murder-charges, decrees the nine ploughshares (*ib.* p. 507, tit. 104). The cross ordeal persisted in Lombard law until forbidden by Lothair in the early 9th cent., 'ne Christi passio . . . cujuslibet temeritate contemptum habeatur' (*ib.* p. 556, tit. 93); Lothair also applied to the Lombards the Frankish decree of his father, Louis the Pious, annulling the cold-water ordeal (*ib.* p. 548, tit. 56; *M.G. Capit.* ii. 16).

In spite of this enlightened attitude, ordeal became so deeply rooted in the popular custom of the two following centuries as to be known in Canon Law as *purgatio vulgaris*. The Church itself relied upon it for the conviction of both clerical and lay offenders (cf. Lea, *op. cit.* pp. 356-363), and was unwilling to forgo a privilege at once so impressive and so lucrative; there was a growing tendency, however, to confine its use to the conviction of heretics, and this use of the iron ordeal was allowed even by the Lateran Council of 1215. In secular usage the practice of it tended to be confined to accusations of unchastity and of conjugal infidelity; thus Richardis, wife of Charles the Fat, and Kunigund, empress of Henry II., both underwent the ordeal of the nine ploughshares. Distrust in the efficacy of ordeal did, however, appear, in spite of this royal and ecclesiastical acknowledgment of it, and in spite of its vigorous defence, supported by Biblical warrant, by Hincmar of Rheims in the 9th century. This distrust found expression in many quarters (cf. Lea, *op. cit.* pp. 348-350), and affects a legal code in the Assize of Jerusalem, where ordeal was allowed only when the accused accepted it voluntarily. It is reflected in literature, both in the courtly epic of Gottfried von Strassburg, where Isolde escapes the conviction of iron ordeal by an oath literally exact, but intentionally deceptive (*Tristan*, i. 15731ff., *Werke*, ed. F. H. von der Hagen, Breslau, 1923, i.), and in popular realistic poetry, as in the poem where a guilty husband openly practises trickery in the iron ordeal (cf. M. Haupt, *ZDA* viii. [1851] 89-95). Yet these references from German literature are not to be taken as proof of general disregard of ordeal; on the contrary, ordeal persists later in German codes than in those of any other Teutonic nation; thus provision for the duel appears in the *Schwabenspiegel* of the 13th cent. (tit. 340, 359, 360, ed. W. Wackernagel, Zürich, 1840); and for the duel, alternating with the water and iron ordeals, in the *Sachsenspiegel* of the 14th century (i. 39. iii. 21, ed. C. G. Heymer,

Berlin, 1827). In S. Germany forms of ordeal still occur in popular custom perhaps more persistently than in any other country, though often much weakened and disguised.

LITERATURE.—H. C. Lea, *Superstition and Force*, Philadelphia, 1878, pp. 240-368; J. Grimm, *Deutsche Rechtsalterthümer*, ed. Heuser and Hübner, Leipzig, 1890, vol. ii. ch. vii.; H. Paul, *Grund. der germ. Philologie*, Strassburg, 1900, vol. iii. sect. ix. B. 7, § 91 (by K. von Amira); H. Brunner, *Deutsche Rechtsgeschichte*, Leipzig, 1892, ii. 393-419; J. Patetta, *Le Ordaile*, Turin, 1890; F. Liebermann, *Die Gesetze der Angelsachsen*, Halle, 1903-12, vol. i. pp. 401-430, vol. ii. pt. ii., s.vv. 'Ordal', 'Kaltwasser', etc.

M. E. SEATON.

ORDER.—I. Orderliness and its uses.—In dealing with sets or collections that consist of individual objects—sets of objects such as the stars in the sky, the men who are members of a social group, or the articles of furniture that are present in a given room—we may proceed in either of two ways.

(1) The first is the purely empirical way, which we follow when we note each individual object by itself, and then consider its relations to the other objects which belong to the collection. Thus we may take note of various chairs in one room, that one is near this window, another close to that door, and so on. Again, we may notice that, at a given time, one star is visible in the east, another is prominent in the west, and that the north star stands in such and such relations to stars which belong to the constellation called the Great Bear. This method of studying the objects which make up a given collection is of great importance, but, unless it is supplemented, it leaves us without a knowledge of the orderliness of the objects and of the collection which we study.

(2) The second is a way dependent upon our power to discover that the objects of the collection which we have studied are subject to such laws that, when we have observed some of the facts with regard to those objects, we can infer from the knowledge of these facts what may prove to be a multitude of other facts to which the objects of the same collection are also subordinate. In so far as we can effectively draw such inferences, we are able to make the empirical knowledge which we first obtain, and which may be, so to speak, 'ruler over a few things,' into the source of a knowledge which also makes us 'rulers over many things.' That is, from the empirical knowledge which has for its object individual members of the collection which we are studying, we may be able to infer, through general laws known to us, a knowledge relating to other members of the same collection, and, on occasion, to a great many other such objects.

When a collection of objects has characters so subject to law that from a knowledge of some portion of the objects, their characters, and relations we are able to infer what are the characters and relations of at least some of the other objects, it has, in a highly general sense, the character of orderliness. The objects of this collection form in some sense an order, or what is also sometimes called an array. A closer examination shows that there are many different kinds of orderliness and order, some of which are much more important than others. But in the most general sense we may say that a collection of objects possesses order by virtue of the fact that, from a knowledge of what is true of some of its members we can infer in definite ways what is or will be true about the other objects of the collection, or about some portion of them. Order is important for us because, in the first place, by means of such properties belonging to collections we can and do economize the work both of our science and of our conduct in dealing with collections of objects which possess especially the more important kinds of order. In-

stead of dealing with all the details of a collection of objects, we deal with a portion of the facts, and then use our information to guide our behaviour in dealing with the rest, or with some portion of the objects.

The simplest instance of the value of order is furnished by the distinction between a confused or disorderly collection of men and an orderly array of individuals, such as is represented by soldiers drawn up in battle line, or by officials taking part in a public ceremony. If you look from a window upon a crowd of people in a park or in a market-place, and if they are not notably an ordered collection, you may make the general statement that the lack of order among them is exemplified by the fact that each individual is going his own way, so that, if you want to find out what he is doing or whether he is going, you must watch him for himself; his neighbour's doings may not be in any clearly observable relation to his own. What one is doing does not enable you to infer what others are doing. If, as in many a market-place or street, the people are in various ways imitating one another, and are engaged in common activities, this very fact introduces, as far as it goes, some sort of order into the group. The ebb and flow of the crowd in the market-place or street, if subject to observable laws at all, makes possible the inference that some of those present are leaders in the movements which go on, while others are followers and imitators, that some preside, incite or address the crowd, or offer their wares for sale, while others are followers, or buyers, or are led or influenced by leaders or by the vendors of wares. So far as such knowledge permits you to make valid inferences from the observed facts regarding certain individuals to the observable or predictable facts regarding others, the crowd in question is not a disorderly assembly, or a collection devoid of what may be regarded as its own sort of order. The uninitiated observer who looks down upon the floor of a Stock Exchange finds a general appearance of disorder, or of the lack of order, in the collection of people whom he at first observes. When he is better acquainted with the business going on, and with the way in which it is done, he is able to draw inferences with regard to some of the people and the modes of behaviour represented, while he learns to base his inferences upon what he observes about the people and the conduct that first attracted his attention. The observer gradually learns something about the laws followed by those who do business in the Stock Exchange, while, precisely as his knowledge grows, the people on the floor of the Stock Exchange appear to him more and more as an assemblage of persons having, and engaged in following, a more or less determinate order.

2. Law and order.—It will be observed that, in the sense which we here emphasize, order depends upon the presence of definable law, and varies with the laws which are in question. On the other hand, there is a difference between the lawfulness, or general subjection to law, which may belong to the real world, to our conduct, or to our thought, and that which we call 'order' for the purposes of the present discussion. By 'lawfulness' we mean a character which is generally viewed as belonging, not to individuals or collections of individuals, but to the general modes of behaviour, the general qualities, character, or relations which nature follows, which we regard as belonging to the real world, or which we discover when we contemplate the natural world, the metaphysically real world, or our world of thought or of conduct. But 'order' belongs to sets of individuals, to collections, to arrays of things, persons, deeds, or events. In other words, to use the term first prominently associated with the famous doctrine of Duns Scotus concerning the nature of individuals, order belongs to collections of 'haecceities,' to groups of individuals, or of objects which are viewed as haecceities; but laws and lawfulness in general especially belong to our science, thought, and modes of behaviour.

E.g., the planetary motions are subject to Kepler's laws, or to the Newtonian law of gravitation. But the solar system possesses, or is, an order, since there are some facts about planets moving in orbits external to the earth's orbit which can be inferred from this very fact. Thus from the fact that the orbit of Jupiter is related in a well-known way to the orbit of the earth, while the orbit of Venus lies between the orbit of the earth and the sun, we can infer that, on occasion, Jupiter and Venus, as viewed from the earth, appear to be nearly opposite each other, while Jupiter and Saturn, being so related to the earth that the earth's orbit lies between each of them and the sun, cannot appear to us as occupying positions in the sky which are opposite to each other. These simple facts can be inferred from our knowledge of the way in which the orbit of the earth is related to the orbit of these other planets. But such facts and inferences relate to the haecceities, to the planets

in question, and to their real or apparent relative positions as members of the order of the solar system.

In brief, a law of nature is an invariant mode of change which some process, or class of processes, exemplifies. Analogous definitions apply to laws and lawfulness wherever these are present in the ethical or the metaphysical world, or in any world, real or ideal, which is properly to be conceived as subject to invariant modes of change or behaviour. But an order is a set of haecceities, or of individuals, such that, by virtue of laws to which these haecceities or their general characters are subject, it is possible to draw the inferences exemplified above from some members of the order to other members of the same order.

The contrast between laws on the one hand and order on the other is easily seen in the ethical as well as in the natural realm. The moral law relates to principles and modes of conduct, and so explicitly to universals. The golden rule, the Kantian categorical imperative, Bentham's maxim regarding the choice of the greatest happiness, are all definitions of supposedly invariant modes of action, ideal types of behaviour, which the moral law counsels for various classes or sorts of moral agents. On the other hand, in a court of law plaintiff and defendant, together with their counsel and the judge, are individuals constituting a determinate legal order. They constitute such an order because, from the fact that we know that somebody, *A*, is plaintiff, while somebody, *T*, is judge, and somebody else, perhaps *D*, is counsel for the plaintiff, we can infer certain other facts, with regard to the functions, interests, duties, purposes, or perils of other actual or possible members of the same court, occupied with this same business.

3. The whole numbers.—One of the most familiar and important instances of order with which the exact sciences are acquainted is the order of the so-called 'whole numbers.' This order is made up of the first member of the order, and then the sequence of numbers represented by the terms three, four, and so on. It consists of an ideally endless sequence of terms whose properties are such that a vast number of assertions can be made with regard to the properties of numbers. These assertions are, ideally speaking, as infinite in their multiplicity as is the series of whole numbers itself. Yet, logically speaking, all the arithmetic of whole numbers can be deduced from the following simple propositions which relate to elementary properties of the order in question:

(1) There is a relation which may exist between two whole numbers, and which is called the 'relation of next successor to.' Thus four is the next successor to three, two is the next successor to one: and, in general, if *n* is a whole number, the next successor to *n* is the whole number called *n*+1.

(2) There is a whole number, and one only, which is not the next successor to any whole number. This, also called 'the first whole number,' may be conveniently represented by the symbol 0. The next successor to 0 is then called one; the next successor to one is called two, and so on.

(3) Given any number, *n*, then its next successor, *n*+1, is thereby uniquely determined, so that, if every whole number has a next successor, every whole number also has but one next successor.

(4) Every whole number, without exception, has a next successor.

(5) If any property whatever is such that it belongs to the first whole number, and if it is such that, if it belongs to any whole number, it belongs to the next successor of that whole number, then this property belongs to all the whole numbers.

From these principles it is easy to show that this series of whole numbers thus defined possesses this property of being what is called 'infinite,' i.e., since every whole number has a next successor, there is no last whole number. In brief, the order of the whole numbers is such that it has a first member and no last, while every one of its members has a next successor, and while it is subject to the principles often called 'the law of mathematical induction'—

the law that permits the so-called 'reasoning from n to $n+1$, and so to all,' in case of orders which have the same properties as those of the whole numbers. Orders of this kind have been called by A. N. Whitehead and Bertrand Russell 'progressions.' They are of enormous importance for all the exact sciences and for the whole progress of the human mind. It will be observed that one can exemplify the order of the whole numbers by considering a very few, such as zero, one, two, three. When one thus becomes aware of the general laws to which the whole order is subject, one can deduce not merely countless theorems belonging to the arithmetic of the whole numbers, but countless properties exemplified by whole numbers not mentioned in the foregoing elementary example. The orderliness of the whole numbers and the properties both of the individual members and of possible groups of members thus become deducible from the principles just stated, and from whatever experience we have for knowing or for asserting that the order of the whole numbers is actually exemplified in the real or the ideal world. How important this knowledge of order may be we can realize if we remember how groups of individual objects or men can be arranged so as to correspond to some portion of the whole number series, while such an arrangement is useful in guiding conduct and reasoning in the most significant ways. The heads of a discourse, the stages of a plan of action, the officers or dignitaries of a given hierarchy or other numerically ordered array of individuals, the deeds of a life, the hours of the day, the days of the year, the watches turned out by a manufacturer, may be either arranged or labelled by a set of whole numbers. Such an arrangement is useful for the most manifold purposes, in planning, seeking, or using objects, or in bringing individual human beings into co-operation.

4. Further illustrations.—There are cases in the realms of science, art, and life in which we deal very extensively with laws and lawfulness without paying attention to the orders in which these laws find their concrete exemplification. Thus, while our account of any given instance of order always involves a recognition of certain laws to which the members of the order are subject, we can have elaborate exposition of theories which deal with laws and their consequences in general terms, while largely neglecting to emphasize those orders in which the laws get many highly important and concrete illustrations. Thus the science of mechanics deals with the laws of motion under conditions very often conceived as ideal; and, in so far, that science does not tell us about the natural order of the physical world. For astronomy the order of the solar system has a certain primary interest, at least from one mode of approach. Newton's *Principia* dealt in considerable part with the laws of bodies subject to gravitation, and, in so far, did not lay stress upon the order of the solar system, but upon the laws of planetary motion and of the motion of bodies in general.

On the other hand, where our discussions relate to general laws and do not primarily lay stress upon the concrete orders that we find existing in the real or ideal world, then, in so far as they are exact and well reasoned, they inevitably include a more or less extended description of systems of ideal objects—conceptual embodiments, so to speak, of the laws the logical or the rational principles of which we are making use. In this sense any exposition of the laws to which the natural or the moral world is subject inevitably includes a presentation of some ideally ordered system of conceptual entities, of numbers, of possible deeds, or of other objects, whose array illustrates those laws with which we are dealing.

Once more, the instance of the whole numbers serves to illustrate what happens when we reason about the laws of nature, or of the ideal or moral world. If the watchmaker labels his watches with numbers that stand for the order in which they were turned out of the factory, he constructs an ordered system of hæcceities. This may be convenient for the process of finding lost watches, or of registering the purchase or the fortune of individual watches. On the other hand, if a man deals, as the arithmetician does, with the laws of whole numbers, he inevitably makes use of the ideal order of the whole numbers themselves. This order is constituted, not by the principles of the arithmetic of whole numbers cited above, but by the ideal hæcceities, called the whole numbers themselves. On the other hand, every study of a system of law, as it becomes explicit, involves the definition of an orderly system of ideal hæcceities, which exemplifies the laws in question. Thus the relations of law and order become more obvious and definite in our discussion. The maxim, 'Order is Heaven's first law,' gets at least one possible and fairly definite interpretation. Viewing heaven as a realm whose members are hæcceities that belong to a world which our experience does not at present at all adequately cover, we, in faith, or in hope, regard these hæcceities as having a certain array. This array will also exemplify justice, the true values which our human life was intended either to exemplify or, in heaven, to attain. The distinction between the law and the order will be perfectly clear, precisely in so far as the laws are understood, and in so far as, in the heavenly world, the order will be needed, since in heaven justice will exist, not merely as a principle, but as the concrete order of the 'just made perfect.' Possibly the law of heaven may be, as St. Paul maintained, the law of charity. But the order of heaven will then be the order of the concrete individuals whose spiritual unity, with one another and with their Lord, the Apostle so eloquently characterizes.

5. Series and the correlation of series.—The term 'series' has already been explained by the endless ideal series of the whole numbers; but there are many other series besides. We early become familiar with a new type of series when we study 'fractions,' better named 'rational numbers.' The rational numbers—*e.g.*, decimal fractions—form a series, in so far as we take account of the fact that two decimal fractions or other rational numbers which are equal to each other may be treated, for certain purposes, as if they were identical. Thus the fractions $\frac{1}{2}$, $\frac{2}{4}$, $\frac{3}{6}$, and the decimal fractions .5, .50, .500, and so on, are all mutually equivalent. We may regard them, therefore, as all different representations of the same fractional value. If we confine our attention to those rational numbers called 'proper fractions,' *i.e.* those which lie between 0 and 1 in value, we may notice that the series of the proper fractions has the following character:

(1) When two proper fractions are distinct, *i.e.*, when they do not possess equivalent values, there is a relation existing between them which is very familiar and possesses decidedly important properties. This may be called 'the relation of greater and less,' *i.e.* in the case supposed one of the fractions is the greater, while the other is the less of the two.

(2) The relation of greater and less is not a mutual relation; as the logicians sometimes say, it is asymmetrical. If a proper fraction P is greater than a proper fraction Q , then Q is never greater than P , but stands to P in what we call the relation 'less than.' The relation 'less than,' like the relation 'greater than,' is an asymmetrical relation. Each of these relations is the inverse of the other, and is, in a way, opposed to it in 'sense,' or in what may also be regarded, from a certain point of view, as 'direction.'

(3) If we choose any two rational fractions, r and t , which are not equal to each other, then there is always to be found in the series of rational numbers a third rational number which is distinct both from r and from t . Let us call this third rational

number s . Now s may be, as the third member of this class, so chosen that s is greater than r and less than t . In this case we may say that ' s lies between r and t in the series of rational fractions.'

(4) If we choose to regard 0, not as one of the rational numbers, but as lying before all the rational numbers, and forming the inferior one of the two extremes between which all the proper fractions lie, while 1 is the superior extreme, then, as we can readily see, there is no proper fraction which is the least of all the proper fractions. For a perfectly analogous reason the series of rational fractions has no greatest member, since, whatever proper fraction we choose, such as $\frac{9999}{10000}$, we can always find a proper fraction which is greater than this chosen fraction, and which is nevertheless not equal to 1, so that it lies between the proper fraction which we just chose and 1.

(5) To sum up, the series of proper fractions possesses these properties: any two of its distinct members stand to each other either in a certain unsymmetrical relation of the first to the second or in the converse of this relation, so that of two proper fractions a determinate one is the greater, while the other is the less. Between any two rational fractions we can always find or determine a third which is greater than one of the pair and less than the other. There is no rational fraction which stands first in the series of proper fractions, and no rational number that stands last. The series of proper fractions has, in this sense, neither beginning nor end. Yet, if we choose, we can regard 0 and 1 as extremes so related to the entire series of the proper fractions that 0 precedes all of them, despite the fact that there is no first member in the series of proper fractions, while 1 follows all of them, despite the fact that there is no last member in the series.

(6) Last of all, we may mention a property of the 'greater-less' relation which is of cardinal importance for establishing and determining the characters which belong to the series of proper fractions. This property is expressed by saying that, if there are three proper fractions such that b is greater than a , while c is greater than b , then c is greater than a ; i.e. the relation 'greater than' is not only asymmetrical, but is also what logicians call 'transitive'; it is a relation which passes over from pair to pair, or which follows what William James, in the closing chapter of his *Principles of Psychology* (London, 1901), calls 'the axiom of skipped intermediaries.'

The simple but highly abstract example of the series of proper fractions has, as we now see, characters which sharply distinguish it from the series of the whole numbers, in which there is a first although no last member. Corresponding to every member, n , there is its next successor, $n+1$. On the contrary, the series of proper fractions has no first and no last member, while none of its members has either a next predecessor or a next successor. Yet the two series have certain notable features in common. In each there is a relation, which we may call 'the relation of successor,' whose converse may be regarded as 'the relation of predecessor.' This relation, so long as it is viewed as between two members of a series which are not of equivalent value, rank, or place, is unsymmetrical and transitive. We can say that, given two proper fractions which are not mutually equivalent, one is a successor of the other, in the same way in which we may call one of them greater than the other; and, if we choose two whole numbers, so long as they are not equivalent whole numbers, one of them is, in the whole number series, a successor of the other, while the other is a predecessor of the one. Different as the two series of whole numbers and proper fractions are, they still possess common and relational characters, which make both of them series. This may be viewed as a general characteristic of all those series which, like the points on a straight line in ordinary geometry, the events in a story or in a man's life, the members of a file of soldiers, or the positions of a heavenly body as it seems to move from a point in the eastern horizon to a point where it disappears in the western horizon, are possessed of the character of being 'open series,' i.e. series which do not return into themselves, and which possess no repetitions of a member.

Open series are of enormous importance for the whole theory of order. The events of time, so far as these are known to us, form open series. No event recurs. In like manner, any physical process which follows, more or less definitely, the course of an open line, be it straight or curved, presents the features of an open series. The movements of a man, when he walks once over a road and does

not return, or cross his own tracks at any point, form an open series. All our business, all our plans of life, all that makes our life a progress or the reverse, all that gives ethical significance to a personality and to its activities, are things depending upon the character of the open series. In the light of the foregoing instances, we may now give a definition of the order of an open series.

Let there be a set of objects, S . The objects may be physical or ideal, theoretically or practically significant—points, numbers, deeds, people, or whatever you will. Let the members of S be subject to the following general law:

If we choose any two members of S , there will be a relation which in some way has already been exemplified by the relation 'greater and less.' This relation will apply uniformly to whatever pair of the members of S is taken into consideration, with this sole proviso, that, if you call it 'the relation G ,' and if you consider two members p and q of G , then a determinate one of these two members of S , i.e. either the member p or the member q , will stand in this asymmetrical and transitive relation G to the other member of the pair. Since, by hypothesis, the relation G is asymmetrical and transitive, if p stands in relation G to q , q will not stand in the relation G to p , but in the converse of this relation.

If all the members of S are subject to this general law, the members of S stand in the order of an open series, and actually constitute such a series. The two cases of the whole numbers and the proper fractions are instances of such a serial order.

In the form of a definition, this account of the order of an open series may be stated thus: by an 'open series' is meant a set, or collection, of objects, so that there exists, or is definable, some one relation, G , asymmetrical and transitive, such that whatever pair, p and q , of the members of the set be chosen, one, and of necessity only one, of them stands in the relation G to the other, while the other inevitably stands in the converse of the relation G to the first.

It is obvious that an open series conforms to our definition of what constitutes order. It is a set of objects. From some assertions regarding members of this set other assertions can be inferred. The series consists of individuals, while the asymmetrical and transitive relation, upon which each instance of a series depends, itself exemplifies a very general relational law. That the members of the series themselves illustrate this law makes it possible to infer from the relations of some of them certain relations belonging to others.

In the actual work of the sciences as well as in the formation, control, and use of serial orders, a large part is played by another set of relations, to which we must call attention in passing. In general we define various distinct series, if we have occasion to define any one series. Thus the series of the whole numbers is usually defined, not merely in the highly general and abstract manner just referred to, but more concretely, namely, in connexion with such a process as the counting of objects, or the numbering of watches, or, again, in connexion with the study of the laws of nature. The series of the proper fractions is both theoretically and practically used, not merely in dealing with abstract arithmetic, but in the processes of measurement. Concretely the proper fractions become useful to us when we are considering an ounce as a determinate subdivision of a pound, measurable by means of a certain proper fraction, or a foot as a determinate part of a yard. In other words, the abstract series of order, such as are exemplified by our proper fractions and our whole numbers, get their more concrete, and in general their more practical, significance when they are brought into relation with other series.

Now the operation of connecting a serial order like the whole numbers with an ordinary process like the counting of individual things is a special

instance of what logicians often call 'correlation of series.' A set of individual objects stand before me. I need, for various purposes, to count them, to know how many of them there are. I do this by using the series of whole numbers, treated, for the purposes of counting, as an order. I consider the concrete set of objects so that, by means of pointing, labelling, or some such process, I attach, in due order, each one of my whole numbers to the members of this collection, continuing until every one of the objects to be counted has been pointed at, or labelled, by one of my whole numbers. Then I regard the last one of the whole numbers of which I make use for this purpose as letting me know how many members the collection of objects which I have been counting contains.

When we are dealing not merely with collections which we can count, but with collections which we measure, we have frequent reason for correlating such series as those of the rational numbers with the various real quantities—with length, distance, weight, size, and so on. The operations upon which such correlations depend in many cases are of great complexity. Our present interest lies in the fact that by means of such processes we get our knowledge of the measurable facts of our natural world into order, and that we do so by correlating the observable or measurable series of lengths, distances, and other measurable objects, with our already known ideal and logically defined serial orders. By means of such correlations the ideal order of the abstract numbers—*e.g.*, of the whole numbers, of the rational numbers—comes to pervade, to dominate, or, as one may sometimes say, to infect, the at first less orderly or even apparently disordered world with which our experience has to deal. Order is thus correlated with the facts which the real world presents to our notice, and which experience presents to be operated upon by our processes of counting, measuring, or otherwise applying our ideal series, such as whole numbers or rational numbers, to the objects of our experience. Through such correlation our conduct gets an orderly organization, which constitutes one of the most general and important consequences of our scientific study of the world. Instead of dealing with a world which seems one of chance facts, we discover what appears to be a world well arrayed, or at any rate capable of being controlled by serially ordered, precisely defined modes of action. The discovery of the whole number series was one of the first advances of the human mind in the exact sciences. All our discovery of order in nature, and all the orderly serial arrangement of our lives, ideals, and social order have been influenced by the whole number series, ever since we learned how to think in terms of this number series. Thus man first discovers order in the form of series of ideal objects, which are, indeed, suggested to him by the real world, but which he learns to understand through such constructive and ideally orderly activities as those which counting and measuring represent. Thus, by means of correlation, man continually introduces order into his real world, and is stimulated by whatever he finds orderly in that world to an effort to increase his own power to construct and to understand orderly series and their correlation.

6. Order in the moral and social world.—The foregoing accounts of instances of order as we find them in the regions with which our theoretical science deals illustrate the fact that, in so far as we take account of order, we not only gain a theoretical control over our knowledge of facts, but prepare ourselves for forms of practical activity which are made possible through the recognition, the definition, the production, and the control of order. The rows, the series, the array

of real and ideal objects with which our science deals acquire their importance for us in close connexion with two principal facts, which result from the very nature of order.

(1) In so far as we are dealing with a collection of objects which, when taken together, constitute an order, we at every point economize the processes of our knowledge, and consequently make it a more powerful instrument for grasping the facts of nature and the connexions of the universe; for it is of the very nature of an order that, from a knowledge of a part of the system which possesses it, we can infer what is true about other parts of the same order, and, upon occasion, about the whole of the order. The general concept of material order, and of the correlation of series, has shown us how, wherever series are known to us and can be systematically correlated, we can constantly make use of some of our knowledge about the facts with which we deal to infer properties without which the advance of our knowledge would be greatly impeded.

It is customary to suppose that the most important concept of the exact sciences is the concept of quantity. That it is the characteristic work of the intellect to be guided by the effort to describe the world in quantitative terms—this is a thesis which has played a large part both in the theory and in the criticism of the work of the human intellect. The well-known Bergsonian criticism of the office and limitations of the intellect is founded upon a tendency to interpret the work of the exact sciences as, in large part, an effort to define nature, as well as reality in general, in prevailingly quantitative terms, so that, from this point of view, the intellect primarily measures, weighs, or otherwise quantitatively defines its task and its material. But this way of viewing the tasks of the intellect is as unjust to the logic of the exact sciences as it is unable to define the actual range which the conception of order has in the guidance of our practical, and, above all, our ethical life.

The quantitative sciences are indeed of very great importance. But their importance is due to the fact that the quantities are subject to certain very interesting laws and types of order, which hold true for many other real and ideal systems besides those systems which the quantitative sciences study and which the arts of measurement make prominent. The science of mathematics is ill-defined as the science of quantity. On the other hand, what gives the quantitative sciences their mathematical importance is the fact that in the realm of quantities there are certain peculiarly interesting types of order present. But these quantitative types of order are not the only exact types of order. Modern mathematical science is interested in a vast number of order types, and of orderly structures in general, which are in their nature not quantitative, and which can be neither defined nor studied in terms of quantitative relations. Geometry, by virtue both of its original name and of a good deal of its actual history, appears to be, upon its face, the science that deals with space measurement—*e.g.*, with the measurement of lengths, areas, volumes, and similar objects. Bergson has been deceived by this aspect of it into calling our geometry 'a geometry of solids,' and into supposing that the pre-eminence which geometry has attained in our physical sciences, and which in consequence the concepts that depend on measurements have possessed in the development of all our philosophy, is due to the evolutionary accidents which have bound the human intellect to a dominant interest in the construction of solid bodies.

As a matter of fact, however, it is not an anti-intellectual tendency, but a profoundly logical

interest in the purely orderly, and in the primarily non-quantitative aspect of things, that has come to be expressed in what is technically called 'non-metrical geometry.' Such a geometry science possesses in the branches of mathematics which are called 'projective geometry' and 'descriptive geometry.' These can be very highly developed without making any use of the idea of measurable geometrical quantities. Their source lies not in our power to measure, to weigh, and muscularly or mechanically to manipulate solids, but, as F. A. Enriques of Bologna has shown, in our sense of sight, in our power to notice the orderly alignment of points and sets of points, and the orderly intersections of systems of lines, as such intersections appear in the field of vision. This non-metrical or ordinal geometry may, therefore, be called 'visual geometry.' In fact the eye gives us a certain knowledge of order, distinct from that which we get through our muscles, or through various operations of measurement and metrical comparisons. The ordinal properties of the field of vision have an importance which the logic of science has neglected until recently. It is the eye that, despite all its illusions of perspective, has shown to man, from very early in his career, the distinction between heaven and earth, and the order of the heavenly movements themselves. In this sense the eye has played a large part in man's development in the conception of order. Furthermore, it is the purely ordinal aspect of the series of whole numbers and of rational numbers that lies at the foundation of some of the most important conceptions and theories of arithmetical science. In sum, then, the essence of the exact sciences lies in the fact that they reveal, as well as use, order, while quantity and the realm of the quantitative furnish only a special instance of order, not the only instance, and in certain respects by no means the most theoretically fruitful instance.

(2) With these considerations in mind, we shall now be able to make a transition to the types and the nature of order which have the greatest interest in the moral world. As we have just seen, the order of the heavenly motions proved to be of great importance in giving men a conception of the kind of order that ought to prevail in a justly organized moral and social world. From the first, then, human conceptions of order have had as genuine a moral and social as a scientific and theoretical significance. The one great task of the intellect is to comprehend the orderly aspect of the real and of the ideal world. The conception of order lies, therefore, just as much at the basis of an effort to define our ideals of character and society as at the basis of arithmetic, geometry, or the quantitative sciences in general, or of those non-quantitative types of exact science which are now on their way to higher development. It is, therefore, not a matter of mere accident or of mere play on words that, if a man publishes a book called simply 'A Treatise on Order,' or 'The Doctrine of Order,' we cannot tell from the title whether it is a treatise on social problems or on logic and mathematics, whether it deals in the main with preserving an orderly social order against anarchy or with studying those unsymmetrical and transitive relations, those operations and correlations upon which the theories of arithmetical, geometrical, and logical order depend. The bridge that should connect our logic and mathematics with our social theories is still unfinished. The future must and will find such a bridge. Then exactness of thinking will become consistent with the idealizing of conduct; the realm of the Platonic ideas that are to guide man in his search for wisdom will be conceived, at least in part, in terms of an order which will not be

'ageometrical'—not foreign in type to the sort of order which the geometers, especially in the non-metrical part of their work, have long had reason to study. It only remains now to mention some ethical and social relations among human beings which are of importance in enabling us to infer from known facts about given human individuals what the duties, offices, and social rights and positions of other individuals either are or may become.

Among the moral and social relations of human beings there are a number of dyadic relations well known to us as furnishing a basis for serial order, and as being useful in both the lesser and the greater matters of social life. Thus the relation of superior and inferior in cases where authority is concerned enables us to define serial order. If A commands B , and B commands C , and if orders can be transmitted from pair to pair, then, in general, or under more or less precisely definable conditions, the commands of A may pass, as we often say, indirectly, through his subordinate B to B 's subordinate C . In such cases it may be as well for A to transmit his commands through B to C as to express his authority directly. How far such a series may extend and how many terms it may have will vary with the type of authority in question, with the range of its application, and so with the number of members who constitute the series. But, as far as the order goes, its essential characteristics are the same as those exemplified by a selected series of ordinal numbers, such as 3, 4, 5, 6. The usefulness of the idea of order is strictly analogous in the two cases. The significance of the series consisting of an officer and his subordinates, their subordinates, and so on, lies in the fact that, from a knowledge of some of the facts relating to the persons in question and to their authority, the relations of others of the facts can be deduced, and thus what is called an orderly mode of activity can be predetermined.

A relation decidedly different from that of authority, but of great practical importance, is that of some one who writes a letter, hands it to a messenger, who in his turn passes it over to some predetermined receiver of messages, while the process of indirect transmission is thus continued in an orderly way, until the letter reaches its destination. Such indirect but orderly transmission of messages may be as effective for purposes of communication as if the writer gave his letter to his correspondent without the use of intermediaries. Of such orderly transmission the conveyance of correspondence through the Post Office is a familiar example. What is essential to this sort of order is that, since from some facts you can, in an orderly system, deduce the existence of other facts, the whole undertaking of transmitting information, or other contents of letters, becomes definite, and, subject to the well-known fallibility of human conduct, predictable. The whole business world depends for the order of its transactions upon systems of organization which involve this serial order. Civilized man does most of his work through intermediaries. He pays a foreign creditor a debt by drawing upon his own local bank. He purchases in a distant part of the world by transmitting his orders through all sorts of indirect channels. What he needs to know in order to guide his actions reasonably is the same sort of thing as a student of non-metrical geometry has to recognize when he draws conclusions about an orderly array of points, or the arithmetician computes when he casts up sums of columns of figures; i.e., the civilized man, like the arithmetician, uses in his business, as the mathematician uses in his computations, some order system. It is an order system because a knowledge of part of

the facts regarding its constitution enables us to reach a knowledge of other facts. In reaching this conclusion we use general principles. So far as these are exemplified by some system of individual men, of individual acts, and, in general, of hæceities, that system is an order system. Its order has for us the value that hereby we are able to arrange our modes of conduct and to predict their outcome.

As in the mathematical, so in the moral and social systems, that form of order called 'serial order' is especially familiar and important. But, wherever the system with which we deal enables us to compute, with greater or less probability, some of its facts from others supposed to be given, we are dealing with an order system.

In general, we may say that, since it is essential to order that we should be able to draw conclusions which to us are novel from knowledge about the relations of certain facts given, the most familiar features of an order system will be those which have been illustrated by the transitivity of the various pairs of members belonging to a given series.

We may say that, if by the symbol $R(a\ b\ x\ y)$ I mean simply the assertion, 'The hæceities, a , b , x , and y , stand in some relation which I call the relation R ,' and if by the symbol $S(c\ d\ x\ y)$ I mean the assertion, 'The hæceities, c , d , x , and y , stand in the relation S to one another,' and if I am able to conclude that, in the system of objects of which I am speaking, the assertion is true that the hæceities, a , b , c , and d , stand to one another in the relation T , so that, using analogous symbols, I can write $T'(a\ b\ c\ d)$, and if general laws of this sort are true of the whole system with which I am dealing, then that system is in some sense an ordered system, although the property of the relations upon which I lay stress is a relational property that permits some sort of elimination. Were the laws of this elimination sufficiently known and sufficiently general, they would permit definite knowledge and, on occasion, definite courses of action, which might rival in their orderliness the states of knowledge and courses of action which we have illustrated by the instances of the numbers and similar mathematical objects.

Such laws may be social. Were it the law of some social order that, if a , b , x , and y belong to the same social club in a great city, and if a , c , x , and y meet in the market-place of the city on a given day, as a fact a , b , c , and d will all bow to one another, and will all take off their hats, then that social order would be subject to a law which it might be worth while to know, and which would certainly give us a right to say that a , b , c , d , x , and y were, at any rate for the time in question, an orderly assemblage of persons. The order in question might not be of an externally peaceable sort. Thus we might suppose an assemblage of men subject to the law that, if a , b , x , and y fought side by side in the trenches, and if c , d , x , and y fought in opposed trenches, a , b , c , and d would, at the earliest opportunity, fraternize and cease fighting. This assemblage of men would be subject to a sort of order. The law characterizing this order might be stated in the form that, in some definable class of instances, the comrades of certain opponents would, at the earliest opportunity, fraternize. However strange the law, it would have some sort of importance if it could be stated and put into application in some determinate manner.

Now in social and ethical matters, quite as much as in mathematical and natural matters, wherever there are laws which permit such eliminations, there is some sort of order in the system characterized by the presence of such laws. To conceive a world in which there is such order is to conceive what makes possible the realization of those ethical ideals most characteristic of organized communities. If an organized and orderly community either exists or is in process of making, we can be loyal to it. For in such a community the individual can devote himself to activities whose fruit does not merely remain his own, but falls to the lot of the other hæceities with whom he is bound by relational ties. Order, therefore, or at least possible order, is the condition upon which depends the existence of anything lovable about our social system. If each acts only as an individual, the mere fact that he happens to be benevolent does not render his benevolence other than envious. Loyal activity, on the other hand, is always orderly, since it involves acting in ways that are determined not merely by personal desires, or by the interests of other individuals, but

by the relations in which one stands to those other individuals. Paying one's debts is a loyal act, as far as it goes. But it is an act which has no meaning for me unless I can recognize the relation of debtor and creditor. If I am not loyal, I say, in substance, 'I will do this if I choose to do it.' If I am loyal, I say, 'I do this in case my relations to others in the community require me to do thus and thus.'

It is possible, no doubt, to recognize relations without possessing the richer spirit of loyalty. Barren intellectualism is as possible in ethics as in our view of reality. But the essence of loyalty is that from the value of our relations to some things—e.g., to some individuals or hæceities—we are able to discover something about the value of our relations to other things. Loyalty which can draw no conclusions, which cannot reason from one's interest in certain hæceities and certain relations to some practically important inference about one's relation to other hæceities and other social ties, remains blind and dumb, a mere sentiment, like the luxuriantly sentimental altruism of a Rousseau, sending his own infant children to the foundling hospital, or of a Shelley, lyrically delighting in the sacrifice

'Of one who gave an enemy
His plank, then plunged aside to die'
(*Prometheus Unbound*, act I.),

while he ruthlessly abandons Harriet Westbrook to commit suicide, 'when the lamp is shattered,' and 'the light in the dust lies dead.'

It is essential to loyalty to draw conclusions, to live in a moral and social world which is, at least in some respects, conceived as orderly. In this sense the idea of order lies at the basis both of the ideal and of the life of any community in which loyalty is possible.

7. Law, order, and negation.—Order, as we have said, is closely connected with law. Law is some aspect of our real or ideal world which permits us to draw inferences. It is fairly obvious that, when we know a law in terms at once general and exact, we are able, granted the suitable data, to draw a series of inferences; i.e., if certain premisses logically warrant a certain conclusion, then, in general, this conclusion may be made the basis of further inferences, which indirectly follow, through the form of reasoning which the traditional text-books of logic call a 'sorites,' from the premisses with which we started. As, in a well-ordered commercial system which includes a series of banks or other agencies for the transmission of payments, one is permitted to pay one's debts more simply, and in a more convenient way, by paying one banker, who transmits some negotiable paper to another banker, and so on to the end of the series, so, wherever an orderly system of computation, rational investigation, or definite inference in serial order is possible, one reaches conclusions which may be important by means of intermediate steps of reasoning, by orderly change of premisses and conclusion. In the case of the reasoning process the series may be interwoven in the most complex manner. In the exact sciences they are so interwoven. The order in that case is not merely an order of a simply serial type. The total result of the interwoven systems of series of inferences whereof the exact sciences consist is the development of a richer and richer system of order. The results of an old investigation become the basis of a new inquiry. One branch of exact science becomes interlaced and combined with another. What is characteristic of the process is that, whatever forms of synthesis appear, inference is everywhere an ally and an instrument both in defining and in attaining at once the conception of order and the orderliness of the system with which one

deals. In consequence it is one of the laws of the more purely theoretical sciences that, whatever special motives determine their development, they constantly tend to produce a richer wealth of orderliness in our own system of ideas. Upon each new stage of orderly conceptions new forms of order and of orderly systems are based. Where the methods of the inductive sciences enable us to recognize that these mathematically definable types of order have their corresponding systems of facts in the real world, our theories, developed by the process of inference, become more and more widely applicable to our understanding nature, so that the world seems to us more and more orderly. In so far as, at any point of our mental development, we see ways of creating facts and systems of facts, social orders and systems of social orders, which correspond to the ideas which we have so far organized, our moral and social worlds tend to become more orderly.

In brief, our power to infer, in the world of theory and of practice, both accompanies and, where it is limited by our ignorance or lack of intelligence, in its turn limits our power to conceive ideal order and to understand the order of nature, and, finally, our power to give to our lives that orderliness which can win and hold our loyalty and render our life that of the spirit. And that is why the maxim, 'Let all things be done decently and in order,' is no mere expression of pedantry or formalism, but an ideal maxim, whose practical and religious significance finds its principal limitation in our ignorance or inability to give expression to our orderly ideals.

Order, then, is known to us through inference; i.e. the orderly is that which corresponds, in the real or the ideal world, to what we infer when we systematically draw conclusions from premisses. Therefore the understanding of the inmost nature of order logically depends upon understanding the relations on which our power to infer rests.

We may sum up with the observation that, if we had no exact idea of what inference is, we should have no exact idea of what order is, while our very idea of what inference is depends, in all cases where an inference relates to classes and to general law, upon our idea of what constitutes the negative of a defined class of objects or cases. Without negation there is no inference. Without inference there is no order, in the strictly logical sense of the word. The fundamentally significant position of the idea of negation in determining and controlling our idea of the orderliness of both the ideal and the real world, of both the natural and the spiritual order, becomes, in the light of all these considerations, as momentous as it is, in our ordinary popular views of this subject, neglected. To the article NEGATION we must, therefore, refer as furnishing some account of the logical basis upon which the idea of order depends. From this point of view, in fact, negation appears as one of the most significant of all the ideas that lie at the base of all the exact sciences. By virtue of the idea of negation we are able to define processes of inference—processes which, in their abstract form, the purely mathematical sciences illustrate, and which, in their natural expression, the laws of the physical world, as known to our inductive science, exemplify. Serial order is the simplest instance of that orderly arraying of facts, inferences, and laws upon which, on the theoretical side of its work, science depends; while, as we have seen, in the practical world, the arraying, the organizing, of individual and social life constantly illustrates, justifies, and renders spiritually precious this type of connexion, which makes our lives consecutive and progressive, instead of incoherent and broken.

Relations of the general type of 'correspondence'

enrich and interweave the various serial orders which nature, as well as our ideas, life as well as theory, present to our knowledge. If order is only one aspect of the spiritual world, it is an indispensable aspect. Without it life would be a chaos, and the world a bad dream. Loyalty would have no cause, and human conduct no meaning.

When logically analyzed, order turns out to be something that would be inconceivable and incomprehensible to us unless we had the idea which is expressed by the term 'negation.' Thus it is that negation, which is always also something intensely positive, not only aids us in giving order to life, and in finding order in the world, but logically determines the very essence of order.

LITERATURE.—Hegel's *Logic*, both his briefer statement in his *Encyclopædie*, Heidelberg, 1830, and his much longer discussion in his *Larger Logic*, vols. iii.-v. in his collected *Werke*, Berlin, 1832-40, treats the idea of negation at length, but does not clearly see in what relations negation stands to order. The first really modern treatment of the conception of order is contained in Bertrand A. W. Russell, *Principles of Mathematics*, Cambridge, 1903. A much fuller discussion of various mathematical aspects of the concept of order appears in A. N. Whitehead and B. A. W. Russell, *Principia Mathematica*, 8 vols., Cambridge, 1910-13. A considerable number of modern treatises on geometry give an account of so much of the concept of order as is especially important for the understanding of projective geometry. J. Royce has a summary discussion entitled 'Principles of Logic,' in the *Encyclopædia of the Philosophical Sciences*, Eng. ed., London, 1913; here logic has been defined as 'the science of order,' and some of the considerations which are used in this article have been somewhat more technically stated in vol. i. pp. 67-120.

JOSIAH ROYCE.

ORDINAL.—See ORDINATION (Christian), PRAYER, BOOK OF COMMON.

ORDINATION (Christian).—By this term is meant the manner of admission of persons to ministerial office in the Christian Church. For methods of appointment (such as election or nomination) see LAITY; for the ordainer see MINISTRY (Early Christian). This article has to deal only with the liturgical side of the matter, i.e. with the ceremonial and forms used in admission to the ministry in the various Christian communities in the world in ancient and in modern times.

1. First six centuries in East and West.—(a) *Phraseology*.—It is necessary, before we discuss the customs of different ages and countries, to consider the words used for admission to the ministry. We find that, just as there was a considerable fluidity of nomenclature in the names of the ministerial offices in the earliest Christian period (see MINISTRY, § 2), so in the succeeding ages there was no fixed terminology for 'ordination.'

One of the most common forms of expression was to speak of 'appointing' ministers, and their 'appointment' (*καθίσταειν* or *καθιστάν*, *κατάστασις*); so in Ac 6³ of the Seven, in Tit 1⁵ of presbyters, in He 6¹ 7²³ 8³ of the Jewish high priest, in Clement of Rome (*Cor.* i. 42) of 'bishops' and deacons, in the 10th canon of the Council of Antioch in *Encænus* (A.D. 341) of readers, subdeacons, and exorcists, in Eusebius, *HE* vii. 9 (*κατάστασις* used with, and as equivalent to, *χειροτονία*), in Athanasius (*Apol. c. Adrian*, 111.), and elsewhere; and in the Church Orders this mode of expression is used of any order from bishops downwards, though at Antioch in *Encæn.* (as above) it is used of the minor orders in contrast to the word *χειροτονία*, used of bishops, priests, and deacons (for the references in the Church Orders see A. J. Maclean, *Ancient Church Orders*, p. 78). We find the expressions 'to ordain,' 'ordination' (*χειροτονία*, *χειροτονία*), especially but not exclusively of the three higher orders, as at Ancyra (can. 18; A.D. 314), Nicaea (can. 19; A.D. 325), Antioch (as above), Neocaesarea (can. 9; A.D. 314 or a little later), and frequently in the Church Orders; these words do not necessarily imply laying on of hands, and sometimes mean election (properly by a show of hands) or even appointment only; but they do not negative the laying on of hands. In Ac 14²³ this verb is used of 'appointing' presbyters by Paul and Barnabas, but there is no indication here that it means the act of 'ordination,' though we can scarcely doubt that the way in which they appointed presbyters was by such an act (see *DAC*, art. 'Ordination,' § 1). So in the *Didache*, 15 (c. A.D. 130?): 'appoint (*χειροτονήσατε*) therefore for yourselves bishops and deacons.' In the *Apostolic Canons* (c. A.D. 400), *χειροτονία* signifies an ordination service over bishops, presbyters, deacons,

and the 'rest of the clerks' (ἐκκλησικοί; can. 1, 2). On the other hand, 'to lay on hands' (χειροθετεῖν) and 'laying on of hands' (χειροθεσία) are used, though less often, for ordination, especially when that ceremony is emphasized, while they are also frequently used for other impositions of hands, such as in confirmation, and even for benediction, when hands are stretched out over persons, as in the dismissal of catechumens in the liturgy (Apost. Const. vii. 39; c. A.D. 375); the verb is used with reference to ordination in the Const. through Hipp. 13 (Funk, *Didascalia et Const. Apost.* ii. 82) and apparently included in Apost. Const. iii. 10 (see Maclean, pp. 153-155). The instance in the *Constitutions through Hippolytus* is remarkable. In this work (probably an epitome of a first draft of Apost. Const. bk. viii.) χειροθετεῖν is used of ordinations generally, but of a reader it is expressly said οὐ χειροθετεῖται—i.e., he is appointed by a form of ordination, but hands are not laid upon him. The substantive χειροθεσία is used in Apost. Const. ii. 32 of the gift of the Holy Spirit by our Lord to His ministers, in the 9th canon of Neocaesarea of the ordination of a presbyter (in the same canon χειροτονία is used in this sense, but the emphasis in the phrase where χειροθεσία occurs is on the laying on of hands), and in the 19th canon of Nicæa, which denies that deaconesses have been ordained—as they have not received any χειροθεσία they must be classed merely among the laity. We may note here, in anticipation, that in the present Orthodox Greek ordination services χειροθεσία is used for ordination of the minor orders (or perhaps only of subdeacons and deaconesses?; see below, § 16), χειροτονία for that of bishops, presbyters, and deacons (Littledale, *Offices of the Holy Eastern Church*, p. 266). In Sarapion's *Sacramentary* (c. A.D. 350) a double phrase is used: 'laying on of hands of the appointment of a bishop' (χειροθεσία κατὰ κράτος ἐπισκόπου, § 14), and similarly for this ordination of presbyters and deacons (§ 12 f.). For other instances of the above terms see *JTHS* i. 273 f. In Ac 20²³ τίθημι is used of the Holy Ghost appointing 'bishops.'

Corresponding words in Latin are *ordinare*, *ordinatio* (Tert. de *Præser.* 41), and *constituere* (often in Cyprian, e.g. Ep. i. [lxv.] 1, iii. [lxiv.] 3, xxix. [xxiii.], iii. [xlviii.] 2, though these and similar words were often used of nomination to the ministry). The ordained person was said to be promoted (*promoveri* [Elvira, can. 80; c. A.D. 305], προχειρίζεσθαι [Nicæa, can. 10; Apost. Can. 82 (81)], προαριθεῖν [Apost. Const. vi. 17, var. lect. παρὰθεῖν], προάγεισθαι [Ankyra, can. 12; Nicæa, can. 1]), or to be 'blessed' (Orange, can. 23 [A.D. 441], where *benedictio* = 'ordination to the diaconate'), or 'consecrated' (Leo the Great, Ep. vi. [lv. 6]). These details of nomenclature are extremely important, as erroneous deductions have often been made from Patristic statements owing to a failure to distinguish the terms used. Further details, especially regarding later centuries, may be seen in Hatch's art. 'Ordination' in *DC4*, to which several additions are here made.

At a later date a difference was made in the West between 'consecration' of a bishop and the 'ordination' to other orders. But no such distinction is found in the earlier period or is known in the East at the present day.

(b) *Descriptions of early ordinations.*—In the whole of the early period ordinations to every grade were simple, consisting of prayer (usually a single prayer) and laying on of hands. At the most one or two other ceremonies were added. In the NT imposition of hands at ordination is mentioned in Ae 6⁶ (the Seven) and 1 Ti 4¹⁴, 2 Ti 1⁶ (Timothy). It is not referred to in the case of the presbyters in Ao 14²³ (though there need be little doubt that it was then used, for St. Luke does not mention all the details on every occasion); but we find it in 13³, where, however, it is doubtful if 'ordination' proper is meant (see *DAC*, art. 'Ordination,' § 8). In 1 Ti 5²² it is mentioned, but here also it is doubtful if the writer is speaking of ordination. That ordinations in the NT were accompanied by prayer is seen from Ae 6⁶ 14²³; cf. also 1²⁴ (Matthias's appointment) and 13³ (mission of Barnabas and Saul).

After the Apostolic Age we have no descriptions of ordinations till the 4th cent., but then they become plentiful. The Church Orders, even several of them which do not give the forms used in the eucharistic liturgy, give ordination prayers. Thus we have them in the *Canons of Hippolytus*, the *Ethiopic Church Order*, the *Testament of our Lord*, the *Apostolic Constitutions*, the *Constitutions through Hippolytus*, the appendices to the *Arabic Didascalia*, and some others. These are probably all of the 4th or beginning of the 5th century.

1 The numbers in square brackets are those of the *Ante-Nicene Christian Library*. Those in *PL* are lxi., lxx., xxiv., xlix.

Sarapion's *Sacramentary* also gives us a set of ordination prayers for the three highest orders, though it has no rubrics and no descriptions of the rite. In all these manuals laying on of hands is emphasized in the ordination of bishops, presbyters, and deacons, and in one or two of them in that of the minor orders. The usual rule with regard to the latter is that they do not have this ceremony; so expressly most of the Church Orders, and so a passage in Basil (*Ep. can. tertia*, cxxvii. 51), where a clear distinction is made between the clergy who are 'in orders' (ἐν βαθμῶν) and those 'in the ministry which is conferred without imposition of hands.' But in *Apost. Const.* viii. 19-22 subdeacons, readers, and even deaconesses receive it; so *Const. through Hipp.* 9-13, except in the case of readers (see above). In these books we sometimes read of the laying on of 'hands,' sometimes of 'a hand,' and sometimes in the same work we find both customs. No difference seems to have been made between them in the early period. There is one apparent exception to the universal practice of laying on hands at ordinations. In the *Apostolic Constitutions*, though it is mentioned in all other cases, even, as we have seen, of minor orders, it is not explicitly referred to in the ordination of a bishop. In this work (viii. 4) one of the bishops says the ordination prayer over the candidate for the episcopate, two others stand beside him, the other bishops and the presbyters pray in silence, and the deacons hold the book of the Gospels over the candidate's head.¹

Considering the unanimity of all the parallel Church Orders and of Sarapion, and the fact that the *Apostolic Constitutions* have this ceremony for all other ordinations, pressing it where the other manuals forbid it (for the minor orders), it is unlikely that the writer of this work meant to exclude it at the ordination of a bishop. It is much more probable that he assumed it. The *Constitutions through Hippolytus* use the same language as the *Apostolic Constitutions*. Laying on of hands was not confined to the Catholic Church. In the Clementine literature Peter uses it in ordaining Clement (*Ep. of Clement*, 2, 19) and Zacheus (*Clem. Hom.* iii. 72; *Clem. Recog.* iii. 66). In the last passage it is recorded that he also ordained twelve presbyters and four deacons. This literature is now usually ascribed, in its present form, to the 4th century.

In the ordination of a bishop there is a variety of usage as to the part taken by the assisting bishops. Sometimes one bishop, and sometimes all the bishops, lay on hands; sometimes one says the prayer (the usual practice), sometimes all do so. In the *Testament of our Lord* (i. 21) all the bishops, having first washed their hands (the presbyters standing beside them), lay on hands and say a declaration: 'We lay hands on the servant of God who hath been chosen in the Spirit, for the true and pious disposing of the Church,' etc.; and then one of their number, at their command, lays hands on him and says the prayer of ordination. After this the people cry thrice 'Axios' ('He is worthy')—a great feature of Greek ordinations in all ages—and give him the kiss of peace. The usage in the *Apostolic Constitutions* has been given above. But what do the two selected assistant bishops in that manual do? Nothing is said. They do not hold the Gospels over the candidate's head. Probably they, with the presiding bishop, lay on hands, and we may possibly conclude, in view of the direction to the other bishops not to pray aloud, that all the three joined audibly in the ordination prayer. In this work, after the prayer, 'one of the bishops' offers 'the sacrifice on the hands of him who has

¹ The meaning of this ceremony seems to be that our Lord is acting through His ministers.

been ordained.' The meaning is not clear; but it probably refers to the custom (for which see below, § 3 (c)) of concelebration of the Eucharist by all the bishops, or all the presbyters, as the case may be. The new bishop is then enthroned by the other bishops, and receives the kiss of peace. After the lections from the Law and the Prophets and the Epistles and Acts and the Gospels, the new bishop salutes the Church and preaches. The liturgy then proceeds. In this work the people before the ordination are asked thrice if the elect is worthy, and three times they affirm that he is. In most of the early authorities (e.g., *Verona Fragments*, *Can. of Hipp.*, *Egypt.* and *Eth. Ch. Ord.*, and apparently *Apost. Const.*, and probably others) the new bishop celebrates the Eucharist.

The ordination prayer in the earliest Church Orders, the *Canons of Hippolytus*, the *Verona Fragments*, and the *Ethiopic Church Order*, is short and simple, and is in nearly identical words. The same may be said of the *Constitutions through Hippolytus*. These parallel forms are clearly all derived from a single original, each writer introducing slight variations. After praying for the Spirit to be given to the candidate for the episcopate, and asking that his life may be exemplary, the presiding bishop in the *Canons of Hippolytus* concludes:

'Receive his prayers and offerings which he shall offer to thee day and night, and may they be to thee a sweet savour. Give also to him, O Lord, the episcopate and a mild spirit, and power to forgive sins; and give him ability to loose all bonds of iniquity of demons and power to heal all diseases, and bruise Satan under his feet shortly, through our Lord Jesus Christ, by whom be glory to thee, with him and the Holy Ghost, for ever and ever. Amen' (for the full prayer see Maclean, *Ancient Church Orders*, p. 76 f.).

This prayer is expanded in the *Testament of our Lord* and in the *Apostolic Constitutions*. The prayer in Sarapion (§ 14) is even shorter than that given above. This book is not one of the parallel Church Orders, and the prayers are quite independent of those there given, but the ordination forms are even simpler. That for a bishop asks for him the Spirit and that he may be a worthy shepherd.

It has usually been said (by the present writer also) that the prayer used in ordaining a presbyter was the same as that used in ordaining a bishop, except that the name of the office was changed. This is the statement in the *Canons of Hippolytus* (iv.; ed. Achelis, §§ 30-32), which also say that in the case of a presbyter enthronization is omitted, and in the *Egyptian Church Order* (Horner, *Statutes of the Apostles*, pp. 245, 307; Maclean, p. 70). But in the other parallel manuals and in Sarapion a separate, though equally simple, form is given for presbyters; and an apparently contradictory rubric in the *Ethiopian Church Order* and the *Verona Fragments* has led C. H. Turner (*JThSt* xvi. 542) to the not improbable conclusion that all that is meant in the two first-named authorities is that the first part of the ordination prayer for bishops is identical with that for presbyters. In several books the prayer for presbyters refers to the elders appointed by Moses (e.g., *Test. of our Lord*, i. 30). In *Apost. Const.* viii. 16, 'priestly duties' on behalf of the people are mentioned; in Sarapion, § 13, the function of reconciliation. The prayer in the last book is peculiar in not mentioning the office to which the person is ordained. In the ordination of presbyters in most of the Church Orders the presbyters join with the bishop in laying on hands (see MINISTRY, § 8).

The prayer for deacons in the Church Orders and in Sarapion is also very simple; it usually refers to St. Stephen and the Seven. The minor orders have still more simple forms.

It must be noticed that in the ordination of

bishops and presbyters there is no trace of an imperative formula like 'Receive the Holy Ghost,' such as we find in the mediæval and modern books in the West.

(c) *Delivery of symbols of office*.—In later times this became a regular part of all the ordination ceremonies; but in the early period it is found only in connexion with the minor orders, for which, as a rule, imposition of hands is not used. In the *Canons of Hippolytus* the Gospels are given to a reader; in the *Testament of our Lord*, the *Ethiopic Church Order*, and the *Constitutions through Hippolytus* (not in the *Apostolic Constitutions*), 'a book'; in the *Egyptian Church Order* the 'Apostle,' i.e. the Pauline Epistles. For this feature in the *Gallican Statutes* see below (c).

(d) *Ordination in pseudo-Dionysius Areopagita*.—The author of the *Ecclesiastical Hierarchy*, who wrote c. A.D. 480, perhaps in Edessa, deals in ch. v. with 'priestly consecration,' i.e. with the ordination of 'hierarchs' (bishops), priests (*lepeis*), and 'ministers' (*leitourgoi*, deacons). At his ordination a deacon kneels on one knee, a presbyter on two—a piece of symbolism, borrowed and worked out by the E. Syrians and Maronites (see below, § 13 f.). All these ordinations consist of laying on of hands with prayer and the sign of the cross; the name of the candidate and the office conferred are proclaimed; in the consecration of a bishop the Gospels are held over his head, to show the fullness of his powers. The kiss of peace is mentioned: 'all of the clergy (*τῶν λειτουργῶν τᾶς ἐκκλησίας*) who are present greet him who is initiated' (*τετελειωμένον*). The account in pseudo-Dionysius is very like that in the *Apostolic Constitutions*, but the details are more precise. The absence of minor orders in this work is probably due to its pseudonymous form; a contemporary of the apostles is supposed to be speaking.

(c) *Ordination in the 'Gallican Statutes'*.—This is the convenient name given by J. Wordsworth (*Ministry of Grace*, p. 58) to the collection of regulations which used to be known as the canons of the Fourth Council of Carthage, but which have nothing to do with Africa. They are also called *Statuta Ecclesiae Antiqua*. They appear to come from the south of Gaul, and may be dated c. A.D. 500 (for their contents see C. J. Hefele, *Hist. of the Church Councils*, Eng. tr., Edinburgh, 1876, ii. 410 ff.). With reference to our subject they say that a bishop before ordination is to be examined as to the faith, and whether he does not disapprove marriage, or condemn second marriages or the eating of flesh; all the bishops are to be present, and the clergy and laity are to give their consent, and especially all is to be done with the authority of the metropolitan (§ 1). At the ordination two bishops are to hold the Gospels over the elect's head and neck; and, while one pronounces the blessing over him (i.e. says the prayer of ordination), all the other bishops lay their hands on his head (§ 2). This seems to be all that is done in ordaining a bishop. When a presbyter is ordained, the bishop lays his hand on his head, and all the presbyters present also lay their hands on his head (§ 3). When a deacon is ordained, the bishop who 'blesses' him (see above) alone lays his hand on his head (§ 4). The minor orders which are mentioned (§§ 5-10) are the subdeacon, acolyte, exorcist, reader, doorkeeper, and singer. These are not to be ordained with imposition of hands—so it is enacted explicitly with regard to the subdeacon, and the same thing would *a fortiori* hold good of the other offices named. The empty paten and chalice, water-cruet, plate (?), and napkin are given to a subdeacon; a candlestick with tapers to an acolyte; a book with exorcisms to an exorcist;

the codex from which he is to read to a reader; the keys of the church to a doorkeeper. These are ordained by the bishop. A singer, on the other hand, may be admitted by a presbyter without the previous knowledge of the bishop; the words of admission are given, and are remarkable as having remained to the present day: 'See that what thou singest, thou believe with the heart; and what thou believest with the heart, thou prove by thy works.' This formula, which is found in *Magdalen College Pontifical* (p. 59; see below, § 3) at the ordination of a singer, is still used in the Roman pontifical in ordaining a reader, and is adapted as the ordinary 'vestry prayer' in the Anglican communion, where there is a surpliced choir.

(f) *Early Roman ordinations*.—It is one of the misfortunes of the student of Christian origins that we know so little of Roman liturgical customs in the early ages. We know next to nothing of ordinations in Rome before the 6th century. But, if the common original of the parallel Church Orders be Roman, as is very probable—it may possibly be the work of Hippolytus—by comparing the forms in the earliest of these manuals, for which see above (b), and by retaining what is common to them all, striking out what is peculiar to one of them, we may provisionally arrive at the form of ordination (at least that of a bishop) which was in use in Rome early in the 3rd century (see Maclean, *Recent Discoveries illustrating Early Christian Life and Worship*², London, 1915, p. 109 f., for an attempt in this direction). When we come to the 6th cent., the *Leonine Sacramentary* (c. 550) gives us the customs in Rome before the reforms of Gregory the Great. It has ordination prayers for bishops, presbyters, and deacons, but not for any orders below these. The simplicity of the ordinations is their principal characteristic.

2. Intermediate period in the West.—For this period our chief authorities are the Roman *Ordines*, especially the *Ordo of St. Amant* (§ 7, giving directions for the ordination of presbyters and deacons), which Duchesne prints (*Christian Worship*, p. 475), and the *Ordo IV.* and *Ordo VIII.* of J. Mabillon (*PL* lxxviii.), which give directions for the ordination of all orders; the *Gelasian Sacramentary* (c. 700 [*PL* lxxiv., and ed. H. A. Wilson, Oxford, 1894]), which gives the Roman rite as modified by Gallican influence, but is chiefly Roman; and the *Missale Francorum* (*PL* lxxii.), which is a fragment of about the same date, 'generally Roman, but with some Gallican rubrics' (Wordsworth, *Ministry of Grace*, p. 74)—these two contain ordination prayers, etc.; Isidore, *de Officiis ecclesiasticis*, ii., which gives the prayers and rubrics of the Gallican rite.

(a) *Ordinations in Rome* (Duchesne, p. 352 ff.).—The ordination of bishops was always on a Sunday, during mass. After the gradual has been sung, the litany and Kyrie follow; the pope bids prayer and says two prayers, one a 'collect' concluding the litany, and the other a eucharistic prayer of ordination, beginning with the 'Suscipe Corda.' The pope, bishops, and presbyters give the new bishop the kiss of peace and the mass proceeds. The lections are Mt 10¹ 24², Mk 6⁵, Lk 10¹, Jn 10¹² 12²⁴, 1 Ti 3¹, Tit 1⁷ (F. E. Warren, *Liturgy and Ritual of the Celtic Church*, Oxford, 1881, p. 69). In this case the pope officiates alone and the other bishops do not take part, this being an exception to the general rule that a bishop must be ordained by at least three bishops. Presbyters and deacons are ordained on the Ember Saturday, having been presented to the people in the churches of Sta. Maria Maggiore and the Holy Apostles on the preceding Wednesday and Friday, when the

people are called upon to make objections if they have any. The ordination takes place in the mass of the vigil, i.e. in the afternoon or evening. The candidates for the diaconate, vested in dalmatics, are presented to the pope before the Gospel by the archdeacon. After the litany the pope lays on hands and says two prayers (see above). The new deacons receive the kiss of peace from the pope and clergy. The candidates for the presbyterate, vested in chasubles, are then presented to the pope, and he says two prayers over them and gives them the kiss of peace. The lections for a deacon are 1 Ti 3⁸, Jn 12²⁴, and for a presbyter Ezk 35², Mt 24⁴² (Warren, p. 69). The older Roman books give no ceremony for the ordination of exorcists, readers, and doorkeepers. The acolyte (holding a linen bag) and the subdeacon (holding an empty chalice) only received a blessing from the bishop at an ordinary mass; and even this was not before the 7th century.

(b) *Gallican ordinations* (Duchesne, p. 363).—A bishop is usually ordained in the cathedral of his see. He is presented on the day of the ordination to the people, who cry 'Dignus' ('He is worthy'). After a bidding there follows the consecration prayer (different from and longer than the Roman one), when two bishops hold the Gospels over the elect's head, and each bishop lays on hands. His hands are anointed, and a prayer is said. The lections are Mal 1¹¹, 1 Co 9⁷⁻¹², Lk 20⁴²⁻²¹ (Warren, p. 69). The candidate for the presbyterate is presented to the people, who cry 'Dignus,' and the bishop lays on hands and says the prayer; the other presbyters also lay on hands. The bishop anoints the new presbyter's hands. The lections are Tit 1⁵⁻⁶, Lk 12⁴²⁻⁴⁴. The procedure in the case of the diaconate is the same except that the anointing is omitted. The lections are Ezk 44¹⁵, 1 Ti 3⁸⁻⁹, Lk 9⁵⁷⁻⁶². The minor orders receive their badges of office, for which see above § 1 (c), and a blessing and prayer are said. An address is made to subdeacons.

(c) *Fusion of the two rites and developments*.—From the 7th to the 9th cent. a process of fusion of the Roman and Gallican rites was going on. The consecration or 'eucharistic' prayers were joined, and the directions of the *Gallican Statutes* (above, § 1), which the later Gallican books reproduced, were prefixed as rubrics. The result of this arrangement of rubrics was that at a later date the laying on of hands was transferred to the first part of the service and took place in silence, instead of after or with the ordination prayer. A later feature was the introduction of the *porrectio instrumentorum*, or delivery of badges of office, to bishops, presbyters, and deacons as well as to the minor orders. To the bishop a ring and staff were given, to the presbyter a chalice and paten with the elements prepared for the mass, to the deacon the Gospel-book, with the charge to read the liturgical Gospel (the last was not before A.D. 1000 in the Roman rite). Unction of the head was also added, but afterwards dropped except in the case of a bishop (Frere, *Hist. of the Book of Common Prayer*, p. 354 f.).

(d) *The Celtic rite*.—There were some differences in the ordinations of the Celtic Church from those described above (see Warren, p. 68 ff.). A bishop was commonly consecrated by a single bishop. The lections were 1 P 1³ 15¹ 23² 2¹⁰, Ac 1¹⁵, 1 Ti 3¹², Mt 16¹⁶⁻¹⁸. Both presbyters and deacons were anointed on the hands, and this is found in the Epistle of Gildas (c. 550), in Egbert's pontifical (early 8th cent.), and elsewhere; the anointing of deacons was peculiar to the Celtic and Anglo-Saxon Churches, the latter probably borrowing it from the former. The book of the Gospels was given to a deacon, and a stole to the presbyter.

These features are not found in the earlier Roman and Gallican rites.

3. *Later Western pontificals.*—We can now consider the results of the fusion of the Roman and Gallican rites as seen in the later pontificals. The Roman pontifical is still in use in the Roman communion. The pre-Reformation Anglican pontificals are as a rule difficult to obtain, but the Henry Bradshaw Society has published that of 'Magdalen College,' edited by H. A. Wilson, which gives the consecration of bishops and ordination of the other orders—for by this time the difference of nomenclature is well established in the West. This pontifical is perhaps from Hereford, or from Canterbury, and seems to be of the 12th century. Maskell has also published in his *Monumenta* the Lincoln (?) rite for consecrating or enthroning a bishop and ordaining clergy, with notes giving the chief differences of the Exeter rite. The pontificals vary a good deal in detail, and the following description is taken from the fullest of them.

(a) *Consecration of a bishop.*—The elect is presented to the archbishop by two bishops, is interrogated at length, and makes the oath of canonical obedience. The mass begins. After the collect there is an exhortation, bidding to prayer, and litany with special suffrage. Two bishops hold the Gospels over the elect and the other bishops lay on hands in silence; in some forms the archbishop says 'Receive the Holy Ghost.' The 'Veni Creator' (in some forms) and collect follow, and the first consecratory prayer (with 'Sursum Corda') is said. The elect is anointed on the head, and two consecratory prayers follow, the archbishop extending his right hand at the second (in some forms). He gives a sevenfold blessing, and anoints the new bishop's head and hands. The latter puts on gloves (so some forms) and is given the staff, ring, and mitre, with a blessing. The Gospel-book is (in some forms) given; and the mass continues, said by the archbishop. The formula 'Receive the Holy Ghost' is not universal, and does not occur in most English pontificals. That given by Maskell directs two bishops to hold the Gospels and the rest of them to touch the head with their hands, and the ordainer to say the 'Veni Creator'; but the formula is absent. The Exeter book alone among the English pontificals has it; it directs the consecrator and the assistant bishops to touch the elect's head with both their hands, and all to say 'Receive the Holy Ghost.' The Roman pontifical agrees with this. The enthronization is a separate ceremony, as the consecration did not usually take place in the new bishop's cathedral church (for this service see Maskell, iii. 281; Wilson, p. 77).

(b) *Ordinations to other orders.*¹—Before the Epistle the minor orders and subdeacons are admitted with the giving of the badge of office and prayer, but without laying on of hands (so expressly, even in the case of subdeacons, the *Magdalen College Pontifical* [Wilson, p. 63]). After the Epistle and Tract the candidates for the diaconate and presbyterate are presented (in some forms all the candidates are presented at the beginning of the service). The deacons are then (in some forms) instructed, the bishop lays a hand on them in silence (at a later period he here says silently 'Receive the Holy Ghost'), bids prayers, says a collect, and then the consecratory prayer, vests the ordinands with a stole (on one shoulder), gives them the Gospels (in some forms), says a second bidding (not Sarum) and a second con-

secratory prayer (some forms) or else a blessing, and (in some forms) vests the new deacon in a dalmatic. The Gospel is then read by one of the newly-ordained deacons, and the presbyters are ordained (in some forms they are presented here). They are instructed (so some forms) and the bishop and presbyters lay on hands in silence; the bishop bids prayer and says a collect and the first consecratory prayer; he vests the ordinand in stole (over both shoulders) and chasuble, says a second bidding (not Sarum) and (in some forms) a second consecratory prayer; in some forms 'Veni Creator' is said; and the new presbyter is blessed and anointed on the hands. The bishop gives him the paten and chalice prepared for the Eucharist, saying, 'Receive power to offer the sacrifice to God, and to celebrate mass for the quick and dead, in the name of the Lord.' The mass proceeds, and (in some forms) there is another imposition of hands with 'Receive the Holy Ghost' after communion. The kiss of peace, blessing, exhortation (so some forms), and post-communion complete the service.

(c) *Concelebration.*—In the present Roman ritual the practice is preserved, at the ordination of presbyters, of the new presbyters celebrating the Eucharist with the bishop; and this may be a convenient place for referring to the custom. This was an ancient custom at every Eucharist, which has survived only at ordination. In the *Ordo Romanus Primus* (ed. E. G. C. F. Atchley, London, 1905, p. 148 f.), on festivals, the cardinal presbyters each hold in their hands a corporal and three loaves, and, standing round the altar with the pope, say the canon, and 'simultaneously consecrate the body and blood of the Lord.' A similar rule is found in the *Ordo of St. Amand* (Atchley, p. 158), where the bishops and presbyters hold two loaves in their hands and consecrate them when the pope is consecrating at the altar. This custom is also found in some of the Church Orders, where the presbyters lay hands on the eucharistic loaves at the offertory (*Test. of our Lord*, i. 23; *Can. of Hipp.* iii. [ed. Achelis, § 20]; *Egypt. Ch. Ord.* 31; *Eth. Ch. Ord.* 21, etc.). The last manual, in J. Ludolf's version (*Ad eam historiam Aethiopicam commentarius*, Frankfurt-on-Main, 1691), directs the presbyters to say the eucharistic prayer with the bishop. The *Magdalen College Pontifical* (Wilson, p. 69) says: 'Let all who have been ordained [presbyters] bring the oblations to the hands of the bishop.' If the customs at Bourges, where the present writer lately witnessed an ordination, are general in the Roman communion, the new priests kneel behind the bishop, at some distance from the altar, and, taught by the ceremoniaris, say the canon of the mass with him, but do not hold a host in their hands.

(d) *'Matter' and 'form.'*—It may be noticed from the descriptions which have been given that the 'matter' (imposition of hands) and 'form' (the consecratory prayer) are not necessarily synchronous. So in Ac 6^s 8^{ss} the prayer, at ordination and confirmation, precedes the laying on of hands.

(e) *The word 'ordinal.'*—This is now commonly used to denote the book of ordination services. But there was no mediæval word to represent this. 'Pontifical' has a wider sense, being a collection of offices used by a bishop. In the Middle Ages an 'ordinal' meant a book of directions or of ceremonies.

4. *Anglican post-Reformation ordinations.*—The following is a description of the forms now in use, dating from 1662, and the chief changes made between the Reformation and that date will be noted in passing. There are now no minor orders

¹ In the Middle Ages the minor orders in the West were doorkeepers, readers, exorcists, acolytes. Subdeacons were reckoned with the higher orders.

recognized in the formularies of the Anglican communion.

(a) *Bishop*.—The consecration must take place on a Sunday or holy day after mattins (so 1662), during the Eucharist, which from 1662 has had a proper collect—before that the collect of the day was used—and a proper Epistle and Gospel. After the Nicene Creed there is a sermon (1662 only), and the elect, vested in his rochet (so 1662, while in 1549 [1550] he was vested in surplice and cope, and in 1552 no vestment was named), is presented to the archbishop by two bishops. Up to 1865 the oath of the king's supremacy was then taken, but now this and all subscriptions at ordinations are taken beforehand, except that the oath of canonical obedience to the archbishop is still taken by bishops at this point in the service. The archbishop bids prayers, and the litany with special suffrage is said, ended by a special collect, and followed by interrogations, exhortations, and blessing. The elect puts on the rest of his episcopal habit (1662), and the archbishop and bishops sing or say over him, by verses (so 1662), the 'Veni Creator.' The consecration prayer is said by the archbishop (but without 'Sursum Corda' as in the pontificals), and then he and all the bishops lay on hands, and the archbishop says, 'Receive the Holy Ghost for the office and work of a bishop in the Church of God now committed unto thee by the imposition of our hands,' and quotes 2 Ti 1st (adapted). (The words 'for the office . . . hands' were inserted in 1662.) He gives him the Bible with an exhortation, and the Eucharist proceeds. In 1549 (not 1552) the Bible was put on the new bishop's neck, and at the words 'Be to the flock of Christ a shepherd' the archbishop gave him the pastoral staff. At all consecrations and ordinations the newly-ordained must communicate, and two special collects or post-communions precede the final blessing.

(b) *Presbyter*.—After mattins (1662) there is a sermon, and the archdeacon presents the candidates ('decently habited,' 1662). Objections are asked for, the bishop bids prayers, and the litany with special suffrage is said; and the Eucharist has a special collect (1662), which is one of the ordination prayers, and a special Epistle and Gospel. (Up to 1662 the 'Veni Creator' was said after the Gospel, and the candidates [in 1549, not 1552, vested in plain albs] were then presented, objections asked, and the special collect said; the collect of the day was used before the Epistle.) Then follow an exhortation and interrogations, bidding and silent prayer, 'Veni Creator,' and the second ordination prayer. The bishop and presbyters lay on hands and the bishop says 'Receive the Holy Ghost for the office and work of a priest in the Church of God now committed unto thee by the imposition of our hands,' and adds Jn 20²³ and a single sentence of exhortation. (The words 'for the office . . . hands' were inserted in 1662.) The bishop gives the Bible (also, in 1549 but not in 1552, 'the chalice or cup with the bread') with a short formula, and the Eucharist proceeds. There is a curious rubric that 'all they that receive orders shall take [the Communion] together and remain in the same place where hands were laid upon them until such time as they have received the Communion.' This seems to be a relic of the custom of concelebration; see above, § 3 (c). It occurs only at the ordination of presbyters.

(c) *Deacon*.—After mattins (1662) and sermon, the archdeacon presents the candidates ('decently habited,' 1662; in 1549, not 1552, in plain albs) to the bishop, who asks for objections and bids prayers. The litany is said with a special suffrage. The Eucharist has a proper collect, which is the real ordination prayer (up to 1662 this was first said and then the Eucharist began and the collect

of the day was used), and a proper Epistle. Then follow interrogations and exhortation, and the bishop lays on hands and says, 'Take thou authority to execute the office of a deacon in the Church of God committed unto thee: In the name,' etc. The New Testament is given and the new deacon reads the proper Gospel (in 1549 he puts on a tunicle, and both in 1549 and in 1552 he reads the Gospel of the day), and the Eucharist proceeds.

These forms are based on the pre-Reformation pontificals, with considerable simplifications; but, especially in the case of deacons, the ordination prayers have become somewhat displaced, and the comparatively modern imperative formulæ have been unduly magnified at the expense of the prayers. The interrogations and exhortation to priests are largely derived from Bucer (see below, § 8).

5. *Presbyterian ordinations*.—Directions as to ordination are given in *The Form of Presbyterian Church Government and of Ordination of Ministers* (see under Literature below), which was agreed upon by the Assembly of Divines at Westminster and approved by the Presbyterian General Assembly in Edinburgh, 1645. In this work ordination is directed to be always continued, and is stated to be 'the act of a presbytery'; 'every minister of the word is to be ordained by imposition of hands and prayer with fasting, by those preaching presbyters to whom it doth belong,' and 'the power of ordering the whole work of ordination is in the whole presbytery.' Directions are given for the candidate's examination by the presbytery, and for his preaching before the people and before the presbytery or ministers of the word acting as their deputies. The ordination is to be performed in the church which he is to serve, and on the day appointed for it a 'solemn fast shall be kept by the congregation.' At least three or four ministers of the presbytery are to attend. One of these is appointed to preach about the ministerial office and duty, and the preacher is to interrogate the candidate. The ministers then lay on hands and say a short prayer or blessing to this effect, though no exact form of words is given:

'Thankfully acknowledging the great mercy of God in sending Jesus Christ for the redemption of his people; and for his ascension to the right hand of God the Father, and thence pouring out his Spirit, and giving gifts to men, apostles, evangelists, prophets, pastors, and teachers; for the gathering and building up of his church; and for fitting and inclining this man to this great work [here let them impose hands on his head]; to entreat him to fit him with his Holy Spirit, to give him (whom in his name we thus set apart to this holy service) to fulfil the work of his ministry in all things, that he may both save himself, and his people committed to his charge.'

After the prayer the preacher exhorts the new minister and the people, and by another prayer commends him and his flock to the grace of God. A psalm is sung and the congregation is dismissed with a blessing.

The Church Service Society, founded in Scotland in 1865, has published, after several revisions, a book called *Euchologion, a Book of Common Order* (see under Literature below) in which forms of prayer, interrogations, and exhortations are given, the above outline being followed. In the ordination prayer the presiding presbyter lays both hands on the candidate's head, and each of the other presbyters lays on his right hand (p. 383). After the prayer the 'Gloria Patri' or other doxology is said, and the presbyters in turn give the new minister the right hand of fellowship (p. 384). The ordination prayer and the addresses in this book are taken in the main (see pp. 419, 431) from the *Provisional Liturgy of the American German Reformed Church*, 1859, and the interrogations from *Knox's Liturgy and Church of Scotland Prayers for Social and Family Worship* (1st ed.).

6. The Scandinavian rite. — i. SWEDEN. — The Swedish post-Reformation ordination services deserve special consideration, as they have some very peculiar features. They are described by G. M. Williams (*The Church of Sweden*, pp. 9-43), who gives most of the prayers in full. The ordinations are to the episcopate and the presbyterate; there are now no deacons in Sweden.

(a) *Bishop*.—According to the present rite (1881), the consecration must take place on a Sunday or holy day, in the cathedral church. The assistants, if bishops, stand inside, but, if priests, stand outside, the altar rail, all being vested in chasubles. They bring in the cope and other episcopal insignia. After an address there is a prayer (this is really the ordination prayer), and the notary reads the king's commission. Several lections, with an exhortation, are read. The elect says the Apostles' Creed and is interrogated. The archbishop says a formula, committing to him the bishop's office, and giving him the king's commission, also the pectoral cross and pastoral staff; meanwhile the choir sing an anthem consisting of a prayer to the Holy Ghost. The elect is vested in the cope, the assistants lay their hands on his head, and the archbishop says the Lord's Prayer. The mitre is put on, and a prayer and blessing conclude the service. Consecrations do not now take place, as in 1571, during the Eucharist. The chief peculiarities of this rite are the laying on of hands *after* the delivery of office, the displacement of the ordination prayer, the Lord's Prayer said at the laying on of hands, and the prominence given to the modern feature of delivering the office to the ordinand as compared with the ordination prayer. There have been several revisions since 1571; in that year an ordination prayer was said at the laying on of hands.

(b) *Presbyter*.—The present form (1894), the last of several revisions, follows the lines of a bishop's consecration, and many of the prayers and interrogations are the same, only the name of the office being altered. Most of the lections are different. Instead of the king's commission, the bishop gives the ordinand his *prestbref* ('letters of orders to the priesthood'), *before* the laying on of hands, and the ordinand is then vested in a chasuble. If more persons than one are ordained at one time, the Lord's Prayer is said over each separately. The word *prestembet* ('priesthood') is now used, as in 1871, while in some of the previous revisions *predicembet* ('preacher's office') replaced it (see J. Wordsworth, *National Church of Sweden*, pp. 355-357).

ii. NORWAY.—Of Norwegian consecrations of bishops before the Reformation we have the following interesting account, given by Dr. Bang, the present bishop of Christiania:

'The archbishop came before the altar accompanied by his assistants. The ordinand presented himself before him with a bishop on each side. The introit and verse were sung; then, instead of Kyrie eleison, the archbishop began the Great Gloria ['Gloria in excelsis'], whereupon the mass was interrupted and the ordination act begun. The ordainer took the Gospel-book and laid it first open, then closed, on the head of the ordinand, in which position it was held by the two assistant bishops. The archbishop then sprinkled the ordinand with holy water, laid his hand on his head, and repeated a long ordination prayer. . . . Thereafter he anointed his hands and head with suitable prayers and delivered him the pastoral staff, and put the episcopal ring on the fourth finger of his right hand. Vested with the episcopal insignia, he was now placed upon the episcopal throne during a long prayer, whereupon the consecration ended with a blessing upon the ordained bishop' (Williams, p. 30).

It would appear that the Scandinavian pontifical, like so many English ones, lacked the 'Accipe Spiritum sanctum.'

7. Moravian ordinations.—We are not here concerned with the disputed question of the ministerial succession in the *Unitas Fratrum*, or Moravian

body, but only with the rite used by them in ordination.

Their first recorded ordination, in 1464, was noticeable because of their use of the lot, after the example of the appointment of the apostle Matthias (de Schweinitz, *Moravian Episcopate*, p. 10). But this was followed by an ordination; according to de Schweinitz, by an ordination (with prayer and imposition of hands) to the priesthood by the priests present in the synod then held, and afterwards by an ordination to the episcopate by two Waldensian bishops.¹ The use of the lot appears to have continued in the Moravian body, as it is mentioned as existing in A. G. Spangenberg's *Exposition of Christian Doctrine as taught in the . . . Unitas Fratrum*² (Eng. tr., Bath, 1796, § 257, pp. 450, 453).

In 1478 the Brethren stated to the Masters of Prague:

'In consecrating to the priesthood, we have no set form of words, but the election is according to prayer and the desire of the congregation, and then the ordination through laying on of hands' (J. Truhlar, *Manuale Vacillava Korandi*, Prague, 1888, p. 351.).

The Brethren had the following offices: bishops, presbyters or seniors, ministers (deacons), acolytes; and to these offices they ordained successively; while in Waldensian ordinations priesthood and episcopate were conferred together, by a single act. In 1504 they told the Masters of Prague:

'We have priests who are properly ordained, as well in accordance with the divine institution (presbyterial ordination), as in accordance with that order which comes from men (episcopal ordination).' See de Schweinitz, p. 18; also p. 12 (2).

John Lasicky (Lasitius), in his *de Ecclesiastica Disciplina* (Amsterdam, 1660, but written c. A.D. 1570), describes the ordination of presbyters thus (ch. xv.):

There is an examination and presentation followed by silent prayer. The bishop with two or three presbyters lays on hands, the congregation meantime singing 'Veni Creator.' The bishop blesses and exhorts the new presbyter, and the people acclaim 'Amen' (this is equivalent to the 'Axiom').

The ordination of bishops is similar. After the ordination follow the liturgy and a solemn giving of hands, and all the ministers partake of a repast together.

In the present *Liturgy and Hymns for the Use of the . . . Unitas Fratrum* (London, 1906) the following is given under the head of 'Ordinations':

'The service being opened by the singing of the hymn "Come Holy Ghost, come Lord our God," etc., or some other suitable verses, the bishop addresses the congregation . . . and candidate . . . after which he offers up a prayer, imploring the blessing of God upon the solemn transaction, and commending the candidate to his grace, that he may be endowed with power and unction of the Holy Ghost for preaching the word of God, administering the holy sacraments, and for the exercise of his office to the edification of the Church. The bishop then proceeds to ordain the candidate with imposition of hands, pronouncing the following or similar words: "I ordain (consecrate) thee NN. to be a deacon (presbyter, bishop) of the Church of the Unity of the Brethren, in the name," etc.' (He adds a blessing; silent prayer, a doxology, 'Amen,' 'Hallelujah,' a hymn, and 'the New Testament blessing' conclude the service. A note is added that at the consecration of bishops two or three bishops generally assist.)

8. German Reformed ordinations.—These do not call for particular remark. Lutheran forms may be seen in H. A. Daniel's *Codex Liturgicus* (4 vols., Leipzig, 1847-53, ii. 517 ff.). The present German 'Evangelical Church' consists of a fusion of the Lutheran and Calvinist communities. The Calvinists were, both in theory and in practice, strictly presbyterian in polity, while the Lutherans in theory were not so (as we see in the Swedish Church, which has more than one order); and for our purpose the draft 'Ordinal' of Bucer (a Lutheran) is of great interest. It was arranged so that it might be used either for those communities which had one order or for those which had more. The essential portions of it, with parallels from

¹ It is disputed, however, whether the former of these two ordinations actually took place.

the Anglican 'Ordinal' of 1549 (1550), may be seen in *CQR* xlv. [1897] 132 ff. The chief interest lies in the fact that Bucer's draft furnished the noble address in the English Prayer Book to the candidates for the presbyterate, and the basis of the interrogations, though most of his suggestions for other parts of the service were rejected by the Anglican Reformers.

9. The Græco-Russian rite.—The forms of ordination of the three higher orders in the Orthodox Eastern Church in the present day are given in Greek with an English translation in *Littledale's Offices of the Holy Eastern Church*. These ordinations take place in the course of the eucharistic liturgy; but it is noteworthy that the point at which they occur is not the same as in the West. In the Græco-Russian rite the bishop is ordained early in the service, the presbyter later on, and the deacon nearly at the end.

(a) *Bishop*.—The form given in *Littledale* (pp. 40, 158) is the oldest and shortest of the three forms found in the *Euchologion*. It is that here described. After the Trisagion, or hymn 'Holy God, Holy Mighty, Holy Immortal, have mercy upon us,' sung at the beginning of the *Missa Catechumenorum* (F. E. Brightman, *Liturgies Eastern and Western*, Oxford, 1896, p. 369), the candidate is presented by three bishops, and a declaration of election made, and the presiding bishop bids the prayers of the people. The Kyrie ('Lord have mercy') is said thrice. The open Gospels are laid on the candidate's head and neck by the presiding bishop, and the other bishops lay on hands with him (*συνεπαρτομένω*). The president says a short prayer secretly (i.e. in a low voice), naming the office of bishop, and praying for the strength of the Holy Spirit for the elect. The deacon's ectene ('litaney') follows, with a special suffrage, and the president says secretly a short prayer, naming the function of offering sacrifice and oblations for all the people, and that of being a shepherd and teacher. The book of the Gospels is taken from the new bishop's neck and placed on the holy table. The president vests the new bishop with the pallium (*omophorion*) and says 'Axios,' and the clergy say the same. The kiss of peace is given by all the bishops, the newly-ordained takes his seat in the apse, and the liturgy proceeds. He offers the prayer for peace at the 'lection of the Apostle' (the liturgical Epistle; Brightman, p. 371). At the communion he first communicates himself and then communicates the president and the rest. This is a relic of the older custom in which the newly-ordained himself celebrates the liturgy after his ordination (above, § 1(b)). In another form an elaborate profession of faith by the candidate is made, and the pastoral staff is given.

(b) *Presbyter* (*Littledale*, pp. 34, 153).—After the 'Cherubic Hymn,' i.e. after the Great Entrance (Brightman, pp. 377-379), the candidate is led up to the holy doors by two deacons. Then two priests lead him round the holy table (which stands out from the east wall of the church), singing the hymn 'Holy Martyrs, who valiantly contended and are crowned, intercede with the Lord that he may have mercy on our souls,' while the bishop sits on a throne before the holy table. The bishop rises and signs the candidate thrice on the head and bids the prayers of the people. The Kyrie is said thrice, and the candidate is again signed thrice with the sign of the cross. The bishop lays his hand on his head and says a prayer, naming the office. The principal priest says the deacon's ectene with special suffrage; and the bishop, holding his hand still on the candidate's head, says a prayer, naming the function of offering 'gifts and spiritual sacrifices' and that of

renewing the people 'through the laver of regeneration.' He then raises the new presbyter and brings the back part of his stole to the front of the right side, saying 'Axios.'¹ The bishop vests him in the chasuble and again says 'Axios,' and the clergy and singers chant the same. The newly-ordained kisses the bishop and the presbyters, and stands with them and reads the *contakion* (short hymn). The liturgy proceeds, and at the epiclesis the new presbyter receives the holy bread (apparently a small particle of it) from the bishop, and holds it in his hands, afterwards returning it to the bishop.² At the communion the new priest is first communicated by the bishop, and he says the prayer behind the ambo (pulpit).

(c) *Deacon* (*Littledale*, pp. 28, 148).—After 'And the mercies' (the blessing which follows the Commemoration of the Quick and the Dead and precedes the Lord's Prayer; Brightman, p. 390) two deacons lead the candidate to the bema (sanctuary) and conduct him three times round the holy table, singing 'Holy Martyrs' (see above). The bishop signs him thrice on the head, and the maniple and girdle are taken from him. The bishop bids prayers, the Kyrie is said thrice, and the candidate is signed thrice. The bishop lays his right hand on his head and prays, naming the office, and referring to St. Stephen and the 'good degrees' of 1 Ti 3¹⁸ (but not in the sense of promotion). The archdeacon says the ectene with a special suffrage, and the bishop says another prayer, holding his hand on the candidate's head. He puts the stole on his left shoulder and says 'Axios,' which is taken up by the clergy and singers. The bishop gives him the fan and says 'Axios,' and the deacons give him the kiss of peace; the new deacon, standing at the corner of the holy table, waves the fan above the holy gifts. The newly-ordained receives Holy Communion before the other deacons, and he says the remaining diaconal portion of the liturgy. (Deacons are more numerous in the East than in the West, and every church has at least one.)

(d) *Minor orders*.—The office for ordaining a deaconess (*Littledale*, p. 152) resembles that for a deacon; she receives the laying on of hands, and is vested with the diaconal stole. At the communion she partakes of the two species separately (unlike the ordinary lay people, who are communicated by intinction), and handles the chalice, and herself places it on the holy table. This office has been unused since the 12th cent. except for abbesses. The *Euchologion* gives other offices for minor orders: singers, readers, subdeacons—very simple and informal. To a singer a psalter is given, to a reader the book of the 'Apostle' (the liturgical Epistles). See *Littledale*, p. 266 f., for a description.

10. The Armenian rite.—The minor Eastern Churches have more elaborate ordination offices than the Græco-Russians. For a Latin translation of these offices see Denzinger, *Ritus Orientalium*, vol. ii.

(a) *Bishop* (Denzinger, ii. 356).—The ordination takes place on a Sunday, and occurs in the liturgy after the Trisagion ('Holy God,' etc.), which, as in the Greek rite, comes at the beginning of the *Missa Catechumenorum* (Brightman, p. 424). The clergy and people kiss the hand of the catholikos (patriarch) and receive his blessing. The elect is then presented and testified to. He is interrogated, and makes a profession of faith, in which

¹ The priest's stole, unlike the deacon's, is worn over both shoulders, and, in this Church, the ends are joined together so that it is of one piece.

² This seems to be a relic of concelebration, for which see above, § 3(c); but Symeon of Thessalonica says that it is meant to show that it is the direct ministrations of our Lord Himself which he has now taken upon him (*Littledale*, p. 272, note 23).

Eutyches is anathematized. The catholicos lays his hands on his head and says a short prayer; then he puts the episcopal pluviale on his shoulders and kisses him on the mouth. They proceed with the liturgy, and two bishops take the elect by the hand and lead him to the altar. The catholicos puts the open book of the Gospels (held by a bishop) on his shoulders and lays his right hand on his head, while Psalm 89 ('*Misericordias Domini*') is sung. The chief deacon makes a proclamation, and a bishop reads a certificate of election and of its confirmation. The catholicos announces the elect's name and the see to which he is called, and prays secretly for the Holy Spirit, while two bishops make proclamations (ectenes), bidding to prayer. He again lays on hands and prays. All the clergy proclaim the vocation of the elect to the episcopate (naming him), and the people answer 'Axios.' The catholicos proclaims the vocation and bids to prayer. A long prayer follows, and then the choir sing Psalm 132 ('*Memento Domine*'), and three lections and a Gospel are read. A bishop says an ectene and then the catholicos says a prayer; and he anoints the new bishop's head with a long prayer, and then his two thumbs; he gives him the pastoral staff and ring and the book of the Gospels. He receives the kiss of peace from the catholicos, the bishops, and all the clergy; the mitre is put on his head, but it is expressly said that gloves are not used. The liturgy is offered on behalf of the new bishop, the catholicos celebrating. At the communion the bishop communicates himself in either kind, and then he communicates the others. After the ordination the new bishop remains in the sanctuary (i.e. the precincts of the church) for forty days continuously. (In the case of a bishop's ordination Denzinger does not give the complete rite, but only a long description of it. It appears from the description that the assistant bishops do not lay on hands. The anointing in this rite is very significant; see below, § 16.)

(b) *Presbyter* (Denzinger, ii. 297, 306).—On the evening before the ordination there are long exhortations and interrogations. The ordination itself takes place (as does that of a deacon) at the same point of the liturgy as in the case of a bishop, before the lections. After psalms and hymns the ordinand is presented, and Psalms 25-27 ('*Ad te Domine*,' '*Judica*,' '*Dominus illuminatio*') are sung. The deacon's bidding and the Kyrie (thrice) follow, and the bishop lays his right hand on the candidate's head and prays. The new presbyter turns to the people, and his vocation to the presbyterate and his name are proclaimed; the people reply 'Axios.' The bishop lays on his right hand and announces his vocation; then, when he has bidden to prayer, the Kyrie is said twelve times. The bishop again lays on his right hand and prays. He arranges the stole round his neck, saying, 'Accept the yoke of our Lord Jesus Christ, for his yoke is sweet and his burden light.' They sing Psalm 132 ('*Memento Domine*'), and read for the prophetic lesson Ezk 31⁷⁻¹⁹, Mal 2⁵⁻⁷, Is 61¹⁻⁶, for the Epistle 1 P 5¹⁻⁴, 1 Ti 1²⁻¹⁷, and for the Gospel Lk 4¹⁴⁻²². They say the creed, and after the offertory the bishop sits in his throne and they sing Psalm 119 ('*Beati immaculati*')—apparently the whole psalm. An ectene with a special suffrage follows, concluded with a prayer by the bishop. He lays his right hand on the head of the new presbyter, who is then vested (prayers being said during the action), and anointed on forehead and two hands, and is given the chalice and paten containing the [reserved] sacrament as a sign that he can now celebrate the liturgy. At the end of the service (the authorities differ as to whether he communicates himself or whether the bishop com-

municates him) he receives the kiss of peace from 'the bishop and the other priests,' and a blessing. After the ordination he is to remain in the church forty days.

(c) *Deacon* (Denzinger, ii. 286).—After psalms and hymn the ordinand is presented to the bishop, and his name and vocation are proclaimed. The bishop lays on his right hand and prays. Psalm 119 (the whole psalm) is sung. The bishop again lays on his right hand and prays. His ordination is proclaimed, and the people say 'Axios.' The bishop lays his hands on his shoulders, then his right hand on his head, proclaims his ordination, and bids prayers and prays. The prophetic lessons are Pr 4¹⁻⁹, Jer 1¹⁻¹⁰ 23⁵⁻⁶, Hos 14¹⁰; then Ac 6²⁻⁷; the Epistle is 1 Ti 3⁷⁻¹⁶; and the Gospel Lk 10²¹⁻²⁴. After the creed and offertory and deacon's ectene the bishop lays on his right hand and prays. After a hymn and introit the new deacon is vested in the diaconal vestment and the bishop puts the stole on his right shoulder, and gives him the book of the Gospels and the thurible. The new deacon censes the altar thrice and receives the kiss of peace.

(d) *Minor orders* (Denzinger, ii. 274).—The ordination rites are preceded by an office for conferring the tonsure; the candidate's hair is cut in the form of a cross. There are offices for the ordination of doorkeepers, readers, exorcists, acolytes, subdeacons. To the doorkeeper the key of the church is given; he goes to the door and opens and shuts it. To the reader the book of the apostles and prophets is given. To the exorcist is given the ritual in which the exorcisms at baptism or the renunciations are written. To the acolyte are given a candlestick with burning lights and a cruet to hold the eucharistic wine.¹ The ordination of subdeacons is more elaborate; it contains laying on of hands with prayer preceded by the lections, Pr 4¹⁻⁹, Is 61¹⁻¹⁰, He 9¹⁻¹⁵, Mk 10¹³⁻¹⁶; the new subdeacon is vested and the maniple is put on his left arm; the empty chalice and paten and other appointments for the liturgy are given to him.

ix. *The Coptic rite.*—(a) *Bishop* (Denzinger, ii. 18, 28).—The clergy and people give their testimony to the elect by a written document. If he is a deacon, he is to be ordained presbyter before he is ordained bishop. The ordination to the episcopate is to be on a Sunday, during the liturgy, after a vigil has been held with psalmody and doxology and reading of the Gospel. When they have said 'the Only-begotten Son' in the liturgy (Brightman, p. 148), i.e. just before the *Missa Catechumenorum* begins, the patriarch (*archisacerdos*) receives and causes to be read the deed of election and the testimony. The archdeacon says a short exhortation, and the archbishop (patriarch) goes to the altar and offers incense. After the ectene, with Lord's Prayer and special suffrages, has been said, the people repeat the Kyrie fifty times, and the bishops lift up their hands and receive (or, in the Arabic, touch) the elect, and put their hands on his shoulders. A prayer by the patriarch over the elect, a short exhortation by the archdeacon, and another prayer by the patriarch, said facing the east, follow. The latter then lays his right hand on the elect, the bishops put their hands on his neck and shoulders, and the patriarch says the ordination prayer, and then, facing the east, another. Turning to the new bishop, he signs him and says, 'We call Bishop N. to the holy church of N.' etc. The new bishop is vested and signed thrice, and another declaration of ordination is made; the people cry thrice 'Axios.' The archdeacon says an ectene and the patriarch prays.

¹ The Armenians alone among Easterns do not mix the chalice.

The new bishop is placed on the right of the altar, holding the Gospel in his bosom, and the liturgy, celebrated by the patriarch, proceeds. At the Gospel (Jn 20¹⁹⁻²³) the patriarch breathes in the face of the new bishop and says 'Axios,' and at v.²² breathes on him again. The new bishop communicates *after* the other bishops; he makes the fraction with the patriarch (a relic of concelebration). When the patriarch communicates the new bishop, he breathes in his face and lays his right hand on his head, and every one cries thrice 'Axios: N. bishop of the city of N. and of this (?) province.' The sacerdotal *σολή*¹ is taken off the new bishop by the patriarch, who puts on him the black *ono*.² It may here be remarked that in all these Eastern rites we find different versions in the various authorities. There is not in the same community any great conservatism of a particular form. In this case of Coptic episcopal ordinations there is another form given by Denzinger (ii. 28) from Renaudot. The differences are not material; but the Gospel (Jn 20¹⁹⁻²³) is read after the communion of the bishops; and the book of the Gospels is put over the head of the new bishop by the patriarch.

(b) *Presbyter* (Denzinger, ii. 11).—After testimony has been given to the candidate, he stands with stole (*orarium*) on one shoulder before the bishop, who offers a prayer with incense. The archdeacon makes an exhortation and the Kyrie is said thrice; the bishop prays and the Kyrie is again said thrice. Then the bishop turns to the candidate, lays on him his right hand, and says the ordination prayer, and then, facing the east, another. The bishop turns, signs the new presbyter on the forehead, and says, 'We call thee unto the holy Church of God, Amen.' The archdeacon announces his name and that of the church which he is to serve, and the bishop proclaims that he is called to be presbyter. He signs him three times, naming the Holy Trinity, vests him with the *σολή* (see above), says a prayer, and exhorts him. The new presbyter kisses the altar and the bishop and clergy, and he is communicated (with the reserved sacrament?). Hands (or a hand) are laid on him thrice and all say three times the 'Axios': 'N., presbyter of the holy catholic apostolic Church of the Christ-loving city of N., is worthy, in the peace of God, Amen.' (It is not said that the ordination is to take place during the liturgy.)

(c) *Deacon* (Denzinger, ii. 7).—The ordination is almost exactly in form the same as for a presbyter, though the prayers are not all the same. In each case the office is named. After the ordination the bishop places the zonarium (girdle), or in some copies the orarium (stole), on the left shoulder of the deacon. There is a short exhortation, the newly-ordained is communicated, and the bishop says, 'N., deacon of the holy Church of God, Amen.'

(d) *Minor orders* (Denzinger, ii. 2).—There are forms of ordination for a subdeacon and for a reader, very nearly as for a deacon, some of the prayers being the same; but a hand is not laid on them (so expressly). The bishop touches their temples. To the reader a book is given, and on the subdeacon a stole is placed. There is a short exhortation. Nothing is said of their receiving Holy Communion at ordination. A singer is ordained (Denzinger, ii. 63) by the bishop with three prayers, the kiss of peace, and the sign of the cross.

12. The W. Syrian (Jacobite) rite.—(a) *Bishop* (Denzinger, ii. 74).—After they have 'brought

¹ This is perhaps the name of the whole set of vestments (see Brightman, p. 691), or a chasuble may be meant.

² The assumption is that the consecration takes place in the patriarchal church. The new bishop is enthroned in his own church later.

round the divine mysteries' (Brightman, p. 80?, or perhaps the end of the liturgy is meant), a mitre is put on the elect's head, and two bishops present him to the patriarch, who says a prayer. The elect makes a confession of faith, and the patriarch prays and salutes the people. The Pater Noster is said, and one of the bishops, naming the elect and his see, makes proclamation of his being called and bids prayers. The Kyrie is said thrice. The patriarch takes the two eucharistic elements and commingles them, saying a prayer. Then all the bishops hold the Gospels over the elect's head and the patriarch lays both hands on him, both the patriarch's hands and the Gospels being moved up and down thrice. The patriarch lays his right hand on the elect's head, moving his left hand round his head, while the bishops hold the Gospels over him in silence, and meantime the patriarch says two ordination prayers. He vests the new bishop and places him on the throne. They then lead him round thrice, the patriarch each time saying 'Axios.' The patriarch leads him down from his throne, and both he and the other bishops take the pastoral staff in their hands, and the new bishop receives it from them, and prays, after which the patriarch and bishops and clergy sing Ps 110² thrice, and leave the staff with the new bishop, who goes to the entrance of the sanctuary and signs the people with it in the form of a cross, and then returns it to the patriarch. (Denzinger does not give the text of the prayers at the ordination of a W. Syrian bishop, and the description is not very full; nothing is said of the communion of the new bishop, nor is the ceremony of coimmixture explained; but see below (b), and § 14.)

(b) *Presbyter* (Denzinger, ii. 71, 87).—The ordination takes place at the end of the liturgy (but see below). Psalms and prayers are said, and the lections (1 P 6¹⁻³, Tit 1¹⁻³, Jn 16^{31-17¹³}) are read. The bishop gives the tonsure, cutting the candidate's hair in the form of a cross; the candidate is then brought to the sanctuary, wearing a stole deacon-wise. The archdeacon makes a proclamation and bids prayers. The Kyrie is said thrice. The bishop lays his hands on the consecrated elements and thrice stretcheth out his arms over them (apparently indicating that the strength and power are from our Lord); then he lays both hands on the candidate's head, and raises them thrice. He puts his right hand on his head, moving his left hand to and fro over his neck and face, and covers the candidate's head and face with the phaina (chasuble), while the deacons wave a fan. He says the ordination prayer, and then, again turning to the candidate, lays his right hand on his head and signs him with the sign of the cross between the eyes, saying, 'He is ordained in the holy Church of God.' The archdeacon proclaims his ordination, naming him and the place that he is to serve. The new priest returns to the altar and says a prayer. He is vested and given the thurible and receives the kiss of peace. The bishop then communicates him and bids him communicate the people.¹ If more persons than one are ordained at one time, the prayers are said in the plural.

(c) *Deacon* (Denzinger, ii. 67, 82).—The ordination is at the end of the liturgy. The ordinand kneels on one knee only, and the chief deacon makes a proclamation and bids to prayer. The bishop lays his hands on the consecrated elements and then on the candidate's head and carries out the same ceremony as in the case of a presbyter; he then says the ordination prayer. The rest

¹ This shows that the ordination takes place after the consecration of the elements, but before the communion of the people.

follows as above (but the prayers are not the same). The stole is put on the new deacon's shoulder, he receives the fan and censer, and then the kiss of peace, and he is communicated.

(d) *Minor orders* (Denzinger, ii. 66, 78).—Offices are given for the ordination of a reader and a subdeacon. The bishop touches their temples and prays. In the case of a subdeacon the bishop first touches the paten and chalice with his fingers (see above). A book is given to a reader, a stole to a subdeacon. The kiss of peace and communion are given to them. The form for a subdeacon is more elaborate than that for a reader.

13. The E. Syrian (Nestorian) rite.—(a) *Bishop* (Denzinger, ii. 238).—After a vigil the faithful assemble in the morning at the third hour; the patriarch or metropolitan and the bishops, having their mitres and staves, come to the sanctuary, and the elect stands before them in the middle. After prayers, anthems, and offering of incense the president takes the Gospel-book and puts it on the elect's back, the bishops on either side laying on their hands and holding them there till the prayer is finished; lections from the Gospels (Mt 16¹⁸⁻¹⁹, Jn 21¹⁵⁻¹⁷, Mt 16¹⁹) are read while the elect is being ordained. The president prays thrice and lays his right hand on the elect, stretching forth his left hand as one who prays. After the prayer the archdeacon bids prayer for the newly-ordained, naming him and his see, saying a form of the 'Sursum Corda': 'Lift up your minds and ask of God mercy for N.,' etc. They answer, 'It is meet and right,' once if a bishop is being ordained, twice if a metropolitan, thrice if a patriarch. After another prayer they take the Gospels off the new bishop's back and the patriarch vests him in the ma'aphra (a sort of cope, taking the place of a chasuble) and mitre, and gives him a staff. The kiss of peace is given, the 'Anthem of the Sanctuary' (Brightman, p. 253) is sung, and the lections read. (This places the ordination before the Trisagion [Brightman, p. 255].)

(b) *Presbyter* (Denzinger, ii. 233).—The ordination takes place at the sanctuary door. The bishop gives the tonsure, cutting the ordinand's hair in the form of a cross, girds him, and puts his ma'aphra on the ordinand's left shoulder. Prayers and anthems follow, and the ordinand kneels on both knees, signifying that he receives two talents, while the bishop stretches his hands over his eyes, signifying that he is given power to invoke the Holy Ghost and to bless, and to beget spiritual children and to feed them with spiritual food (see above, § 1 (d)). The bishop places his right hand on the ordinand's head and says two ordination prayers secretly; he places the ma'aphra on his shoulder, and arranges the stole on his breast.¹ The bishop gives the new presbyter the Gospel-book, and announces his ordination, naming him. A 'canon' (anthem) is sung and the kiss of peace is given. If there is a liturgy, it now proceeds, and they say, 'Before the throne of God,' and begin the 'Anthem of the Sanctuary' (Brightman, p. 253; see above).

(c) *Deacon* (Denzinger, ii. 229).—The ordination is at the sanctuary door, and the tonsure is given. The ordinand kneels on one knee, to signify that he receives one talent only (see above). The bishop places his right hand on his head, extending his left hand as one who prays, and says two ordination prayers. He places the stole on the new deacon's left shoulder, gives him the book of the 'Apostle' (the liturgical Epistles), announces his ordination, naming him, and gives him the kiss of peace. The new deacon is led round to the

right and left of the altar.¹ The ordination does not usually take place during the liturgy. Both presbyters and deacons at their ordination are gradually led up towards the holy table by the bishop, who says a prayer at each step (A. J. Maclean and W. H. Browne, *Catholicos of the East*, London, 1892, p. 201).

(d) *Minor orders* (Denzinger, ii. 227).—There are offices for the ordination of readers and subdeacons (but these are now obsolete among the Nestorians). After a short anthem there is laying on of hands (cf. the W. Syrians, above, § 12) and a short prayer. A stole is laid on the arms of a reader and a book of the lections is given him. When a subdeacon is ordained, the bishop receives back from him his reader's book and places a stole on his neck.

14. The Maronite rite.—This is somewhat more elaborate than in the other Eastern communions.

(a) *Bishop* (Denzinger, ii. 187).—The ordination must be on a Sunday. The patriarch vests the elect in cowl, alb, amice, and chasuble, and they lead him to the sanctuary, where the patriarch begins the liturgy. When it is ended, the ordination begins. The archdeacon says the ectene and the president prays. The archdeacon bids prayers, and the Kyrie is said thrice. A profession of faith is made by the elect and he is presented by two bishops. The president (who in this office is also called 'the bishop' or 'the shepherd') lays hands on the elect and prays, the bishops holding the Gospels over the president's hands. He thrice raises his hands, spreads his arms over the elect's head, and prays. He lays his hand on the consecrated elements and on the head of the elect twice, the archdeacon making a proclamation. The new bishop then holds two crosses, and they bring the chrism and the Gospel-book, and lead him thrice round the church, singing, the patriarch praying at the end of each procession. At the end of the second the bishops hold the Gospels over the new bishop's head, the deacons wave fans, and the president extends his arms under the Gospels over his head and prays. After the third procession the president takes from the new bishop the two crosses, and gives him the Gospels, shut, and prays; he receives back the Gospels and anoints his head with chrism thrice, and also his hands. Long prayers follow, and a deacon's ectene, and lections from He 4¹⁴⁻⁶⁹ and Jn 10¹⁻²¹ with an antiphon between; then the president washes his hands, the newly-ordained washes his head and hands, and another ectene follows. The bishop signs the new bishop and announces his ordination. They vest him in a chasuble and mitre and place him in his seat. The bishops and presbyters lift the seat thrice and cry 'Axios.' After a prayer the president leads the new bishop to the door of the sanctuary, commits to him the flock and the clergy, and admonishes him. Two prayers and the Pater Noster conclude the service.

(b) *Presbyter* (Denzinger, ii. 148).—The ordinand, vested as a deacon, kneels on both knees and is blessed and signed by the bishop. Prayers with archdeacon's bidding and with offering of incense follow, and the ordinand is presented by the archdeacon; the Kyrie is said thrice. The ordinand kneels on both knees, and the bishop lays his hand on his head and prays; he then places his hands on the host and chalice and thrice spreads out his arms. He lays his right hand on the ordinand's head, covers the latter's face with his chasuble, moves his left hand over his face and neck, and says the ordination prayers. He puts his hand on the elements and on the ordinand's head and again prays several times. He anoints the hands of the

¹ The E. Syrians, unlike the Greeks, have the same shape of stole for deacon and presbyter, but the former wears it on one shoulder, the latter on both shoulders.

¹ The E. Syrian altars stand against the east wall of the church, and do not stand out from it as those of the Greeks do.

new presbyter, and both he and the archdeacon proclaim the ordination, naming him, the archdeacon also naming the charge which he is to serve. The bishop vests him with girdle, amice, stole, and chasuble, and blesses him. Lections from 1 Co 12²³, 1 Ti 3⁴ 4¹¹, Tit 1⁵⁻⁹, 1 Ti 4¹⁵ 14. 15, Jn 21¹⁵⁻²² follow, and then the ectene and prayer. The thurible is given, and they lead the new presbyter round, giving him the Gospels to carry, and they put the consecrated bread in the paten. Several prayers follow, the cross is laid on his head, the kiss of peace is given, and the new presbyter is bidden to cense the people. The bishop then intinges the host and the chalice and bids him communicate the people. A long exhortation concludes the service.

(c) *Deacon* (Denzinger, ii. 128).—The procedure is similar, though the prayers are different. The newly-ordained deacon (who has been kneeling on one knee only [see above, § 13]) is vested in tunic and stole and is given the 'Apostle' to read; the lection is 1 Ti 1¹⁻³ 15.* He is given the thurible to go round the sanctuary; he is given the Apostle to go round the church, a hymn being sung meanwhile; the chalice and paten are put on his head. His ordination as deacon is proclaimed; and there is an exhortation.

(d) *Minor orders* (Denzinger, ii. 108).—There are offices for the ordination of singers, readers, and subdeacons. The bishop gives the tonsure to a singer, cutting his hair, and touches the temples in all three cases. The bishop takes the candidate by the right hand and prays; there is no laying on of hands on the singer or reader, but hands are held over the reader, and a hand (having been placed on the consecrated elements as above) is laid on the subdeacon. A psalter is given to the singer, tunic and stole to reader and subdeacon, the book of Isaiah to the reader, the water-cruet and the book of Acts to a subdeacon. These services for the ordination of minor orders are comparatively elaborate.

In concluding this review of Eastern ordinations we must remember two things: the details sometimes vary in different MSS; and there are, in addition to those described above, ordination rites for different offices, such as those of patriarchs, metropolitans, archdeacons, periodeutæ, chorepiscopi, so that it might sometimes seem as if these were 'orders' properly so called, and that one who had formerly been ordained as a presbyter was re-ordained as a periodeuta, and one who had formerly been ordained as a bishop was reordained as a patriarch. But the confusion is not so great as may appear, as (in theory at least) the ancient discipline ordinarily holds good in the East, especially in the more conservative minor Eastern Churches, that no bishop can be translated from one see to another; so that one who is elected to a patriarchate is ordinarily assumed to be not yet a bishop. And the E. Syrian *Sunhadhus* ('Book of Canon Law') makes it clear that periodeutæ and archdeacons are not distinct 'orders,' by saying that it is the duty of a diocesan bishop to 'ordain all readers, subdeacons, deacons, and presbyters, give a blessing to periodeutæ, and say a prayer over archdeacons' (Maclean-Browne, p. 182).

15. *Times of ordination in East and West.*—Bishops were usually ordained on a Sunday, both in the East and in the West. This ancient custom is found in the *Testament of our Lord* (i. 21), the *Egyptian Church Order* (§ 31), the *Ethiopic Church Order* (§ 21), the *Apostolic Constitutions* (viii. 4), and in the canons attached to the *Older Didascalia* (*Verona Latin Fragments*, ed. Hauler, p. 103). It is implied by Leo the Great (see below), was in force in Rome in the intermediate period (above, § 2), and is explicitly stated in later Western ponti-

ficals (e.g., Maskell, iii. 242; Wilson, p. 70); also explicitly in Eastern rites, as in the Armenian (above, § 10), Coptic (above, § 11), and Maronite (above, § 14). It is also found in the Anglican rite (above, § 4) and the Swedish (above, § 6), though in these two a holy day is also sanctioned for the purpose.

No limit is decreed in the East as to the occasions when the ordination of presbyters and deacons can take place; but in the West the four Ember seasons (*Quatuor tempora*) were chosen for the purpose. These fasting times (Wednesday, Friday, and Saturday at the four seasons of the year) were not instituted for ordinations, but it was afterwards found convenient to have ordinations at such times. In Rome they took place in the Saturday vigil mass (above, § 2 (a), and Duchesne, p. 353), and especially at the December Ember season. In this connexion we notice the strong injunction made by Leo the Great (*Ep.* ix. [xi.] 'ad Dioscurum') that priests and deacons should be ordained only on Sunday, which he emphatically says began on Saturday night. Ember seasons were not known for many centuries in Gallican countries (Duchesne, p. 368). The limitation of ordinations of presbyters and deacons to these occasions is still in force in the Roman and Anglican communions, and affords an opportunity to the people throughout the land to pray for the ordinands with a special intercession; but the rule is not an absolute one, and the bishop has a discretion.

16. *Summary.*—In reviewing the ordination rites which have been described above, we notice that for ordaining bishops, priests, and deacons there is an irreducible minimum which is common to them all—laying on of hands and prayer—for it is impossible to believe, with Hatch, that the episcopal ordination in the *Apostolic Constitutions* is a real exception to this. The extreme simplicity of the earliest rites continued for many centuries in both East and West, and it was only by slow degrees that they became more elaborate.

A conspicuous feature of ordinations in earlier and often in later times was the difference between those of the lower and of the three higher orders, laying on of hands being expressly confined to the latter, except in the *Apostolic Constitutions* (and in the *Constitutions through Hippolytus*), and except in the present Greek rite (in the case of subdeacons and deaconesses), the Armenian and Maronite (in the case of subdeacons), and the E. Syrian. In the Coptic and W. Syrian rites the bishop touches the temples of, but does not lay hands on, those admitted to minor orders. In the Maronite rite the bishop touches the temples of the orders under the rank of subdeacon. See § 1 (b).

It is practically the universal custom to name the office to which the person is ordained, in at least one of the ordination prayers. But the word 'presbyter' is absent from that for the second order in Sarapion, and the word 'deacon' from that for the third order in the *Canons of Hippolytus*, though the latter work refers to St. Stephen and to the *διακονία* of the ordinand.

One of the earliest ceremonies added at the ordination of a bishop was the holding of the Gospel-book over him. It is mentioned in the *Apostolic Constitutions* (viii. 4, when the deacons hold it, not, as in the other books, the assistant bishops); also in pseudo-Dionysius, the *Gallican Statutes* and other Gallican books, in the later Western pontificals (including the Norwegian), and in the Greek, Armenian, W. Syrian, E. Syrian, and Maronite rites. In the Coptic rite the new bishop holds the Gospel-book in his bosom, and, in some forms of it, it is held over him; but, at any rate at one time, this custom was observed in Alexandria only in the case of the ordination of a patri-

* This seems to be a mistake. Another MS has 1 Ti 5⁵⁻¹⁰ 122.

follows as above (but the prayers are not the same). The stole is put on the new deacon's shoulder, he receives the fan and censer, and then the kiss of peace, and he is communicated.

(d) *Minor orders* (Denzinger, ii. 66, 78).—Offices are given for the ordination of a reader and a subdeacon. The bishop touches their temples and prays. In the case of a subdeacon the bishop first touches the paten and chalice with his fingers (see above). A book is given to a reader, a stole to a subdeacon. The kiss of peace and communion are given to them. The form for a subdeacon is more elaborate than that for a reader.

13. The E. Syrian (Nestorian) rite.—(a) *Bishop* (Denzinger, ii. 238).—After a vigil the faithful assemble in the morning at the third hour; the patriarch or metropolitan and the bishops, having their mitres and staves, come to the sanctuary, and the elect stands before them in the middle. After prayers, anthems, and offering of incense the president takes the Gospel-book and puts it on the elect's back, the bishops on either side laying on their hands and holding them there till the prayer is finished; lections from the Gospels (Mt 16¹⁸⁻¹⁹, Jn 21¹⁵⁻¹⁷, Mt 16¹⁹) are read while the elect is being ordained. The president prays thrice and lays his right hand on the elect, stretching forth his left hand as one who prays. After the prayer the archdeacon bids prayer for the newly-ordained, naming him and his see, saying a form of the 'Sursum Corda': 'Lift up your minds and ask of God mercy for N,' etc. They answer, 'It is meet and right,' once if a bishop is being ordained, twice if a metropolitan, thrice if a patriarch. After another prayer they take the Gospels off the new bishop's back and the patriarch vests him in the *ma'aphra* (a sort of cope, taking the place of a chasuble) and mitre, and gives him a staff. The kiss of peace is given, the 'Anthem of the Sanctuary' (Brightman, p. 253) is sung, and the lections read. (This places the ordination before the Trisagion [Brightman, p. 255].)

(b) *Presbyter* (Denzinger, ii. 233).—The ordination takes place at the sanctuary door. The bishop gives the tonsure, cutting the ordinand's hair in the form of a cross, girds him, and puts his *ma'aphra* on the ordinand's left shoulder. Prayers and anthems follow, and the ordinand kneels on both knees, signifying that he receives two talents, while the bishop stretches his hands over his eyes, signifying that he is given power to invoke the Holy Ghost and to bless, and to beget spiritual children and to feed them with spiritual food (see above, § 1 (d)). The bishop places his right hand on the ordinand's head and says two ordination prayers secretly; he places the *ma'aphra* on his shoulder, and arranges the stole on his breast.¹ The bishop gives the new presbyter the Gospel-book, and announces his ordination, naming him. A 'canon' (anthem) is sung and the kiss of peace is given. If there is a liturgy, it now proceeds, and they say, 'Before the throne of God,' and begin the 'Anthem of the Sanctuary' (Brightman, p. 253; see above).

(c) *Deacon* (Denzinger, ii. 229).—The ordination is at the sanctuary door, and the tonsure is given. The ordinand kneels on one knee, to signify that he receives one talent only (see above). The bishop places his right hand on his head, extending his left hand as one who prays, and says two ordination prayers. He places the stole on the new deacon's left shoulder, gives him the book of the 'Apostle' (the liturgical Epistles), announces his ordination, naming him, and gives him the kiss of peace. The new deacon is led round to the

right and left of the altar.¹ The ordination does not usually take place during the liturgy. Both presbyters and deacons at their ordination are gradually led up towards the holy table by the bishop, who says a prayer at each step (A. J. Maclean and W. H. Browne, *Catholicos of the East*, London, 1892, p. 201).

(d) *Minor orders* (Denzinger, ii. 227).—There are offices for the ordination of readers and subdeacons (but these are now obsolete among the Nestorians). After a short anthem there is laying on of hands (cf. the W. Syrians, above, § 12) and a short prayer. A stole is laid on the arms of a reader and a book of the lections is given him. When a subdeacon is ordained, the bishop receives back from him his reader's book and places a stole on his neck.

14. The Maronite rite.—This is somewhat more elaborate than in the other Eastern communions.

(a) *Bishop* (Denzinger, ii. 187).—The ordination must be on a Sunday. The patriarch vests the elect in cowl, alb, amice, and chasuble, and they lead him to the sanctuary, where the patriarch begins the liturgy. When it is ended, the ordination begins. The archdeacon says the ectene and the president prays. The archdeacon bids prayers, and the Kyrie is said thrice. A profession of faith is made by the elect and he is presented by two bishops. The president (who in this office is also called 'the bishop' or 'the shepherd') lays hands on the elect and prays, the bishops holding the Gospels over the president's hands. He thrice raises his hands, spreads his arms over the elect's head, and prays. He lays his hand on the consecrated elements and on the head of the elect twice, the archdeacon making a proclamation. The new bishop then holds two crosses, and they bring the chrisam and the Gospel-book, and lead him thrice round the church, singing, the patriarch praying at the end of each procession. At the end of the second the bishops hold the Gospels over the new bishop's head, the deacons wave fans, and the president extends his arms under the Gospels over his head and prays. After the third procession the president takes from the new bishop the two crosses, and gives him the Gospels, shut, and prays; he receives back the Gospels and anoints his head with chrisam thrice, and also his hands. Long prayers follow, and a deacon's ectene, and lections from He 4¹⁴⁻⁵⁰ and Jn 10¹⁻²¹ with an antiphon between; then the president washes his hands, the newly-ordained washes his head and hands, and another ectene follows. The bishop signs the new bishop and announces his ordination. They vest him in a chasuble and mitre and place him in his seat. The bishops and presbyters lift the seat thrice and cry 'Axios.' After a prayer the president leads the new bishop to the door of the sanctuary, commits to him the flock and the clergy, and admonishes him. Two prayers and the Pater Noster conclude the service.

(b) *Presbyter* (Denzinger, ii. 148).—The ordinand, vested as a deacon, kneels on both knees and is blessed and signed by the bishop. Prayers with archdeacon's bidding and with offering of incense follow, and the ordinand is presented by the archdeacon; the Kyrie is said thrice. The ordinand kneels on both knees, and the bishop lays his hand on his head and prays; he then places his hands on the host and chalice and thrice spreads out his arms. He lays his right hand on the ordinand's head, covers the latter's face with his chasuble, moves his left hand over his face and neck, and says the ordination prayers. He puts his hand on the elements and on the ordinand's head and again prays several times. He anoints the hands of the

¹ The E. Syrians, unlike the Greeks, have the same shape of stole for deacon and presbyter, but the former wears it on one shoulder, the latter on both shoulders.

¹ The E. Syrian altars stand against the east wall of the church, and do not stand out from it as those of the Greeks do.

new presbyter, and both he and the archdeacon proclaim the ordination, naming him, the archdeacon also naming the charge which he is to serve. The bishop vests him with girdle, amice, stole, and chasuble, and blesses him. Lections from 1 Co 12²³, 1 Ti 3¹⁻⁴, Tit 1⁵⁻⁹, 1 Ti 4¹⁵⁻¹⁶, Jn 21¹⁵⁻²² follow, and then the ectene and prayer. The thurible is given, and they lead the new presbyter round, giving him the Gospels to carry, and they put the consecrated bread in the paten. Several prayers follow, the cross is laid on his head, the kiss of peace is given, and the new presbyter is bidden to cense the people. The bishop then intinges the host and the ehalice and bids him communicate the people. A long exhortation concludes the service.

(c) *Deacon* (Denzinger, ii. 128).—The procedure is similar, though the prayers are different. The newly-ordained deacon (who has been kneeling on one knee only [see above, § 13]) is vested in tunic and stole and is given the 'Apostle' to read; the lection is 1 Ti 1¹⁻³.^{*} He is given the thurible to go round the sanctuary; he is given the Apostle to go round the church, a hymn being sung meanwhile; the ehalice and paten are put on his head. His ordination as deacon is proclaimed; and there is an exhortation.

(d) *Minor orders* (Denzinger, ii. 108).—There are offices for the ordination of singers, readers, and subdeacons. The bishop gives the tonsure to a singer, cutting his hair, and touches the temples in all three cases. The bishop takes the candidate by the right hand and prays; there is no laying on of hands on the singer or reader, but hands are held over the reader, and a hand (having been placed on the consecrated elements as above) is laid on the subdeacon. A psalter is given to the singer, tunic and stole to reader and subdeacon, the book of Isaiah to the reader, the water-cruet and the book of Acts to a subdeacon. These services for the ordination of minor orders are comparatively elaborate.

In concluding this review of Eastern ordinations we must remember two things: the details sometimes vary in different MSS; and there are, in addition to those described above, ordination rites for different offices, such as those of patriarchs, metropolitans, archdeacons, periodeutes, chorepiscopi, so that it might sometimes seem as if these were 'orders' properly so called, and that one who had formerly been ordained as a presbyter was re-ordained as a periodeute, and one who had formerly been ordained as a bishop was reordained as a patriarch. But the confusion is not so great as may appear, as (in theory at least) the ancient discipline ordinarily holds good in the East, especially in the more conservative minor Eastern Churches, that no bishop can be translated from one see to another; so that one who is elected to a patriarchate is ordinarily assumed to be not yet a bishop. And the E. Syrian *Sunhadhus* ('Book of Canon Law') makes it clear that periodeutes and archdeacons are not distinct 'orders,' by saying that it is the duty of a diocesan bishop to 'ordain all readers, subdeacons, deacons, and presbyters, give a blessing to periodeute, and say a prayer over archdeacons' (Maclean-Browne, p. 182).

15. Times of ordination in East and West.—Bishops were usually ordained on a Sunday, both in the East and in the West. This ancient custom is found in the *Testament of our Lord* (i. 21), the *Egyptian Church Order* (§ 31), the *Ethiopic Church Order* (? § 21), the *Apostolic Constitutions* (viii. 4), and in the canons attached to the *Older Didascalia* (*Verona Latin Fragments*, ed. Hauler, p. 103). It is implied by Leo the Great (see below), was in force in Rome in the intermediate period (above, § 2), and is explicitly stated in later Western ponti-

ficals (e.g., Maskell, iii. 242; Wilson, p. 70); also explicitly in Eastern rites, as in the Armenian (above, § 10), Coptic (above, § 11), and Maronite (above, § 14). It is also found in the Anglican rite (above, § 4) and the Swedish (above, § 6), though in these two a holy day is also sanctioned for the purpose.

No limit is decreed in the East as to the occasions when the ordination of presbyters and deacons can take place; but in the West the four Ember seasons (*Quatuor tempora*) were chosen for the purpose. These fasting times (Wednesday, Friday, and Saturday at the four seasons of the year) were not instituted for ordinations, but it was afterwards found convenient to have ordinations at such times. In Rome they took place in the Saturday vigil mass (above, § 2 (a), and Duchesne, p. 353), and especially at the December Ember season. In this connexion we notice the strong injunction made by Leo the Great (*Ep.* ix. [xi.] 'ad Dioscurum') that priests and deacons should be ordained only on Sunday, which he emphatically says began on Saturday night. Ember seasons were not known for many centuries in Gallican countries (Duchesne, p. 368). The limitation of ordinations of presbyters and deacons to these occasions is still in force in the Roman and Anglican communions, and affords an opportunity to the people throughout the land to pray for the ordinands with a special intercession; but the rule is not an absolute one, and the bishop has a discretion.

16. Summary.—In reviewing the ordination rites which have been described above, we notice that for ordaining bishops, priests, and deacons there is an irreducible minimum which is common to them all—laying on of hands and prayer—for it is impossible to believe, with Hatch, that the episcopal ordination in the *Apostolic Constitutions* is a real exception to this. The extreme simplicity of the earliest rites continued for many centuries in both East and West, and it was only by slow degrees that they became more elaborate.

A conspicuous feature of ordinations in earlier and often in later times was the difference between those of the lower and of the three higher orders, laying on of hands being expressly confined to the latter, except in the *Apostolic Constitutions* (and in the *Constitutions through Hippolytus*), and except in the present Greek rite (in the case of subdeacons and deaconesses), the Armenian and Maronite (in the case of subdeacons), and the E. Syrian. In the Coptic and W. Syrian rites the bishop touches the temples of, but does not lay hands on, those admitted to minor orders. In the Maronite rite the bishop touches the temples of the orders under the rank of subdeacon. See § 1 (b).

It is practically the universal custom to name the office to which the person is ordained, in at least one of the ordination prayers. But the word 'presbyter' is absent from that for the second order in Sarapion, and the word 'deacon' from that for the third order in the *Canons of Hippolytus*, though the latter work refers to St. Stephen and to the *διακονία* of the ordinand.

One of the earliest ceremonies added at the ordination of a bishop was the holding of the Gospel-book over him. It is mentioned in the *Apostolic Constitutions* (viii. 4, when the deacons hold it, not, as in the other books, the assistant bishops); also in pseudo-Dionysius, the *Gallican Statutes* and other Gallican books, in the later Western pontificals (including the Norwegian), and in the Greek, Armenian, W. Syrian, E. Syrian, and Maronite rites. In the Coptic rite the new bishop holds the Gospel-book in his bosom, and, in some forms of it, it is held over him; but, at any rate at one time, this custom was observed in Alexandria only in the case of the ordination of a patri-

^{*} This seems to be a mistake. Another MS has 1 Ti 3¹⁰⁻¹².

arch (*DCA* i. 222). It is not found in the present Anglican and Swedish rites. And originally it was not in use in Rome, while in the 8th and 9th centuries it seems to have disappeared from Gaul, Germany, and Spain (*ib.*).

The custom of delivering the Gospel-book to the new bishop was not known in Rome before the 11th century (Morinus, *de Sacr. Ord.* iii. 23). It is in the present Roman pontifical; and so in Maskell (iii. 275); but not in that of Magdalen College (Wilson, p. 77). In the Anglican rite a Bible is given: The Gospels are given in the Armenian and Maronite rites; and the same thing seems to be implied in the Coptic rite.

Anointing at ordinations seems to have originated in the Gallican rite, perhaps in Britain, where we find it in the 6th century (Duchesne, p. 378). From the Gallican rite it passed to Rome, and it is perhaps because of the influence which Roman customs have had on the Armenians and Maronites that they alone of Easterns have it at the present day.

The vesting of the newly-ordained is very general, but it is not found in the earliest forms. Ordinarily it takes place immediately after ordination, but in the present Anglican rite (at the consecration of bishops) it comes before it. The giving of the insignia of office is confined to the minor orders in the earlier forms, and, when it was extended to the higher orders it became for a long time in the West the most prominent part of the rite.

In the later Western pontificals the fusion of the Gallican and Roman rites produced some dislocation. The displacement of the imposition of hands and the multiplication of ordination prayers were among the principal results of this fusion. In almost all Western rites, whether before or after the Reformation, the introduction of imperative or declaratory formulæ and the delivery of the insignia of office changed the centre of gravity of the office from a prayer to God to ordain to an act done by the ordainer. This is not the case in the East, though there the ordainer and also usually the archdeacon proclaim the ordination to the people (cf. pseudo-Dionysius, above, § 1 (d)). The Anglican use of Jn 20²³ at the laying on of hands in the ordination of a presbyter is parallel to the reading of this passage as a lection at the ordination of a bishop in the Coptic rite.

In the East, and to a lesser extent in the West, the custom (found in the *Testament of our Lord* and the *Apostolic Constitutions*) of the people crying 'Axios' is one of the most prominent features in the service.

The only doctrinal development that calls for notice is found in the Western pre-Reformation pontificals. In these the function of offering sacrifice is greatly emphasized in the ordination of a presbyter. This is the case both in the ordination prayers and in the comparatively modern imperative formulæ.

ORDINATION (Jewish).—There are in the Hebrew language two words meaning 'ordination'—*s-mikhah* and *minnu*. The latter was used for a few centuries only; the former goes back to Biblical precedent and has been retained to this day. It must be pointed out that the Jewish ordination does not partake of a sacerdotal or sacramental character; it is in the main an 'appointment,' yet not entirely devoid of spiritual significance. Behind this institution there lies a chapter of Jewish history which has not yet been sufficiently elucidated, viz. the appointment of judges, of those who would have to administer the law, both temporal and spiritual. It is a very obscure chapter, for it marks the division between State and Church, which could not have been sharp and decisive. The Jewish law is not a civil law in the ordinary sense of the term. The laws are not human decisions, but divine ordinances. To obey the law means to perform a religious act; to transgress the law means to commit a sin, which has to be expiated in a religious manner; hence the character of the judge could not be that of a mere civil authority. The indications in the Bible go a long way to prove that from the very beginning such a division was intended in the Mosaic legislation. The sacerdotal functions of the Temple belonged to a family; the priest was born into it; he could neither be ordained nor appointed.

The word used in the appointment of Aaron and of the Levites is not the same as that used in the appointment of Joshua and the Seventy Elders. In the former case Moses 'filled' their hands (Ex 28⁴¹ 29⁹, Lv 21¹⁰; AV and RV translate wrongly 'consecrate' instead of 'filling the hands')—no doubt, with those objects which they were to offer up in the Temple, flour or oil, or part of the sacrifice. Moreover, they were anointed; not so Joshua. Moses 'placed his hands' (Nn 27¹⁹) (*samakh*) upon him in exactly the same way as the priest put his hand on the sacrifice (Lv 1⁴ etc.), or as the witnesses laid their hands upon the head of the guilty (Lv 24¹⁴). In all these cases it meant a transfer of personal responsibility either in the exercise of authority or in the expiation of sin and guilt. There can be no question of a transmission of the spirit, as Joshua already had the spirit before Moses was ordered to place his hands upon him. It is not within the power of man to dispense

the grace of the spirit. Joseph is mentioned as the man upon whom there was the spirit of God (Gn 41³⁸); he neither got it from Jacob nor handed it on to his children; and even in the tents of the Seventy Elders the spirit came to them not directly from Moses but as a spirit of prophecy from above, and ceased with them (Nu 11²⁵). Joshua, moreover, was commanded distinctly (Nu 27¹) to stand before Eleazar and to consult him by the Urim and Thummim in all matters of supreme importance. Joshua was clearly appointed the civil administrator of the law, the supreme judge, the king, for we shall see that the power of appointing judges rested with the king.

It is nowhere stated that these men were to be priests or Levites to the exclusion of Israelites. On the contrary, it was, no doubt, Israelites who acted as local magistrates in the various tribes (see below). True, in the highest tribunal which was in the centre of the divine worship the high priest acted as the supreme judge; thus the direction Dt 17⁹ can best be explained in harmony with the Mosaic legislation. And probably this is also the best explanation of the passages in which the judges are called the *'elohim* (e.g., Ex 22²⁴) and the judge who decided the case by the use of the Urim and Thummim the divine oracle. According to Dt 16¹⁸⁻²⁰, judges were appointed in every tribe. These were formed by the elders (see Dt 21¹⁸⁻²²), who were called upon to decide in such cases as the rebellious son in the case of immorality, the dead body found outside the town and the murderer unknown, the case of Yibbum (Ruth), etc. These judges were regarded as the men upon whose authority one could rely (*samak*), upon whom part of the responsibility for right and wrong had been devolved, just as in the case of the sacrificial animal, upon which part of the sin and responsibility of the people had been laid. We find nowhere that the blunders which prevented the priest from acting in the Temple were a bar to the judge. Of course, the judges from Joshua to Saul were, in fact, the temporal rulers, the tribal kings who for the time being exercised authority over the rest by their military prowess and victory in battle.

Samuel, who acted in a double capacity as priest and king, went also in a circuit to judge Israel (1 S 7¹⁶), but, later, the people asked him to appoint a king over them who would rule them (1 S 8⁹). David appointed from among the Israelites and Levites 'officers and judges' (1 Ch 23⁴ 26²⁷). The author of the book of Chronicles states (2 Ch 19⁵⁻⁷) that Josaphat appointed judges in all the fenced cities of Judah, and (vv. 8-11) established in Jerusalem a high court consisting of priests, Levites, and the heads of the houses of Israel. Here we have practically the composition of the high court as it developed in Jerusalem after the Exile. It was a tribunal whose members claimed the right to decide in all kinds of controversies, and to inflict punishments—even capital punishment; and, above all, they reserved to themselves the sole right of determining the Jewish calendar. They did not interfere except rarely in those ordinances which referred to the sacrifice and the service in the Temple, but, on the other hand, they claimed the right of being the representatives of the oral law; they were the living tradition which was applied authoritatively to the interpretation of the law for the daily necessities of life; they were the Pharisees, i.e. the authoritative interpreters of the law—hence their sway over the people; they were the *smilkhim*, men not only appointed but worthy of being relied upon in all matters of interpretation and application of the divine ordinances of the law, for upon them that authority had been devolved—as they claimed—in historical succession. This was the result of a

long process of evolution. The difficulty began immediately after the return from the Exile. The high priest became under Persian rule the virtual administrator and governor of the province; he was thus invested with the power of appointing officers and judges. Then a conflict must have arisen between the heads of the fathers' houses and the priestly caste. Each one probably claimed power and authority, and no doubt this led to the establishment of what is known as the Great Assembly, which was succeeded by the Sanhedrin (the Greek equivalent for the Hebrew assembly). The conflict must have been a keen one; and it evidently grew in strength and bitterness after the Maccabean success, for then some of the high priests (Jannai and his successors) endeavoured to combine publicly the authority of the king with that of the high priest. Much more is meant by this than has hitherto been understood. It meant that the high priest was the sole authority in all matters of civil and criminal law in addition to the spiritual, or rather sacerdotal, functions which he alone could exercise in virtue of his Aaronite descent. In the long run the absolute power was wrested from his hand, and the laymen gained the victory. They retained the right of administration and interpretation of the law, and, above all, the sole authority in the regulation of the calendar. They claimed to be the true representatives of that tradition which Moses had given to the Seventy Elders in the wilderness. It is for this reason that in the chapters of the fathers (*Pirke Abhoth*) which contain the chain of the oral tradition no notice is taken of the high priests—with the sole exception of Simon. The tradition is made to descend in a direct line from Moses to Joshua, from Joshua to the elders, from the elders to the prophets, from the prophets to the men of the Great Assembly, and so on, until it reached the patriarchs and the other heads of the Rabbinical schools. In the *Midrash Eshah* the names of the Seventy Elders are given (*Yalkut Shimoni*, i. § 736). This list is more fully elaborated in the other chain of the tradition known as *Seder Olam*. Curiously enough, the Karaites, who reject the oral tradition, have nevertheless preserved a similar chain, though in a modified form (*Dod Mordkhai*). The Sanhedrin claimed to be the direct continuators of the authority which was vested by Moses in the Seventy Elders. It had reached them through the intermediary of the prophets. Zechariah and Malachi were counted among the first members of the men of the Great Assembly, who were the direct predecessors of the Sanhedrin. They appointed the local judges in various towns of Palestine, who derived their authority to decide in all matters, civil and criminal, direct from that of the Sanhedrin. The appointment, according to a vague tradition, took the form of the appointment of Joshua by Moses. The Nasi—i.e., the Prince, the title given to the president of the Sanhedrin—alone or in conjunction with other members of this, the highest tribunal, placed his hands upon the candidate and proclaimed him worthy in the first place to be among those initiated into the secret of the computations of the calendar (*Sed ha'Ibbur*) and to decide in all legal questions exclusive of those affecting the Temple. Even there the Sanhedrin claimed a certain jurisdiction in the matter of probing the purity of descent of a Kohen who came to participate in the service. They examined his documents and rejected him if they found them insufficient. It is not to be thought, however, that priests were excluded from this college; the members were chosen for their capabilities, whether they were Israelites, Levites, or Kohanim. The case recorded in the NT of the high priest Caiaphas (Mt 26⁷¹), etc., proves this

point. He, no doubt, was consulted in a matter which affected the spiritual worship and the service of the Temple. Other high priests may have had their seat in the Sanhedrin, and one of them—Rabbi Ishmael, the high priest—is always mentioned with great veneration. These new judges thus became the sharers in the authority which came down in direct succession. They became *s'mikhim*, men of authority who were 'ordained,' i.e. 'appointed,' as men upon whom the people could 'rely.' They exercised certain spiritual functions, for Jewish life in all its forms depended upon their interpretation of the law. Things became pure or impure, allowed or forbidden, according to their declaration, sanction, or refusal. They declared the festivals; and even on a memorable occasion, when one of the great scholars, relying on his own calculation and observation of the moon, had drawn up a different calendar, he had to submit to the decision of the patriarch Gamaliel II. and his colleagues in power and keep the Day of Atonement on the day fixed by them (*Rōsh Hash. 25a, b*). The 'ordination,' or *s'mikhāh*, was one of the means by which the oral tradition preserved its authoritative character; for, so long as there were men who were the lawful heirs of the authority of the Sanhedrin, the Jewish law had its authoritative exponent. The point which has hitherto remained obscure, viz. the disuse of the *s'mikhāh*, as has been alleged, after the destruction of the Temple, will now become perfectly clear. The reason is obvious why the Roman Government punished with death any one who would continue this practice of *s'mikhāh*, i.e. ordain pupils to become Rabbis; for, as soon as the chain of *s'mikhāh* was broken, there was no longer any central authority great and respected enough to command universal obedience, to interpret the laws, and, above all, to fix the calendar; and, as soon as the people no longer knew when to keep their Sabbaths and their festivals or how to apply the law, their spiritual dissolution was near at hand. And it is easy to understand why Judah b. Baba (*Sanh. 14a*) exposed himself to die by the hand of the Romans whilst granting *s'mikhāh* to four pupils; he had thus re-established the legal authority for the oral law, and a proper succession for its interpretation.

The Roman rule did not tolerate any Jewish civil tribunal or any Jewish magistrates who would judge the people according to the Jewish law, and therefore the practical use of the *s'mikhāh* as a regular continuous institution on a large scale had to come to an end for a time after the war of Bar Kokhba (A.D. 130). But, when the civil local government of the Jews was re-established soon afterwards under the headship of one of the descendants of the house of David, or rather the house of Hillel, under the name of 'patriarch of the Jews,' the right of *s'mikhāh* was vested in the patriarchs, though there was no longer a real Sanhedrin with its autonomous jurisdiction and unquestioned authority on all matters of political and religious life. The new judges now appointed had, however, to decide, as before, not only what was right and wrong, but also what was religiously correct or incorrect. It was now a limited form of authority that was vested in the *s'mikhāh*, though it still carried with it the same spiritual authority. Any one who received the *s'mikhāh* received at the same time the right to decide with the others in the fixing of the calendar. But this right was centred in Palestine. No school, no head of a college in Babylon, could ever obtain it. It was jealously guarded as a privilege of the patriarchate in Palestine. When the great scholar from Babylon, R. Eleazar b. Pedath, came to Palestine, he considered it a very great honour to have obtained

the *s'mikhāh* there (*Jerus. Rōsh Hash. 58b*; cf. *Sanh. 18c* and *B. K'thūb. 112a*). But the name of this institution and the form of the appointment had been changed. It was no longer called *s'mikhāh* in Palestine, but *minnuy* (from the Aramaic word *mana*, *Dn 1^{5.10}*). The old name had obviously an ominous ring about it in the ears of the Romans, and therefore the Jews of Palestine avoided using it. It was retained, however, in Babylon, and is still used. The laying on of hands was no longer practised (*B. Sanh. 13b*) either for the same reason as the name had been abandoned—not to arouse too much suspicion of the Romans—or possibly because the Church had adopted this practice for the purpose of ordaining priests. The laying of hands on the pupils (*Ac 6⁶*) and on Saul and Barnabas (*13³*) need not be taken as ordination, but merely as a form of blessing like that of the priests, and, at the same time, it may have been a symbol of authority, granting them the power to be judges who would declare the law in the community. Later this became the symbol of consecration for sacerdotal office, and this very likely was the reason why the practice was discontinued by the Jews. Shortly afterwards the right of the patriarch became limited, inasmuch as he could appoint only with the concurrence of the heads of the legal tribunal, *Bēth Din*—the judges of the Jewish court.

The constant persecution by the Roman and then by the Byzantine emperors pressed heavily on the Jews of Palestine, and thus it came about that one of the patriarchs, Hillel or Jndah in the 4th or 5th cent.—the time has not yet been definitely decided—established a calendar upon the basis of mathematical calculation only. It was no longer to be made dependent on the real observation of the appearance of the new moon. On the other hand, the oral law had become codified and had been further enlarged and expounded by the great schools of Palestine and Babylon, all of which became the 'written' Mishnāh and Talmud. Thus the *s'mikhāh* lost its essential character of being the only legal authority for the calendar, and for the interpretation and declaration of the oral law.

With the extinction of the patriarchate the institution came practically to an end in Palestine. No Rabbi could henceforth be appointed either by 'nomination' or by 'ordination' and laying on of hands capable of exercising functions like those vested in the Sanhedrin and the patriarchate. In one form or another, and either in the name or by the hand of the college, the *Rōsh Yeshibāh*, or *Gāon*, granted by 'nomination' or in the form of a written certificate a degree of qualification for the function of teacher and judge. Much that happened in Palestine during the first centuries of the Muhammadan conquest is wrapped in obscurity. Fragments from the Genizah in Cairo, however, give us a glimpse into some movements which must have taken place in the 9th and 10th centuries, when among others a certain Ben Meir endeavoured to resuscitate the ancient power of *s'mikhāh*, and claimed for himself and possibly for others in Palestine the right of again fixing the calendar by observation and, no doubt, of exercising such functions as formerly belonged to the holders of the *s'mikhāh*. Saadyah entered into long polemics with Ben Meir and his associates, but very little is known about this dispute except the fact mentioned above. Again, the re-establishment of the *s'mikhāh* became a burning question among the Jews of Palestine when Bē Rab in the year 1538 claimed for himself and his tribunal the right of resuscitating the ancient *s'mikhāh*. He based his claim on a statement of Maimonides which seemed to grant to the Rabbis of Palestine the right of re-establishing the *s'mikhāh* if they had all come together and had

unanimously decided upon it. Bê Rab, who lived in Safet, had evidently not paid sufficient attention to the susceptibilities of his colleagues in Jerusalem, the chief of whom was Levi aben Habib; a controversy arose between them, and the attempt of Bê Rab was entirely frustrated. He emphatically denied the intention of touching the calendar or interfering with the criminal law, but declared that his aim was to create a spiritual centre for Judaism in Palestine, just as the patriarchate and the Sanhedrin had been before. There was another motive which may have prompted Bê Rab to this action—Messianic aspirations. The plan which afterwards matured under Don Joseph of Naxos, the favourite of Selim—to create, as it were, a small Jewish commonwealth in Galilee with its centre in Tiberias—may have prompted Bê Rab to this step, which was to be a preliminary step to the re-gathering of the Jews in the Holy Land.

The *smikkhah*, shorn of its special character, is still a practice in the ordination of a Rabbi. It does not carry with it the same authority as it had in Palestine, but it is a necessary condition for the qualification of a Rabbi. When in the 12th cent. Judaism again suffered under the shock of the persecution which threatened to destroy the unity of Israel and to undermine the authority of the representatives of the law, R. Meir resuscitated the old practice in the manner and to the extent that it had been practised in the Diaspora. It was to be henceforth as a certificate for the holder, a kind of *venia docendi* which was granted to him by one who was a recognized authority himself and a holder of such a diploma. It was precisely the same as in olden times in so far as the authority of the giver guaranteed the qualifications of the recipient. No community would appoint a man to be the Rabbi—i.e. the judge in all matters legal and religious—who did not have the *smikkhah*, for upon his decision alone many doubtful legal questions can be solved; he is responsible for the upholding of the written law in its entirety and for the carrying out of all the divine ordinances in conformity with the old tradition; he grants divorce; he decides all the questions of the ritual slaughter of animals; he declares the food fit or unfit for Jewish consumption; and in all questions of a legal character he is the authority upon whom the community relies. Thus the *smikkhah*, or ordination, is still a valid principle in Judaism. It is now the token of qualification for eventual appointment as a Rabbi, who is then called *mtsmakh*. Among the Ashkenazic Jews the diploma is now called *Hätarath Höräah venia docendi*—i.e. he has now the permission to declare the law—whilst the Sephardic Jews and the Jews of the East have retained the old name of *smikkhah*.

It is of interest to note that among the titles of the priests and elders of the Samaritans there is also that of *sämikkhah*, the one who is worthy of being relied upon, a man of authority, and also he who has been appointed to high office. The appearance of this title among those of the Samaritans shows its great antiquity and its wider use in Palestine.

LITERATURE.—The chief sources are the 1st ch. in the Mishnah of Sanhedrin and the two Talmudic treatises of that name, esp. Jerus. Sanh. 10a, c, and Bab. Yehiel (1340), *Tür Höshen Mishpat*, chs. l., vii., viii., and Káro's commentary to it, as well as *Shulhan 'Arukh*, same chapters; I. ben S. Lampronti, *Pahad Ishaq*, s.v. 'Semikah'; Levi aben Habib, *She'eloth u-T'shuvot*, Venice, 1665; Bê Rab, *She'eloth u-T'shuvot*, do. 1663, and M. Gaster's Cod. 931, fol. 3a-44b, containing under the heading 'Iggereth Has'mikah' the full correspondence of Bê Rab (the MS was copied in his MGWJ xxxviii. [1894] 123-127: A. rl, Berlin, n.d.; M. Glödemann, *Gese*. und der Kultur der abendländ. Juden, Vienna, 1880-88; M. Gaster, *Rabbinical Degree*, London, 1900. M. GASTER.

ORENDA.—*Orenda* is a word of Iroquoian origin, being an Anglicization of the Huron *iarendä* or *orenda*, which has cognates in the related dialects. The word signifies the inherent power or energy which every object, in some characteristic degree, possesses and exerts; and, indeed, it is not so far removed in meaning from our own looser use of the term 'energy,' regarded as potential or active and related in kind and degree to the object which it defines. That the meaning of the aboriginal word is more intimately psychical than ours—*orenda* being conceived as indissolubly bound up with desire and will—is but the natural reflexion of a more primitive stage of thought; but it is at least a fair question whether our own use of 'energy' does not covertly carry the same psychical connotation. 'Magic power' is the phrase most commonly employed by J. N. B. Hewitt in translating *orenda*; but 'magic,' as he points out, is derogatorily associated with superstition and supernaturalism, and is not, therefore, a fair rendering of the native conception.

By primitive man all motions and activities were interpreted as manifestations of life and will. Things animate and things inanimate were comprised in one heterogeneous class, sharing a common nature. All things, therefore, were thought to have life and to exercise will, whose hehests were accomplished through *orenda*—that is, through magic power, reputed to be inherent in all things' (Hewitt, 21 *ABEN* [1903], p. 134).

In another connexion Hewitt gives a number of phrases illustrative of the use of the concept in Iroquoian tongues:

'When a hunter is successful in the chase, it is said, *wa'tharendogé'sini*, he baffled, thwarted their *orenda*, i.e., the *orenda* of the quarry; but, conversely, should the huntsman return unsuccessful, it is said, *wa'tharendogé'sini*, they (the game) have foiled, outmatched his *orenda*; . . . when the elements are gathering and a storm is brewing, it is said, *wa'rendogé'sini*, it (storm-maker) is making, preparing its *orenda*; and when the lowering storm-clouds appear to be ready, it is said, *totrendogé'sini*, it has finished, has prepared, its *orenda*; these two expressions and their conjugational forms are equally applicable to an animal or bird that is angry or in a rage; . . . anything whose *orenda* is reputed or believed to have been instrumental in obtaining some good or in accomplishing some purpose is said "to possess *orenda*" (*toréndare*), just as a wealthy person is said "to have money," that is, "an abundance of money"; and if these things or portions of them be chosen and kept against the time of their use, they become what are commonly called charms, amulets, fetiches, mascots, shields, or, if you please, "medicine" (*Amer. Anthropologist*, new ser., iv. 381.).

Hewitt goes on to indicate the relationship of the exercise of *orenda* to willing and desiring and to singing—relations which he regards as of primary importance in the interpretation of the term, showing, as they do, its intimately psychical intention:

'*Roteréndogé'sini*, he is arrayed in his *orenda*, and *rotéréndogé'sini*, he has effused or put forth his *orenda*, are two expressions, sentence-words, which are said in reference to a man who is exerting his *orenda* for the accomplishment of some purpose, this is its primary signification; the first term, *rotéréndogé'sini*, has come to mean, as a secondary usage, he is hoping for it, is expecting it, because it was the habit to put on one's *orenda* to obtain what is desired; now, the second sentence-word, *rotéréndogé'sini*, as a secondary meaning has come to signify, he is singing, is chanting, but literally, he is holding forth his *orenda*. Thus, singing was interpreted to signify that the singer, chanter, whether beast, bird, tree, wind, man, or what not, was putting forth his *orenda*, his mystic potency, to execute his will; hence, too, it comes that the shaman, when exerting his *orenda*, must sing, must chant, in imitation of the bodies of his environment. Let it be noted, too, that this is the only word signifying to sing, to chant, in the earlier speech of the Iroquoian peoples.'

Orenda is not applied to muscular strength or to any purely mechanical force, but only to invisible powers conceived as analogous to will and intelligence, although there is a curious suggestion of emanation, or efflux, about it, that seems to bring it within the range of what are sometimes spoken of as 'telepsychic powers.'

In the Onondaga version of the Iroquoian cosmology it is said of Sapling, the vegetation spirit, that so soon as he becomes old he is transformed again into a youth:

Moreover, it is so that continuously the *orenda* immanent in his body—the *orenda* with which he suffuses his person, the

point. He, no doubt, was consulted in a matter which affected the spiritual worship and the service of the Temple. Other high priests may have had their seat in the Sanhedrin, and one of them—Rabbi Ishmael, the high priest—is always mentioned with great veneration. These new judges thus became the sharers in the authority which came down in direct succession. They became *smikhām*, men of authority who were 'ordained,' i.e. 'appointed,' as men upon whom the people could 'rely.' They exercised certain spiritual functions, for Jewish life in all its forms depended upon their interpretation of the law. Things became pure or impure, allowed or forbidden, according to their declaration, sanction, or refusal. They declared the festivals; and even on a memorable occasion, when one of the great scholars, relying on his own calculation and observation of the moon, had drawn up a different calendar, he had to submit to the decision of the patriarch Gamaliel II. and his colleagues in power and keep the Day of Atonement on the day fixed by them (*Rōsh Hash. 25a, b*). The 'ordination,' or *smikhāh*, was one of the means by which the oral tradition preserved its authoritative character; for, so long as there were men who were the lawful heirs of the authority of the Sanhedrin, the Jewish law had its authoritative exponent. The point which has hitherto remained obscure, viz. the disuse of the *smikhāh*, as has been alleged, after the destruction of the Temple, will now become perfectly clear. The reason is obvious why the Roman Government punished with death any one who would continue this practice of *smikhāh*, i.e. ordain pupils to become Rabbis; for, as soon as the chain of *smikhāh* was broken, there was no longer any central authority great and respected enough to command universal obedience, to interpret the laws, and, above all, to fix the calendar; and, as soon as the people no longer knew when to keep their Sabbaths and their festivals or how to apply the law, their spiritual dissolution was near at hand. And it is easy to understand why Judah b. Baba (*Sanh. 14a*) exposed himself to die by the hand of the Romans whilst granting *smikhāh* to four pupils; he had thus re-established the legal authority for the oral law, and a proper succession for its interpretation.

The Roman rule did not tolerate any Jewish civil tribunal or any Jewish magistrates who would judge the people according to the Jewish law, and therefore the practical use of the *smikhāh* as a regular continuous institution on a large scale had to come to an end for a time after the war of Bar Kokhba (A.D. 130). But, when the civil local government of the Jews was re-established soon afterwards under the headship of one of the descendants of the house of David, or rather the house of Hillel, under the name of 'patriarch of the Jews,' the right of *smikhāh* was vested in the patriarchs, though there was no longer a real Sanhedrin with its autonomous jurisdiction and unquestioned authority on all matters of political and religious life. The new judges now appointed had, however, to decide, as before, not only what was right and wrong, but also what was religiously correct or incorrect. It was now a limited form of authority that was vested in the *smikhāh*, though it still carried with it the same spiritual authority. Any one who received the *smikhāh* received at the same time the right to decide with the others in the fixing of the calendar. But this right was centred in Palestine. No school, no head of a college in Babylon, could ever obtain it. It was jealously guarded as a privilege of the patriarchate in Palestine. When the great scholar from Babylon, R. Eleazar b. Pedath, came to Palestine, he considered it a very great honour to have obtained

the *smikhāh* there (*Jerus. Rōsh Hash. 58b*; cf. *Sanh. 18c* and *B. K'thūb. 112a*). But the name of this institution and the form of the appointment had been changed. It was no longer called *smikhāh* in Palestine, but *minnuy* (from the Aramaic word *mana*, *Dn 15.10*). The old name had obviously an ominous ring about it in the ears of the Romans, and therefore the Jews of Palestine avoided using it. It was retained, however, in Babylon, and is still used. The laying on of hands was no longer practised (*B. Sanh. 13b*) either for the same reason as the name had been abandoned—not to arouse too much suspicion of the Romans—or possibly because the Church had adopted this practice for the purpose of ordaining priests. The laying of hands on the pupils (*Ac 6⁹*) and on Saul and Barnabas (*13³*) need not be taken as ordination, but merely as a form of blessing like that of the priests, and, at the same time, it may have been a symbol of authority, granting them the power to be judges who would declare the law in the community. Later this became the symbol of consecration for sacerdotal office, and this very likely was the reason why the practice was discontinued by the Jews. Shortly afterwards the right of the patriarch became limited, inasmuch as he could appoint only with the concurrence of the heads of the legal tribunal, *Bēth Din*—the judges of the Jewish court.

The constant persecution by the Roman and then by the Byzantine emperors pressed heavily on the Jews of Palestine, and thus it came about that one of the patriarchs, Hillel or Judah in the 4th or 5th cent.—the time has not yet been definitely decided—established a calendar upon the basis of mathematical calculation only. It was no longer to be made dependent on the real observation of the appearance of the new moon. On the other hand, the oral law had become codified and had been further enlarged and expounded by the great schools of Palestine and Babylon, all of which became the 'written' Mishnāh and Talmud. Thus the *smikhāh* lost its essential character of being the only legal authority for the calendar, and for the interpretation and declaration of the oral law.

With the extinction of the patriarchate the institution came practically to an end in Palestine. No Rabbi could henceforth be appointed either by 'nomination' or by 'ordination' and laying on of hands capable of exercising functions like those vested in the Sanhedrin and the patriarchate. In one form or another, and either in the name or by the hand of the college, the *Rōsh Yeshibāh*, or *Gāōn*, granted by 'nomination' or in the form of a written certificate a degree of qualification for the function of teacher and judge. Much that happened in Palestine during the first centuries of the Muhammadan conquest is wrapped in obscurity. Fragments from the Genizah in Cairo, however, give us a glimpse into some movements which must have taken place in the 9th and 10th centuries, when among others a certain Ben Meir endeavoured to resuscitate the ancient power of *smikhāh*, and claimed for himself and possibly for others in Palestine the right of again fixing the calendar by observation and, no doubt, of exercising such functions as formerly belonged to the holders of the *smikhāh*. Saadyah entered into long polemics with Ben Meir and his associates, but very little is known about this dispute except the fact mentioned above. Again, the re-establishment of the *smikhāh* became a burning question among the Jews of Palestine when Bē Rab in the year 1538 claimed for himself and his tribunal the right of resuscitating the ancient *smikhāh*. He based his claim on a statement of Maimonides which seemed to grant to the Rabbis of Palestine the right of re-establishing the *smikhāh* if they had all come together and had

unanimously decided upon it. Bê Rab, who lived in Safet, had evidently not paid sufficient attention to the susceptibilities of his colleagues in Jerusalem, the chief of whom was Levi aben Habib; a controversy arose between them, and the attempt of Bê Rab was entirely frustrated. He emphatically denied the intention of touching the calendar or interfering with the criminal law, but declared that his aim was to create a spiritual centre for Judaism in Palestine, just as the patriarchate and the Sanhedrin had been before. There was another motive which may have prompted Bê Rab to this action—Messianic aspirations. The plan which afterwards matured under Don Joseph of Naxos, the favourite of Selim—to create, as it were, a small Jewish commonwealth in Galilee with its centre in Tiberias—may have prompted Bê Rab to this step, which was to be a preliminary step to the re-gathering of the Jews in the Holy Land.

The *smikhah*, shorn of its special character, is still a practice in the ordination of a Rabbi. It does not carry with it the same authority as it had in Palestine, but it is a necessary condition for the qualification of a Rabbi. When in the 12th cent. Judaism again suffered under the shock of the persecution which threatened to destroy the unity of Israel and to undermine the authority of the representatives of the law, R. Meir resuscitated the old practice in the manner and to the extent that it had been practised in the Diaspora. It was to be henceforth as a certificate for the holder, a kind of *venia docendi* which was granted to him by one who was a recognized authority himself and a holder of such a diploma. It was precisely the same as in olden times in so far as the authority of the giver guaranteed the qualifications of the recipient. No community would appoint a man to be the Rabbi—i.e. the judge in all matters legal and religious—who did not have the *smikhah*, for upon his decision alone many doubtful legal questions can be solved; he is responsible for the upholding of the written law in its entirety and for the carrying out of all the divine ordinances in conformity with the old tradition; he grants divorce; he decides all the questions of the ritual slaughter of animals; he declares the food fit or unfit for Jewish consumption; and in all questions of a legal character he is the authority upon whom the community relies. Thus the *smikhah*, or ordination, is still a valid principle in Judaism. It is now the token of qualification for eventual appointment as a Rabbi, who is then called *mismakh*. Among the Ashkenazic Jews the diploma is now called *Hätarath Hôrâah venia docendi*—i.e. he has now the permission to declare the law—whilst the Sephardic Jews and the Jews of the East have retained the old name of *smikhah*.

It is of interest to note that among the titles of the priests and elders of the Samaritans there is also that of *smikhah*, the one who is worthy of being relied upon, a man of authority, and also he who has been appointed to high office. The appearance of this title among those of the Samaritans shows its great antiquity and its wider use in Palestine.

LITERATURE.—The chief sources are the 1st ch. in the Mishnâb of Sanhedrin and the two Talmudic treatises of that name, esp. Jerus. Sanh. 19a, c, and Bab. Sanh. 17a; Maimonides, (†1204), *Yad ha-azakah*; *Hilkhôth Sanhedrin*, l.-iv.; Asher b. Yehiel (1340), *Tôr Hôshen Mishpat*, chs. i., vii., viii., and *Karo's* commentary to it, as well as *Shulhân 'Arûkh*, same chapters; I. ben S. Lampront, *Paḥad Ishak*, v. 'Semikhah'; Levi aben Habib, *She'elôth u-Teshûbôth*, Venice, 1665; Bê Rab, *She'elôth u-Teshûbôth*, do. 1663, and M. Gaster's Cod. 931, fol. 3a-44b, containing under the heading 'Iggereth Hasmikhah' the full correspondence of Bê Rab (the MS was copied in his lifetime); W. Bacher, *MGWJ* xxxviii. (1894) 122-127; A. Goldmann, *Monatsschrift*, Berlin, n.d.; M. Gûdemann, *Gesell.* und der Kultur der abendländ. Jude M. Gaster, *Rabbinical Degree*, London, 1900. M. GASTER.

ORENDA.—*Orenda* is a word of Iroquoian origin, being an Anglicization of the Huron *iarenda* or *orenda*, which has cognates in the related dialects. The word signifies the inherent power or energy which every object, in some characteristic degree, possesses and exerts; and, indeed, it is not so far removed in meaning from our own looser use of the term 'energy,' regarded as potential or active and related in kind and degree to the object which it defines. That the meaning of the aboriginal word is more intimately psychical than ours—*orenda* being conceived as indissolubly bound up with desire and will—is but the natural reflexion of a more primitive stage of thought; but it is at least a fair question whether our own use of 'energy' does not covertly carry the same psychical connotation. 'Magic power' is the phrase most commonly employed by J. N. B. Hewitt in translating *orenda*; but 'magic,' as he points out, is derogatorily associated with superstition and supernaturalism, and is not, therefore, a fair rendering of the native conception.

'By primitive man all motions and activities were interpreted as manifestations of life and will. Things animate and things inanimate were comprised in one heterogeneous class, sharing a common nature. All things, therefore, were thought to have life and to exercise will, whose behests were accomplished through *orenda*—that is, through magic power, reputed to be inherent in all things' (Hewitt, *21 RBEW* (1903), p. 134).

In another connexion Hewitt gives a number of phrases illustrative of the use of the concept in Iroquoian tongues:

'When a hunter is successful in the chase, it is said, *wa'tharêndogê'ni*, he baffled, thwarted their *orenda*, i.e., the *orenda* of the quarry; but, conversely, should the huntsman return unsuccessful, it is said, *wa'thorêndogê'ni*, they (the game) have foiled, outmatched his *orenda*; . . . when the elements are gathering and a storm is brewing, it is said, *wa'trêndogê'ni*, it (storm-maker) is making, preparing its *orenda*; and when the lowering storm-clouds appear to be ready, it is said, *wa'trêndogê'ni*, it has finished, has prepared, its *orenda*; these two expressions and their conjugational forms are equally applicable to an animal or bird that is angry or in a rage; . . . anything whose *orenda* is reputed or believed to have been instrumental in obtaining some good or in accomplishing some purpose is said "to possess *orenda*" (*ôrêndarr*), just as a wealthy person is said "to have money," that is, "an abundance of money"; and if these things or portions of them be chosen and kept against the time of their use, they become what are commonly called charms, amulets, fetishes, mascots, shields, or, if you please, "medicine" (*Amer. Anthropologist*, new ser., iv. 38f.).

Hewitt goes on to indicate the relationship of the exercise of *orenda* to willing and desiring and to singing—relations which he regards as of primary importance in the interpretation of the term, showing, as they do, its intimately psychical intention:

'*Rotêrêndogê*, he is arrayed in his *orenda*, and *rotêrêndogê*, he has effused or put forth his *orenda*, are two expressions, sentence-words, which are said in reference to a man who is exerting his *orenda* for the accomplishment of some purpose, this is its primary signification; the first term, *rotêrêndogê*, has come to mean, as a secondary usage, he is hoping for it, is expecting it, because it was the habit to put on one's *orenda* to obtain what is desired; now, the second sentence-word, *rotêrêndogê*, as a secondary meaning has come to signify, he is singing, is chanting, but literally, he is holding forth his *orenda*. Thus, singing was interpreted to signify that the singer, chanter, whether beast, bird, tree, wind, man, or what not, was putting forth his *orenda*, his mystic potency, to execute his will; hence, too, it comes that the shaman, when exerting his *orenda*, must sing, must chant, in imitation of the bodies of his environment. Let it be noted, too, that this is the only word signifying to sing, to chant, in the earlier speech of the Iroquoian peoples.'

Orenda is not applied to muscular strength or to any purely mechanical force, but only to invisible powers conceived as analogous to will and intelligence, although there is a curious suggestion of emanation, or efflux, about it, that seems to bring it within the range of what are sometimes spoken of as 'telepsychic powers.'

In the Onondaga version of the Iroquoian cosmology it is said of Sapling, the vegetation spirit, that so soon as he becomes old he is transformed again into a youth:

'Moreover, it is so that continuously the *orenda* immanent in his body—the *orenda* with which he suffuses his person, this

orenda which he projects or exhibits, through which he is possessed of force and potency—is ever full, undiminished, and all-sufficient; and, in the next place, nothing that is *otkon* or deadly, nor, in the next place, even the Great Destroyer, *otkon* in itself and faceless, has any effect on him, he being perfectly immune to its orenda; and, in the next place, there is nothing that can har his way or veil his faculties' (21 *RBEW*, p. 219).

The word *otkon*, or *otgon*, which here appears as a name for hostile or malevolent orenda, is, says Hewitt (*Amer. Anth.*, new ser., iv. 37 n.), gradually displacing orenda, for the reason, he thinks, 'that the malignant and the destructive, rather than the benign, manifestations' of this power produce the more lasting impressions on the mind. It is possible that this word is related to the Huron *oqui* or *oki*, which D. G. Brinton (*The Myths of the New World*³, Philadelphia, 1896, p. 64) regards as of Algonquian origin.

The word *oqui*, and its plural *ondaqui*, signifies among them (i.e. the Hurons) some divinity; in a word, what they recognize as above human 'nature' (*Jesuit Relations*, ed. R. G. Thwaites, Cleveland, 1896-1901, v. 257).

The term orenda is, in fact, only one of a large group of terms, members of which are found in most, if not all, Indian languages, which have the same general meaning—invisible power or energy. Hewitt (*Amer. Anth.*, new ser., iv. 37 ff.) mentions the Siouan *wakan*, Algonquian *manitowi*, Shoshonean *pokunt*. W. Matthews ('Navaho Legends,' *Memoirs of the American Folk-Lore Society*, Boston and New York, 1897) describes the Navaho *digin* (p. 37). J. Swanton (*Memoirs of the American Museum of Natural History*, viii. [1909] 13) says of the Haida *sgāna* that it is 'a word which my interpreters liked to render by "power"', applied to supernatural beings, shamans, etc. F. H. Cushing ('Zufii Fetiches,' 2 *RBEW* [1883], p. 9) describes the Zufii conception, in essence equivalent to the Iroquoian. Apparently the Inca word *huaca* (Garcilasso de la Vega, *Royal Commentaries*, London, 1871, II. iii.) is a S. American instance.

The whole group of terms designate the American equivalent of what is generally known to anthropologists by the Polynesian term *mana*. As applied to American Indian beliefs, *manitu* and *wakanda* (Algonquian and Siouan respectively) are much the most common in use. There is the difficulty, however, that *manitu* is very generally used for a spirit or deity, i.e. a kind of invisible personality, which is not at all the meaning of orenda—by which a spiritual attribute rather than entity (to employ a scholastic distinction) is designated. Something of the same objection extends to *wakan*, *wakanda*, which, although most commonly used in the attributive sense, is still also employed in a sort of personification of that power for which the white man has no better term than Great Spirit:

'The Wakonda addressed in tribal prayer and in the tribal religious ceremonies which pertain to the welfare of all the people is the Wakonda that is the permeating life of visible nature—an invisible life and power that reaches everywhere and everything, and can be appealed to by man to send him help. From this central idea of a permeating life comes, on the one hand, the application of the word *wakonda* to anything mysterious or inexplicable, be it an object or an occurrence; and, on the other hand, the belief that the peculiar gifts of an animate or inanimate form can be transferred to man. The means by which this transference takes place is mysterious and pertains to Wakonda but is not Wakonda. So the media—the shell, the pebble, the thunder, the animal, the mythic monster—may be spoken of as *wakondas*, but they are not regarded as the Wakonda' (Alice C. Fletcher, 27 *RBEW* [1911], p. 599).

In view of this tendency to personify, which does not appear in the case of the Iroquoian orenda, there may be reason in adopting the latter term, as Hewitt urges, to designate the fundamental view of the world, as actuated by interplaying and invisible powers, which underlies all American Indian myth and religion (cf. art. NATURE [American]).

See further art. MANA.

H. B. ALEXANDER.

ORGANIC SELECTION.—This is a theory supplementary to Darwinism (*q.v.*) according to which the course of evolution by natural selection is guided by individual organic accommodations in lines coincident with themselves. The accommodations or adjustments made by individuals are conceived as affording a screen or protection, against elimination, to those variations with which they coincide in direction; these variations, thus screened, have a chance to accumulate themselves from generation to generation until they become of independent 'selection-value.'

This principle was announced independently in 1896 by three naturalists—C. Lloyd Morgan, H. F. Osborn, and J. Mark Baldwin, the last-named giving it its name and developing it in *Development and Evolution* (New York and London, 1902), in which the original papers of the other authorities as well as his own, and citations from others (E. B. Poulton, H. W. Conn, etc.), are reprinted.

The theory of evolution founded upon organic selection has received the name of the 'orthoplasy theory' in opposition to the 'orthogenesis theory,' which assumes determinate variations properly so called. It is held to afford a valuable supplement to that based upon Darwinian selection, in various ways. Certain striking applications of it may be briefly stated (cf. the co-operative article on this topic in Baldwin's *DPhP*).

(1) If this view of the directive effect of individual accommodations is true, there is no further need of the Lamarckian principle of the 'inheritance of acquired characters,' since the 'direction' secured, although ultimately due to variation, is in lines coincident with the characters or modifications acquired in experience. The case for Lamarckism against Darwinism, as a theory of evolution, is therefore greatly weakened by the 'organic selection' theory, as is quite generally admitted.

(2) The theory finds an interesting application in the account of the origin of animal instinct. The instincts, according to it, are functions due to accumulated variations which have been screened and protected during their immature stages by individual habits of intelligent and conscious adjustment. Under this protection—in cases such as the theory of organic selection recognizes—these functions have developed on the organic side, while the intelligent adaptations associated with them, becoming less and less necessary, have finally been superseded entirely by the instinct. This gives the look of intelligence to the instincts—they have arisen as substitutes for intelligent action, by coincident variation. The Lamarckian theory of instinct developed by Spencer under the name of the 'lapsed intelligence' theory is thus completely replaced by the 'organic selection' theory.

(3) To psychologists and students of sociology and ethics certain bearings of the theory are of extreme interest. If conscious individual accommodations may have such a directive effect upon evolution, then a purposive or teleological factor is introduced into Darwinism. The course of organic evolution is no longer to be looked upon as haphazard, accidental, or fatalistic, but as proceeding in lines of progress marked out by intelligent adjustments. Consciousness, mind in general, becomes an efficient, though indirect, factor in biological evolution. And mental evolution takes the lead, in a sense; not, indeed, in the way of determining variation in certain directions, but in the way of controlling variation, and of securing the selection of functions and characters which subserve the purposes of mind.

Moreover, the special modes of accommodation found in co-operative life, social and moral, get

the same directive efficiency. The whole range of social and ethical group-activities reflects its values into the instinctive and other more plastic potencies of the individuals making up the group. The opposition between Darwinian evolution and morality, signaled by Huxley, completely disappears.

(4) Philosophically considered, in view of these points, the Darwinian theory of evolution by natural selection is very materially recast. It is no longer a theory resting exclusively upon fortuitous congenital variations. For in many important instances it is not upon such variations, taken simply for themselves, that the preserving hand of selection falls, but upon those only which show their fitness to serve the ends of conscious adaptation and of mind. Selection falls upon the variations only because it falls first upon the entire living function in which the variations are included and protected. The function which survives, and with it the anatomical characters, are those which present the successful union and joint operation of endowment (present in the variation) and experience (present in the accommodation).

LITERATURE.—Besides the citations made above, the following works contain accounts and critical estimates of the theory of organic selection: C. Lloyd Morgan, *Habit and Instinct*, London, 1898; *Animal Behaviour*, do. 1900; L. H. Plate, *Das Selektionsprinzip und Probleme der Artbildung*, Leipzig, 1908; F. W. Headley, *The Problems of Evolution*, London, 1900; H. W. Conn, *The Method of Evolution*, New York, 1900; Y. Delage and M. Goldsmith, *Les Théories de l'évolution*, Paris, 1909; W. McDougall, *Body and Mind*, London, 1911; C. Lloyd Morgan and A. Welsmann, in *Darwin and Modern Science*, ed. A. G. Seward, Cambridge, 1909; C. Groos, *The Play of Man*, Eng. tr., London, 1901; J. A. Thomson, *Darwinism and Human Life*, do. 1909; J. T. Gulick, *Evolution, Racial and Habitual*, Washington, 1905.

J. MARK BALDWIN.

ORGY.—The practice of periodic relaxation of social restraints has been followed by the majority of peoples, and is the unconscious response to a real social need. The study of the orgy as a normal phenomenon throws light on the whole mechanism of society. Primitive 'bursts' and modern Bank Holiday 'mafficking' fulfil an identical purpose, and their conditions are identical, though more stringent in the case of early society.

Thus, of the Central Australians we are told that 'the life of a native is hedged in with arbitrary rules that must be obeyed, often at the peril of his life. To the casual onlooker the native may appear to live a perfectly free life; in reality he does nothing of the kind; indeed, very much the reverse.'¹

We may here take exception to the epithet 'arbitrary'; there is little in any social organization to which it can be applied. It cannot, e.g., be applied to the orgy itself, so far as this is indulged in by normal members of the society. The orgy is to the routine of ordinary life what the religious feast is to the fast. It supplies a rest and a change, but particularly an emotional and physical expansion and discharge of energy. Excess and dissipation are almost inevitably involved, but they are not in principle essential conditions. Nor, again, is the criminality which often appears. The functions in which this neuro-muscular discharge takes place are those belonging to the general muscular system—eating, drinking, and sex. The main psychological element, relief from restraint, is connected with others—the play-instinct, the pleasure of exhilaration and neuro-muscular excitement, and religious enthusiasm in many cases.

The economic conditions of savage life themselves suggest periodic excess. The savage hunter often practically fasts for days together. He is in-

ured to this, and especially capable of gorging himself when he has killed his game. This capacity indeed is part of his survival value.¹

In origin an unconscious social reaction, the orgy has clearly been thus understood in later ages and accepted.

'Having a function to fulfil in every orderly and laborious civilization built upon natural energies that are bound by more or less inevitable restraints,' it has been deliberately employed in great religious ages, the rule of abstinence being 'tempered by permission of occasional outbursts.'²

Possibly such regulation of excess and dissipation has assisted the general development of self-control. In some cases the orgy combines all possible forms of expression, in others it is specialized in a particular direction; e.g., the dramatic element was conspicuous in the Feast of Fools, the idea of change and social inversion in the Roman Saturnalia, religious ecstasy in the Dionysiac orgy. The Hindu followers of the Śākta Tantras require at their feasts the 'five n's'—fish, flesh, wine, corn, and women. But even these Śāktists seem to omit dancing and to emphasize drinking; they 'drink, drink, and drink until they fall on the ground in utter helplessness.'³ The Jews at Purim seem to have indulged in most forms of excess.⁴

Various dates lend themselves to the orgy. Such are the harvest festival and other agricultural occasions of celebration, the passage from the old to the new year, and other seasonal changes. In many such instances, as in the case of feasts of firstfruits, the sudden access of a supply of food and liquor inevitably encourages an outburst.

A few typical examples will illustrate the chief characteristics of the orgy.

At the Pondo festival of firstfruits 'the young people engage in games and dances, feats of strength and running. After these are over the whole community give themselves over to disorder, debauchery, and riot. In their . . . games they but did honour to the powers of nature, and now, as they eat and drink, the same powers are honoured in another form and by other rites. There is no one in authority to keep order, and every man does what seems good in his own eyes. . . . People are even permitted to abuse the chief to his face, an offence which at any other time would meet with summary vengeance and an unceremonious dispatch to join the ancestors.'⁵ During the yam-harvest feast in Ashanti the grossest liberty prevails; 'neither theft, intrigue nor assault is punishable,' and 'each sox abandons itself to his passions.'⁶

The New Year feast of the Iroquois formed 'a kind of saturnalia. Men and women, variously disguised, went from wigwam to wigwam smashing and throwing down whatever they came across. It was a time of general license; the people were supposed to be out of their senses, and therefore not to be responsible for what they did.'⁷

The Hos of N. India 'have a strange notion that at this period [harvest festival] men and women are so overcharged with vicious propensities that it is absolutely necessary for the safety of the person to let off steam by allowing for a time full vent to the passions.'⁸

This shrewd description illustrates the safety-valve function of the orgy. After eating and beer-drinking people expand in other ways; the feast is 'a saturnale during which servants forget their duty to their masters, children their reverence for parents, men their respect for women, and women all notions of modesty, delicacy, and gentleness; they become raging bacchantes. . . . Sons and daughters revile their parents in gross language, and parents their children; men and women become almost like animals in the indulgence of their amorous propensities.'⁹

Of the Roman Saturnalia Frazer writes: 'Feasting and revelry and all the mad pursuit of pleasure are the features that seem to have especially marked this carnival of antiquity. . . . But no feature of the festival is more remarkable, nothing in it

¹ The Greek *orgia* meant primarily 'acts of ritual.' Then it was specially applied to 'secret' or 'mystic' cults, such as the Eleusinian *mysteria* and the Dionysiac *epiphany*. From the Bacchanalia suppressed by Rome the term derived its modern meaning of 'feasting or revelry, especially such as is marked by excessive indulgence or licence' (*OED*).

² B. Spencer, *Native Tribes of the Northern Territory of Australia*, London, 1914, p. 342 f.

seems to have struck the ancients themselves more than the license granted to slaves at this time. . . . The slave might call at his master, intoxicate himself like his betters, sit down at table with them. . . . Masters actually changed places with their slaves and waited on them at table.¹

The two days of the Jewish festival of Purim were designated as 'days of feasting and gladness, and of sending portions one to another, and gifts to the poor' (Est 9:22). 'Purim has been described as the Jewish Bacchanalia, . . . and everything is lawful which can contribute to the mirth and gaiety of the festival.' The Jew must drink 'until he cannot distinguish between the words "Cursed be Haman" and "Blessed be Mordecai."' During the two days of the feast the Jews, we are told, in the 17th cent. 'did nothing but feast and drink to repletion, play, dance, sing and make merry; in particular they disguised themselves, men and women exchanging clothes.'²

The Christian Church in early Europe seems to have adopted folk festivals of the Saturnalian type, especially on Shrove Tuesday and New Year's day. The dramatic element and freedom of movement were prominent at the former festival: 'Some go about naked without shame, some crawl on all fours, some on stilts, some imitate animals.'³

The Feast of Fools, or *Kalender*,⁴ was an ecclesiastical orgy, conspicuous chiefly for inversion of rôle. 'Priests and clerics may be seen wearing masks and monstrous visages at the hours of office. They dance in the choir dressed as women. . . . They sing wanton songs. They eat black puddings at the horn of the altar while the celebrant is saying mass. They play at dice there. They cense with stinking smoke from the soles of old shoes. They run and leap through the church without a blush at their own shame. Finally they drive about the town and its theatres in shabby traps and carts, and rouse the laughter of their fellows and the bystanders in infamous performances with indecent gestures and verses scurrilous and unchaste.'⁵ Chambers notes that the festival was confined to the inferior clergy, and infers it to be 'an ebullition of the natural lout beneath the clerical, allowed as a 'reaction from the wonted restraint.' The inversion of status is especially marked by such offices as bishop, pope, and king—all examples of the mock authority common in folk-festivals.⁶ The curious title of this orgy may be due merely to the fact that the clerics played the fool, but ancient Rome had a *stultorum feriae* on Feb. 17, the title of which is also obscure.⁷ The Dionysiac orgy was conspicuous for the prominence of women. Probably men dressed as women. Dancing and excessive physical exertion, drinking, and the eating of raw flesh and drinking of warm blood were features.⁸ Among the Central Australians an exchange of wives at the end of the Engwura ceremonies may be regarded as an orgiastic element.⁹

Farnell regards the production of exhilaration in the Dionysiac orgy by means of dancing and drinking as not only religious exaltation but a means of acquiring supernatural energy for the working of vegetation-magic. This cannot be the primary object of the orgy.¹⁰ Frazer, in view of its frequent connexion with expulsion of evils, observes:

'When a general riddance of evil and absolution from all sin is in immediate prospect, men are encouraged to give the rein to their passions, trusting that the coming ceremony will wipe out the score which they are running up so fast. On the other hand, when the ceremony has just taken place, men's minds are freed from the oppressive sense, under which they generally labour, of an atmosphere surcharged with devils; and in the first revulsion of joy they overleap the limits commonly imposed by custom and morality. When the ceremony takes place at harvest time, the elation of feeling which it excites is further stimulated by the state of physical wellbeing produced by an abundant supply of food.'

Again, in special reference to the Saturnalia of Italy, he remarks:

'What wonder then if the simple husbandman imagined that by cramming his belly, by swilling and guzzling just before he proceeded to sow his fields, he thereby imparted additional vigour to the seed?'¹¹

These suggestions miss the main point of the problem of the orgy, which is quite satisfactorily explained by Ellis. They refer to secondary applications of a natural, self-regarding, human need.

¹ Frazer, *GB*, pt. vi., *The Scapegoat*, p. 307. In an English hotel at the present day it is the custom at Christmas for the visitors and servants to change places. The custom seems to have originated spontaneously as an expression of fellow-feeling. This is an element of the orgy.

ORIENTALISM.—See SYNCRETISM.

ORIGEN.—See ALEXANDRIAN THEOLOGY.

ORIGINAL SIN.—I. *THE TRADITIONAL CHRISTIAN DOCTRINE*.—1. Preparation in the Old Testament.—Christian theology has identified original sin with a consequence of the Fall, and has described the sinfulness thus introduced into human life in terms of contrast with the original or unfallen state of man. The ecclesiastical doctrine of original sin, from the time of St. Paul, has been regarded as contained or implied in Gn 3, and therefore as having a foundation in OT theology. That some form of doctrine concerning original sin was exegetically derived from the Paradise story by Jewish writers before the Christian era is plain, as will presently be seen; but it seems no longer tenable that any such teaching was intended by the compiler of that narrative.

Gn 3 does not assert that any corruption or dislocation of human nature was occasioned by the sin of Adam and Eve; it does not mention any withdrawal of divine gifts such as before the Fall might have enabled man to remain morally innocent; it does not represent that Adam's posterity was involved in the consequences of his sin, except exclusion from the garden and from access to the tree of life, and liability to the physical ills of life. Further, no element of the conception of original sin seems to have been present to the Jahvist compiler's mind. Subsequent sins, such as Cain's, are in no way connected with Adam's; undiminished responsibility is attributed to the sinner of the second generation, evil is not predicted of human nature, sinfulness is not regarded as universal in Adam's posterity, and the general corruption which evoked the Flood is assigned, in the Jahvist history, to a different cause from the sin of the first parent. Lastly, the story of Paradise does not receive any doctrinal exposition in any of the books of the OT, and no connexion between the sinfulness of mankind and Adam's sin is ever hinted at in them.

But the OT testifies to the growth of several ideas which were afterwards embodied in the conception of inherited or original sin, and to a growth uninfluenced by any such conception. Sin is sometimes personified as a power external to man, in which we see exhibited the tendency, so disastrous in later theology, to conceive of sin in abstraction from the sinner, apart from whom it can have no existence. Man is credited with an evil imagination (*yēser*), though this imagination or disposition was not a result of the Fall. Sin is regarded as a state, as well as an isolated act. The universality of sinfulness is sometimes emphasized. Sin is occasionally spoken of as inherent in man from his birth, and in Ps 51 this inherent and inherited sinfulness is regarded as guilty. Facts and conceptions are thus recognized which were afterwards connected and explained by the idea of original sin derived from Adam; but in the OT itself the inherent and inherited sinfulness of mankind is not identified with a moral consequence of the first sin. Indeed, OT thought seems to preclude the possibility of such identification.

2. Development of thought in uncanonical Jewish literature.—Perhaps the earliest extant exegesis of the Fall-story is contained in Sir 25¹

¹ Ellis, p. 223 f.; *CGS* v. 237.

'From a woman was the beginning of sin; and because of her we all die.' That 'beginning' is to be interpreted here in a temporal, and not in a causal, sense is rendered overwhelmingly probable by the recovered Hebrew text and, more especially, by other passages of Sirach. In this case Ben Sira makes no advance upon OT teaching in connexion with original sin; but the latter part of the verse quoted above supplies evidence that in his day the way was being prepared for an interpretation of Gn 3 such as would lead to a doctrine of original sin.

The book of Wisdom affords new instances in Jewish thought of approach towards this doctrine—e.g., in its teaching that sin and (spiritual) death were introduced into humanity from without, in speaking of Adam as 'the protoplast,' and in affirming the actuality of transmitted depravity (though this is local and derived from the Cainites, not universal and derived from Adam). The data for the doctrine are all present in this book; but they are unconnected, not generalized into a single conception. The last sentence will serve equally well to summarize the more elaborate teaching of Philo and of Alexandrian Judaism generally. But in an apocalyptic writing of the same period largely influenced by Hellenic thought, the *Book of the Secrets of Enoch*, original sin derived from Adam is plainly taught (see below).

(a) *Rabbinical literature*.—In this department of Jewish literature we find much said of the glory of the unfallen state of Adam, and something as to the cosmic effects of the Fall. But the privileges forfeited by Adam for the race are not the *dona superaddita* of later Christian theology. The idea of the evil inclination, the germ of which is met with early in the OT, is greatly elaborated; but this bias to evil seems never to have been regarded by Rabbis before the Christian era as a consequence of the first sin. A crude legend that Eve was polluted by Satan (or the serpent), and her taint transmitted to her posterity, occurs in several forms in Rabbinic writings; but it does not seem to have served the purpose of an explanation of the universal sinfulness of man. What is most remarkable, in connexion with the antecedents of St. Paul's teaching, is the apparent absence from this department of Jewish literature, until medieval times, of any reference to the idea of all the race being included in Adam, or identified with Adam, when he sinned. Death, and various supernatural adornments of Adam's life at its beginning, are the only consequences of the Fall which early Rabbinism seems to recognize.

(b) *Jewish apocalyptic literature*.—If the ground-work of the *Book of Enoch* is the earliest extant specimen of pseudepigraphic literature, it points to a tendency, in the first beginnings of Jewish exegesis, to explain the sinfulness of mankind by reference not to the Fall story of Gn 3, but to the legend of the 'elohim' (or 'watchers,' as they are called in *Enoch*) contained in Gn 6¹⁻⁴. As we pass to later apocalypses, we find the emphasis increasingly shifted to Gn 4, and signs of confusion of these two distinct Biblical stories, which seems to have resulted in detaching the idea of the fall of the race from the setting in which it first grew up, and transplanting it to the history of the first temptation and the loss of Paradise. Thus the Fall-story came to be regarded as the explanation of much besides human death. In the A recension of *Slavonic Enoch*, or the *Book of the Secrets of Enoch*, the idea appears that mankind inherits from Adam, and as a consequence of his sin, moral infirmity of nature—a much more explicit doctrine of original sin than that taught by St. Paul. Possibly this teaching, which would be very unusual for an early Jewish book, is not really

ancient. The *Apocalypse of Baruch*, which is more akin to Rabbinic literature than any of the pseudepigrapha, seems to regard the Fall as having brought upon the whole race liability to future punishment, and as thereby having affected the spiritual destiny of all men, while at the same time it asserts, with an emphasis which suggests a polemical intention, that ultimately each individual is 'the Adam of his own soul.' But for a difference of emphasis on these two different lines of doctrine, the teaching of pseudo-Baruch is similar to that of St. Paul. Similar again to the teaching of both these writers, and probably contemporary, is that of the *Apocalypse of Ezra* (2 Esdras of the Apocrypha). But, while pseudo-Baruch minimizes the effects of the Fall on man's moral state, pseudo-Ezra is full of the sense of human infirmity; his doctrine as to original sin, however, is so greatly qualified by the teaching as to the 'evil heart' (*yēser hara*), which follows Rabbinic lines, that he is led practically to repudiate original sin in the sense of inherent corruption, deriving human infirmity not by heredity from fallen Adam, but from 'the following of Adam' in indulging the evil impulse which was as much in Adam when he was created as in us when we were born.

We conclude, then, that Judaism, at the beginning of the Christian era, possessed two distinct conceptions of original sin. The one, presumably originating in the Alexandrian school, is stated in terms of the idea of inherited depravity or corruption, and is analogous to an important and characteristic factor of Augustine's doctrine. The other asserts, quite indefinitely, a connexion between Adam's sin and his posterity's liability to punishment, and offers no connecting link between them; if we possess analogy with any later form of the doctrine of original sin, it would seem to be the imputation theory. The passage from this form of the Jewish doctrine to the teaching of St. Paul involves but a slight step.

3. *St. Paul's doctrine of original sin*.—There is only one passage in his Epistles in which St. Paul deals explicitly with the connexion of human sinfulness with Adam's transgression, viz. Ro 5¹²⁻²¹. This connexion is plainly affirmed; but no attempt is made to express how the connexion is to be conceived. It is easy to read into St. Paul's statement each of the later ecclesiastical theories as to the nature of this connexion, just because that statement is so indefinite and colourless as to be capable of accommodating them all; but none of them can safely be extracted, for the same reason, from the Apostle's vague language. The Apostle certainly teaches original sin—more or less after one manner in which it was current in the Jewish schools of his day; but in what form he conceived it it is perhaps for ever impossible for us to determine with certainty. He says that sin 'entered into the world by one man, and death through sin; and so death made its way to all men, because all sinned.' Exegesis of these words involves an answer to two distinct questions. (1) Does St. Paul mean that death passed to all because all sinned personally, or because all sinned when Adam sinned? The latter interpretation, it may be answered, is to be preferred, because otherwise the whole of the parallel between Adam and Christ, and therefore the whole argument of the context (in which reference to original sin is incidental), would be destroyed, and the force of the aorist tense ('all sinned') would be lost. (2) What did St. Paul conceive to be the mediating link between Adam's sin and the sin and death of his descendants? Is it simply God's appointment (cf. *Apocalypse of Baruch* and *Apocalypse of Ezra*); or the seminal existence in Adam of his

posterity (cf. He 7th); or their identity with, or inclusion in, Adam, in the sense of Augustine's 'realism'? The first two of these alternatives could each be naturally attributed to St. Paul, because we know that they were current at or near his day. It is also possible, however, to interpret St. Paul in terms of his own thought in other contexts, and to suggest that he refers the sins of all mankind to the first sin, not in the sense that all shared in that sin, but in a similar sense to that in which he speaks of believers as being crucified to the world, and having died to sin, when Christ died upon the Cross. Or, again, just as the believer's renewal is conceived by St. Paul as wrought in advance, though he did not suppose it actually to be so wrought, so also he may regard the consequences of Adam's sin as having been wrought simultaneously with it. But, whichever, if any, of these meanings were present to St. Paul's mind, the only certainty that we have is that he states none of them.

4. **Development of the doctrine in the Patristic period and the Middle Ages.**—We have seen that St. Paul taught a doctrine of original sin, and that he probably (perhaps we should say certainly) imbibed it, along with many other particular views, from his Jewish surroundings. But, when we pass on to consider the writings of the Fathers of the early Church, we find that they did not directly adopt St. Paul's teaching as the basis of their doctrine, nor borrow that presented in Jewish literature. They started afresh to elaborate a doctrine of original sin. The three chief pioneers, before Augustine, in this work were Irenæus, Origen, and Tertullian. And it may be pointed out that each of these Fathers derived his particular contribution to the fabric of future orthodox doctrine from his own reflexion on texts, philosophical tenets, or institutions, none of which had been a source of the similar conclusions previously reached by Jewish thought.

Justin Martyr was entirely uninfluenced by St. Paul's teaching on original sin, and practically repeated the doctrine characteristic of Rabbinical, rather than of later Jewish apocalyptic, literature. It is not until the Gnostic controversy had invested the general problem of evil with considerable importance for Christian thought that the doctrines of the original state and of the Fall began to receive definite shape in the Church. By the time of *Irenæus*, moreover, the Pauline Epistles had come to be accepted as Scripture, and therefore as a guide to doctrine, or a source thereof. *Irenæus*, however, did not set out from St. Paul's doctrine of original sin as a foundation already laid. It is in working out his idea of recapitulation, according to which Christ is the son and the representative of restored humanity, that he begins to shape his teaching as to the Fall; and, had it not been for the requirements of the recapitulation-doctrine, it is probable that he would not have been inspired by the Epistle to the Romans to develop any teaching concerning original sin. The teaching which he supplies exhibits no real advance upon that of St. Paul. He merely emphasizes the idea that the Fall was the collective deed of the race, in virtue of the unity, in some undefined and perhaps mystical sense, of the race with Adam. On original sin as an inherent disease, or as the source of concupiscence, he is quite silent. In a recently recovered work of this Father (*Εἰς Ἐπίδειξιν τοῦ Ἀποστόλου κηρύγματος*, ed. by A. Harnack from the Armenian version, Leipzig, 1908), however, there occurs a somewhat curious doctrine of original sin, or of inherited sinfulness, especially associated with the descendants of Cain. God's curse on Cain is spoken of as handed down by natural heredity to his

posterity. This teaching is, of course, different in important points from that which became general in the Church, and it was obviously adopted by *Irenæus* from Alexandrian Judaism. It is characteristic of Alexandrian Jewish literature to emphasize the gravity of Cain's sin, and the sinfulness of his descendants, and somewhat to minimize that of Adam; and it is in the book of *Wisdom*, as was seen above, that we find the first clear conception of hereditary sin. This work of *Irenæus* serves further to show that in his time the idea of inherited sinfulness was not as yet definitely coupled with that of Adam's fall.

Origen's name is generally associated with a theory of the source of inborn sinfulness which is incompatible with the ecclesiastical doctrine of original sin. This Father taught, especially in his earlier years, that the Biblical story of Paradise was an allegory describing the fall of all individual souls in a previous, celestial existence. According to this view, suggested by Plato's myth (*Phædrus*), original sin is not derived from the first forefather of the race, but is the result of individual free will. The guiltiness of inborn sin is thus secured at the expense of that racial solidarity upon which *Irenæus*, following St. Paul, had insisted. Naturally this theory never received general sanction in the Church. Quite another line of teaching, however, was adopted by Origen in his later years—a doctrine of inherited corruption, introduced by Adam's fall; and thus he became the precursor of Augustine.

It has been suggested with great probability that Origen's change of view was occasioned by his coming in contact, during his banishment from Alexandria, with the practice of infant baptism at Cæsarea. His writings of this period refer frequently to a stain of sin defiling every man, and requiring to be cleansed away in baptism. Thus it would seem that Origen developed his later teaching as to inborn sin in order to account for the ancient and wide-spread practice of infant baptism. The texts of Scripture which speak of universal and inborn uncleanness (e.g., Job 14th, Ps 51st), and the Hebrew ceremonial of purification, seem to have suggested to Origen the idea of an inborn taint; and, having become possessed of the idea, he proceeded to associate it with Adam's fall, though express association of the two ideas very rarely occurs in his writings. Of solidarity of the race with Adam, again, Origen offers a very definite conception. He borrows the idea of seminal existence from the Epistle to the Hebrews, and by means of it explains the unity of the race with its first parent in sin. Thus, without revealing any influence from *Irenæus* or Tertullian, Origen independently supplied the two main conceptions involved in the Augustinian doctrine of original sin.

The third early and independent pioneer in the elaboration of the doctrine was *Tertullian*. On the point of the mode of derivation of universal inborn sin from fallen Adam—a point as to which *Irenæus* is silent and to which Origen scarcely refers—*Tertullian* lays down full and definite teaching. He does so in terms of the traducianist doctrine of the origin of the soul, which he adopted from current Stoic philosophy and not from Scripture. This psychological tenet plays for Tertullian the same part as infant baptism played for Origen, and the recapitulation-doctrine for *Irenæus*. The conception that every human soul is a 'branch' of Adam's, reproducing its qualities, and therefore its corruption (which Tertullian considered to be in a state of actual sinfulness), readily lent itself to the formulation of a definite theory of original sin. The traducianist explanation of the propagation of original sin was not generally accepted by the

Church; but the results attained by its means were permanently retained.

From the time of Origen and Tertallian to that of Augustine the doctrine of original sin received no important development, save that, alongside of the view, emphasized by the two founders of the doctrine just mentioned, that original sin consists in a positive corruption of human nature (a view also advocated with varying degrees of clearness and emphasis by Gregory of Nazianzus, Gregory of Nyssa, Macarius of Egypt, Hilary of Poitiers, and Ambrose, and greatly developed by Augustine), we meet frequently with the supplementary conception of original sin as a loss of supernatural graces with which man was endowed at the first. This aspect of original sin, destined to become predominant in Scholastic theology, is presented by Irenæus (with great inconsistencies) and Athanasius, and, along with the more positive aspect, by some other Fathers, including Augustine. As has been shown above, it has no more Scriptural authority than the assertion that the Fall introduced positive derangement into man's nature. It originates apparently in the peculiar and baseless teaching of Tatian, that the communion of the Spirit was withdrawn from Adam (Tatian says nothing as to Adam's posterity) when he sinned, and in the distinction drawn first by Irenæus between the image of God (belonging to man's nature, and never lost) and the likeness of God (generally identified with supernatural endowments, the loss of which was due to the Fall). This is, of course, merely a piece of false exegesis, though upon it is based the whole superstructure of what has been regarded by many theologians, Anglican as well as Roman Catholic, as the most essential and most catholic element in the doctrine of the Fall and original sin. As to its 'catholicity,' there is no reason to believe that the conception of original sin as loss of *dona superaddita* was more general among the Fathers than that of original sin as a positive *vitium* or *corruptio* of human nature; and in respect of moral consequences it encounters even graver difficulties.

The development of the doctrine of original sin in the pre-Augustinian period having now been traced, it is necessary to call attention to such instances as may be found of Patristic teaching which deviated from that which was generally accepted. Though *Clement of Alexandria* was not unfamiliar with the writings of Irenæus, he seems not to have held any doctrine of original sin whatever, as distinct from a doctrine of the Fall. He vaguely identifies Adam with the race, or considers him as its representative; but Adam's sin was to this writer a type of human sin rather than the cause of human sinfulness. His exegesis of Ro 5 even repudiates the idea that death was a consequence of the Fall. Like most Eastern Fathers, Clement insists most strongly on the unimpaired free will of mankind. *Athanasius* too, in spite of his adoption of the view that the Fall occasioned the withdrawal of Adam's supernatural gifts, deviates from the generally received teaching of the Fathers in regarding the fall of mankind as having been gradually brought about, rather than as having been catastrophically effected by Adam. It is in the Antiochene school, however, that we find the most conspicuous instances of heterodox teaching concerning original sin. *Chrysostom* does not appear to have countenanced this doctrine in any form, or to have regarded natural concupiscence as of the nature of sin, while *Theodore of Mopsuestia* was practically a Pelagian, denying that baptism removed inherited sinfulness and also the practically universal belief that Adam's transgression was the cause of death.

It was the Pelagian controversy that obliged

Augustine to make a more complete and systematic study of sin than had yet been undertaken in the Church. During the controversy he was led to modify his earlier views, which were practically identical with those of the majority of Eastern and Western Fathers since Irenæus. He expressed the solidarity of the race with Adam sometimes in terms of Origen's idea of seminal existence in the first parent (c. *Julianum*, v. 12), and sometimes in terms of the realistic notion that Adam's personality, and not merely his nature, was shared by his posterity:

'Omnes enim fuimus in illo uno, quando omnes fuimus ille unus, qui per feminam lapsus est in peccatum. . . . Nondum erat nobis singillatim creata et distributa forma, in qua singuli viveremus; sed iam natura erat seminalis, ex qua propagamur' (*de Civ. Dei*, xiii. 14).

In *de Vera Religione*, 51, he speaks of the sin which our nature committed (in Adam), which implies his adoption from Greek philosophy of the idea that universals or generic concepts exist apart from their individual or particular cases. Being, especially before the Pelagian controversy, a champion of free will, he admits Pelagius's premiss that there can be no sin without willing, but he falsely thought that he could secure our guilt for Adam's sin by incorporating our nature in Adam, whereas our wills would also require to be identical with Adam's, and consequently our personalities and individualities. Augustine was also inconsistent in regarding Adam as at the same time an individual and a generic idea.

Original sin, with Augustine, involved guilt. Hence the unbaptized, even unbaptized infants, incurred, and (he taught) would receive, damnation:

'Infans perditione puniatur, quia pertinet ad massam perditionis' (*de Peccato Originali*, 81).

The most characteristic feature in Augustine's doctrine of original sin is his exaggeration of the effects upon human nature of Adam's fall. He taught that the depravity thus introduced was complete, so that fallen man is unable even to will what is good. To this belief was chiefly due his teaching concerning grace, and consequently his doctrine of predestination.

On passing from the Patristic to the Scholastic age, we find no important changes from the main trend of the teaching of the pre-Augustinian Fathers. Augustine's extreme views were left aside; doubtless they seemed to be provincial rather than catholic. *Aquinas* held that, on its positive side, original sin was a disordered condition (*vulneratio nature, dispositio inordinata*) consequent upon dissolution of the harmony in which original righteousness essentially consisted; while, on its negative side, it was loss of original righteousness or of superadded graces. *Aquinas* could not follow Augustine on several important points. He denied that natural goodness was forfeited at the Fall, that free will was more than impaired, that concupiscence is of the nature of sin proper. At the same time he emphasized the positive side of original sin more strongly than Anselm had done, who, while not denying the guiltiness of inborn sin in the infant, was dissatisfied with the view that original sin is strictly sin (i.e. personal sin), and compared it with deformity or misery. *Duns Scotus* represented a standpoint still more remote from Augustinianism than that of *Aquinas*. He held that the first sin—which he has a tendency to minimize—had not affected man's nature at all, but only his supernatural gifts. He more strongly emphasizes fallen man's freedom of will, and denies that original sin is to be identified with concupiscence, because concupiscence belongs to our unwounded nature. There is indeed little in common between *Duns Scotus* and Augustine,

in so far as Augustine differed from the Fathers who preceded him.

If the Thomist and Scotist views sum up the two main tendencies of Scholastic teaching in its maturity, *Abelard* may be mentioned as the most conspicuous representative of views markedly divergent from the general trend of mediæval doctrine. In some respects he is a precursor of *Jeremy Taylor*. He revolts somewhat at the idea of Adam's sin being so serious as to be an adequate cause of the condemnation of mankind. Appetite, he teaches, is natural and innocent, and the conflict between sense and reason is characteristic of man as God made him. If it be said that we sinned in Adam, 'sin' is used in an improper sense. For these and other particular views concerning original sin *Abelard* was censured by *Bernard*.

The Scholastic doctrine of original sin, more especially in the form which it received from *Aquinas*, became at the Council of Trent the official teaching of the Church of Rome. The decrees of that Council affirm that the Fall caused loss of original righteousness, infection of body and soul, thralldom to the devil, and liability to the wrath of God; that such original sin is transmitted by generation, not by imitation; that all which has the proper nature of sin, and all guilt of original sin, is removed in baptism; that concupiscence remains after baptism, but this, though called 'sin' by St. Paul, is not sin truly, but only metonymically.

The Anglican Article diverges from this doctrine in asserting that man is 'far gone from original righteousness,' and in apparently, though not explicitly, sanctioning the Pauline usage of 'sin' to describe concupiscence. In all other essential points it is in agreement with the doctrine of the Roman Church.

The various Protestant denominations which formulated their doctrine as to original sin in the 16th cent. inclined rather to the elements in Augustinianism which the Schoolmen rejected. It will not be necessary here to enter into points of difference between the Lutheran, Calvinist, and other symbols. Roughly speaking, these agree in asserting the depravity of human nature to be total, using the strongest and most extravagant language to describe the fallen state; and in explicitly affirming concupiscence to be of the nature of sin. The rest of their positive teaching, in so far as the broader and more important issues are concerned, is similar to that of the Roman and Anglican Churches.

5. The doctrine from the 16th to the 19th century.—The chief point of interest in theological thought concerning original sin since the detailed formulation given to the doctrine in the 16th cent. consists in the signs which have appeared from time to time of dissatisfaction with some element of its contents. One or two of the more important of these witnesses may be briefly alluded to here.

In the 17th cent. *Jeremy Taylor*, in his *Unum Necessarium, or the Doctrine and Practice of Repentance*, chs. vi. and vii., protests strongly against the extremer forms which this doctrine had taken. The sin of Adam, he argued, neither made us heirs of damnation nor rendered us naturally and necessarily vicious. He spurned the idea that unbaptized infants are damned, as inconsistent with the goodness of God; denied that the loss, at the Fall, of Adam's graces, in so far as they were indispensable to rectitude, was a punishment of mankind, on the ground that such a belief detracts from the divine justice; and rejected the teaching that the Fall introduced an inheritance of total depravity, as well as various methods by which the mediation of this depravity had been stated to

be effected. Original sin, *Taylor* held, is not an inherent evil, not 'sin' at all in the strict, but only in a metonymical, sense; i.e., it is the effect of one sin and the cause of many—a stain rather than sin. It consists in loss of supernatural endowments (as to the nature of which Scripture gives no information) and in an aggravation of our natural concupiscence.

S. T. Coleridge (*Aids to Reflection*, 'Aphorisms on Spiritual Religion,' x.) endorses *Jeremy Taylor's* protests, but criticizes the alternative interpretation of original sin which he offered. The assertion that to man, since the Fall, obedience was possible, though incomparably more difficult, he regards as inconsistent with the admission that sin is universal; hence *Taylor* has not succeeded in vindicating the divine justice, i.e. in explaining why the unoffending sons of Adam were sentenced to be born with so fearful a disproportion of their powers to their duties. The difficulty of reconciling the traditional doctrine of original sin with theodicy was thus beginning to be felt, and *Coleridge* himself can find relief from it only by adopting the view, opposed to *Taylor's*, that original sin is truly sin, i.e. personal or volitional. In order to advocate this view, he relies on the teaching of *Kant* (see below), but introduces a further obscurity into it by substituting for its individualism the notion that the Fall was the collective voluntary deed of humanity. Assuming that original sin is a fact, recognized by all religions, he indeed also, like *Kant*, asserts it to be a mystery for ever inscrutable. But, again following *Kant*, he teaches that moral evil can have its seat in the will alone. Original sin must therefore be the ground of evil in the will. It is a consequence, but not an effect, of Adam's sin. The first evil will in time is selected as 'the diagram,' and Adam means the race rather than the individual. The resort by *Coleridge* to conceptions so obscure, in order to escape the moral difficulties which the problem of original sin, as apprehended down to his time, presented, is a witness to the intractability of the problem as it had as yet been stated.

Another witness, even more interesting and striking, is supplied by the work of *Julius Müller* (*The Christian Doctrine of Sin*, 2 vols., tr. W. Urwick, Edinburgh, 1877-85), which contains a more exhaustive and able treatment of the theology of sin than had previously been written. *Müller* was led, perhaps reluctantly, to find the Augustinian, or any similar ecclesiastical, theory insufficient to solve the great antithesis which *Kant* had emphasized, between individual responsibility for sin and the fact that sin seems inborn and prior to sinful action. He therefore supplements it by resorting to a view which is apparently intermediate between *Kant's* theory of the timeless origin of sin and *Origen's* theory of an ante-natal origin. He postulates an individual fall, which he calls extra-temporal, but which is nevertheless prior to birth. This would seem to him to be the only possible solution—a last resort. That *Kant*, *Coleridge*, and *Müller* should all be driven in the same direction bespeaks that a solution of the problem was perhaps impossible, from their presuppositions, along any other lines; and yet all these thinkers, avowedly or not, only banish the problem to the realm of mystery. *Müller's* fundamental assumption is that there is in us already when moral consciousness dawns an abiding 'root of sin,' so that sin does not then originate in us, but rather 'steps forth.' Like *Kant*, he also endeavours to see the source of sin in the will abstracted from the appetitive factors of human nature. It will later be argued that it is in virtue of these two assumptions, both false,

that Müller's and similar attempts to explain the origin and universality of sin necessarily fail, and that with their abandonment satisfactory explanation is for the first time rendered possible.

II. THE PROBLEM OF ORIGINAL SIN IN PHILOSOPHY.—Modern philosophy first attacked the problem of evil in independence of ecclesiastical doctrine when *Spinoza* unfolded his pantheistic system. It is true that, in so far as he taught that evil is of negative character (privation or defect), *Spinoza* was in agreement with many of the Fathers, notably *Augustine*, who had adopted this view from ancient Greek philosophy and the Neo-Platonists, and had endeavoured to assimilate it with Christian theology. But *Spinoza*, in virtue of his intellectualism, identified evil with defect of knowledge, and, in virtue of his pantheism, with non-being. Evil, for him, was mere appearance, and the conception of it, he affirms, would be impossible if we saw things *sub specie eternitatis*. For *Spinoza*, then, inquiry into the problem of the origin of sin was superfluous.

Leibniz distinguished 'moral' evil from 'metaphysical' evil, or the necessary imperfection of all things finite. The latter alone he held to be necessary, and he did not regard it as the source of sin. But it is only lack of self-consistency that prevents *Leibniz* from denying, like *Spinoza*, that evil is real. Nor is it easy to find a place in *Leibniz*'s philosophical system for the orthodox doctrine of original sin. He adopted this doctrine in a form similar to that developed by *Tertullian*, and regarded all souls as existing (germinally) in that of Adam. If he had been consistent, he would have been compelled to identify original sin with the imperfection of human nature as it was created.

The doctrine of original sin received its most serious treatment, at the hands of philosophy, from *Kant*, who, while rejecting Augustinianism, developed a remarkable theory of 'radical badness.' *Kant* set out from the Christian view that the ultimate seat of sin is in the will alone, and, taking this premiss more seriously than the Fathers of the Church had done, was compelled (like *Origen* in his earlier years) to seek for a purely individualistic explanation of inborn sinfulness. His overlooking of the fact that the will does not work *in vacuo*, or in abstraction from appetitive elements common to all mankind in virtue of heredity, led him both to exaggerate the volitional factor in sinful activity and to ignore the real solidarity of the race.

Another presupposition of *Kant*'s doctrine of moral evil is the dualism of the phenomenal and the noumenal in man, which is a consequence of his general theory of knowledge. Sin, he teaches, is brought about when a man adopts the impulses of sense rather than the dictates of his reason into the 'maxims,' or subjective ruling principles, which his will appoints to itself for the exercise of its freedom. The subjective condition of the possibility of adopting evil maxims, however, is what especially needs to be accounted for. This cannot be due to any determining act in time; for the temporal, empirical world, according to *Kant*, is governed by necessity, whereas necessary moral evil is a contradiction in terms. It is therefore an innate propensity, in force before free activity is (sensibly) experienced. Its origin must be in our freedom—else it could not be called evil; and it must belong to the noumenal sphere, i.e. must be a timeless, 'intelligible,' act, which cannot be traced further without indefinite regress, and which, in the last resort, is quite inscrutable.

The 'intelligible act' and the division of man into the phenomenal and the noumenal are in

themselves obscure conceptions, which, when worked out in the subsequent development of the Kantian teaching, proved futile. And other difficulties inhere in his doctrine of radical evil. In the first place, the evil maxim is one of those pieces of ingenious mental machinery of which *Kant* was so surpassingly inventive. It has no meaning for actual experience, and is superfluous. Further, it is difficult to conceive how the supersensible essence of man which gives him the categorical imperative could also give him the evil maxim. Similar difficulties might be multiplied; but it will be more profitable to inquire why it is that *Kant*'s investigation of the origin of sin avows that it leads only to inscrutable mystery.

It is surprising that *Kant* should set out from the statement that sinfulness is absolutely universal among mankind, as if this were an *a priori* principle, whereas the universality of sin is but an empirical generalization—and not an exceptionless one—unless original sin be first proved on independent grounds to be a fact. The one side of the antithesis which it is his intention to resolve is therefore not an absolute or necessary truth, but an approximate generalization based on necessarily inadequate knowledge; it does not therefore require for its adequate explanation, as *Kant* seems to assume, to be derived with logical necessity from an universal or *a priori* principle. *Kant*'s quest in supersensible realms is, in fact, from the outset unnecessary. That he failed to take the right road saves us from concluding the non-existence of the goal that he never reached.

Again, that there is an evil bias (in *Kant*'s sense of the word 'evil') in us at birth is by no means an unchallengeable premiss. *Kant* must call our propensity evil if he is to enjoy the right to call it blamable; but he merely assumes—after the manner of uncritical common sense—that it is morally blamable, in order to deduce its volitional character. This is to argue the wrong way round. The propensities inborn in human nature are now known to be existent before will has emerged into actuality, much more before will is capable of moral choice. If we do not assume volition to exist until we empirically find it, and impute guilt only where we see volition, we avoid the necessity for resort to the supersensible; for the possibilities of the phenomenal have not been exhausted. Such are the radical errors in *Kant*'s procedure. He assumes that conduct below the standard of moral perfection is blamable or guilty; consequently he has to prove such conduct to be volitional. To make it volitional he has to assume volition where experience tells us there is none, and morally evil propensity where as yet there cannot be any. *Julius Müller* arrived practically at the same negative result as *Kant*, because he too set out from some of the same presuppositions.

Hegel is another of the greater philosophers who have devoted considerable attention to the subject of original sin, though his references to it are scattered, and perhaps somewhat desultory. He regards the natural (unmoralized) state as inherently evil, because not morally good, or something which 'ought not to be'; and it is thus that he interprets the Christian doctrine of original sin. Original sin, in fact, is a defect of nature, and simply expresses the truth that the natural man is at first only potentially good. Of course, the Christian doctrine means much more than this; otherwise it would be well to substitute for 'original sin' some other name, wholly unsuggestive of strictly moral implications, and to declare roundly that 'original sin' is not sin.

Schleiermacher's tendency, in spirit though not in letter, is in this direction. He retains the term *Erbsünde* not at all in the old sense of inherited

corruption, but as simply expressing the universal sense of the need of redemption, or the influence on the individual of the actual sin of the human environment. Schleiermacher, practically for the first time since Pelagius, shifts the emphasis from physical to what is now called social heredity. The guilt of what he calls original sin attaches to an individual only in respect of his membership of a guilty race, and his making the common sinfulness his own. But this is merely to blur the line between inherited disposition and acquired habit.

Ritschl regarded Schleiermacher's treatment of original sin as sophistical. But he himself seems to have considered the social heredity of evil influences sufficient to take the place of physically inherited disharmony of nature as an explanation of the universality of sinfulness. And, indeed, several more recent attempts to explain and justify the doctrine of original sin reveal the same tendency. Social interaction, however, is insufficient to account for the general prevalence of moral evil. Something universally and unconditionally present in human nature is called for. Ritschl hints at this condition of practically universal sinfulness when he teaches that evil springs out of the merely natural impulses. But he made no attempt to lay the foundations of a psychologically accurate theory of sin, and, while recognizing the relevance of moral development to the question, ignores factors other than ignorance in his account of the origin and growth of sin.

It will appear from this brief sketch of the chief contributions from philosophy to the discussion of original sin that the ecclesiastical doctrine has received no support therefrom. It has not infrequently been repudiated by philosophers on account of inherent difficulties, and, when the conception has been retained, it has practically always been so completely transformed as scarcely to persist, except in name.

III. ORIGINAL SIN IN RELATION TO RECENT THOUGHT; CRITICISM AND RECONSTRUCTION.—Until quite recently the doctrine of original sin, in its traditional form, received almost unquestioned acknowledgment within the Church. Poets and men of the world have frequently voiced their agreement with theologians as to its truth. This is largely because original sin has been confounded with the general tendency of mankind towards actual sin, and a hypothetical cause of the universality of sin has been mistaken for the observed manifestations of sinful volition. Original sin is not a fact, however, but an inference, an alleged, conjectural, explanation of the facts. At the same time, there has seldom been wanting evidence of dissatisfaction with the theory in individuals here and there; and this recurrent dissatisfaction has been occasioned by the violence offered to the moral consciousness when called upon to attribute guilt to that for which the individual person is not responsible, or to reconcile the divine entailment of hereditary loss of moral endowments, or acquisition of spiritual fetters, with the divine justice.

At the present day, however, not only is original sin recognized not to be of the nature of observed fact, and sometimes felt to be an oppressive doctrine, but the various foundations on which it was supposed to be securely based have been severally called in question. It is seen to have no basis in Scripture save in an incidental analogy drawn by St. Paul, and it is known that he derived his conception of Adam and the Fall from free Jewish speculation. It is recognized that the doctrine of the unfallen state of man—the necessary presupposition of a doctrine of original sin occasioned by a 'fall'—is equally unscriptural, and due partly to the fancies of Jewish Haggadists and partly to erroneous Patristic exegesis. But more than this:

evolutionary anthropological science has rendered belief in a primitive state of simple moral rectitude, and a general 'fall' therefrom, almost impossible; psychology and biology make acceptance of the idea that human nature could be deranged by an act of sin, or that such an effect, if caused, could be propagated by physical heredity, extremely difficult; and these sciences, guided by the theory of evolution, are able to supply an explanation of the presence in man of appetite and impulse which prompt the will to sin, and so remove all necessity to invoke a catastrophic fall in order to account for the world-wide prevalence of sin. Genetic psychology, once more, has established that man is (necessarily and normally) an impulsive before he is a volitional animal, and a volitional before he is a moral agent, and so furnishes knowledge which makes superfluous all conjectures as to 'a root of sin' in us at birth, or an innate sinfulness which, when moral consciousness awakes, 'steps forth.'

Thus modern science has supplied ideas and facts which suggest not only the manifold erroneousness of the traditional doctrine of original sin, but also the lines along which may be sought a substitute for the old conception, equally capable of explaining the facts which the idea of original sin was fashioned to explain, while free from its scientific, psychological, and ethical deficiencies. If Christian theology is to adhere consistently to the doctrine that sin proper is always volitional and intentional activity—and this is fundamental for Christian theology and ethics—then it must unreservedly allow that sin proper cannot be inherited. It must repudiate the correlation of guilt with original sin, and must admit that in adhering to the phrase 'original sin' it uses 'sin' in a metonymical sense; 'original sin' must mean merely the solicitations of the lower nature, conceived of prophetically as sin because they constitute its potentiality. It must further recognize that these solicitations do not imply withdrawal of any supernatural graces by which they were replaced or coerced, or any dislocation or corruption of human nature; that they are necessarily and normally inherent in that nature as such, in virtue of our animal ancestry; that they are 'stock tendencies,' morally neutral in respect of the good or the evil which the will may make out of them, and non-moral in virtue of their necessary presence and their non-volitional character at birth; that they are what the Schoolmen called *fomes peccati*, not sinful in themselves. What is original cannot be sin, and sin cannot be original. Yet it is precisely these neutral and non-moral conative elements, fixed by heredity in the human species without exception, that account for racial solidarity in sinfulness. It is they that are original, innate, and universal. Augustine substituted for them, in order to account for the universality of sinfulness, a corruption of nature and a fictitious sinning of each individual in, or with, Adam; Kant and Müller, overlooking their non-morality, saw in them signs of a mysterious root of sin present before birth, and so were led to abandon race-solidarity for individualism. But the view just indicated preserves the fact of racial solidarity while leaving room for the individual responsibility and guilt. Empirical science thus succeeds where *a priori* methods failed, and gives a natural explanation of the origin of sin where previous methods merely led to inscrutable mystery. And this view, in accounting for the origin of sin in both the race and the individual, explains the practical universality of sinfulness. For the inherited appetitive propensities, natural and necessary for the animal life of our non-human ancestry, are entrenched in every one of us before the moral consciousness dawns, and require incessant coercion

and voluntary direction throughout life. Here is the precondition of human morality, which is not provided by volition and conscience alone; and also the explanation of the familiar fact that, among human beings who have attained to complex moral life, none has absolutely avoided moral failure at some time and in some degree. *Ex uno omnes.*

Thus may be reconstructed the doctrine of original sin, its errors being discarded, and the vital truth which it sought to express being retained. If the reconstruction be sound, it will appear that there was more aimed at in the old ecclesiastical theory than can possibly be re-stated in terms of social heredity alone. From the time of Schleiermacher various attempts have been made to explain the universality and the propagation of sin in terms of the influence, after the dawn of moral consciousness in the individual, of the social environment. The most recent, and perhaps the most interesting, is that of J. Royce (*The Problem of Christianity*, i., New York, 1913). Original sin is exalted by him into one of the fundamental doctrines of Christianity, and he uses the phrase to denote a moral burden from which the individual can never be saved apart from the Church. The moral self, Royce affirms, is bred through social conflict. The community relieves the first tension between individuals by its codes, thus evoking and educating moral consciousness and at the same time creating new tensions, and heightening self-will, which perhaps obeys, but with internal revolt. Cultivation breeds at the same time civilized conduct and conscience independence. Thus conscience is a product of spiritual warfare, and our knowledge of good and evil is inevitably tainted by its origin. The 'divided self' produced by social life in every individual is what should be meant by 'original sin'; it is a human necessity, inhering in the conditions of the development of self-consciousness.

Such emphasis on the influence of social life and the social conditions of moral consciousness is called for in any complete account of sin. But it needs to be supplemented by insistence on the factors derived through physical heredity, and which until lately Christian theology, from lack of the requisite empirical knowledge, was not in a position adequately to describe.

LITERATURE.—For history of Jewish and Patristic doctrine, F. R. Tennant, *The Sources of the Doctrines of the Fall and Original Sin*, Cambridge, 1903; R. Rietzsch, *Gesch. und Kritik der kirchl. Lehre von der ursprüngl. Vollkommenheit und vom Sündenfall*, Leyden, 1881; J. Turmel, *RHLR* vi. [1901]. Full references to original literature will be found in the first and last of these writings. For recent thought, critical and reconstructive, or conservative (in addition to works referred to in the art.), O. Pfleiderer, *Philosophy of Religion*, Eng. tr. of 2nd ed., London, 1886-88, iv. 34-38; F. R. Tennant, *The Origin and Propagation of Sin*, Cambridge, 1906; J. Orr, *Sin as a Problem of To-day*, London, 1910; F. J. Hall, *Evolution and the Fall*, New York and London, 1910; W. E. Orchard, *Modern Theories of Sin*, London, 1909.

F. R. TENNANT.

ORISSA (Orisā, Skr. Odra-deśa, 'the land of the Odra race').—1. Name and statistics.—The meaning of the term Odra is disputed. It is popularly derived from Skr. *odra*, the Chinese rose, which grows in its jungles; Lassen believes that the word means 'north country'; modern Hindus explain it as 'land of filth', in allusion to the low estimation in which the country is held by Sanskrit writers and the modern belief in the stupidity of its people. Orissa is a division now forming part of the province of Bihar and Orissa, the result of changes of administrative areas which came into effect in 1912. Its area is now 8,238 sq. miles, and its population 4,188,109. Of this population 4,059,744 (96.93 per cent) are Hindus; 113,708 (2.72 per cent) Muhammadans; 5145 (·12

per cent) Christians; 8770 (·21 per cent) animists; 434 (·1 per cent) Buddhists; with 308 whose religion was not described. As usual, the majority of the animists seem to have been recorded as Hindus. The Hindu population is predominant in the alluvial tract between the sea and the Chotā Nāgpur plateau; the animists are mostly found in the hilly inland region.

2. Language.—The language of Orissa is known as Oriyā, Odri, or Utkālī, the last term being derived from an old name of the division, Utkaladeśa, 'the glorious country,' or 'the outlying strip,' in reference to the Ganges valley. It is spoken by 95.96 per cent of the population. The earliest written example of it is found in an inscription of the 13th century A.D.

Oriyā is handicapped by possessing an excessively awkward and cumbrous written character. This character is, in its basis, the same as Dēva-nāgarī (the script in which Hindi is written), but it is written by the local scribes with a stylus on a talipot palm leaf. The scratches are themselves legible, but in order to make them more plain, ink is rubbed over the surface of the leaf and fills up the furrows which form the letters. The palm leaf is exceptionally fragile, and any scratch in the direction of the grain tends to make it split. As a line of writing on a long narrow leaf is necessarily in the direction of the grain, this peculiarity prohibits the use of the straight top line which is a distinguishing peculiarity of the Dēva-nāgarī character. For this, the Oriyā scribe is compelled to substitute a series of curves, which almost surround each letter. It requires remarkably good eyes to read an Oriyā printed book, for the exigencies of the printing press compel the type to be small, and the greater part of each letter is this curve, which is the same in nearly all, while the real soul of the character, by which one is distinguished from another, is hidden in the centre, and is so minute, that it is often difficult to see. At first glance, an Oriyā book seems to be all curves, and it takes a second look to notice that there is something inside each. Oriyā is sometimes called a dialect of Bengālī, but this is incorrect. 'It is a sister, not a daughter, and the mutual points of resemblance are due to the fact that they have a common origin in the ancient Māgadhā Apabhraṃśa' (G. A. Grierson, *Census of India*, 1901, vol. i., 'India,' pt. i. p. 316 ff., vol. vi., 'Bengal,' pt. i. p. 321).

3. Religious history.—The earliest inhabitants were non-Aryan tribes like the Kandhs (*q.v.*) and Savaras. At the dawn of history Orissa formed part of the kingdom of Kalinga, which stretched from the mouths of the Ganges (*q.v.*) to those of the Godāvarī (*q.v.*). On the early history see J. Beames, *IA* i. [1871] 74 ff.

(a) *The Buddhist period.*—In the early Buddhist period it was invaded by the Yavanas, a tribe whose history is obscure. This name is often applied to the Ionian Greeks, and Hunter tries to prove that they were Græco-Bactrians. But in Orissa the word probably means no more than that they were, from the Hindu point of view, foreign barbarians. They entered Orissa from the north-west and probably brought Buddhism with them (J. Fergusson and J. Burgess, *The Cave Temples of India*, p. 60 f.; W. W. Hunter, *Orissa*, i. 207 ff.). In 261 B.C. the country was conquered by Aśoka (*q.v.*), and one of his edict pillars is found at Dhauli about seven miles south of Bhuvanavar in the Puri District (V. A. Smith, *Asoka, the Buddhist Emperor of India*, Oxford, 1909, pp. 131, 179 ff.). Buddhism remained the religion of the land, and the tooth relic was honoured there, intermittingly it may be by the kings, but certainly by the people, down to A.D. 322, when it was removed to Ceylon. Buddhism survived in an attenuated form under the last Yavana kings (328-474), when it was finally abolished by the Keśarī dynasty. The extensive series of Buddhist caves has been fully described by Fergusson-Burgess (p. 55 ff.; cf. Hunter, i. 180 ff.). Among those at Udayagiri and Khandagiri the finest is the Rānī kā Nūr, or Queen's Palace, which is inferior to the great *cāhāras* of W. India, and owes its interest more to sculpture than to architecture. It was excavated in the 1st century A.D. The Buddhist pilgrim, Hīnen Tsiang (Yüan Chwang; A.D. 629-645), visited Orissa. He calls the country U-cha, i.e. Odra.

'The people are uncivilised, tall of stature, and of a yellowish black complexion. Their words and language differ from Central India. They love themselves to it without intermission. Most of them are law of Buddha. There are some hundred *saṅghārāmas* [monasteries], with 10,000 priests. They all study the Great Vehicle. There are 50 Dēva [Hindu] temples in which sectaries of all sorts make their abodes. The *stūpas*, to the number of ten or so, point out spots where Buddha preached. They were all founded by Aśoka-rāja' (S. Beal, *Buddhist Records of the Western World*, London, 1884, ii. 204 f.).

Buddhism has now practically disappeared, the only survivors of this faith being a small colony in the Baramba State, among a caste known as Sarāk, a term derived from Skr. *śrāvaka*, 'a hearer,' used by the Buddhists to designate the second class of monks, who mainly occupied monasteries, as distinguished from the Arhans, the highest class, who lived solitary lives as hermits, and the lowest class, the Bhikṣus, or mendicants, who supported themselves by begging (*Census of India*, 1901, vol. vi., 'Bengal,' pt. i. p. 427 f.). The Vaiṣṇava cultus at Jagannāth (*q.v.*) preserves clear survivals of Buddhism, and the same origin is attributed to the cult of Dharma which is current among Pods, Doms, and other menial castes (*ib.* i. 157, 201).

(b) *Saivism*.—On the downfall of Buddhism as the State religion, the cult of Śiva was established by the Keśari, 'the long-haired' or 'lion' dynasty, at Bhuvanesvar about A.D. 500. This sacred city was built between that date and 657, and the cult-titles of Śiva established there were Maheśvara or Mahādeva, 'the great lord,' Bhuvaneśvara, 'lord of the earth,' Brahmeśvara, 'lord of lords.' From this period dates the introduction of the Brāhmans. The Keśari dynasty is said to have imported 10,000 Brāhmans from Oudh, and to have settled them at Jājpur on the sacred river Vaitaraṇī. Jājpur is now desolate, having been destroyed by the Muhammadans, but an annual fair is still held in honour of the sacred river, and the site contains some fine images of Indrāṇī, consort of Indra, lord of the atmosphere, and of Varāhiṇī, consort of Varāha, the boar incarnation of Viṣṇu—immense monoliths dragged by an enormous expenditure of labour from the mountains of the Tributary States 100 miles distant (Hunter, i. 238 f., 265 f., 267, ii. App. 67).

(c) *Vaiṣṇavism*.—On the downfall of the Keśari dynasty, which favoured the cult of Śiva, they were succeeded by the Chor Gangā dynasty of Kalinganagar. The latter were devoted Vaiṣṇavas, and under their auspices were erected the famous temple of Jagannāth at Puri and the Black Pagoda, built by Languliya Narasiṃha in A.D. 1238 at Konārak, a title meaning 'the *arka* (sun-god) at Kona' (*IGI* xv. 391 f.). Sun-worship also appears at Jājpur and other places, and the cult of fire at Santīśvara, 'lord of peace,' at the temple near Jājpur (Hunter, i. 286).

4. *Hinduism*, its present position.—Orissa is thus one of the most distinctively Hindu regions in India. The Brāhman community is numerous and influential. At Puri they are divided into two classes, Vaidik and Laukika. The Vaidiks, or priests learned in the Veda, are said to be descended from immigrants from the Ganges valley, who appeared in the 12th century A.D. They are divided into two groups: the Kulīṇa, who are notorious for their exaggerated polygamy, and the Srotiya, or those learned in the scriptures. The second class, the Laukika, or 'worldly,' are supposed to represent the original Aryan settlers (Hunter, ii. App. i. 7, App. ii. 37 ff.).

5. *Animism*.—The animism of Orissa presents no distinctive features, and it has been already described (artt. BENGAL, DRAVIDIANS [North India], KANDH). The village godlings are, as a rule, feminine, and are known by the titles of

Grāmdēvatī or Thakurāṇī. Each village has one of its own, and their status was officially recognized in the first regular land settlement, when a piece of land was left unassessed to provide for their worship (*Census of India*, 1901, vol. vi., 'Bengal,' pt. i. p. 280, note).

6. *Islām and Christianity*.—Neither Islām nor Christianity has as yet attained much success in the priest-ridden area.

'The missionaries have been the pioneers of popular education in Orissa, as indeed everywhere throughout Bengal. Their labours date' from 1822; 'and during this period they have not only made a small population of converts, but they have, by schools and printing-presses, introduced a new culture and a new literature into the District Capitals of Cattaek and Balasor. The Cattaek Mission has chiefly received its pastors from the Baptists of Derbyshire and Nottingham.' During recent famines they have supported a large number of orphans, whom they have trained to agriculture. Other missionary bodies are the American Free Will Baptists and the Roman Catholics (Hunter, ii. 141 f.).

LITERATURE.—*IGI* xix. 248 ff.; W. W. Hunter, *Orissa*, London, 1872; Rājendralāla Mitra, *Antiquities of Orissa*, Calcutta, 1875-80; A. Sterling, *Orissa*, London, 1886; J. Fergusson and J. Burgess, *The Cave Temples of India*, London, 1880; E. A. Gait, *Census of India*, 1901, vol. vi., 'Bengal,' 1911, vol. i., 'India'; L. S. S. O'Malley, *Census of India*, 1911, vol. v., 'Bengal, Bihar, Orissa, and Sikkim.'

W. CROOKE.

ORMAZD.—Ormazd is the Parsi form of the name of the highest god of Mazdeism, the principle of good opposed to Ahriman (*q.v.*), the lord of the bad creation. This form, which has become the current one for non-specialists, is an adulteration of Pahlavi Auharmazd, coming from Avestan Persian Auramazda, while, in the oldest portion of the Avesta, the name is not yet felt as a compound and is generally Mazdāh or Mazdāh Ahura. Ahura is a title given not only to Mazdāh but occasionally to Mithra (*Yt.* x. 25, 69) and to Apām Napāt (*Ys.* ii. 5, i. 5, lxv. 12). It is, however, given with a special persistence to Mazdāh, and Ahura employed *kar' ētōxšn* without further determination is always the supreme god, Mazdāh, as, in India, the great Asura is Varuṇa. In India the word *asura*, the equivalent of Ahura, is used for a deity in general and more especially for a god or a spirit endowed with a mysterious power (*maya*). As for Mazdāh, it is the Iranian form of Skr. *medhas*, 'science.' Etymologically, Ahura Mazdāh is thus 'the knowing one,' 'the omniscient,' or 'the wise Ahura,' a title sometimes given in the Vedas to Varuṇa (*Rigveda*, i. xxiv. 14: *asura pracheta*).

In the fully developed Mazdean system of the Sasanian period Ormazd is the real god, being called in Pahlavi books 'the being *par excellence*, the One who was, who is, and who shall be, the pure intangible spirit, the spirit of spirits.'¹ He is omniscient and omnipotent, perfectly good, beneficent to all, benevolent and merciful. Being the spirit of light and of wisdom, he foresees the end of his struggle with Ahriman. The latter, on the contrary, being the spirit of darkness and ignorance, possesses only a knowledge of past events. He is rather a negative being, having the reverse of all the qualities possessed by Ormazd. He is the generator of all evil and evil beings which are opposed to Ormazd's creatures. Though he is to be finally conquered by Ormazd, he is no emanation from him and his being is the limitation of Ormazd, who, as an unavoidable consequence of dualist principles, cannot possess infinity. The *Bundahishn* tries to explain the rather curious relation in which the one stands to the other:

'Both spirits are limited and unlimited, for this supreme light is called infinite and there is a void between the two and thus the one is not contiguous to the other, and, secondly, both the spirits are limited as to their bodies' (i.e. the partial extension of their personality).²

¹ L. O. Casartelli, *La Philosophie religieuse du Mazdeisme sous les Sassanides*, vii. § 27.

² *Bundahishn*, i. 5.

Consequently, Ormazd has an aspect and a residence different from Ahriman's. He dwells in the eternal and endless light, while Ahriman lies in darkness so thick that the hand can grasp it.

The intricacies and the mass of contradictions into which dualism leads in its ultimate consequences have induced the religious philosophers of Sasanian times to look for some principle of unity above Ormazd and Ahriman. One of these attempts is characterized by the famous theory of the boundless time (*zervan akarana*), which was represented as having generated both Ormazd and Ahriman. Another school found in fate (*bakht*) a primordial principle. In spite of those efforts, the Mazdæan theology remained dualistic in form, though the very negative nature of Ahriman makes Ormazd practically play the part of a monotheistic god (see DUALISM [Iranian]).

The exalted conception of God in later Mazdæism, as well as the theory of dualism, is traceable to the Iranian religion of older times, as we find it both in the Avesta and in the Achæmenian inscriptions.

The *Gāthās*, the oldest and finest portion of the sacred book, which very likely date back to Zoroaster himself, tell us (Ys. xxx. 3 f.) that at the beginning of the world two spirits manifested themselves, one as the good one, the other as the evil one. They created the world animate and inanimate. Men have to make their choice between those spirits, and the wise know how to choose; not so the fools. At the end of things the former will triumph with the victory of the good spirit.

Mazdāh Ahura is for Zoroaster the god of the supreme law, the law of justice and truth (*asha*), who wants men to follow his path, practising good words, good thoughts, good deeds, rejecting the works of the mendacious spirit (*druj*) so that they can reach the kingdom (*xshathra*) of blessings (*adā*), which is the reward (*ishti*) of the just in this life and after. Mazdāh is spoken of in the most exalted terms:

'This I ask thee, tell me in truth, O Lord, Who was the first originator and the father of Right? Who gave to the sun and the stars their path? Who made the moon to wax and to wane? All that, O God of Wisdom, I wish to know and other things, O Lord! Who gave a fundament to the earth and to the clouds, so that they would not fall? Who created water and plants? Who gave swiftness to clouds and wind? Who is the creator of the Good Spirit (*Spenta Mainyu*)? . . . O Lord, I ask thee, tell me in truth, Who is the artist who made light and darkness? Who is the artist who made sleep and watch? Who made morning, mid-day and night, that reminds the wise of their duties?'¹

He is thus the *asura* of marvellous science and mysterious power, the knowing one, the seeing one. He appears in the *Gāthās*, above all, as the omniscient protector of morality. His strong personality has no material aspect, though he is essentially a god of light.

Auramazda, the great god of the Persian Great Kings, appears with a very exalted character also on the Achæmenian inscriptions. Darius gives himself out as an Auramazdæan, and in the name of his god he proclaims the truth of his statements. It is Auramazda who made Xerxes a king.² Auramazda is the 'great god' (*mathishta baganām*). He is all-powerful by his will (*vashna*), and it is he who makes the nations into slaves or tributaries of Darius.³ He gives the victory in battle. He is the god who knows all and provides (§ 18) for all. He is the god 'who created these heavens, who created this earth, who created man, who created man's happiness.'⁴

Auramazda stands high above the other deities mentioned in the inscriptions, the *aniya bagāha*, 'minor gods,' also called 'gods of the clans.' Two gods, however, are spoken of in a more conspicuous way, and form with Auramazda a kind of a triad:

Mithra, who is in close relation to the sun, and Anāhita, the goddess of the fertilizing waters.

Herodotus¹ does not mention Auramazda. He observes that the Persians have no images or shrines. They offer sacrifices on the highest peaks of the mountains to Zeus, calling the whole vault of the sky Zeus. They also sacrifice to sun, moon, earth, fire, water, and winds. In this the Greek historian, though he depicts a situation apparently very different from what we have in Mazdæism and in the Old Persian inscriptions, gives a very precious account of the Indo-European elemental cult, centring in Dyēus. He gives us thus to understand that the old Aryan beliefs had been preserved with a remarkable purity by the people of Irān.

Though it would be exaggeration to say, as some have said,² that the gods of the Indo-European pantheon were indifferent to morality, since we find the Homeric Zeus, e.g., protecting guests, faithfulness to oath, etc., we may safely assume that there is great contrast between the elemental gods of the sky, invoked on account of their might, and Ahura Mazdāh, who is essentially the guardian of morality. While Dyēus as the god of the sky is surrounded by gods who embody the forces of nature—moon, stars, wind, fire, earth, etc.—Ahura Mazdāh in the Zoroastrian system is at the head of a certain number of personified moral entities—Asha, 'justice,' 'truth'; Vohu Manah, 'good and religious mind'; Xshathra, 'the reign of the good'; Armaiti, 'piety,' 'wisdom'; Haurvatāt, 'prosperity'; Amcētāt, 'immortality'; Sraosha, 'obedience,' 'rule,' etc. They are often constituted into a group of seven, the heptad of the Amesha Spentas, 'holy immortal ones.'

The religious situation in the other branch of the Aryans, as it is described in the Vedas, shows striking similarities to the Iranian one. There the cult of the Indo-European elemental deities, of the heavenly ones, is at the basis of Vedic religion, where the power of the gods and their continuous action in and through natural phenomena provide us with an exuberant mythology, but, among the deities, the group of the Aditya occupies a very special position and stands eminently for the maintenance of the moral law, reproducing to a great extent the characteristics of the religion of Ahura Mazdāh.

Here also there is a triad. Instead of Mazdāh, Mithra, and Anāhita, we find Varuna, Mitra, and Aryaman. The last member of the triad is different; instead of a goddess of fertilizing waters we have a beneficent and healing deity, essentially helpful to man, and invoked at times (Rigveda, I. cxli. 9) as the dispenser of beneficent waters. The identity of the first two members, on the other hand, is hardly questionable. In India as well as in Irān the eye of Mitra is the sun, with which he is watching over the human tribes (*ib.* III. lix.). His activity is expressed by the verb *yaj*, which is also used for the payment of debts (in Rigveda, II. ii. 4, he and Varuna are mentioned as the gods who make men pay their debts). He is the god of contracts and pledges. Those who do not abide by their pledged word are sinning against him, like the *mithrōdruj*, 'breakers of contract' in Irān (Yz. x. 2, 45, etc.).

The original identity between Varuna and Mazdāh is also generally accepted. Varuna is the most exalted deity of the Veda. As it was the will of Mazdāh that had made Darius a king, it is Varuna's will or command (*vrata*, *dhāman*) that rules the world. He is the *dhr̥tavrata*, he whose commands are firm and immutable. His will is often identified with the *rta*, the *asha* or *arta* of

¹ Ys. xlv. 3-5.

² E.g., H. Oldenberg, *Die Religion des Veda*, p. 284

the Iranians, which is the great law of the world, moral and material, the principle of all order, causing the sun to rise, rain to fall, rivers to flow, fire to come out of the rubbed sticks (*rtajan agni*), and imposing on man the moral obligations of justice, truth, and piety. If man be guilty of rebellion against the *rta*, he becomes loaded with the chains of Varuna and has to pray him to be released from his fetters and obtain the freedom of innocence (*aditi*).

'Sunahcēpa, bound to three pillars, invokes thee, O Aditya, O Varuna, O king, release him . . . May our prayer and our sacrifice release us from thy wrath, of thee who art the king, wise Asura, release us from the chains of the sins which we have committed. May Varuna make loose my chain . . . may we then follow thy path and go to Aditi.'¹

As Ahura Mazdāh is surrounded by a court of moral hypostases, so the wise Asura of India is the first in a group of personified religious abstractions—the Ādityas. Their number is not quite fixed, but in its oldest form the group was a heptad as in Irān, and in both countries the seven-number appears to be a ready-made frame into which entities have been introduced out of a larger number, so as to fill up a group previously put at seven. In India, among those abstractions we find Bhaga, 'good lot,' Āṁsa, 'the share,' Dakṣha, 'ability,' etc. If they happen not to be the same as the Amesha Spentas, it is probably a mere chance, because the equivalents of the various religious hypostases of Irān are to be found also in the Vedic mystic. Not only does *rta* correspond to *asha*, *arta*, but *aramati*, 'piety,' 'prayer,' is the equivalent of *ārmaiti*, 'piety,' 'wisdom,' *kṣatra* is the kingdom of Varuṇa as *Xshathra Vairya* is the realm of Mazdāh, *saurvatāti*, 'integrity' is *Haurvatāt*, while the conception of the good mind (*Vohu Manah*), though not found in the Vedas, seems to have belonged to the moral vocabulary of the ancient Indians, since one of these Vedic priests is called Vasumanas, 'he who possesses good mind.'

The original identity between Mazdāh-Mithra and the Amesha Spentas, on the one hand, and Varuṇa-Mitra and the Ādityas, on the other, can thus be established as regards their moral aspect, which is by far the most developed and the decidedly prominent character of those deities. Even in India the physical attributes of those gods are in the background, though they are associated with light more clearly still than in Irān. Āditya in later Skr. has even become a name of the sun. The sun also is explicitly mentioned as being the eye of Mithra, and the connexion of Mithra with the sun in India as well as in Irān does not seem to be doubtful.

As for Varuṇa, he is sometimes said to preside over night while Mithra is the god of the daylight. The Atharvaveda, which shows us the more material side of ancient Indian religion, says:

'God at night becomes Varuṇa, at dawn he rises up in the form of Mithra. All that Varuṇa has concealed during the night, Mithra discloses at dawn.'²

On account of such passages and of the reiterated statement of commentators that Mithra is for day and Varuṇa for night, Oldenberg thinks that, since Mithra's connexion with the sun is fairly evident, Varuṇa must at one time have been put in some relation to the moon. The material aspect of this god, practically forgotten in the Rīgveda, in presence of his high moral character, has subsisted to a certain extent in the more or less gnostic or magical teaching about the gods, such as we find it in the Atharvaveda. In Irān the moral aspect of the great Ahura Mazdāh is still more prominent. Some epithets seem to refer to a previous period when there was a connexion between Mazdāh and the night-sky:

¹ Rīgveda, i. xxiv. 10-15.

² Oldenberg, p. 191.

'When Ahura Mazdāh who has put on his cloth, made by the spirits and adorned with stars, is there with Mithra and Rashnu and the Holy Ārmaiti who has neither end nor beginning' (Yt. xiii. 8).

In a hymn to the moon (Yt. vii. 3) it is said to be the abode of the Amesha Spentas, from which they bestow their blessings on the earth created by Mazdāh. The moon is repeatedly called the *ratu*, 'master,' 'patron,' of Asha, 'justice' (Yt. vii. 3, 4, 6).

Not only is the material aspect of Varuṇa-Mitra thus decidedly secondary to their moral activity, but even their names seem to refer to the latter. A. Meillet³ has made it fairly probable that Mithra is the same word as Skr. *mitra*, 'friendship,' Av. *mithra*, 'contract,' and possibly Varuṇa is a derivative from the same root as *vrata*, 'ordinance,' the word regularly used for his indefectible commands. He is the god of divine will, the promulgator of the law of *rta*.

The moral aspect seems thus as old as the very names of those gods, and their situation in the Aryan pantheon, as moral gods with a somewhat dim connexion with sun and moon, is the more surprising, since the Indo-Europeans already possessed deities for sun and moon as for other natural elements—Sūryā, 'the sun,' Mās, 'the moon,' as well as in Greece Ἥλιος and Σελήνη. As a supreme god, the great Asura (Mazdāh or Varuṇa) is also in direct competition with Dyēus, the sky-god, who with the Persians of Herodotus as well as with other Indo-Europeans is the highest deity, while his name does not appear in Mazdæism and occupies only a very subordinate position, as Dyāus, in India. For the priestly and ruling classes Dyēus, in his quality of the bright supreme deity, has been absorbed by the wise Asura, the god of indefectible commands, and his surrounding of moral deities, Mitra, Aryaman, and the Ādityas or Amesha Spentas.

This situation seems so exclusive of any explanation through a natural development from the naturalistic religion of the Indo-Europeans that Oldenberg,⁴ followed by O. Schrader,⁵ has come to the conclusion that Mitra-Varuṇa and the seven Ādityas are sun and moon followed by the planets and are an acquisition from the Chaldean astral religion. The prominence of the moon-god with Sumerians induces Oldenberg to believe in a specially strong Sumerian influence on Aryan religion.

Though many Indianists are reluctant to accept this theory, it has been made rather more probable by recent discoveries. In the remnants of the Hittite capital in Boghaz-Keui an inscription has been found in which the names of the Aryan gods, Mithra, (V)aruṇa, Indra, Nāsatya, are clearly mentioned along with the Hittite gods, sun (Shamash), moon (Sin), and storm (Teshab). The identification of Varuṇa with a moon-god seems thus equally probable with the equivalence between a sun-god and Mithra, and a storm-god and Indra, who is essentially the storm-god of India. As for Nāsatya it is the epithet of the Ashvins, who are in close connexion with Indra, and the same as the Av. Nāōhaithya, an Ahrimanian spirit always mentioned in company with the *daēva* Indra. The existence of the Aryan moral gods in the 2nd millennium B.C. and the contact between Aryan and Semito-Hittite religion at that time are confirmed by the mention of Mithra on a Palestinian stele described by W. Max Müller⁶ and by a list of Assyrian gods published by Vincent Scheil.⁷ Among those gods we find Assara Mazaash (or Asura Mazdās, the old, pre-historic form of the name Ahura Mazdāh). Curiously enough, the name is immediately followed by the mention of

³ JA x. x. [1903] 143.

² Pp. 185 ff., 194.

⁵ OLZ xv. [1912] 252.

⁶ RT^r xiv. [1893] 100.

the seven spirits of heaven (Igigi, 'the strong ones') and the seven spirits of earth (Anunnaki). Now, it is to be observed that the Igigi and the Anunnaki are supposed to concentrate all spirits which have power in the world just as the world has been apportioned to the Amesha Spentas in Mazdeism (Asha is for the fire, Armaiti for the earth, Xshathra for the metals, etc.). Moreover, the number seven, which seems to have no special meaning with Aryans, is for the Babylonians the conventional expression for a great number.

Not only does the Aryan heptad around the great Asura in this way receive an explanation, but we find in Assyrian religion the equivalents of the two Indian and Persian triads. Two triads are especially apparent in the Assyrian religions system. One unites Sin (moon), Shamash (sun), and Ishtar (goddess of fertility), and corresponds clearly to the Achæmenian triad, Auramazda, Mithra, and Anāhita. The Iranian goddess repeatedly identified with Aphrodite, *e.g.*, under the name of 'Aphodīrā' *Avatris*, is the dispenser of the fertilizing waters of heaven. Another triad is mentioned in Sargon's palace—Sin, Shamash, Ramman. Ramman, an Assyrian deity, was originally a god of lightning and storm, so that the Assyrian triad, Sin, Shamash, Ramman, corresponds to the Hittite group, Sin, Shamash, Teshab. Now, Ramman is looked upon as the helper of mankind *par excellence*. The kingly name Ramman-nirari means 'Ramman is my helper.'¹ He is especially associated with Shamash, a god of justice, and, while Shamash, like Mithra, gives victory, he gives superabundance.² This makes him very near to Aryaman, 'the friend,' the beneficent, helping, healing deity of the Aryans, who bestows abundance by pouring water, and who forms the third member of the famous triad Varuna, Mitra, and Aryaman. The phonetic similarity between Ramman and Aryaman may be purely fortuitous, but may also be explainable by a folk-etymology.

It is thus by his moral side that Aryaman can be connected with Ramman. This applies also to Mithra and Shamash, Varuna and Sin. The central and essential activity of Mithra, as embodied in his name, is the protection of law and justice among men. He is the guardian of the great law of the world (*rita*) and more especially of good faith and oath, punishes pitilessly all crimes and delicts, but brings the good and the brave to victory on earth and to the abode of the blest after death. Shamash, who is mainly a sun-god with astral functions in Chaldaea, assumes in Assyria a much more decided moral character. He is for Ashurbanipal and Shalmaneser³ the judge of the world who guides mankind aright, the lord of the law who judges according to unchangeable principles (*cf.* the *rita* of the Aryans). He sees the wickedness of the foes of the country and he helps to conquer them. He is the king in heaven, and his favour produces order and stability. He loosens the bonds of the imprisoned, like Varuna and Mithra. This character comes out especially in the hymns quoted by Jastrow:

'The law of mankind dost thou direct,
Eternally just in the heavens art thou, . . .
Thou knowest what is right, thou knowest what is wrong. . . .
Oh Shamash! Supreme judge of heaven and earth art thou. . . .
O Shamash! on this day purify and cleanse the king . . .
Release him from the ban.'⁴

As the god of law, he is accompanied by two divinized abstractions—Kettā, 'justice,' and Mēsharu, 'rectitude.' It cannot be a mere coincidence that Mithra in Iran has likewise two satellites—Rashnu, 'justice,' and Sraosha, 'discipline,' 'rectitude' (*Yt.* xvi. 17, xiii. 3).⁵ *Yt.* x. 41 says:

¹ M. Jastrow, *The Religion of Babylonia and Assyria*, Boston, 1895, p. 159.

² *Ib.* p. 237.

³ *Ib.* p. 210.

⁴ *Ib.* p. 300 f.

⁵ H. Zimmern, *ERE* ii. 811.

'Mithra strikes fear into them; Rashnu strikes a counter-fear into them; the holy Sraosha blows them away from every side.'

In the Behistān inscription (§ 63) Auramazda similarly declares that 'he has proceeded with Justice and Equity.' Not only is the correspondence very striking, but the very existence of such personified moral entities in Assyria is very suggestive in presence of the peculiar hypostases-system of India and Iran.

The comparison which has proved so suggestive between Aryaman-Mithra and Ramman-Shamash can be applied to Varuna and Sin with no less interesting results. The moon-god enjoys a remarkably high prestige in the Assyro-Babylonian pantheon. The moon is, indeed, like the guide of the stars and planets, the overseer of the world at night. This was reconcilable with a high moral character. The planets became spirits subservient to his will. He is a king, a ruler of men and nature, producing stability and order, but he is also a judge who, like Varuna, loosens the fetters of the imprisoned. His light, like Varuna's, is the symbol of righteousness. He is a god of wisdom like Mazdāh. Like him also, he is a supreme god of morality, whose material side has become quite secondary. He is addressed in very lofty hymns in the same exalted tone as Varuna, and, what is most striking, he is celebrated above all as the god of strong commands, whose will is indefectible—which we have concluded to be the typical feature of Varuna, possibly expressed in his name.

'O lord, chief of the gods, who on earth and in heaven alone is exalted. . . .

Strong chief . . . who, from the foundation of heaven till the zenith,

Passes along in brilliancy (?), opening the door of heaven, Preparing the fate (?) of humanity. . . .

Lord, proclaiming the decisions of heaven and earth,

Whose command is not set aside, . . .

Thy strong command is proclaimed in heaven, and the Igigi prostrate themselves. . . .

Thy strong command on high, like a storm in the darkness, passes along, and nourishment streams forth . . .

Thy strong command produces right and proclaims justice to mankind. . . .'¹

The rest of the hymn celebrates the commands of Sin, and it is very remarkable how the hymns, which after all are our most trustworthy testimonies about the gods, emphasize both for Sin and for Shamash that very central feature which the Vedic hymns are chanting for Varuna and Mithra. This makes it probable that the great Asura of India and Iran, the protector of moral law, with his triad and his heptad of moral deities, has been introduced into the naturalistic pantheon of the Aryans, not on account of their material and astral side (the Aryans had already deities of that kind), but by reason of their moral value. They accordingly received names in connexion with that moral aspect.

It does not belong to our present task to locate with more or less precision the place where the contact between Assyrians or Hittites and Aryans took place. The discoveries of recent years leave a wide field open to possibilities. As Iranian art received its peculiar features through contact with the people of Northern Asia Minor and Assyria,² Aryan religion was under the influence of Hittite beliefs in Cappadocia. The Mittani kings entertained relations with the Harri, or Aryans, their king Artatama, and his aristocracy, the *marya*, 'men' (Arm. *mar*, 'a man').

The hypothesis of L. von Schroeder (*Arische Religion*, i., Leipzig, 1914, p. 314 ff.), that Varuna, Mithra, etc., are simply epithets of the Aryan sky-god, can be reconciled with the one given here, inasmuch as the epithets of the diurnal and nocturnal sky would not have developed into special deities if a syncretism had not taken place with Sin and

¹ Jastrow, p. 303 f.

² Cf. Perrot-Chapiez, v. 515, etc.

Shamash. The indebtedness of Aryans towards Semites in this important point of their religion must not lead us to minimize the part played by Zoroaster. The personality of the great god had not been sufficiently isolated from other deities and especially from Mithra. Zoroaster alone in his *Gāthās* has ignored Mithra, and retained around Mazdāh no deity but moral entities with a very shallow personality. Mazdāh for Zoroaster concentrates in himself all science, all virtue, all good. He is the supreme and constant object of man's hope and desire. The dualistic conception has prevented him from developing a complete monotheism, while the realistic though imaginative temperament of the Persians has dwelt in symbolism and has always ignored Indian mysticism, let alone Christian love of God.

ORTHODOX EASTERN CHURCH.—See EASTERN CHURCH, GREEK ORTHODOX CHURCH, RUSSIAN CHURCH.

ORTHODOXY.—To be 'orthodox' is to hold or profess opinions which are regarded as in some sense 'right.' *Orthodoxia* is the character of a 'right-thinking' person, society, school of thought, or Church. *Erepoðoxia*, an awkwardly formed yet useful derivative, is the character of thinking which is 'other' than right. Neither term attempts in itself to indicate what constitutes 'rightness,' and in practice there is a constant danger that the distinction between them may revert to the primitive difference on which Byron's wit fastened when he said: 'Orthodoxy is my doxy, Heterodoxy is another man's doxy.' Orthodoxy is thus very apt to denote nothing more than the accepted faith of a particular denomination regarded complacently from its own standpoint, heterodoxy being simply religious opinion at variance with it, a species of intellectual 'dissent' from ecclesiastically 'established' views. There are, indeed, as many types and standards of orthodoxy as there are distinctive denominations in the Church, and, for that matter, distinctive parties within any branch of the Church. Even when orthodoxy in a superdenominational sense is under review, it will be found that it is distinguished from heterodoxy by many considerations other than doctrinal. Its 'rightness' may rest upon traditional continuity, or upon the numerical strength of its devotees, or upon its real or supposed congruity with Holy Scripture. But at its lowest and narrowest, even when most intimately associated with prejudice, mere use and wont, or gross literalism, orthodoxy asserts a claim to credence and authority as the *truth*.

By the same instinct that has prompted schools of religious thought and ecclesiastical organizations to define with varying precision the doctrines or opinions which they have come to consider valid and right, and which they urge the world to accept as a sacred obligation, orthodoxies have also been evolved through intuition, speculation, and experience in such departments as law, morals, medicine, economics, æsthetics, literary criticism, and history. In each of these a species of dogma has established

itself through controversy or through convention, and contributes strength and stability to the structure of human life and knowledge. Against the recognition of an orthodoxy in religion there ought to be no *a priori* prejudice, for analogy is all in its favour, so long as it is not suffered to become artificial, oppressive, or blindly hostile to correction.

Strictly speaking, orthodoxy in religion is concerned only with doctrine or belief, with the intellectual element in spiritual life. It is opinion raised to its highest power and dignity. But, since religion embraces feeling and activity as well as thought, orthodoxy becomes an inadequate criterion of its worth apart from right experience and right conduct. It ought to have for its correlatives such words as 'orthopathy' and 'orthopraxy,' the inward experience and the outward exercise of piety. True religion calls for soundness of heart and of will not less than of head. It is not to be forgotten, however, that the emphasis which has been laid so persistently upon orthodoxy in all the great world-systems of religion springs ultimately from a just perception that what a man thinks, believes, or knows is supremely determinative of his experience and conduct.

It is significant and interesting that the Greek or Eastern Church has elected to designate itself the Orthodox Church, thus adhering in its name to its ancient predilection for theological discussion, whereas the Latin or Western Church chooses above all to style itself the Catholic Church, adhering with equal fidelity to its imperial instincts. Different as the titles are, they are based upon essentially similar conditions. The Eastern Church is not more jealous on behalf of sound doctrine, as it conceives it, than is the Western. The Western Church is not more alive to the value of *semper, ubique, and ab omnibus* as tests of catholicity than is the Eastern. They are conserving the same interests, operating with the same ideas, though they approach the problem of substantiating the received faith from widely separate directions. To the Greek 'truth' or opinion was the fundamental. To the Roman 'law' and 'custom' were supremely sacred. But each in vindication of his own ultimate standard instinctively had recourse to the other's principles. Universal acceptance offers an irresistible presumption of a doctrine's truth. And, in like manner, the truth of a doctrine is the surest guarantee that it will prevail and prove itself catholic.

Is there a Christian orthodoxy in fact as well as in name or claim? If there is a religion, truly one in spite of all sectarian division, to which the name 'Christian' can properly be given, there must be a Christian orthodoxy, just as there must be a Christian ideal or standard of ethical duty, moral character, and spiritual experience. The difficulty is to locate and identify it. Is it the sum of all doctrines actually received and taught among those who name the name of Christ? Or is it the common doctrine present in all systems, received in all communions? The former seems hopelessly excessive, unless incompatible teachings are permitted to cancel each other. The latter seems painfully scanty, unless a very simple residuum of uncontroversial teaching is held to be sufficient for religious needs. The problem brings the investigator into the very heart of the most delicate and distressing of all Christian controversies—the discussion as to the validity, genuineness, and sufficiency of the claim of ecclesiastical organizations, doctrinal systems, ministries, and individuals to be Christian. If orthodoxy be defined as the Christian doctrine which has been received always, everywhere, and by all, it is at once obvious that no existing system in the world

can substantiate that claim, neither the fullest nor the barest, or else, alternatively, that in reckoning the always, the everywhere, and the all we must have been enabled by some legerdemain to eliminate the countless exceptions to the rule of faith which we have arbitrarily laid down, very much in the same fashion as the necessary unanimity was sometimes secured in ancient Ecumenical Councils for momentous decisions in matters of faith by coercing, intimidating, or excommunicating the recalcitrant minority. Yet the problem must be faced with resolution and courage, for, so far from being academic or abstract, it is in reality nothing else than the problem of Christian concord and Church reunion. What is Christianity? Who are true Christians? What constitutes a Christian? What are the marks by which we may recognize a true Church, the true Church? No Christian individual and no Christian church ought to be asked to belong to a communion which has not a satisfactory title to be considered Christian, but what kind of title is to be held sufficient? The history of the Christian Church, and a survey of the Christian world, afford instant proof that there is very much in Christendom which does not belong to Christ, and also suggest that there is not a little in the world outside the constituted Church which well deserves to be ranked with Christianity. Too seldom we have gone to our supreme authority in the Gospels for guidance in essaying the problem. When we despair of discovering any unifying principle of orthodoxy in the accredited Churches and systems with their unlimited diversity and discord, we have a right, and an obligation, to turn to such indications of the mind of Christ as the Gospels preserve. The faith which Simon Peter professed at Caesarea Philippi was expressly accepted by Christ as true; its possession made Peter 'blessed'; it was not revealed to him by 'flesh and blood' but by the Father in heaven; it either was itself, or constituted him, a rock on which Christ was to build His Church beyond the reach of decay and death (Mt 16¹⁸). Its profession was for the earliest age of the Church a passport to baptism. And in fact that faith is a common possession of every Christian communion and every Christian individual to this day. It remains a sound and sacred criterion of Christian profession, a criterion which is also searching and, when seriously applied, sufficient. That it is to be applied in a tolerant and charitable spirit and at the same time heart-searchingly seems to be implied in such sayings as those in which Christ refused to forbid the worker who healed in His name though not belonging to the apostolic circle—'he that is not against us is for us' (Mk 9⁴⁰, Lk 9⁵⁰)—and extolled the child-spirit in the receiving of the kingdom of God (Mk 10¹⁵ and parallels), and bade His followers beware of false teachers in days to come:

'By their fruits ye shall know them. . . . Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven. . . . Every one therefore which heareth these words of mine, and doeth them, shall be likened unto a wise man, which built his house upon the rock. . . . And every one that heareth these words of mine, and doeth them not, shall be likened unto a foolish man, which built his house upon the sand' (Mt 7¹⁵⁻²⁷).

It was foreign to the method and design of Christ to impose or to exact a precise system or scheme of faith. The abuses of set codes of law and doctrine were only too obvious in His day. For the same reasons that led Him to write out no tables of Christian observance and practice He refrained from exacting an orthodoxy with formulated tenets. In both spheres of Christian responsibility He preferred to bequeath a Spirit. Loyalty is more than obedience. Faith is more than conviction. To trust, to revere, and to love His person,

to receive His own Spirit and to surrender one's life to its influence, is a surer guarantee of right-mindedness towards Him than any acceptance and profession of authorized opinions could ever be.

As a matter of fact, no Church in Christendom ventures or can afford to ignore those principles of sincerity and charity in the everyday economy of its own ecclesiastical life. Without exception a working latitude is assumed by the members in their relationship to official standards. In every Church the more superstitious believe more and the more sceptical accept less than dogma prescribes. There is endless variety in the measure of individual docility and credulity. No Church would arraign its members by the same standard of orthodoxy which it expects its clergy to maintain. Even in Churches which boast of their orthodoxy and make a fetish of their creed there is amazing diversity in the sense in which their doctrines are interpreted by parties, schools, and individuals within their acknowledged fellowship. In the Roman communion itself it is notorious that, though a modernist who publishes his opinions receives but a short shrift before excommunication, the modernist who keeps his counsel within his own private circle and performs the duties of his office faithfully and decorously has little to fear. And in all other Churches from Greek Orthodoxy to Quakerism room has had to be found for party differences which are at least as serious as those which separate two communions from each other. Examine the facts closely, and it becomes apparent that they rest upon no anarchical foundation. At bottom the explanation is that doctrine is but one among several tests of loyalty and bonds of fellowship. The Christian Church is everywhere and always in principle the communion of *saints*, not of identical believers. Men look for other intercourse within her bounds than the comparison of doctrinal notes. Orthodoxy enjoys no evident monopoly of the Christian spirit, of the Christian tone and accent, of the graces and virtues of the Christian life. Among both clergy and lay-folk, accordingly, it is recognized in all Churches that very different types of doctrine may live and work together under the shadow of a common rule of faith, united by a common devotion to the Church's Lord and the coming of His Kingdom. It was so among the Twelve first called. It is so among the NT writers. To the end of time it may well be so in the Church. Christian remains a greater name than Orthodox or Catholic. Ritual, doctrine, and government—these are the spheres in which denominational differences flourish and run riot. But not even when they are added up to form one sum do they become a definition of Christianity. The Christian spirit is not confined within their provinces. It may, indeed, thrive on a very limited portion of their territory as Rome gained spiritual prestige through the unwelcome shrinkage of her temporal kingdom. Grave matters though they are, they are ultimately open questions, matters for controversy and for compromise or toleration. Simplicity and complexity must learn to respect each other with regard to each of them. Behind them and above them are the ultimate tests of conformity to the will of God and the example of Christ in the outward life and in the secret heart. By comparison with these our ecclesiastical tests of orthodoxy and conformity appear poor and ineffectual indeed. It is to travesty and caricature the Divine Majesty to picture Him as deeply concerned about the particular denomination to which a human soul before the tribunal of His Son had belonged in life. The Salvation Army and the Society of Friends practise neither baptism nor the Lord's Supper, but no one will dare or care to

unchurch them who believes the rule 'ubi Spiritus ibi Ecclesia.' The Unitarian fellowship declines to profess the traditional doctrine of the Trinity, or to accept the doctrine of the deity of Jesus, but with Peter it hails Jesus as the Christ and recognizes in some sense His divinity, and its saints, scholars, philanthropists, and singers have not been cut off from the wellspring of inspiration. Partial it may be in its grasp of the verities and experiences on which any Church that aspires to be world-wide and popular must depend, but it is unmistakably Christian in its spirit and essential convictions, and has a distinctive service to render to Christendom as it is still constituted.

History suggests, accordingly, that, as ecclesiastical differentiation is not necessarily subversive of the religious unity which underlies the denominational variety of Christian life, but may be the divinely-appointed way to the permanent enrichment of Christian truth, worship, organization, so the apparently endless diversity of the doctrinal systems of Christendom is not necessarily destructive of the concept and ideal of orthodoxy. Varying systems teach us to look beyond the letter which divides and distracts to the spirit which may be the bond of unity and the common source of truth. They direct our thoughts beyond the merely or exclusively doctrinal tests of legitimacy in the household of faith. They prompt the thought that, as the vast empires of the future must be erected on an ever-widening foundation of provincial, linguistic, racial liberty and autonomy, so in the ecclesiastical future the orthodoxy which shall qualify for true membership in the Church on earth must be something at once more comprehensive and more simple than the great organizations hitherto have formulated for the purpose. The orthodoxy of a great communion is its fidelity to its *working* creed. The orthodoxy of the universal Church is, in like manner, its fidelity not to its formal or outward Confessions of Faith viewed as an aggregate, nor to any mechanically extracted essence or consensus of them, but to the living faith, personal and intellectual, devotional and practical, which each of the historic creeds and formularies is an effort to capture and enshrine in words. The Augustinian maxim, 'Securus indicat orbis terrarum,' which meant so much for Newman and his school, is a sound and invaluable principle in religious apologetics, but it is a fond imagination that seeks to harness it to the exclusive service of any particular system, however imposing. Weight of numbers, length of time, width of diffusion do tell heavily in favour of any doctrine, worship, or organization that is on its trial. That is beyond question. But other things are needed. Truth is not always on the side of the big battalions, length of days is not immune from error. Nothing is more universally diffused than sin or superstition. Christianity itself not only remains but is still likely long to remain but one of a group of religions with millions for their following, and the *orbis terrarum* has not yet completed its judgment upon its orthodoxy, its soundness for all times, all tongues, and all climes. We base our assurance of its absoluteness and finality upon something deeper than its diffusion. So with orthodoxy, we are led to adopt a discriminating attitude towards its claims. We recognize the honourable nature of the principle which inspires its formulation and recognition. We appreciate the value of the evidence which even its excesses furnish to man's sense of the power for good and evil which organized common opinion commands in the Church as in the State. We see that conflicting orthodoxies may discredit one another's exclusive claims without invalidating the presumption that in religion there is a body of truth on which all men might agree,

and without deterring truth-lovers from devoting their lives to the ardent quest for it. History does not suggest a kindly judgment upon the political, administrative, and mechanical methods which have been employed to secure the permanence of particular orthodoxies in their respective communions, for Truth is a spirit and can neither be engaged nor kept outside the bars, but the impulse to seek for a doctrine which shall hold good not for the individual merely but for all believers, a doctrine which can be received as from God because it is found to lead to God, a doctrine which has endured the tests of time and experience, has appealed to men of varying type, temper, and race, and contains within it the guarantee that it will last, is not only legitimate and honourable but vital to religion and to man.

Chesterton, *Orthodoxy*, London, 1909 (a vivacious and frequently illuminating literary apology, anything but orthodox in type, on behalf of orthodoxy).

WILLIAM A. CURTIS.

OSSETIC RELIGION.—The Ossetes are a people of about 170,000 souls, dwelling half-way along the main range of the Caucasus; their country is about 80 miles from east to west and 50 miles from north to south; through it runs the only road across the mountains, the pass of Darial; accordingly, they alone of Caucasian peoples are found both north and south of the watershed; a few also are about Mozdok in the plain of the Terek. They speak an Iranian language which shows special features that also occur in the remains of the Iranian formerly spoken in the plains of S. Russia, viz. names found in great numbers in the inscriptions of Olbia, Tanais, and Panticapaeum, one or two names of Sarmatians preserved in literature, and certain river names: Danube, Dnestr, Dnêpr, and Don all probably contain the Ossetic *don*, 'river.' It is therefore clear that the Ossetes reached their present position not from the main body of the Iranians to the south, separated from them by the Georgians and Armenians, but from the north; they are the descendants of the 'Osi' of Georgian Chronicles, the 'Yasy' of the Russians, both identified with the 'Alans,' themselves described as a branch of the Sarmatians. Their neighbours on the north are the tribes of Kabarda and now the Russians, on the east the Ingushes, Kists, Pshavs, and Khevsurs, on the south the Georgians, on the west the Balkartses, or mountain Tatars. The last are comparatively late comers, and the place names of their country show that it was formerly inhabited by Ossetes. There are two main dialects of Ossetic, Iron (the same word, it appears, as *Iran*) and Digorian; the latter, spoken in the western district and the valley of the Uruk, is more archaic than Iron, which has spread over the greater part of the country. The Alans, or Ossetes, were more or less Christianized by Byzantine and Georgian missionaries, but one of them, Theodore, in the 13th cent. calls them Christians

in name only (*PG* xli. 410, § 24). Soon after his time, under the influence of Tatar and Kabarda invasions, they superficially adopted Islām. During the past century the Russians have had a certain success in combating Islām among them; some, the more genuine Musalmāns, emigrated to Turkey, while many embraced Christianity, but they are said only to have attained to the ritual, not to the ethics or any full understanding of their new faith. Their religion consists, therefore, of the original paganism into which their former Christianity has been absorbed, covered with a surface layer of Muhammadanism now being displaced by Christianity; perhaps no Indo-European people outside India has preserved so much of primitive heathenism. This has, as it were, crystallized about the places and persons hallowed by the ancient missionaries, so that several of the powers worshipped bear the mutilated names of saints, and the most sacred spots are the sites of old churches or monasteries; no doubt many of these had been sacred long before the missionaries came.

The Ossetes reserve the name of God, *Khutsau*, for the supreme divinity, the 'God of Gods,' but, though often invoked in daily talk, he is regarded as too high and inaccessible to take part in human affairs. These are ruled by *dzwars*, saints or lesser powers—a *dzwār* (Georgian *dzhvari* = 'cross') is anything holy, a cross, a praying-place, a sanctuary, a falling star, and also one of these powers or saints—in whose train are angels, *izād* (Avestic *yazata*) or *dawäg*, and every man has a guardian angel. The chief of these powers are: *Watsilla* (St. Elias), the lord of the thunder and also of crops; *Wastyrdzhi* (St. George), imagined as riding on a white horse, the protector of good folk and their cattle against thieves and wolves; *Tutyr* (St. Theodore of Tyre), lord of wolves, and to be appeased accordingly; *Fälvära* (SS. Florus and Laurus), the kindly lord of sheep; *Ävsati*, lord of wild creatures; *Barastyr*, lord of the under world, who meets the dead and sends them to *džänät*, 'heaven,' or *zyndon*, 'hell,' according to their deserts; *Kurdalägon*, the heavenly smith; *Safa*, guardian of the hearth; *Donbyttyr*, the water-bogey, with his daughters; *Sau-dzwār*, the black saint, lord of the forest; *Rynybarduag*, lord of murrain; *Alardy*, lord of smallpox; *Khntsawy Dzwār*, God's saint, guardian of marriage and giver of children; another with much the same province is *Fyry-dzwār*, the ram's saint, who had an idol in the shape of a ram at *Dergavs*. The women chiefly reverence *Mady Mairäm*, Mother Mary, who takes the form of a big stone outside each village. Every house has its *bynaty khitsau*, 'lord of the place'; a bride must ask his leave when departing from her old home and must do homage to that of her new house; so every village has its guardian angel. There are also patrons of robbers, of travellers, of the back, giving clothing, of the belly, giving food, and so on. It is remarkable that women are allowed to pronounce the name of *Alardy* only; other powers they must refer to by a periphrasis—e.g., *Wastyrdzhi* is 'the men's saint.'

Sanctuaries as well as saints or powers are called *dzwars*; their sanctity is due to their being regarded as the dwelling-places of the personal *dzwars*. Some are regarded as holy by all the Ossetes—these are mostly Christian sites—others only by the villagers near them. By far the most important are *Rekom*, once a church dedicated to St. George, and *Mykalygabyrte*, which still contains the name of St. Nicolas. The former is full of miscellaneous offerings, horns, clay cups, glasses, beads, coins (which no one would dare to steal), and especially silver braid and cotton wool, once no doubt to serve as decoration and wicks for holy lamps, now thought of only as evidence to the *dzwār*

that due prayers have been offered. There used to be a bell with a Georgian inscription recording its dedication by George Bagration; there were many of the name, so the date is uncertain. It at least points to Georgian foundation, and some families of the neighbouring village, *Tzey*, trace their descent from Georgian clergy. But other *dzwars* are more primitive—a cave, a grove, a tree, a dolmen, a stone, and the like. Special events may make a place become a *ntog dzwar*, 'new sanctuary.' A family might have a special *dzwār*. An ancestor of the *Atait* was cutting wood when he heard a voice say 'Cease.' He tried another tree and from it flowed milk and blood. So he took the log home as a wealth fetish, and from that time the family waxed rich. It was kept till 1876, and every year a ram, beer, and arak were offered to it.

Ossetian life is a round of many feasts and fasts, several of them Christian in origin. The year begins on the Friday following new moon in the winter month *Basiltymai* (Jan. 1 is St. Basil's day); next is *Komakhsän*, guarding the mouth, and *Komdaräni*, binding the mouth, corresponding to the beginning and end of Lent; then come *Marti* (March), *Nikkola* (St. Nicolas, May 9), *Fälvära* (Florus and Laurus, Aug. 18, does not quite fit); the other names, *Amistol*, *Sosäni*, *Rukhän*, *Käfti*, *Gëwärgoba*, *Tsäpporsë*, are of native origin, except that *Gëwärgoba* contains the name George.

Religious rites are divided into two main classes: *kuud*, 'worship,' and *khist*, 'service of the dead.' Essential to all are *chirittä*, 'thin cakes'; there is usually a sacrifice as well, carried out by an old man who prays, *dräpçerä*, by singeing the hair, and makes a libation into the fire, and a young man who outs the beast's throat in due fashion. When all have sat at their tables, the head of the household makes a long prayer and the others answer 'Amen' to it; at the end he throws some of the lungs wrapped in fat upon the fire. The next in age to him makes a short prayer and pours some arak into the fire. Food and drink being thus blessed, the feast begins. Women do not come in, but eat up the leavings.

The chief events of the year are: New Year and the fetching of the waters, about Epiphany; in between comes a sacrifice of a lamb to the house-spirit, part being buried inside the house; at this time of the year some people can ride to the world of the dead and bring back the seeds of good fortune; but, if they are tempted to bring back flowers or fruit, these cause epidemics. The dead shoot at the invaders, and these, if hit, die soon after their return.

Komakhsän, at carnival time, is the general feast of the dead: each household in which a death has occurred takes its part of the village and regales it with many sheep, much arak, and beer. After a laudation of the dead man there is a horse-race in his honour, and his arms and belongings are given away as prizes. Next follows a month or more of fasting in honour of *Tutyr* to make him keep in his wolves and spare the sheep. Another explanation is that *Tshiristi* ('Christ') gives a place in heaven only to those who have only fasted; and they ask *Barastyr* to let their deserving ancestors enter heaven.

In the spring is a great festival to propitiate *Alardy*. Families join by twos, one sacrificing an ox, the other several sheep, and both providing enough beer and arak to last a month. Next comes the feast of St. Nicolas, one ox to every four families. In May comes Great God's day (i.e. Trinity Sunday) at the end of the ploughing; at this time the graves of the past year are covered with turf. This is followed by the women's service at the village *dzwār*; no man must be present except the sacrificer, and the object is to secure the

coming harvest. The next feast precedes the hay harvest; in each ward of the village an ox is sacrificed and a banquet held. At the beginning of the grain harvest each household has its own feast; the special prayer is that the year's grain shall be used for festivals and not for *khists*, or service of the dead. In August comes the festival to Fälvära for the preservation of the cattle. Then there is the harvest thanksgiving when the grain has been brought home and threshed. It is celebrated every Sunday for a whole month. Another festival marks the first ploughing for the winter corn; again the object is to secure a good crop. Next follows Khorybon, specially addressed to Watsilla. The prayer is that the harvest shall be as rich as when Watsilla sowed at Kurp (a very fertile spot) and Mairäm followed him holding the seed basket. There is also a wearing of clothes inside out and a dousing of a boy with small-beer, that the fields may give corresponding overplus. At the end of autumn is the maidens' vigil on account of Mady Mairäm. They receive pies of different sorts and divine what husbands they will have by what they find in the pies. The last sacrifice and feast of the year is in honour of Wastyrdzhi. Mention may be made of the peculiar Digorian feast of Katzbadän; it lasts five days, during which there is even more eating and drinking than usual, and a stranger found within the house is compelled to stay through it.

The *khists* in honour of the dead are as numerous as the festivals of the *dzuars*. The chief, or *styr-khist*, over a dead man involves his family and more distant kinsfolk in a sacrifice of five or more oxen, fifty or more sheep, hundreds of gallons of beer (made in special cauldrons 6 ft. high, for the hire of which they pay a gallon of beer, a sheep, and other victuals), and thousands of *khist*-cakes. All the men of the settlement are invited, and after the feast there are races and archery with valuable prizes. The women have their turn, as every Friday for a year after a death the family must provide all victuals for a feast eaten by them at the cemetery. Besides the *styr-khist* there are nine others in the course of a year. Families in which several members die one after another may be absolutely ruined, as to honour each of them properly costs about £200.

The ceremonies in connexion with birth are mainly in honour of Mady Mairäm. Those of marriage have reference to her and still more to the house-spirit. The funeral ceremonies equip the dead man with all that he may want in the next world, and show clear traces that the wife and the horse must once have followed their lord thither, as was the custom of the Scyths and Sarmatians. For a year after the death the widow wears deep mourning and must sit up every night till cock-crow waiting her husband's return. As to the relation of soul to body, the Ossetes believe that the soul is quite independent; that on the fatal day the decree of death is made by six men (for a man) or four women (for a woman); that then the 'withdrawer of souls' appears to the dying man in the form of a wolf. After the soul is withdrawn from the body it flies above it until the burial, when it re-enters it in the grave, but at once leaves it and flies to the next world, where after judgment it resumes human shape. Souls grow old in the next world and have to be fed.

Musalman influence upon the Ossetes is shown by their calling Muhammad the 'Son of the sun' (*Khori fyr*), and by their ablutions and observance of Friday, Ramadan, and other holidays; but it does not seem to have sunk so deep as the Christian element, which is now being revived.

LITERATURE.—The best authority on the Ossetes is Vsevolod Miller, on whose *Osetinskie Etydy*, Moscow, 1881-87, the above

has been based; cf. his *Die Sprache der Osseten*. Much material on their customs and beliefs is found in *Sbornik Svědění o Kavkazskikh Gortsakh* ('Miscellany of Information on Caucasus Mountaineers'), Tiflis, 1871 ff., but there is very little in languages more accessible than Russian.

OSSIANIC CYCLE.—See FEINN CYCLE.

OSTRACISM.—Ostracism was the method employed in Athens for the greater part of a century for imposing a check upon the acquisition by any politician of too great power in the State. The name is explained by the form of voting adopted, according to which each voter wrote upon a potsherd (*ostrakon*) the name of the person to be proscribed. The normal procedure was as follows. Every year at the regular meeting of the assembly (*ekklēsia*) held in the sixth prytany (Aristotle, *Ath. Pol.* 43. 5) a division was taken on the question whether the provision relating to ostracism should be put in force. If the question was answered in the affirmative, a special assembly was called to meet in the Agora for the actual voting (Philochorus, frag. 79^b [*FHG* i. 396]; Plutarch, *Aristid.* 7). The voters deposited in the urn set apart for their tribe the shell containing the name of the candidate chosen for expulsion. In order that a definite result might be attained it was necessary that at least 6000 votes should be recorded;¹ and, if this was not the case, the whole of the proceedings became abortive. If, on the other hand, the necessary number were present and voted, the nominee who obtained the largest vote was proclaimed by the public herald as subject to the penalties of ostracism. These involved removal for ten years to a fixed distance from Athens, or, in default, perpetual disfranchisement (*atimia*). The sentence must be carried out within ten days of the decree, but was subject to revocation by an extraordinary resolution. The exile was allowed the enjoyment of his property during his banishment, so long as he did not infringe the prescribed limits (Arist. *Ath. Pol.* 22. 8; Philoch. and Plut. *loc. cit.*).

Ostracism was introduced by a law of Cleisthenes (Arist. *Ath. Pol.* 22. 1) in the year 508-507 B.C., and lasted until the year 417 B.C.,² in which Hyperbolus was condemned. An unusual incident of the process on that occasion was that Hyperbolus himself had advocated a recourse to ostracism, but, owing to a temporary coalition of the parties headed by Nicias and Alcibiades, he became the victim of his own proposal (Plut. *Nic.* 11). It has been commonly asserted that ostracism fell into disuse because the vote condemning a worthless person like Hyperbolus was felt as the degradation of a punishment hitherto regarded as a distinction rather than as a disgrace (Plut. *loc. cit.*, quoting Plato Comicus, frag. 187 [i. 654 K.]). This account is accepted in substance by some modern historians (e.g., Grote, vi. 378), but it is probable that Hyperbolus, who was murdered in 411 by the oligarchs at Samos (Thuc. viii. 73), although the accident of our tradition has left his reputation at the mercy of his unscrupulous opponents, was a more important person than his detractors admitted (Busolt, iii. 1260). Hence it is more likely that ostracism gradually passed out of use because it was felt to be no longer needful as a protection against the preponderating influence of any individual, while at the same time it had become subject to abuse by being employed in the interest

¹ Grote (*Hist. of Greece*, iv. 84n.) favours the alternative view that the minimum applied to the number of votes given against any particular name. The Greek authorities bearing on the point appear to be inconsistent; but Plutarch's explicit statement is to be preferred to the abbreviated and perhaps corrupt text of the lexicographers.

² For the considerations which fix the date see G. Busolt, *Griech. Gesch.* iii. 1257.

of partisanship without any resulting advantage to the State.

It has been suggested that the law of ostracism was formally repealed during the archonship of Euclides (Lugebil, in *Jahrb. für klass. Philol.*, Suppl. iv. 170), and that it was superseded in practice by the *γραφὴ παρανόμων*, which, though it may have been earlier in existence as a means of correcting irregularities of the statute law, first became an important political weapon in the course of the 4th century (J. P. Mahaffy, in *Hermathena*, vii. [1881] 87 ff.).

The original purpose for which ostracism was instituted is clearly stated by Aristotle in more than one passage (*Pol.* iii. 13, 1284^a 17, *Ath. Pol.* 22. 3), viz. the preservation of equality among the citizens by the removal of any one whose wealth or influence had become dangerously pre-eminent. The peril of such exaltation had been brought home to the Athenians by the history of the rise of Pisistratus; and it accords well with the professed object of the law that the first person who suffered under its provisions was Hipparchus, the son of Charmus, a kinsman of Pisistratus (*Arist. Ath. Pol.* 22. 4). Not long afterwards Megacles, the son of Hippocrates and a nephew of Cleisthenes himself, was ostracized as an adherent of the Pisistratids (*ib.* 6); and the first person unconnected with the formerly reigning house who was punished solely in consequence of his eminence was Xanthippus, the father of Pericles (*ib.*). It very soon came about that ostracism ceased to be used for the welfare of the State, but was employed merely as an instrument of faction (*Arist. Pol.* iii. 13, 1284^a 23) in order to suppress the leader of a political party, and leave his opponent free to pursue his own measures without hindrance, or even to inflict annoyance upon an adversary by securing the removal of his friends. Such were the conditions when Aristides was ostracized on the initiative of Themistocles (*Plut. Aristid.* 7, *Them.* 5), when the obnoxious opposition of Thucydides, the son of Melesias, to the policy of Pericles was similarly terminated (*Plut. Pericl.* 14), and when Damon the musician was banished on suspicion of being the secret adviser of Pericles' (*ib.* 4).

While most of the recent authorities conclude that the institution of ostracism was inspired by fear of the return of the Pisistratid dynasty, Grote (iv. 81-90) has argued that it was from the beginning a carefully devised scheme for preventing the dangers likely to arise from the excessive bitterness of party strife and inculcating in the new democracy a growing respect for constitutional permanence. The successful accomplishment of its purpose is proved by the absence of any attempt to overthrow the constitution during the interval between the reforms of Cleisthenes and the close of the Peloponnesian War; and the device itself was allowed to become obsolete when the security of the democracy showed that it was no longer needed. But Grote has probably exaggerated the political value of ostracism, and it is unlikely that Cleisthenes had wider aims than those attributed to him by Aristotle.

Ostracism was in force not only in Athens, but also in Argos (*Arist. Pol.* vii. [v.] 3, 1302^b 18), Miletus, and Megara (schol. *Aristoph. Eq.* 855), although nothing is known of the details of its working in these States. At Syracuse also there was a similar institution known as 'petalism' (*πεταλισμός*) from the laurel leaf which was used instead of the potsherd to receive the name of the

statesman designated for expulsion. Petalism is said to have been introduced at Syracuse in imitation of the Athenian law, but to have lasted for only a few years. The period of exile prescribed at Syracuse was five years instead of the Athenian ten (*Diod. xi.* 86 f.); but all our information on the subject rests on very unsatisfactory authority.

A. C. PEARSON.

OSTYAKS.—Three different tribes of N.W. Siberia are known under this name; the Ugrian (Ougrian) Ostyaks, the Samoyedic Ostyaks, and the Yenisei Ostyaks. The Ugrian Ostyaks live along the Ob, the Irtysh and its tributaries the Konda and the Vasyugan, in the Tobolsk Government, and in the Narimsk District of the Tomsk Government. Their number in 1897 was 17,221 (9012 males). The Samoyedic Ostyaks, or Ostyak-Samoyeds, live along the rivers Baikha, Tysk, Karakonsk, Karasinsk, and Taz. Their number in 1897 was 5805 (2962 m.). The Yenisei Ostyaks live along the Yenisei from the village of Antsiferova near Yeniseisk to the lower Kureika, a tributary of the Yenisei, and along the tributaries Stony Tunguska, Bakhta, Lower Tunguska, Kureika, and the little left tributary Yelogyua. They numbered in 1897 about 998 altogether (535 m.). From various local administrative and ecclesiastical papers we may suppose that the number of Ostyaks of Yenisei has since decreased.

The first two peoples, though of different stock, are linguistically as well as racially akin, both forming groups of Castrén's¹ Uralo-Altayan family of races, while the Yenisei Ostyaks are linguistically like none of the living tribes in Siberia, and were perhaps originally also unlike physically, but the admixture of Russian and other blood makes it difficult to define their physical type now.

The name 'Ostyak' has no linguistic affinity with any of the languages of the three peoples. The Ugrian Ostyaks are known also simply as Ostyaks, or as Ugra, Yugra; the Yenisei Ostyaks as Yeniseians, being the oldest inhabitants of the Yenisei of all the peoples now living along that river. The Ostyak-Samoyeds really form one group of the Samoyed tribes, and will be discussed in the art. SAMOYEDS.

Under the existing Russian administration all three nations and their clans are mixed, and artificially divided into *rody*, 'clans,' with territorial names; the more scientific books and educated travellers, however, will never confuse these tribes.

I. UGRIAN OSTYAKS.—1. Ethnology.—The origin of the name Ostyak has been variously explained.

Novicki (1715)² naively suggests that it may be derived from the Russian *ost*, 'fish-bones,' for the Ostyaks, living chiefly on raw fish, leave heaps of fish-bones behind them after camping. His other derivation is from the Russian word *ostatki*, the remains of the only large nation of Ugra who once lived, as some authors say, in the middle of the present Russia, according to others, on both sides of the Urals. Wherever their original home was, it is certain that the Ostyaks in Europe have been nearly exterminated or merged into the neighbouring Zyryan, Vogul, and Samoyed tribes, and it is only in W. Siberia that they remain in comparative integrity.

One of the more probable explanations of the name is that deriving Ostyak from Asnyakh, 'people of Ob,' the local name of the Ostyaks of the Ob in contradistinction to the Ostyaks of the Konda or other rivers and lakes, although the general name by which the Ostyaks as well as the Voguls call themselves is *mans* or *man's*; in older days they are supposed to have called themselves Aryakhi (ar. 'many'; kho, 'man').

The most probable derivation is from the Tatar word *oustak*,

¹ *Nordische Reisen und Forschungen*, ii. 75, iv. ('Ethnologische Vorlesungen') 14 f.

² *Iraktoye opisyaniye o narodie ostyatskom*, ed. Mainoff, p. 28.

¹ On the question of the identity of this Damon with Damonides, also described as a political adviser of Pericles, see Sandys on *Arist. Ath. Pol.* 27. 4; U. Willamowitz-Möller, *Aristoteles und Athen*, 2 vols., Berlin, 1893, i. 134.

'harbarian,' by which the Tatars called all the tribes of the middle Yenisei and the Ob when they came to the Yenisei valley in the 13th century. It is they who are responsible for the classing of different tribes together under one name. In the old Novgorod annals of the 11th cent. the Ostyaks are known as Ugra, while their neighbours, the Samoyeds, are known under their present name. The entry for the year 1398 mentions the Voguls as distinct from but allied to the Ugra; the same nomenclature is to be found in 1483, when the Moscow military expedition conquered the lands of these tribes. The Russians have probably adopted the Tatar word Oushtak, which was perhaps already corrupted into Ostyak. The old name Ugra, Yögra (plur. Yögrajass), is still used by the Zyryans for their neighbours, the Ostyaks of the Urals. The Samoyeds call the Ostyaks Yaran, Yargai (*yara*, 'stranger'), which some people think is derived from *yögra*. Still more problematic is the derivation of Yurak from *ugra*, *yögra*. The Yurak, like the Ostyak-Samoyeds, form a group of Siberian Samoyeds, and their name may very well be derived from their word *yur* ('hundred').

The Finno-Ugrian tribes form four linguistic groups: (1) the Ugrian, to which at the present day the Voguls and the Ostyaks belong, and from which the Magyars branched off; (2) the Permian, to which the Votyaks, Permiaks, and Zyryans belong; (3) the Cheremiss and Mordvin; (4) the Western Finnic group, to which the Finlanders, Chud, Vess, Ests, and Lives belong; to this group may also be added the Laplanders.

Fischer¹ thinks that the Samoyeds and the Ugrian Ostyaks are the remnants of a once large nation of mid-Siberia, called Chud. This historical and rather vague name must not be confused with that of the Finnic tribe mentioned above, who inhabit N.E. Europe. According to Fischer, these ancient Chud were driven northward by Tatar and Kirghiz, migrating from the Sayan mountains to the banks of the Yenisei. But it seems fairly settled now that most of the so-called Chud remains in Siberia should be ascribed to the old Turkic and Turkicized tribes, and perhaps Strahlenberg² is more correct in thinking that the Ugrian Ostyaks at any rate, if not the Samoyeds also, are of Finnish parentage and have migrated from Lapland eastward and southward. The Finnic physical type is generally understood to be fair, reddish-haired, light-eyed, and long-headed, but, even if it were so originally, at the present moment the division of the Russian investigator Mainoff³ of the Finnic tribes into dark-haired and fair-haired is the only one justified by the facts. The Ugrian Ostyaks would belong to the dark-haired section, and are, vaguely speaking, mesocephalic or dolichocephalic, and the Mongoloid influence is less seen among them than among the Mordvins, although the Ugrian Ostyaks now live almost entirely in Asia and the Mordvins in Europe. The lack of a sufficient number of anthropometric data makes it difficult to define their type more closely than has been done by S. Shirokogorov.⁴ He bases his generalization on the researches of Rudenko, who places the Ostyaks according to their physical type between the Voguls and the Samoyeds.⁵

About a thousand years ago, when the Ostyak lands still stretched into E. Europe, though the eastern corner of Siberia was also occupied by them at that time, the Magyars went to the Danube valley, and are now known as Hungarians. In the middle provinces of Russia there are numerous place- and river-names of Ugrian origin, and it is probable that, while the Ostyaks had to give up their European dominions to the Russians, they concentrated in W. Siberia, fighting with the Samoyeds, who were then losing their southern Siberian dominions, for supremacy in the lands between the Ural and the Ob.

⁴ *Zadachi Antropologii v Sibiri*, p. 23.

⁵ Rudenko has taken measurements of 127 Ostyaks; see his *Antropologicheskaya Issledovaniya Inorodtsev Syvvero-Zapadnoi Sibiri*.

These fights are vividly described in the old heroic epos of the Ostyaks, which has been specially studied by I. Patkanoff. Neither the Samoyeds nor the Ostyaks were exterminated as a result of the fighting. Some of the latter, such as the Narimsk Ostyaks, were merged into the Samoyed tribes, but the nucleus of the Ostyak nation still exists on the same lands as they have occupied for many centuries, and they still number about 17,221, while of the Voguls there are only 6500.

The heroic epos, *Tarnyn-ara* (*ara*, 'song'; *Tarn*, *Taran*, *Tarin*, an evil anthropomorphic power, bringing war, sickness, etc.), does not mention any fights with the Tatars, who subdued the whole valley of the Irtysh not earlier than the end of the 14th and the beginning of the 15th century. Nor does this epos mention the fights with the power who succeeded the Tatars in subduing the Ostyaks, namely the Muscovites. While the Ostyaks had already had to fight with the Novgorodians in the 11th cent., when the latter took possession of the White Sea, and made military expeditions against the Ugra, they were not conquered, and paid taxes only when these were exacted at the point of the Novgorodian sword, but in 1581 the Ugra did succumb to the Muscovites, and in 1586 the first Russian *ostrog*, or Cossack settlement, was built at the mouth of the Irtysh on pure Ostyak land. It was only after a long and hard struggle, however, and not until 41 Ostyak villages had been destroyed, that the Russians conquered them; later the Ostyaks helped the Russians in conquering other native tribes.

The Ostyaks live in three groups: the northern Ostyaks, in the northern Berezovsk District; the eastern Ostyaks, along the Surgut and the Vasugan as far as its tributary the Chayanka; and the south-western or Irtysh Ostyaks, in the northern part of the Tobolsk District, along the Ob, the Irtysh, and the Konda. The Surgut is said to be the purest of the Ostyak dialects.

2. *Material culture.*—The *Tarnyn-ara* gives the following picture of Ostyak life in pre-Tatar times. While their general material welfare has changed for the worse since then, yet the northern and eastern Ostyaks have not changed much in their material culture. The south-western Ostyaks are the most affected by Russian colonization, and in some places they give up their nomadic life, though they remain seasonal nomads; i.e., they live in their wooden huts for the fishing season, and often for the hunting season as well. Very few of them take up agriculture. Syphilis and other diseases, and the abuse of vodka, are most prevalent among these Ostyaks.

The northern and eastern Ostyaks are wanderers, living in reindeer-skin tents, and occasionally in half-underground log-huts covered with snow. Their summer tents and domestic utensils are made of birch-bark. Their occupations are hunting, reindeer-breeding, and fishing; they also fish through the ice. In summer they eat raw fresh fish, in winter frozen fish. The bowels, heart, and liver of reindeer are eaten raw, still warm, after the killing of the reindeer; the rest of the meat is usually cooked. The sledges are made of driftwood, and joined by being sewn with skin thongs: the runners for winter are covered with reindeer-skin. The winter dress is made of reindeer-skin, or birds' skin, ornamented with furs of other animals; the summer dress is often of *nalim* (fish)-skin, or woven by women from the nettle plant (*Urtica*). The same material is used for mosquito nets. The Russian cotton shirt is very little known among the northern Ostyaks, but the south-western Ostyaks use more and more European cloth.

3. *Social customs.*—In the north the old custom of burying the dead in a canoe is still in practice. All the belongings of the dead man are laid in the grave. To show their sorrow, the relatives tear hair from their heads and throw it on the body; this will help the soul-life of the dead. Those in mourning go a couple of days with unwashed body and unkempt hair. The widow makes a wooden doll representing her husband, dresses it in his

clothes, and treats it as her husband for a year; then she buries it also.

A woman just before her confinement is separated from society, and lives for three weeks in a special tent which no man is allowed to enter. After her seclusion she is purified by jumping three times through the fire.

In olden days the Ostyaks used to tatu their bodies with red ochre or soot, with which they coloured their dress and even 'signed' Russian official papers. At the present day their 'signature,' like that of the other northern Siberians, is a drawing of a bow and arrow.

When a girl marries, a bride-price (*kalym*) is paid, and only when the whole of this has been received is the girl allowed to be taken by the bridegroom. When visiting his betrothed, the young man has to enter the tent with his face turned away, lest he should show his face to his parents-in-law, towards whom he has to observe various prohibitive restrictions (e.g., he must avoid meeting his mother-in-law). The bride has to observe the same restrictions towards the bridegroom's family until her first child is born. Clan exogamy was until recently strictly kept, even though the clan was composed of people who were not blood-relations. Now that the south-western and many of the northern Ostyaks are nominal Christians, the marriage ceremonies are a combination of Christian and shamanist rites.

In comparison with the old war epic, *Tarnyn-ara*, the language of which is known to very few Ostyaks of to-day, the modern songs and tales seem very poor. Yet even now, especially under the influence of vodka, or of a particular kind of fungus, of which they eat seven, fourteen, or even twenty-one at once, in order to become intoxicated, the Ostyaks sing to the accompaniment of the 'swan' (Russian *lebid*, Ostyak *toron-iix*), or of the *dombra* (Russ.; Ostyak *nares-iix*). The latter is said by the Ostyaks to be their original instrument, and indeed the five reindeer-sinew strings of the *nares-iix* correspond to the five notes of the *Tarnyn-ara* melody. The Ostyaks of Konda call the *toron-iix* 'Ob music,' and say that this instrument, in the form of a swan, and with nine metal strings, came to them from certain of their Ob neighbours.

At the time of the *Tarnyn-ara* the Ostyaks were composed of many small sovereignties, each with a chief, living in a settlement, village, or perhaps small town. They were all united into a confederacy, with a chief (*yor, ur, urt*) over all the other chiefs. His subjects were known as *mygdatyaks*, 'earth-people,' for they lived in half-underground dwellings; there were also slaves—*tey-ort*, 'man-slave,' and *tey-ney* or *ort-ney*, 'woman-slave.' The chief was identified with the hero (*urt*).

Their legends say that after the Russian conquests the Ostyak heroes were taken by the gods up to the sky, and there they live as holy men; the Ostyaks bring sacrifices to them even now.

4. Religion.—(a) *Gods and spirits*.—Many of the Ostyaks have since 1715 belonged officially to the Russian Orthodox Church, but this has not influenced their shamanist beliefs and practices to any great extent, and in the Berezov and Taz Districts they are even officially still classed as pagan.

The dualistic division of gods and spirits is very strongly marked. The chief gods are represented by anthropomorphic figures, or sometimes by stones of peculiar shape. These are seldom kept in their tents; there are special places for them, usually among the hills and mountains. Near these sanctuaries there is usually a shaman (medicine-man), who looks after the image of the god, whose special protection he enjoys while he is performing his shamanistic ceremonies. All the propitiatory cere-

monies take the form of sacrifices to the gods, either of objects, especially of dresses, which are put on the figure one on the top of another, or sometimes of blood-sacrifices, consisting in the killing of animals and the smearing of the lips of the figure with their blood. Each god has his special sphere of influence.

There are three great gods common to all the Ostyaks—Yeman' gnyem, called by some Yega-teigenen, 'the old man from the mouth of the Ob'; the goose-god; and the god of the Konda.

The descriptions of 'the old man from the mouth of the Ob' are somewhat confused. Sometimes he is the god of all fish (according to the Ostyaks, all the fish in creation live in the Ob and its tributaries); every season the first catch of fish is sacrificed to him, and many other sacrifices of animals or various objects are placed on the spot where he lives, the cape at the mouth of the Ob which bears his name, in order to secure good weather and divert unfavourable winds. The god of river-fertility, he also shows the way to travellers in winter, for he keeps fires burning (*aurora borealis*) during the winter darkness. He does not, however, always inhabit the mouth of the Ob; every alternate three years he spends at the mouth of the Irtysh. Thus it seems that the Ostyaks, by moving him from place to place, hope to secure his patronage for both rivers. His figure is made of driftwood, with eyes of glass and breast of plated gold. He also has small metal horns. His first garment is of 'worms' skin,' above which he wears a large number of different dresses which have been offered to him as sacrifices. One detail suggests that this old man of the mouth of the Ob and the Irtysh may be derived from the hero who once lived among the Ostyaks, and whose deeds are recorded in their songs—he is always represented with a bow and arrows and a shield. The chief good god of the Voguls, Kors-Torum, and his son Yanykh-Torum, are never represented with weapons. Nobody may hunt or shoot near the place where the image of Yeman' gnyem is kept, or take water from the river near by, or pitch a tent in the neighbourhood, except the shaman who looks after the god.

The goose-god is the protector of all birds—i.e. the birds of the river Ob. His figure resembles a goose, and is made of copper and clothed with many sacrificial garments. He lives in the Byelogorsk hills near the Ob, and the shaman who looks after him also looks after the nest in which he lives, made of pieces of skin, fur, and cloth.

About the god of the Konda we know very little.

The chief destructive god is Tarn, god of war, sickness, bad weather, and everything destructive to life. This god is usually represented as a female; her full name is Ey-vet'ne kimtaran, 'double Tarn with one face.' She is also the personification of flames of fire. Of a man who has experienced great hardships the Ostyaks say that he has 'seen the face of Tarn.'

In the northern part of the mouth of the Ob, to the north of the abode of the good god, the protector of Ob, lives a dark under-world spirit sometimes called by the Vogul name Kul Odyr. The dark spirits dependent on him are known as *menkva* (Vogul).

Some of the heroes of the old Ostyak folk-songs are believed to have gone, after their death, to the sky, and to live there in the form of iron wolves (*kart yevra*), and, since the Ostyaks no longer make war for themselves, these heroes are now imagined as destroying the enemies of the Russians, the allies of the Ostyaks.

Besides these great gods, each Ostyak tent has a lesser family-god. Mystical properties are possessed by the swan and the goose among birds and

by the bear among animals, but by none more prominently than the bear. After a bear has been killed, his body is placed on the ground and the people dance round it, saying:

'We did not want to kill you, we are not to be blamed. The Russians have beaten the iron for the arrow-heads and the wing of the arrow we received from Eagle Father.'

(b) *The soul*.—The Ostyaks believe that man is composed of the body, its shadow, and its soul. After death the soul, with the characteristic individuality of the man, is reborn in some baby of the same clan, while the shadow goes to the under world, and there lives another life similar to the life that it lived on the earth.

(c) *Shamanism*.—The office of shaman is not necessarily hereditary. The shaman chooses a successor, male or female. When the spirits pass into the newly-chosen shaman, he has to suffer both physically and mentally. He is recognized as a shaman when he knows how to deal with the dark spirits. The shaman's costume is very similar to that of the Samoyedic shaman, and is made of reindeer-hide with many metallic jingles. At one point in his incantations the shaman must have his face covered with a piece of cloth. The drums of the Ostyak shamans differ from the type used by the other natives along the Yenisei in being round instead of oval.

II. OSTYAKS OF THE YENISEI OR YENISEIANS.

—i. *Ethnology*.—According to Castrén,¹ the Yeniseians belong to the Indo-Chinese linguistic group, and their only relatives in Siberia were the not long extinct Arine, Kotte, and Assane. In physical type the Ostyaks of the Yenisei differ from their neighbours in the fact that none of the latter, namely the Tunguses, Ugrian Ostyaks, Samoyeds, and Yakuts, are so decadent or have such mixed blood in their veins, so that the latter tribes have a more characteristic racial type.

The Ostyaks of the Yenisei were from the 7th cent. under Turkic and Uigur influence; then came the Mongols in the 13th cent., while, since the beginning of the 17th, Russian influence has over-ridden all others. Hence it is no wonder that their present physical type is different from what it was in pre-Turkic times. It is supposed, though not proved, that they are descendants of the old Dinlin (Ting-ling) people who, together with the Usuni and the Khakas (Kirghiz), were, according to the Chinese annals (Radloff,² Bichurin³), of fair complexion, fair hair, and blue eyes. Of these three peoples we can trace so far only the Khakas, who in the 7th cent. took the name of Kirghiz, and came under the domination of the Turkic tribe Tiukiū (called by the Chinese Tchili, Dili, or Tele), whose language and script they adopted on the *pisaniṭsy* (pictographs), and later of the northern Uigur (called by the Chinese Kao-tche). In 970 the Khakas were strong enough to subdue the Uigur, but in the 13th cent. they could not stand against the Mongols. Yet the latter did not subdue them for any length of time, and, after fighting for about a quarter of a century against the Russians, whose conquests they could not check, most of them migrated to the other side of the Sayan mountains to the steppes of S. Mongolia. The rest were merged in the Turkic and Mongolic people of the Minusinsk country.

All this has been traced partly from Chinese annals and partly from the old Khakas *pisaniṭsy* from the Orkhon valley and the Minusinsk country, which have been deciphered by V. Thomsen and Radloff.⁴ It may be supposed that the Dinlin tribe was similar to that of the Khakas-Kirghiz, but the link between

them is missing. One of the clans of the Kyzyl 'Tatars'—Shin—is said to be of Yenisei-Ostyak origin.

The present Yeniseians have lighter hair than the dark brown or black hair of the Samoyeds, Ugrian Ostyaks, and Tunguses, and blue eyes are also found; but this must rather be ascribed to an admixture of Russian blood. The name by which they call themselves, according to Novicki,¹ is Tindigyet, according to Castrén,² Kanasket (derived probably either from the river Kan or from the river Ulukan), while V. I. Anuchin,³ with whom the present writer's own observation agrees, says that they use for themselves the name Din ('people'). According to Radloff,⁴ the still existing tribe of Koibal, living on the right side of the middle Abakan, or the greater part of them, are of Yeniseian (Yenisei-Ostyak) origin, while Kai Donner,⁵ the student of the Samoyedic and Finnic languages, believes them to be Tatarized Samoyeds, who one hundred years ago spoke Samoyedic, like the nearly extinct Kamashints (Kamajenil), a few of whom still live in the Kansk District.

2. *Material and social culture*.—All the Ostyaks of the Yenisei live along the rivers, grouped into seven clans of unequal size, and are fishermen, usually working for one of the Russian traders. Their hunting and trapping also are limited to the area in the neighbourhood of the river. A small number of them possess reindeer, and consequently lead a really nomadic life; others have adopted a more settled mode of life, never, however, living long in one place. Demoralized, weak, unhealthy, fond of alcohol and tobacco, like all the natives, they are yet kind-hearted, and, as a rule, honest; they are, on the whole, the most hopelessly degenerate of all the tribes of the Yenisei region.

In their social life they have preserved very few of their old customs connected with birth, death, or marriage, although one of the old customs still enforced is that of avoidance of father- and mother-in-law. In their religion, on the other hand, although they are all officially reckoned as members of the Russian Orthodox Church, they have remained comparatively faithful to their old traditions.

3. *Religion*.—The gods of the Yeniseians may be grouped in two classes.

(a) *The benevolent gods*.—The highest kind god is Ess, whose duties are somewhat vaguely described, as is the people's relation to him. No one ever saw him, for he lives above the seventh sky. He does not take part in human affairs; only once a year, on the longest day of spring, he makes a review of the earth and the stars. The people celebrate this day with feasting, during which women dance an erotic dance. This celebration has no direct connexion with Ess as an anthropomorphic god, but, since the sky is also called Ess, it may be a ceremony connected with sky-worship, on his special day of the year.

Next to Ess they put Tomam (*am*, 'mother'). She lives among the rocks of the far south, and is very beautiful and kind. Every spring she ascends a high rock on the coast of the Yenisei and shakes her hands over the river; from her sleeves fall downy feathers, which change, while floating to the river, into geese, swans, and ducks; these fly northwards to the Yeniseians. She is the personification of the warm and fertile south.

Besides these two most important, there are some other less important deities. Such are the *eskyns*, the servants of Ess; in winter they keep a fire burning in the sky (*aurora borealis*), to see by its light what the bad goddess Khosadam is doing in her dark northern region. Some of the mythical

⁵ In a private communication to the writer.

persons, such as Alba, the hero defender of the country, who had to struggle with Khosadam for the sake of his nation, rise also to the dignity of deities who live in the three skies nearest to the earth. Alba is expected to return to the earth when the Yeniseians need him very much.

The other mythical person who is worshipped is Dokh, the greatest shaman of all time, and the law-maker. 'So said Dokh,' is the usual end of songs, legends, and proverbs. Dokh cannot return to the earth till his *ulvei*, the most important of his souls, is freed from the power of Khosadam by the hero Alba.¹

(b) *Malevolent powers*.—The Yeniseians are, on the whole, more occupied with struggles against bad powers than with the worship of good ones. Chief of these bad spirits is Khosadam, who was once the wife of Ess, but left him, together with her servants, and went to live with the moon, Khyp (i.e. 'grandfather'). Ess punished her by throwing her down to the earth, where she now symbolizes cold, darkness, sterility, disease—everything bad that can happen to men. To punish the moon, Ess made him serve man, for whom he divides the time and also foretells the weather. Khosadam is personified as having decaying eyes, dishevelled hair, and animal paws; her servants, *kyns* or *selkyns*, are black birds with hooked beaks. Khosadam once lived in the southern Yenisei, but was driven to the north by the hero Alba, since her presence disturbed the peace of the Yeniseians. As the Yeniseians advanced northwards, pushed by some 'people from the mountains,' Alba drove Khosadam still further north to the 'dead island,' where no one can touch her; 'even a Russian cannot thaw her ice.'² No animals except fishes (which have no soul) are at her disposal.

Less evil but still mischievous is Dototam, who owns the mountains. In spite of the ending of the name, Dototam is a masculine being, personified by night-birds, who frighten people with their screaming, and have the bat as their best friend. As long as men do not look for his home Dototam is not harmful.

According to V. I. Anuchin,³ the Ostyaks of the Yenisei believe also in spirits of the forest, and of water, and in the daughters of the latter; the conceptions of all these resemble the Russian conceptions of the owners of forest and water. These spirits were sent down to earth at the same time as Khosadam. Lityss, the spirit of the forest, has fur like a bear, and leaves tracks like a reindeer.

In every tent there is also the spirit protector of the household (*alalt*), who looks after the people at night when they are asleep. This *alalt* is friendly, but there are also *alalt* of wind, and of mice, who are harmful. As protection against these their figures are carved and thrown into the river.

(c) *The soul*.—Every man, according to the philosophy of the Yeniseians, has seven souls. All animals except fishes have one soul, and the bear has two, one an animal soul (*kontol*), the other the soul life possessed by men also (*ulvet*). Man gets most of his souls from his mother, who again acquires them in the course of eating plants and animals before the child is born. His chief soul, *ulvei*, he gets from outside after he is born. The *ulvei* is personified as a minute man, and its picture is always represented on a shaman's coat. Man's souls are situated in his head and heart, but the *ulvei* is outside the man, though near him. When the *ulvei* is sick, his condition reflects on the man, and the shaman has to find and cure the *ulvei*, and occasionally to fight to free it from the power of the bad spirits.

(d) *Death*.—When Khosadam eats the *ulvei*, the man dies. But Alba often appears and frightens

Khosadam so much that her bowels are relaxed and all the souls are set free. A good shaman can achieve the same result. The souls are immortal. In olden days man also was immortal. It is owing to the dog that people die now.

'Long ago when the first old man died, people were weeping, so Ess sent to them a dog with the message that they must not be afraid, but must wrap the old man up in grass and put him up in a tree. But the dog cheated them, and told them to bury the dead man in the ground. Since then all men die, and the dog was punished by being left to live on the earth and eat human excrement'¹ (this is the habit of dogs in the north).

After the death of the man his souls go one after another to the seven underground caves, where are neither sun nor stars, and where in a river a special kind of fish lives, but where only one land-animal, the mammoth, lives. From there the souls return to the earth, entering animals or plants before returning to man. The *ulvei*, however, can go only to the bear. When the bear feels the moment of death approaching, he goes to his cousin, man, and asks him to free the *ulvei*. The man kills the bear, and then makes a little image of the man-bear which he places on some tree. By this act the soul of the bear is freed.

(e) *Burial*.—At the present time the Ostyaks of the Yenisei bury their dead in accordance with the Russian Church regulations; i.e., they dig the grave in the earth, and carry the dead man in a sleigh or in a canoe with his head turned to the front. But in olden days they used to cut a piece out of a tree, lay their dead in the cavity, and then force the piece back into its original position.

(f) *Animal-worship*.—Although the Ostyaks of the Yenisei live almost exclusively on fish, there is no rôle for fish, as there is none for insects, in their shamanistic conceptions. Of trees the birch is connected with shamanism, of flowers the red lily, concerning the origin of which there is the legend that it is a drop of the blood of the hero Alba, shed when he was coming from the north after a severe fight with Khosadam. Although there are no reptiles north of the Middle Tunguska, the serpent (*tikh*), which is the servant of Khosadam, is very often represented. The bat and the mole (*lya*) are also symbols of black magic. The eagle, the diver, the swan, the bear, the reindeer, and the red squirrel are symbols of white magic.

(g) *Idea of the universe*.—To the Ostyaks of the Yenisei the earth is flat, surrounded by seven seas; above it there are seven skies, and beneath seven underground worlds. All these have to be represented on the shaman's drum. Each of the skies has a fire burning—the sun—and also the moon. The Bear constellation is called Kay, i.e. 'elk.' The four stars of the constellation are the feet of the elk, the other three stars represent the hunters. The first star represents the Tunguses, the second the Ostyaks of the Yenisei, and the third the Russians. By means of this constellation the Ostyaks of the Yenisei divide the seasons of the year. Orion is called Seld, and is said to be the head of a reindeer which belonged to the hero Alba. Fire is still respected, though no longer worshipped; no dirt must be thrown into the fire, nor must it be touched with a knife.

(h) *The shaman*.—There may be distinguished two kinds of shamans, dark and light, the latter being the more numerous. The dark medicine-man, or woman, is called *nikkor*, or *banoket*, 'man from the ground.' The smith also is supposed to have a certain amount of supernatural black power. In the tent of the black shaman skins of the mole or the bat are always to be found hanging from the tent-pole. These people shamanize only during the dark nights. They can send a man a disease, but they can also, as well as the white shaman,

OUT-CASTES (Indian).—1. The out-castes of the early Hindu period.—Caste, in the form which it exhibits at present, is an institution of comparatively recent origin (see art. CASTE, vol. iii. p. 234 f.). The true out-castes, therefore, as we now observe them in India, did not exist in the early Hindu period. But, as the Indo-Aryans consolidated their power in N. India, with the growth of Brahman ascendancy, the theory of the personal purity of the dominant tribes came to be generally accepted. It was held that one region should be regarded as specially pure.

That land created by the gods, which lies between the two divine rivers Sarasvati and Drishadvati, the (sages) call Brahmanvarta. The custom handed down in regular succession (since time immemorial) among the (four chief castes (varṇa) and the mixed (races) of that country, is called the conduct of virtuous men' (*Laws of Manu*, ii. 171. [SEE xxv. (1886) 32]).

The races residing beyond this sacred pale were known to the Hindus by different titles.

(a) *The Mlechchha*.—First come the Mlechchha, or barbarians.

That land where the black antelope naturally roams, one must know to be fit for the performance of sacrifices; (the tract) different from that (is) the country of the Mlechchhas (barbarians) (ib. ii. 23).

There is uncertainty about the modern meaning of the word 'Mlechchha.' Manu contrasted Aryas with Mlechchhas, the latter living in a different country and speaking a different language. The land of the Aryas was the region between the Himalayas and the Vindhya mountains; outside this lay the country of the Mlechchha, or barbarians, i.e. mostly the aboriginal races.

According to this definition, the Deccan was comprised in the Mlechchha country, but other writers, such as Vāsiṣṭha, imposed no such limitations. In classical works the natives of the west were called Mlechchhas, but not those to the east or north. The Chinese, Burmese and other eastern nations are never spoken of as Mlechchhas, but the Muhammadans are often so described. In modern Bengali the word "Mlechchha" is a term of abuse for those who do not adopt the rules of cleanliness (*āchāra*) of the Hindus. In other words, it has lost its original meaning and distinguishes Hindus on the basis of cleanliness. It is still used as a designation for those who are to be held in some difference of opinion from the Hindus, and is applied to such races as the Chinese and Japanese. On the whole, the general view appears to be that the term is confined to the western nations. While those who go to Europe and America are liable to excommunication, voyages to China and Japan involve no such penalties' (*Census of India, 1911, Bengal Report*, i. 229 f.).

It may also be remarked that in the more recent law literature the term received a more liberal interpretation. It was provided that, if a Ksatriya or other Hindu king defeated the Mlechchha and reduced them to the rank of Chāṇḍāla, that is to say, forced them to join the lowest grade of the Hindu social system, that country became fit for sacrifice (*Manubhāṣhiya*, ii. 23, in *IA xli. [1912] 76*). On the whole, the word 'Mlechchha' generally seems to connote speakers of the western languages, like the *Kapōv βαρβαροφωνων* of Homer (*R.* ii. 867).

(b) *The Dasyu*.—The second class of aliens was that of the dark-coloured indigenous races which resisted the advance of the Aryans. They were known as Dasyu, 'destroyers of the good,' Rākṣasa, or Asura, 'demons,' Anāsa, 'noseless.'

The black complexion, ferocious aspect, barbarous habits, rude speech, and savage yells of the Dasyus, and the sudden and furtive attacks which, under the cover of the impenetrable woods, and the obscurity of night, they would make on the encampments of the Aryas, might naturally lead the latter to speak of them, in the highly figurative language of an imaginative people, in the first stages of civilisation, as ghosts or demons; or even to conceive of their hidden assailants as possessed of magical or superhuman powers, or as headed by devils' (*J. Muir, Orig. Sanskrit Texts*, ii. [1860] 4091.).

Modern Hindu writers of the S. Indian school, who oppose the theory of Aryan ascendancy, regard the contrast between the Arya and the Dāsa, or Dasyu, as a question of cult and not of race, Arya meaning a worshipper of Indra and Agni, and Dāsa, or Dasyu, either demons opposed to Indra or people that worshipped these demons (P. T. Srinivas Iyengar, *Life in Ancient India in the Age of the Mantras*, Madras, 1912, p. 11 ff.).

(c) *The Śūdra and the Chāṇḍāla*.—When we come to the period of the law-books, we find that the Śūdra are subjected to various disabilities, and, in particular, are excluded from the right of *connubium* with the Aryas (*Laws of Manu*, iii. 13-19, and *passim*). Below the Śūdra, but holding a definite place in the Aryan community, are the Chāṇḍāla, objects of contempt and disgust. Manu regards the Chāṇḍāla as the offspring of a woman of high caste and a Śūdra (*ib.* x. 12, 16).

A Chāṇḍāla, a village pig, a cock, a dog, a menstruating woman, and a eunuch must not look upon the Brahmanas while they eat' (*ib.* iii. 239). 'The dwellings of Chāṇḍālas and Śvapachas ('dog-cooking,' 'dog-feeder') shall be outside the village, they must be made Apapātras [those who use vessels from which no one else will eat], and their wealth (shall be) dogs and donkeys. Their dress (shall be) the garments of the dead, (they shall eat) their food from broken dishes, black iron (shall be) their ornaments, and they must always wander from place to place. A man who fulfils a religious duty shall not

carry out the corpses (of persons) who have no relatives. . . . By the king's order they shall always execute the criminals, in accordance with the law, and they shall take for themselves the clothes, the beds, and the ornaments of (such) criminals' (*ib.* x. 61-66).

2. *The modern out-castes*.—The modern out-castes fall into two classes: (1) the menial, depressed tribes or castes, who occupy the degraded position which Manu assigns to the Chāṇḍāla, such as the Dom, Bhangi, or Chuhrā (*gg.v.*) of N. India, or the Pariah (*g.v.*) of Madras; and (2) those who for some offence against Hindu social regulations have been expelled from their tribe or caste by the sentence of caste tribunal, known in N. India as the council of five members (*pañcāyat*). The common phrase for such expulsion in N. India is *huggah pāni band karnā*, implying that no member of the group will smoke with him, or take water from his hands. In other words, he is boycotted, no caste-man will hold intercourse with him, and—perhaps the most serious of all penalties, in a land where the marriage of children is a religious duty—he loses his rights of *connubium* and other caste privileges. The offences for which this penalty is prescribed vary in different parts of the country and among different castes and tribes, but the general system is the same throughout India.

In Bengal a man is permanently expelled from caste for grave offences—e.g., if he knowingly and persistently partakes of food with, or drinks water from the hands of, or smokes with, a man of lower caste, or marries a woman of lower caste and refuses to put her away. This extreme penalty has even been imposed when a man has married a woman of his own caste without or against the consent of her relatives. Adultery and engaging in an occupation which is looked on as degrading are sometimes punished in this way. Temporary out-casting is ordered as a punishment for less serious offences, and a suspect is frequently out-casted until he clears himself from a charge of violation of caste usage (*Census of India, 1911, Bengal Report*, i. 467, and see also United Provinces and Oudh Report, i. 337 ff., Panjab Report, i. 420 ff., Baroda Report, i. 251 ff.).

3. *Restoration to caste privileges*.—In the case of temporary expulsion, restoration to caste privileges is secured by abject submission to the caste council and by the infliction of various penalties.

In Bihār the offender has to undergo prescribed penances, such as going on a pilgrimage for an appointed period, bathing in the Ganges and swallowing some of its sand, living on alms for a prescribed time, remaining dumb for a certain time, fasting or eating only one meal in the day, swallowing a mixture of the

five products of the cow—cow-dung, cow's urine, milk, curds, and ghee, or clarified butter. Besides these punishments there are rites of expiation (*prāyaścitta*), including sacrifice, worship of the gods, commonly of Śaṅkaraśaṅkara, making a gift of a cow, a heifer, cash, and cloth to the family priest, feeding Brāhmins and presenting gifts to them, and giving a dinner to the caste-men (*Census of India, 1911, Bengal Report, i. 461*). In the case of this committal of one of the most serious offences, cow-killing, the offender has to measure his length on hands and knees along one bank of the Ganges, from the source to the sea, and to return in this same way along the other bank.

4. Pollution by the touch of out-castes.—The touch or even the shadow of an out-caste falling on a man of high caste causes pollution.

In N. India, when a Dom or a Bhangī is called as a witness in a court of justice, the spectators draw in their skirts to avoid contact with him, and careful Hindus bathe after shaking hands with a European. In parts of the Panjāb where the Hindu element is strong one of the unclean castes is not allowed to draw water from a public well used by high-caste Hindus. In such places Chuhārās and Chamārās have wells of their own. In other parts of the province a Hindu's water-vessel is supposed to be polluted if an out-caste happens to stand on the well platform, or if his bucket-rope is still touching the sides of the well (*Census of India, 1911, Panjāb Report, i. 411 f.*). This feeling is even stronger in S. India. The Nayāḍis, an out-caste tribe, pollute a Brāhmin if they come within the distance of 300 ft. of him; he is obliged to bathe, to renew his sacred thread, and to drink the five products (*pañcagavyam*) of the cow; when these out-castes are passing by, they must announce their presence by shouting lest they cause pollution (L. K. Anantha Krishna Iyer, *The Cōchin Tribes and Castes, Madras, 1909, i. 57*). The approach of an Ulladan within a distance of 64 ft. pollutes Brāhmins and other men of high caste; hence they are forbidden to use the public roads or enter bazaars (*ib. i. 85*). Vallans are obliged to announce their presence by shouting, and, if they visit a temple, they have to stand at a certain distance from the outer walls (*ib. i. 260*). In Bombay the touch or even the shadow of a Holeyā or Cānarese Pariah is thought to defile (*BC xxiii. [1884] 214*). In Khāndesh a Brāhmin clerk will not let a Mahār touch his cart, nor will he take anything from his hands; if the Mahār presents a paper, he has to throw it on the ground; the clerk picks it up, and, when he returns it, he flings it to the Mahār, and will not hand it to him (*ib. xii. [1880] 117*).

Even castes of menial status have similar prejudices. The Pulayans, themselves a cause of pollution, have to bathe five times and let a drop of blood flow from a finger in order to purify themselves after touching a Pariah; and the Kurichans, a low jungle tribe, are polluted by the approach of others of the same grade, and their women require water sanctified by a Brāhmin in order to purify themselves (L. K. Anantha Krishna Iyer, *i. 86*; E. Thurston, *Castes and Tribes of S. India, Madras, 1909, iv. 126*). Out-castes retaliate even on Brāhmins. The Holeyās say that their quarter must undergo purification if a Brāhmin enters it; otherwise ill will befall them. Pariahs also exclude Brāhmins, and, should one of them enter their ward, water mixed with cow-dung is flung over his head, and he is driven out; in former times, in Mysore, it is said that he was beaten to death (Thurston, *ii. 330 f., vi. 88*).

It is a mistake to believe that these out-castes are conscious of their own degradation.

All traditions represent the Pariahs as a caste which has come down in the world (*Census of India, 1901, Madras Report, i. 172*). Hence many of these tribes possess privileges which they tenaciously assert. 'On certain days [in Madras] they may enter temples which at other times they must not approach. There are several important ceremonial and social observances which they are always called to inaugurate or take some share in, and which, indeed, would be held incomplete and unlucky without them; and at particular seasons there is a festival much resembling the classic Saturnalia, in which, for this time, the relation of slaves and masters is inverted, and the former attack the latter with unstinted satire and abuse, and threaten to strike work unless confirmed in their privileges' (M. J. Walhouse, *JAI iv. [1876] 371*). The Pariahs and Pulayans of Cōchin cherish the memory of their former greatness, and regard themselves as the original owners of the soil; in some temples the Holeyās have the right of entry on three days in the year; one of them sits beside the image of Śiva on his elephant and fans the idol during the annual procession; a Pariah annually performs the rite of the 'sacred marriage,' with Egathāl, the tutelary goddess of Madras, and ties the marriage hodge round the neck of her image; Pariahs pull the idol cars at processions without causing any pollution, and they are employed to decide boundary disputes by walking along this line with pots of water on their heads (L. K. Anantha Krishna Iyer, *i. 69*; Thurston, *ii. 332, vi. 83*).

This association of out-castes with religious rites is based on the theory that they are autochthones, that they thus understand the proper modes of propitiating the local godlings, and hence in many parts of India they act as their priests. The same belief accounts for the fact that they are often called in to perform the rites of inauguration and investiture of a Rājā of high caste, as in the case

of the Halbas of the Central Provinces (A. E. Nelson, *Raipur Gazetteer, 1909, i. 102*; cf. the customs of the Bhil, *ERE ii. 554 f.*).

5. Measures of reform.—The attention of sympathetic Europeans has for a long time been attracted to the almost intolerable position of out-castes in India.

W. Ward remarks that the rules of the *Sāstras* or Hindu religious and social regulations regarding the Sūdras of Bengal 'are so unjust and inhuman, that every benevolent person must feel the greatest indignation at the Hindoo lawgivers, and rejoice that Providence has placed so great a portion of this people under the equitable laws of the British Government' (*A View of the History, Literature, and Religion of the Hindoos*, Serampore, 1818, i. 63). J. A. Dubois writes: 'In fact, these Pariahs are the horn slaves of India; and had I to choose between the two sad fates of being a slave in one of our colonies or a Pariah here, I should undoubtedly prefer the former' (*Hindu Manners, Customs, and Ceremonies*, Eng. tr., Oxford, 1906, p. 49).

Recent political agitation among the educated classes has aroused public attention to the problem of 'the untouchables,' as they are popularly called, and their position is logically regarded as incompatible with those theories of the freedom and equality of man which are in the air at present. A more practical reason has strengthened these considerations—the high-caste Hindu sees that many of them, in order to escape their degraded condition, have sought relief by adopting Christianity or Islām. A movement to ameliorate their condition has been recently started in W. India.

'The attitude of the educated section of the higher castes towards the despised classes has, within the decade, undergone a remarkable change. Theosophists, Brahmo Samajists, Arya Samajists, Prarthana Samajists, high class Hindus and Christian missionaries are all taking an active interest in their welfare. The work of the Depressed Class Mission in Bombay and other parts of Western India is progressing. The untouchables are being touched. The stigma is being removed. The first step has been taken, and there is no doubt that this movement now going on for their elevation is bound to succeed. In the Baroda State H. H. the Maharaja Sayajirao Gaekwad is a keen sympathiser with the lot of these poor people. Schools and Boarding Houses have been opened for their education. Dheds, Bhangis and Chamars can now enter the precincts of Courts and Government Offices, like other castes, and even the public service is thrown open to them' (*Census of India, 1911, Baroda Report, i. 262*).

Up to the present this movement has not made much progress in N. and S. India. It has to encounter the confirmed prejudices of a most conservative priestly body, and, though it is probable that, the question once having been raised, their position may become less degraded than it is at present, it is premature to expect that the process of amelioration will be rapid.

LITERATURE.—This has been quoted in the article.

W. CROOKE.

OUTLAW.—The extent of the area throughout which the social feelings of early man are operative differs in different cases. In some instances they scarcely cross the threshold of his family-group, while in others they reach beyond the boundaries of his clan or even those of his tribe. To him the limits of the group, clan, or tribe seem to form the ring-fence of all possible social life, outside of which lies a world peopled by beings whom he fears and hates as his deadly enemies. Not only the welfare but the very existence of the community of which he is a member depends on the maintenance of the peace which subsists within it. This peace is safeguarded by custom, which is accepted without question and without explanation as the only rule of conduct; and custom is obeyed, in the first place, by reason of this acceptance, and, in the second place, by reason of the conviction that some supernatural power, force, or influence will bring disaster not only upon the man who disregards its bidding, but upon the community to which he belongs. It follows that whoever breaks the peace commits an offence which is at once secular and religious. Sometimes it is the former, sometimes it is the latter, element to which primitive notions regarding the essentials

of criminality assign more importance.¹ In both cases, however, the fate of such an evil-doer is the same. There is no place for him within the community which he has imperilled and polluted. He must be slain or expelled from the company of his fellows.

Frequently expulsion results not only in the civil, but in the actual, death of the outcast.

Among the Masai, if a man is convicted of a particular offence several times, and constitutes himself a public nuisance, he is proclaimed an outlaw, his property is confiscated, he is turned away with blows from every settlement or village, and, unless he can find friends in some stranger tribe, he must die of starvation.² A similar fate awaits the Zulu who has committed a premeditated murder;³ and in early Arabia a man who had killed one of his kindred was either put to death by his own people or became an outlaw, forced to take refuge in an alien group.⁴ In Albania the murderer's house is burned, his movables are confiscated, his immovables are made over to his victim's representatives, and he and his family must flee the country.⁵ In the Nissan Islands criminals are expelled from the village or district to which they belong, and their houses and lands are forfeited;⁶ the Seri Indians outlaw any of their members who are guilty of habitual idleness, of associating with aliens, or of failing in certain of the tests imposed upon would-be bridegrooms.⁷ Among the Wyandots it is the duty of every tribesman to kill the outlaw; and the Bedáwin of Hadramaut permit the slaying of the man who has been banished, after an interval of three days.⁸

Sometimes a man will submit to outlawry rather than face the death which is the punishment of persistent disobedience to tribal custom,⁹ or will himself renounce his clansman's rights and family ties in order to prosecute his vengeance the more readily.¹⁰

Sometimes an offender is outlawed for crimes committed upon persons other than the members of his group.

Thus, among the Barea and Kunína the cattle-thief who robs a friendly tribesman, and refuses to make the reparation which the elders of his own tribe have demanded of him, is expelled by his fellows, his dwelling is broken up, his property is taken from him, and his friends and relatives must share in his fate.¹¹

So, too, when the murderer of a member of a neighbouring tribe learns that an avenging expedition is on his track, if he takes to flight, he does so 'in the full knowledge of being ostracised for ever.'¹²

We find instances in which the kindred of a

homicide escape responsibility for his crime by withdrawing their protection from him.¹

Among the Circassians on the Kuban, the man-slayer for whom his clan refuse to pay compensation, and whom they abandon to the vengeance of his victim's representatives, must flee the country and wander a homeless fugitive (*abraik*), until he either makes his peace with the avengers or finds death at their hands.²

Elsewhere the same principle is applied to the case of the son for whom his father has paid many fines,³ and to that of the spendthrift for whose debts each branch of the family is legally liable. He is, says W. Marsden,⁴ sent forth as a deer to the woods, no longer to be considered as entitled to the privileges of society. It may be noted that to meet or have intercourse with an outlaw was regarded by the Babylonians as a sin.⁵

In the early Aryan community death was the only penalty; and, if the criminal could not be taken, he was expelled from it, to be treated like a wild beast, and, like a wild beast, to be hunted down and slain.⁶ This conception ruled in Vedie⁷ and Germanic⁸ antiquity, and, in the opinion of Schrader, it underlies the *ἀντιπλ* of the Greeks, which originally signified the position of the man who could be slain without penalty or payment or compensation.¹⁰ The case of the *homo sacer* was similar. Fallen under the wrath of the gods, whom he had offended by his crime, he was expelled from all human society; his goods were confiscated, and it was open to any one to slay him. He was not a mere enemy, and, as such, without rights. He was an abomination in the sight of gods and men, to be shunned like a leper, and to be cast out to herd with the wild beasts.¹¹

In ancient Gaul refusal to submit to the judgments of the druids was punished with outlawry;¹²

¹⁰ Schrader, *loc. cit.*; see also CRIMES AND PUNISHMENTS (Greek), §§ 4, 6 (5). B. W. Leist (*Græco-italische Rechtsgeschichte*, Jena, 1884, pp. 326 f., 331, 403) observes that the Greeks distinguished between *φόνος ἐκούριος* and *φόνος ἀκούριος*. In the former case, when the homicide had fled beyond the reach of the avenger, the community broke off all relations with him, as having brought pollution upon it and offended its gods. As in the case of the Roman *aqua et ignis interdictio*, his flight was declared an *ἀκούριος*, upon which followed the confiscation of his property. In the latter case he must absent himself from his country only until he has made his peace with the avenger and with the angry gods. See GE³, pt. III., *The Dying God*, London, 1911, p. 69 f.

¹¹ R. von Ihering, *Geist des römischen Rechts*, I. 4, Leipzig, 1878, p. 279 ff. This condition was the consequence not of all but of certain specified crimes—ill-treatment of parents, the betrayal of a client by his patron, and the ploughing up of ancient boundary-stones; and to these the later law added certain other offences. Ihering observes that banishment was not a punishment, but a means of escaping punishment which the Romans left open to the accused until judgment. The community, to free itself of all responsibility to the gods, must renounce all intercourse with the outcast. This was the meaning of the *aqua et ignis interdictio*. It was not mere political banishment, but operated as a purification. Fire and water are the emblems of purity, and were employed in every act constituting or representing a religious union—e.g., sacrifice, marriage, the making of a treaty, etc.—and they were denied to the criminals, not in order to signify a refusal of the necessities of life, but as symbols of the purity of the common life, which he would sully by his use (*ib. p.* 283). Avoidance is a by no means infrequent punishment, and is in use, e.g., among the Eskimos of Boothia Felix (John Ross, *Appendix to the Narr. of a Second Voyage in Search of a North-West Passage*, London, 1835, p. 11).

and in the laws of early Ireland the outlaw is defined, and the conditions are prescribed by compliance with which his family could be exonerated from his guilt, and subject to which he could be slain with impunity.¹

Among the Germanic peoples outlawry in its oldest form may be described as expulsion from human society to keep company with the beasts of the forest. The outlaw was named 'the wolf' (*wargus*), and was to be treated as the wolf, the enemy of human kind. He could be slain by any one without penalty, and, frequently, a price was set upon his head.² But, unless caught red-handed, his life was safe until the close of the tribunal which had pronounced judgment upon him. He had thus an opportunity of escape. No one might give him food or shelter, and, according to the older law, his goods were confiscated, and his very memory was blotted out by the burning down of his dwelling.³ Thus, in its earlier forms, outlawry included all punishments, while, in its later modifications, each punishment had its separate and independent place.⁴ Even in the former case something was abated of the harshness of the law, either by the interposition of arbitrators or by voluntary submission to a punishment; and, when it became permissible to give to the outlaw the assistance necessary to enable him to quit the country, banishment gradually took the place of the heavier penalty. A milder form of outlawry consisted in a three years' banishment, upon his return from which the exile was restored to his place in the community. If, however, he did not pay the compensation to which he had been adjudged liable, or if he had committed a fresh breach of the peace during the term of his banishment, he fell under the rigours of the old law.⁵ In later times expulsion of the evil-doer from the country was replaced by expulsion from the district ('Mark,' 'Gau') to which he belonged, while, under the influence of Christianity, not only did the Church introduce a form of expulsion, which a secular tribunal had no power to inflict, but secular was conjoined with ecclesiastical expulsion, and pilgrimage to holy places, where he could be cleansed of his guilt, was imposed upon the exile.⁶ Gradually the older system yielded to a new order of things, under which almost all crimes could be atoned for by a money payment.⁷

It was provided by one of the laws of King Edward that the homicide's relatives should escape responsibility for his crime if they forsook him, refused to pay for him, and ever afterwards refused him food or drink.⁸

It is of interest to note that, until the law of

¹ The provisions of the *Book of Aicill (Ancient Laws and Institutes of Ireland)*, Dublin and London, 1865-79, iii. 381 regarding outlawry are quoted in art. CRIMES AND PUNISHMENTS (Celtic). Brunner, *Deutsche Rechtsgeschichte*, do. 1837, i. 163. In Iceland the law sanctioned and favoured a sort of war of extermination against the outlaw. Whoever met him and could master him without danger to himself must either slay him or give him over to be slain. The community paid a price to the slayer or captor, and restored to its peace the outlaw who had slain three other wretches like himself (Wilda, p. 282 f.; cf. Maurer, i. 141, 143). The danger to society which results from neglect to take severe measures against those whom it has expelled is illustrated by the case of the Cocina Indians, who are neither a tribe nor a caste, but a band of outlaws, who live by robbing the other inhabitants of the Goajira Peninsula (F. A. A. Simons, 'An Exploration of the Goajira Peninsula,' *Proc. of the Royal Geographical Society*, vii. [1885] 787).

Dasent, entitled *The Saga of Burnt Njal*, Edinburgh, 1861, and *The Story of Giskli the Outlaw*, do. 1866.

P. J. HAMILTON-GRIERSON.

OVERSOUL.—'Oversoul' is Emerson's term for the absolute spiritual reality of the universe. The word in this sense was new with Emerson; the idea which he sought to express through it was almost as old as human thought. The early influences which brought Emerson to his doctrine of the oversoul, which in his twenty-fourth year he calls 'the Universal Mind' (*Journal*, ii. 217), were the writings of Coleridge, Wordsworth, Carlyle, and Goethe. Somewhat later he took up the study of Plato and Plotinus with intense enthusiasm. They had a profound influence on his development, and it was probably their doctrine of the soul that suggested to Emerson his term 'oversoul.'

Plotinus, following Plato's suggestion, in the *Timæus*, of a world-soul, presents as a central feature of his philosophy a vast, eternal, all-inclusive soul of the universe, which is at once both a one and a many. It is the unity in one of all the souls that are and of everything that can be called soul in the entire universe, visible and invisible. It is the overflow of the ineffable godhead, flooding out and coming to expression in the myriad forms of man and nature.

'The uncreated ground' of Meister Eckhart and 'the bottomless abyss' of Jacob Boehme also had a positive influence in the formation of Emerson's view of the oversoul, and still more important was the influence of German transcendental philosophy, especially as expounded by Fichte and Schelling.

'There is,' according to Fichte, 'one animating life, one living reason, of which all that seems to us to exist and live is but a modification, definition, variety and form' (*Grundzüge des gegenwärtigen Zeitalters*, Berlin, 1806, lect. ii.). 'One eternal energy separates itself into our consciousness, flows forth as the fountain of being, and remains even in its time-stream always one undivided energy' (ib. lect. iv.). 'One divine life wells up in our consciousness and appears in a world of infinite variety and change' (*Anweisung zum seligen Leben*, Berlin, 1806, lect. iv.).

With even less restraint and greater poetic exuberance, Schelling traced everything up to the absolute, the ground and matrix, both of finite mind and of external nature, which fit each to each like the two poles of a magnet. This absolute is the immense, brooding, organizing life, sleeping in the plant, dreaming in the animal, and waking into full consciousness in man, and revealing itself in ever-heightening forms first in an embryonic way in nature and then in conscious forms through history, art, and religion—a view which Coleridge interpreted in his *Eolian Harp*:

'And what if all of animated nature
Be but organic harps diversely framed,
That tremble into thought, as o'er them sweeps
Plastic and vast, one intellectual breeze,
At once the Soul of each, and God of all?' (44 ff.).

Emerson's doctrine of the oversoul runs through all his writings both in prose and in verse. It underlies his interpretation of nature, his conception of genius, his faith in man, and his unfailing assurance in the testimony of the soul. His most complete, though still highly poetic, interpretation is

¹ 1649, c. 98; 1661, c. 217 (*The Acts of the Parliaments of Scotland*, ed. T. Thomson, Edinburgh, 1814-76, vi. pt. ii. p. 173, vii. 203).

² D. Hume, *Com. on the Law of Scotland respecting Crimes*, Edinburgh, 1844, i. 187 ff.; 1540, c. 14; 1692, c. 65 (*Acts of Parliaments of Scotland*, ii. 372, iii. 674).

given in his essay, *The Over-soul*, first published in 1841. In this essay the oversoul is called 'the Universal Mind,' 'Supreme Mind,' 'Spirit,' 'Deity,' 'the Eternal One,' 'that Unity within which every man's particular being is contained and made one with all other,' 'the common Heart,' 'the Soul of the whole,' 'the deep Power in which we live.' Like Fichte's 'absolute ego' and Schelling's 'absolute principle,' like 'the universal reason' of Coleridge and 'the infinite Divine Presence' of Wordsworth, the oversoul, in Emerson's view, is an immense spiritual environment of the soul, a vast background presence impinging on the inner border of every personal life, so that man is a veritable 'façade of a temple,' which opens inward into the infinite.

When this presence 'breathes through his [man's] intellect, it is genius; when it breathes through his will, it is virtue; when it flows through his affection, it is love' (*The Over-soul* [Works, ii. 255]). 'It arches over them like a temple, this unity of thought in which every heart beats with nobler sense of power and duty, and thinks and acts with unusual solemnity' (*ib.* p. 260).

He accounts for the genius of Michael Angelo and other artists in the well-known lines:

'The passive Master lent his hand
To the vast soul that o'er him planned'

(*The Problem*, l. 471. [Works, ix. 17]).

One universal sea of life surges into all individual inlets, 'as the water of the globe is all one sea, and, truly seen, its tide is one' (*Over-soul*, p. 276). 'The waters of the great deep have ingress and egress to the soul' (*The Intellect* [Works, ii. 319]), and its 'influx' makes men wise beyond their own private knowledge, and good beyond the narrow range of their human deeds—'the soul is superior to its knowledge, wiser than any of its works' (*Over-soul*, p. 271). Silence, the hush of all that is of the private and exclusive self, is essential to the inflow of the higher truth into the soul. A man must learn to 'listen greatly.'

'Silence is a solvent that destroys [limiting] personality, and gives us leave to be great and universal' (*Intellect*, p. 319). According to Emerson's doctrine, there is no impenetrable wall, 'no screen or ceiling,' between the individual soul and the oversoul.

'There is no bar or wall in the soul, where man . . . ceases, and God . . . begins. The walls are taken away. We lie open on one side to the depths of spiritual nature' (*Over-soul*, p. 255).

'Draw, if thou canst, the mystic line
Severing rightly his from thine,
Which is human, which divine'

(*Worship*, l. 21 ff. [Works, ix. 237]).

'Ineffable is the union of man and God in every act of the soul. . . . For ever and ever the influx of this better and universal self is new and unsearchable' (*Over-soul*, p. 274). 'Thoughts come into our minds by avenues which we never left open.' 'If he [man] have found his centre, the Deity will shine through him' (*ib.* p. 263 f.). Self-reliance is safe because it is soul-reliance, and soul-reliance is safe because it is a 'trust which carries God with it and so hath already the whole future in the bottom of the heart' (*ib.* p. 278).

Like his masters, Plato and Plotinus, and his German and English inspirers, Emerson thinks of this oversoul, this universal reason, as the interpenetrating life and power and intelligence in nature, which is 'the perennial miracle' of spirit. Nature is alive through the same oversoul which is in us. At the centre of nature, as at the centre of man's soul, one supreme mind is actively present, is showing its unvarying laws, and is weaving the web which partly conceals and partly reveals the hidden-working spirit. There is one common, penetrating pulse of nature and spirit—'the earth-beat, sea-beat, heart-beat, which makes the tune to which the sun rolls, and the globule of blood, and the sap of trees' (*Representative Men* [Works, iv. 135]).

Since Emerson's day there have been many interpretations of ultimate reality in terms of oversoul. William James concludes that 'continuous and continuous' with our personal selves there is 'a wider Self through which saving experiences come'

(*Varieties of Religious Experience*, pp. 508, 515). R. M. Bucke calls this ultimate reality 'cosmic consciousness,' and gives many illustrations of its influence (see his interesting book, *Cosmic Consciousness*). F. W. H. Myers worked out in much detail a doctrine of the subliminal self, from which, he holds, come inspirations, revelations, and a vast number of extraordinary experiences and manifestations (*Human Personality*). There are, furthermore, in contemporary thought, many popular varieties of oversoul doctrine.

RUFUS M. JONES.

OXFORD MOVEMENT.—The name is given to the religious revival which began at Oxford in 1833. Its formal beginning is held to be a sermon on 'National Apostasy' preached in the University Church at Oxford on 14th July 1833 by John Keble. Later in July there was a meeting at Hadleigh in Suffolk, where H. J. Rose was rector, at which the only resident Oxford Fellow present was R. H. Froude; but far more important were the *Tracts for the Times* by *Members of the University of Oxford*, which began in September 1833, the first three Tracts being written by J. H. Newman. Keble, Froude, and Newman were all Fellows of Oriel College, though Keble had ceased to reside regularly in Oxford ten years before.

1. Causes of the Movement.—The immediate causes were the dangers threatening the English Church from four quarters.

(1) The most obvious danger, though the least serious, was political. The Established position of the English Church seemed threatened. In 1828 the Test and Corporation Acts, in 1829 the penal laws against Roman Catholics, had been repealed. In 1832 the great Reform Bill had become law, and the Whigs who had championed all these measures were in office supported by the emancipated Roman Catholics and the Dissenters. The Church as a whole had been allied to the Tories, and most observers imagined that the old order in the Church as well as in the State was doomed. In 1833 the Irish bishoprics were reduced from twenty to ten (the Church of Ireland was then Established); the Bill for their reduction was before the House of Lords when Keble preached his famous sermon; the interference with the Irish sees appeared an earnest of what might happen to the English in their turn. The opposition of the bishops and clergy to reform had made them singularly unpopular in the great towns. By the isolation of this cause the Movement can be made to appear almost wholly political, as a mere rally in favour of the Tory party, or of the old relations between Church and State.

(2) A second danger was from what is called Erastianism (*q.v.*), though it was not the teaching of Erastus but of the English philosopher Thomas Hobbes—the view that the final authority in religious belief was neither the Bible nor the Church, but the State. Such a view was a commonplace of Whig thinkers, and since the action of the State at the Revolution of 1689, when six English bishops (including the archbishop of Canterbury) and one Irish bishop had been deprived, without any canonical sentence, the Church had inclined more and more in its prac-

tice in an Erastian direction. The strongest teaching against Erastianism came from the Nonjurors (*q.v.*), and it is significant that an edition of the works of Charles Leslie, one of the wisest and most learned of the Nonjurors, had been issued from the University Press, Oxford, in 1832. Keble in his sermon had spoken strongly against State tyranny over the Church, and a strong protest against such a relation of Church and State marked the Movement from its beginning. This view, while it made an appeal to the more spiritual of the Protestant Dissenters, was unlikely to commend the Movement to Whig ministers.

(3) The most vital and the most subtle danger was 'Liberalism.' This was the spirit which had burst out in the French Revolution, but was at work in 1833 in the universities of Germany, unknown to most Englishmen. H. J. Rose had called attention to it in sermons at Cambridge in 1825, when he was answered, strangely enough, by E. B. Pusey. In England in 1833 Liberalism was the view that education, civilization, and reason would cure the evils and sorrows of mankind. Religion, in this view, was apt to be regarded as 'the rubbish of superstition.' By Liberalism the followers of the Oxford Movement meant 'the tendencies of modern thought to destroy the basis of revealed religion, and ultimately of all that can be called religion at all' (Church, *Occasional Papers*, ii. 386; Liberalism is analyzed most carefully in H. S. Holland, *Personal Studies*, London, n.d., pp. 76-82, and by J. H. Newman, in the *Apologia pro Vita Sua*, Note A, 'Liberalism,' added to the 1865 and all subsequent editions).

(4) The fourth danger which in part evoked the Movement was the wide-spread ignorance of the principles for which the English Church stood. Thomas Sikes, rector of Guilsborough, foretold a few years before the Movement began that the general suppression of the truth of the doctrine of the Holy Catholic Church would 'have its reprisals.' The effects of these, he added, 'I even dread to contemplate, especially if it comes suddenly' (*Letters and Correspondence of J. H. Newman*, ii. 484). Certainly one object of the *Tracts for the Times* was 'to avert the danger of people becoming Romanists from ignorance of Church principles' (Church, *Oxford Movement*, p. 241), and the *Tracts* were directed to be advertised as 'Tracts . . . on the privileges of the Church and against Popery and Dissent.' This fact is further borne out by the Preface to Keble's sermon on 'National Apostasy.' The Movement had its origin in part in the anti-Roman feelings stirred by the Emancipation Act of 1829.

These were the immediate causes. There were others which reached further back, prominent among them the horror of the French Revolution which had caused men to look with more favour on the institutions of the past, the Romantic movement in literature headed by Sir Walter Scott, and the Latitudinarian teaching of the Oxford Noetics, whose arguments drove men to sound their position and so forced them to re-discover the foundations of the position claimed by the English Church—viz. the Fathers and the Councils and belief in the Holy Catholic Church. Yet another cause operating in the same direction was the teaching of Charles Lloyd (1784-1829), bishop of Oxford and Regius Professor of Divinity. As professor in 1825 the bishop gave a course of lectures to graduates on the sources of the Prayer Book, and showed its indebtedness to the Latin forms in the Roman service-books. According to an Oxford tradition, breviaries were brought from the Bodleian Library and shown to the bishop's class. Newman, Froude, and Pusey all attended these lectures, which set them to study sympathetically the devotions of

the pre-Reformation and the primitive Church. William Palmer's *Origines Liturgicae* (Oxford, 1832), which owed something to Lloyd, turned men's attention in the same direction. Lloyd's death in 1829 was a heavy loss, for, had he lived, he would undoubtedly have exercised great influence on the Movement. The distinction drawn by Newman, in Tract 90, between the practical and formal teaching of Rome he had learnt from Lloyd.

2. History.—The traditional position had always been held before the Oxford Movement by those who were called since Queen Anne's day 'the High Churchmen,' but it had been obscured by the Latitudinarianism of the previous century. It had suffered from its supposed connexion with Jacobitism; it was held to a man by the Nonjurors. It still had distinguished representatives in 1833, in the little knot of men whom successive archbishops of Canterbury (Manners-Sutton [1805-28] and Howley [1828-48]) had trusted, especially Hugh James Rose (1795-1838) and a devout layman Joshua Watson (1771-1855). To the energies of this group was due the founding of the National Society for the Education of the Poor in the Principles of the Church of England in 1811 and the Church Building Society in 1817, and of a monthly Church review, *The British Magazine*, in 1832; and recent researches tend to show the latent strength of this body of Churchmanship, which, though not so prominent as the Evangelical school, in time helped to swell the force of the Oxford Movement. The *Tracts for the Times* roused Churchmen and rallied them to the old standards, and from 1833 until 1839 the Movement gained ground rapidly. This was due in part to the moral and intellectual attraction of its leaders. John Keble, 'the true and primary author of the Movement' (Newman, *Apologia*, p. 75, ed. Wilfrid Ward, p. 119), had made his reputation as a scholar at Oxford before he was twenty-one. In 1827 he had published, anonymously, *The Christian Year*, a volume of religious poetry which won immediate success. John Henry Newman was second only to Keble. The *Tracts for the Times* were his idea, and many of them were from his pen. His books, pamphlets, and, above all, his sermons, were among the most compelling forces on the side of the Movement. Richard Hurrell Froude, originally a pupil of Keble, brought him and Newman together. Froude died young, in 1836, but his ideas and influence as manifested in his diary and letters, printed after his death, had their effect on the revival. Edward Bouverie Pusey joined the Movement in 1834 with a Tract on 'Fasting' (*Tracts for the Times*, no. 18). His personal holiness and profound learning were to have an enormous influence on the later development of the Movement, after Newman had gone.

Pusey had been, like Keble, Newman, and Froude, a Fellow of Oriel, but became Regius Professor of Hebrew and Canon of Christ Church in 1828. Each of these was a scholar, and each (save Pusey) had poetry in his veins; but, above all, each was a man of deep religious earnestness. Keble and Pusey had been brought up in the traditional High Church school; Froude had learnt that faith from Keble; Newman, originally an Evangelical and later inclined to 'Liberalism,' had become a High Churchman from Keble's teaching mediated through Froude.

From 1833 to 1843 Newman's influence was supreme in the Movement, and it was felt not merely through his published writings, but also through his sermons preached in St. Mary's, Oxford, of which he had been vicar since 1828. They have been described by various writers, by none more carefully than by John Campbell Shairp, himself a Presbyterian:

'After hearing those sermons you might come away still not believing the tenets peculiar to the High Church system; but you would be harder than most men, if you did not feel more than ever ashamed of coarseness, selfishness, worldliness, if you did not feel the things of faith brought closer to the soul' (*Studies in Poetry and Philosophy*, Edinburgh, 1868, p. 278).

Thus, 'while men were reading and talking about the Tracts, they were hearing the sermons,' and 'the sermons created a moral atmosphere, in which men judged the questions in debate' (Church, *Oxford Movement*, p. 130). The appeal of the Movement to Christian antiquity and to the great Anglican divines was given practical illustration by the *Library of the Fathers*, begun in 1838 under the joint editorship of Keble, Newman, and Pusey, and by the *Library of Anglo-Catholic Theology* in 1841, directed by a committee of which the same three leaders were members. The Movement from 1836 had a quarterly magazine, *The British Critic*, at first partly edited by Newman, who became sole editor in 1838. He resigned in 1841 and was succeeded by Thomas Mozley.

From 1833 to 1839 was the period of the Movement's great success. Recruits poured in: at Oxford among the younger men it numbered R. I. Wilberforce, Charles Marriott, R. W. Church, J. B. Mozley, Frederic Rogers (later Lord Blackford), Isaac Williams, and W. J. Copeland, each of whom has left a name behind him. But its swift success was a danger. It attracted minds of a different temper from those of the original followers, men who 'cut into it at an angle' and 'whose direction was unquestionably Romeward almost from the beginning' (Newman, *Apologia*, p. 278, ed. Ward, p. 260). Among them were distinguished names: William George Ward, once a follower of Arnold, F. W. Faber, Frederick Oakeley, J. B. Morris, and J. D. Dalgairns. This party gained control of *The British Critic* and forced Newman in the Romeward direction.

In 1839 he first felt a doubt as to the tenability of the Anglican position. Between July and November 1841 this doubt was increased by his study of the history of Arianism, the establishment in connexion with the Protestant State Church of Prussia of an Anglican bishopric in Jerusalem, and the storm of episcopal censure which burst upon him on account of his Tract no. 90, which he had published earlier in that year. The Tract was a comment upon certain passages in the XXXIX. Articles; it applied the strictly historical method to them and showed that much of their language was not directed against the formal teaching of the Roman Church. The honesty of the interpretation would hardly be questioned now, and even in that day old-fashioned High Churchmen such as W. F. Hook of Leeds, G. Moberly of Winchester, and William Palmer came forward in Newman's defence. But popular clamour was aroused, and the effect on Newman was immediate and disastrous. In 1842 he retired from Oxford to live in almost monastic seclusion at Littlemore. In September 1843 he resigned his benefice of St. Mary's and preached his last sermon as an Anglican (the famous 'Parting of Friends') at Littlemore on 25th September. A month later he retired into lay communion with the English Church and performed no more ministerial acts.

Meanwhile the opposition to the Movement had been growing. The Evangelicals had early in its course denounced it as being a return to superstition and popery, the Liberals under T. Arnold had attacked it fiercely on the same ground (see Arnold's art. in *The Edinburgh Review*, cxxvii. [1836]), and the Roman Catholics from another side disliked and denied its assertion of the Catholicity of the English Church. Protestant feeling had been aroused by the publication of the first two volumes of R. H. Froude's *Remains* (ed. Keble and Newman)

in 1838 and by the title of Tract no. 80, 'On Reserve in Communicating Religious Knowledge,' which was 'a beautiful and suggestive' essay by Isaac Williams, written to check the habit of using the most sacred words and phrases at random in hortatory appeals. Tract no. 90, in 1841, added fuel to the flame. The Heads of Houses at Oxford who had at first regarded the Movement with 'contemptuous indifference' from 1841 adopted an attitude of bitter and passionate hostility, with the exception of M. J. Routh, President of Magdalen, then the most learned and venerable divine in England, who stood entirely apart from their proceedings.

In 1841 the Heads issued a decree condemning Tract 90 and branded it as dishonest. In 1843 a committee of them suspended Pusey from preaching in the University pulpit for two years for teaching in a sermon on the Holy Eucharist doctrine contrary to the Church of England. Pusey never knew the precise charge against his sermon or the ground upon which it was condemned. A like violence marked the utterances of some of the bishops. J. B. Sumner, then bishop of Chester, later archbishop of Canterbury, a devout Evangelical, in a charge of 1841 ascribed the Movement to the work of Satan, and other bishops followed suit (their utterances were carefully collected and arranged by W. S. Bricknell, in his *Judgment of the Bishops upon Tractarian Theology*, Oxford, 1845). The silencing of Newman and Pusey in Oxford gave the Romanizing wing an opportunity of coming to the front, and in 1844 W. G. Ward published his *Ideal of a Christian Church*, a book marked by great moral earnestness and containing some extremely shrewd and bitter criticism of the English Church; it assumed that only the Roman Church satisfied the conditions of what a Church should be.

The Heads of Houses at Oxford seized the chance thus given them. They secured the condemnation of the book by the University and Ward's degradation from his degrees; a proposal to censure Tract no. 90 was, however, vetoed by the Proctors. These events on 13th Feb. 1845 meant the downfall of the Movement in Oxford; the drift to Rome set in, and finally on 8th Oct. 1845 Newman was received into the Roman communion.

The Movement then entered upon its second stage, which was appropriately enough marked by the consecration of a new church (the anonymous gift of Pusey), St. Saviour's, in the slums of Leeds. The Movement had ceased to be an academic affair and now made its appeal to the people of the great towns. The Evangelicals in the 19th cent. had left these great populations apart, their own strongholds being chiefly in the inland watering-places such as Bath, Cheltenham, and Tunbridge Wells. The followers of the Movement began the mission work in East and Central London, where such outposts as St. Peter's, London Docks, and St. Alban's, Holborn, became in time famous. This earnest devotion to the masses in the towns was strong in R. H. Froude, who in 1833 had a 'Project for reviving Religion in great Towns' by means of colleges of unmarried priests, which he considered 'the cheapest possible way of providing effectively for the spiritual wants of a large population' (*Remains*, i. 322). Side by side with this attempt to evangelize the poor districts went the movement to raise the standard of worship, and to teach through the eye as well as through the ear. Both developments roused strong opposition, and from 1845, when riots began at Exeter because the surplice was used in the pulpit in place of the black gown, as the bishop had directed, until the infamous riots at St. George's-in-the-East which closed the series in 1860, mob violence was freely used.

Inevitably it failed, as it deserved to fail, and slowly the public worship of the English Church lost its coldness and dinginess and became more dignified and beautiful. Hymns came into more general use; the principal hymn-writers of this period were, with few exceptions, followers of the Movement. Among them were Henry W. Baker, William Bright, S. Baring-Gould, and John Mason Neale. Neale aided this development not only by his original compositions, but by his translations of the old Latin and Greek hymns—a work which had been begun tentatively by Bishop R. Heber (1783–1826) in the previous generation, but in which no one before or since has approached Neale. Music too, as a result of this side of the revival, returned to parish church services and attention was paid to choirs; many of the most popular English Church hymn-tunes owe their origin to the men of the Movement. J. B. Dykes, the much persecuted vicar of St. Oswald's, Durham, and Frederick Gore-Ouseley were both priests who had flung in their lot with it. W. H. Monk and John Stainer were devout lay musicians on the same side, while Richard Redhead and Thomas Helmore did much to restore the old plain-song to the Church's services.

While this revival of Church worship was proceeding, the teaching of the Movement met with fiercer attack. In 1850 the doctrine of Baptismal Regeneration came before the Judicial Committee of the Privy Council in the case of G. C. Gorham, whom the bishop of Exeter had refused to institute to a benefice. The Privy Council in 1851 decided that Gorham's doctrine (which was, in fact, peculiar to himself), though it appeared to deny the Prayer Book teaching, was not contrary to the Church of England. The result was a panic in which many clergymen and lay-folk went over to Rome, among them H. E. Manning, J. R. Hope (afterwards Hope-Scott), and, later, R. I. Wilberforce. Next followed an attack on the doctrine of the Real Presence of the Lord in the Holy Communion. For teaching this doctrine G. A. Denison was prosecuted in 1854, but his opponents failed to secure his condemnation in 1858, on a technical ground. Keble's treatise *On Eucharistical Adoration* (Oxford, 1857) and Pusey's two separate books on *The Real Presence* (1855 and 1857) were evoked by this attack. In 1870 the attack was renewed, the defendant being W. J. E. Bennett, vicar of Frome-Selwood. In 1872, however, the Privy Council decided in his favour. Still fiercer storms raged over the teaching and practice of private sacramental confession. Its use had naturally been revived as the Prayer Book was studied and the power of the sacramental system known in the individual life. Its practice at St. Saviour's, Leeds, was attacked in 1848, in 1858 Richard Temple West, later vicar of St. Mary Magdalene's, Paddington, was assailed for such teaching at Boyne Hill, and there were furious public agitations against the practice in 1873 and again in 1877; the effect of these was to bring the teaching before a wider circle than before. These last agitations were confined to newspaper articles, speeches, and pamphlets; no charge of false doctrine was ever brought against the much-abused clergy in any Church court.

The ceremonial revival, inaccurately but popularly called 'ritualism,' led to a series of suits in the law-courts which began in 1854 and only closed with the judgment in the case of *Read v. the bishop of Lincoln* in 1890. This revival was originally due to an early follower of the Movement and friend of Newman, J. R. Bloxam, Fellow of Magdalen College, Oxford, a scholar and an antiquary. It was carried on by the Cambridge Camden Society, led by J. M. Neale and others, but with the growth of hostility to the Movement in the

fifties it passed into less learned hands. The Churches began to be re-decorated, and the use of the Eucharistic vestments was revived, the stole being first used in 1837, the chasuble in 1841. The first lawsuit ended with a judgment in favour of the revival in 1857, later the Privy Council changed its mind, and, finally, on the tide of a No-popery agitation, Disraeli, then Prime Minister (assisted by A. C. Tait, archbishop of Canterbury), passed a Public Worship Regulation Act in 1874 'to put down Ritualism.' Under this Act five priests were imprisoned for various terms—a fact which rallied public opinion to the persecuted party—and the Act became a dead letter. The Church of St. Alban's, Holborn, and its vicar, A. H. Mackonochie, bore the brunt of this attack from 1867 to 1883, when Mackonochie was finally deprived of his benefice. He died four years later, worn out by his long persecution. A like fate had overtaken Dykes in 1876 after the merciless hostility of his diocesan C. Baring, bishop of Durham. The judgment of E. W. Benson, archbishop of Canterbury, in the case of the bishop of Lincoln in 1890 brought peace to the Church and practically decided the question in favour of the revivalists.

During these struggles—indeed, from the Gorham judgment in 1851—the fight had been directed against the principle of Erastianism. The Judicial Committee of the Privy Council had, almost by inadvertence, as Lord Brougham declared, been made the supreme court of ecclesiastical appeal in 1833, when the old Church courts were reconstituted. It was a purely Parliamentary court, destitute of spiritual authority. Consequently, as this became realized, High Churchmen declined to plead before it or to obey its decisions. This led to the accusation of 'lawlessness,' but the moral authority of the protesters has in fact rendered the court and its decisions inoperative.¹

3. Fruits of the Movement.—The spiritual force of the Movement showed itself further in its successful revival of the 'religious' or monastic life. Newman and Keble both sympathized with this development, but its guiding spirit was Pusey. The first sisterhood was founded in 1844, and every decade since then has witnessed the growth of the Movement, a revival without parallel in Christendom; and the great sisterhoods, with their works of charity, penitentiaries, homes, orphanages, and schools, are a marked feature in the life of the English Church, and would have seemed incredible to the Churchmen of one and two hundred years ago. Communities for men have grown more slowly, but the Society of St. John the Evangelist, Cowley, founded by Richard Meux Benson in 1866, is established in four continents, and the Community of the Resurrection and the Society of the Sacred Mission are deeply rooted and widely known. These are some of the fruits of the Movement of 1833. Other results are the zeal for Foreign Missions, which it shared with the Evangelicals, and the wholly changed conception of clerical and episcopal activity. Samuel Wilberforce, bishop successively of Oxford and Winchester, was 'the re-modeller' of the conception of a bishop's duties, and the high standard set by him owed most if not all of its features to the Movement of 1833. Among the rank and file of the clergy the Movement has done much to raise the general level of devotion. Retreats and Quiet Days, parochial Missions, and the like, if originally borrowed from the Church in France, owe their acclimatization to the Oxford Movement.

The first Tractarians re-introduced a type of

¹ Reference may be made to the *Report of Royal Commission on Ecclesiastical Discipline*, 1906, p. 67, § 363, which declared that 'the judgments of the Judicial Committee cannot practically be enforced.'

character which had been sadly lacking in the English clergy and laity for a century. They were marked by reserve, resolute self-discipline, unworldliness, shrinking from preferment, hatred of sham and pretence, and a grave distrust of the feelings. Their teaching and preaching exhibited the most tender personal devotion to the Lord Jesus Christ as to a living Friend. Generally speaking, religious men before the Oxford Movement 'spoke of our Lord in a more distant way, as one holding the central place rather in a dogmatic system than in the devout affections' (Shairp, p. 329). This personal devotion was particularly a mark of Keble and of Pusey, but it was reflected very clearly in their followers.

In one respect the Oxford Movement after 1845 showed that it had its right and left wings, both a conservative and a more liberal group; this was when it was confronted by the fresh discoveries of natural science, represented broadly by the term 'evolution,' and by the same methods applied in the department of Biblical criticism. The right or conservative wing was that of Pusey and Keble, the more liberal school that of the founders of the *Guardian* newspaper (in 1846), Church, J. B. Mozley, and Lord Blythburgh. They differed in their view of the sort of opposition to be offered to the next generation of the liberal wing (who carried on in many respects the Newman tradition in the Movement) issued in *Lux Mundi*, an important volume of theological essays, published in 1889.

Apart from the more detailed results noticed here, the Oxford Movement from its beginning in 1833 has stood for the corporate as opposed to the individualistic principle. Thus, while it emphasized the almost forgotten or neglected truth of the Church, and so incurred the suspicion of attaching importance to the institutional rather than the mystical side of religion, its later followers were drawn to apply the doctrine in its fullness to society round them, and Christian socialism is no by-product of the revival, but a true application of its principles to social questions. The Christian Social Union was in fact founded by later followers of the Movement in 1889, though it secured the aid of Churchmen of other views. But guilds and religious societies have sprung from the Movement and its principles naturally and spontaneously. Broadly, too, the Movement has had a wider result. From the thinly-veiled deism of the Latitudinarian Churchmen of the 18th cent., with their Zwinglian view of the sacraments, the Oxford Movement has slowly and painfully brought back into the lives of English people a belief in the supernatural. When the Movement began, Englishmen as a whole were becoming more and more materialistic, less and less spiritual, distrusting enthusiasm and devotion; religion, when it was more than a cold and dry morality, tended to become mere emotionalism which was very apt to feed itself on phrases. The Oxford Movement with its passionate devotion, its appeal to Christian history and to authority, brought back the old conception of the Church, not as a mere human institution and a department of the State, but as the Body of Christ, with life-giving sacraments and a ministry reaching back through the Apostles to the Lord, a society which 'takes its origin not in the will of man, but in the will of the Lord Jesus Christ' (F. Temple, *Twelve*

Sermons preached at the Consecration of Truro Cathedral, Truro, 1888, quoted in H. S. Holland, God's City, London, 1894, p. 20).

LITERATURE.—A brief bibliography will be found in *The Cambridge Hist. of English Literature*, xii. [1915] 453-463. The Movement itself may be studied in the following authorities.

i. *The Tracts for the Times*, London, 1833-41; *The Remains of Richard Hurrell Froude*, do. 1838-39; sermons and other works of J. Keble, E. B. Pusey, Charles Marriott, and Isaac Williams; *The British Critic*, 1830-43; the sermons and lectures, etc., of J. H. Newman before his secession; the treatises of R. I. Wilberforce and of Isaac Williams. These are characteristic productions of the Movement as a whole in its first stage; the works of R. W. Church, H. P. Liddon, W. Bright, and J. M. Neale illustrate the second stage; for the third the works of C. Gore, H. S. Holland, A. L. Moore, R. C. Moberly, W. C. E. Newbolt, Darwell Stone, J. N. Figgis, P. N. Waggett, A. Chandler, F. Weston, and B. W. Randolph give the best general view of its doctrinal and ethical teaching.

ii. The history is chiefly to be found in numerous biographies, but books covering the period are: Church, *Oxford Movement 1833-1845*, London, 1892, and Newman, *Apologia pro Vita Sua*, ed. Wilfrid Ward, 'with differences of various edd. noted,' Oxford, 1914 (these are indispensable, but they carry the story only to 1845). Complete general histories are: P. Thureau-Dangin, *The English Catholic Revival in the XIXth Century*, Eng. tr., 2 vols., London, 1914; S. L. Ollard, *Short Hist. of the Oxford Movement*, do. 1915; S. Baring-Gould, *The Church Revival*, do. 1914. Other sketches of the Movement are contained in T. Mozley, *Reminiscences, chiefly of Oriel College and the Oxford Movement*, 2 vols., London, 1883; J. A. Froude, *Short Studies on Great Subjects*, 4 vols., London and Bombay, 1903, iv.; F. Oakeley, *Hist. Notes on the Tractarian Movement (1833-1845)*, London, 1865. The biographies of the leaders are important, especially Liddon, *Life of Edward Bouverie Pusey*, 4 vols., London, 1894-98; *Letters and Correspondence of J. H. Newman*, ed. A. Mozley, 2 vols., do. 1891; J. T. Coleridge, *Memoir of John Keble*, 2 vols., Oxford, 1869; *Life and Letters of Dean Church*, ed. M. C. Church, London, 1894; Church, *Occasional Papers*, 2 vols., do. 1897; *Letters of J. B. Mozley, D.D.*, do. 1885; *Letters of J. M. Neale, D.D.*, ed. M. S. Lawson, do. 1910; J. O. Johnston, *Life and Letters of Liddon*, do. 1904; G. W. E. Russell, *Dr. Liddon*, do. 1905; *Letters on Church and Religion of W. E. Gladstone*, ed. D. C. Lathbury, 2 vols., do. 1910; *Letters of Frederic Lord Blythburgh*, ed. G. E. Marindin, do. 1896; Wilfrid Ward, *William George Ward and the Oxford Movement*, do. 1889; *Autobiography of Isaac Williams*, ed. G. Prevost, do. 1892; J. H. Pollen, *Narrative of Five Years at St. Saviour's, Leeds*, Oxford, 1851, and *Life* (by A. Pollen), London, 1912; William Palmer, *Narrative of Events connected with the Publication of Tracts for the Times*, Oxford, 1843, new ed. with additions, London, 1883; A. P. Perceval, *A Collection of Papers connected with the Theological Movement of 1833*, London, 1842; [M. Trench], *Charles Loder: A Biography*, do. 1881; [E. A. Towler], *A. H. Mackonochie: A Memoir*, do. 1899; C. E. Osborne, *The Life of Father Dolling*, do. 1903; W. Crouch, *Bryan King, St. George's E.*, do. 1904; *Autobiography of Dean Gregory*, ed. W. H. Hutton, do. 1912; G. W. E. Russell, *Edward King, Sixteenth Bishop of Lincoln*, do. 1912; *St. Alban the Martyr, Holborn*, do. 1913; J. W. Burgon, *Lives of Twelve Good Men*, do. 1888; A. B. Donaldson, *Five Great Oxford Leaders*, do. 1900; and biographies in H. S. Holland, *Personal Studies*, do. 1905, and A. Cecil, *Six Oxford Thinkers*, do. 1909.

iii. Characteristic of the Movement were its novels and its poetry.

(a) *Novels*: those of Charlotte M. Yonge, Elizabeth M. Sewell, Francis Edward Paget, Harriet Mozley, J. M. Neale, W. Gresley, and A. D. Craike; also *From Oxford to Rome*, London, 1847, and *Rest in the Church*, do. 1848, anonymous, but in fact by F. E. S. Harris; J. H. Newman, *Loss and Gain*, do. 1848.

(b) *Poetry*: *Lyra Apostolica*, London, 1836, ed. H. C. Beeching, do. 1899, which shows the hopes and ideals which animated the leaders in the first days; J. Keble, *The Christian Year* (anon.), do. 1827, *Lyra Innocentium* (anon.), Oxford, 1846, both ed. with Introd. by Walter Lock, London, 1898-99; J. H. Newman, *Verses on Religious Subjects*, London, 1853, many of which are included in his *Verses on Various Occasions*, do. 1868; Isaac Williams, *The Cathedral*, Oxford, 1838, *Thoughts in Past Years*, do. 1838, *The Altar*, London, 1847, *The Baptistry*, 2 vols., Oxford, 1842-44, and others; F. W. Faber, *Poems and Hymns*, collected ed., London, 1914; J. M. Neale, *Collected Hymns, Sequences, and Carols*, do. 1914; Christina Rossetti, *Verses*, do. 1893, *New Poems*, do. 1896. The Oxford Movement from the literary point of view is discussed by W. H. Hutton, in *Cambridge Hist. of English Literature*, xii. ch. xii.

S. L. OLLARD.

P

PACIFISM.—See WAR.

PADMAPĀNI.—Padmapāni (Tibetan, Phyang na pad ma), the *bodhisattva* or the god 'with a red lotus in the left hand,' is a name of Avalokiteśvara, who, as has been said, is more than an ordinary *bodhisattva*, who is in fact one of the chiefs of the Buddhist mediæval pantheon (see art. AVALOKITEŚVARA). Many forms of Avalokiteśvara are known from Indian and Tibetan sculptures, from Indian miniatures and Tibetan designs. It is always the same Avalokiteśvara, and the differences are chiefly iconographic, although different legends and speculations may be embodied in the different representations of the same god. From the iconographic point of view it is possible to distinguish the non-human forms, with four, six, twelve, or a thousand arms, from the human forms. Among the latter the figure with a lotus in the left hand is prominent; such a figure was likely to be called Padmapāni,¹ Abjapāni, Kamalahasta, Padmakara, or any name meaning 'lotus-handed.' Padmapāni is the most common. In the same way the figure with a thousand arms is a 'thousand-armed' (*sahasrabhuja*). The right hand sometimes holds a *kalāṣa*, the consecration phial—an attribute of many *bodhisattvas*, possibly a symbol of their consecration as *kumāras*, royal princes in the spiritual kingdom of a *tathāgata*—sometimes a rosary (*aṣṣamālā*); sometimes it is in the attitude of giving (*varanudrā*). Moreover, Padmapāni is sometimes characterized by a fawn-skin on the left shoulder, and by an image of Amitābha—the reigning *tathāgata* of Sukhāvati—in his head-dress. Amitābha is the *tathāgata*, Avalokiteśvara the *bodhisattva*, *par excellence*, Śākyamuni the *nirmītabuddha* (see PHILOSOPHY [Buddhist]) of the present age.

In Tibet, since 1439 (?) Avalokiteśvara-Padmapāni has been incarnated in the Dalai Lama—a *nirmīta-kāya* of secondary rank.

The name Padmapāni does not occur in the *Kāraṇḍavyūha*, the summary of Avalokiteśvara's *āpītorā*. But lotuses are conspicuous in this book. When Avalokiteśvara returned from his pilgrimage to Sukhāvati, the western Buddha's field, he brought back and offered to Śākyamuni lotuses sent as a gift of homage by Amitābha (*imāni Amitābhena prakīṭāni* [pp. 18, 89]), and the representation of Avalokiteśvara 'with a lotus in hand' possibly originated from this story, or *vice versa*. However it may be, in the description of the diagram (*maṇḍala*) of the 'six-syllabled charm' (*om maṇipadme hūm*) we learn that Avalokiteśvara is to be represented with the lotus and the rosary (p. 74). If the name Padmapāni is wanting, synonyms are near at hand: in the *stotra* (hymn) uttered by the Devaputra Maheśvara (p. 89) Avalokiteśvara is styled Padmadhara, 'who bears a lotus'; Subhāpadmahasta, 'who has in hand a pure lotus'; Padmapriya, 'friend of lotuses'; also Padmāsana, 'who sits upon a lotus,' and Padmaśrī, 'lotus glory' (cf. p. 11)—not to be confused with the Padmaśrī of the *Saddharmapuṇḍarīka*. It is interesting to remark that Avalokiteśvara is Maheśvara (p. 90), and the fiend of Vajrapāni, who never entirely loses his demon character (p. 11).

¹ The same name is given to Brahmā, to the sun, and to Viṣṇu in the Lexicons (see O. Böhtlingk and R. Roth, *Sanskrit-Verörterbuch*, Petrograd, 1855-75), possibly owing to the Buddhist identification of these gods with Avalokiteśvara. 'Pad ma' can equal Viṣṇu, Avalokiteśvara.

There is some evidence that, in Tibet, the name Padmapāni vied with the name Avalokiteśvara. It seems that the *Mani bka bum* prefers the former (W. W. Rockhill, *The Land of the Lamas*, suppl. notes, ii., London, 1891; E. Schlagintweit, *Buddhism in Tibet*, Leipzig, 1863, tr. L. de Milloué, *AMG* iii. [1881] 54; L. A. Waddell, *The Buddhism of Tibet, or Lamaism*, London, 1895, p. 356).

LITERATURE.—See art. AVALOKITEŚVARA. For descriptions of Padmapāni (photographs) see H. H. Cole, *Preservation of National Monuments*, India, Yūsufsāi District, pl. xxv. (ap. Grünwedel, *Mythologie*, p. 22), a Gāndhāra sculpture identified by S. d'Oldenburg; A. Foucher, *Étude sur l'iconographie bouddhique de l'Inde* (*Bibl. de l'École des Hautes Études*, vol. xlii. pt. i.), Paris, 1899, p. 101 f.; A. Grünwedel, *Myth. des Buddhismus in Tibet und der Mongolei*, Leipzig, 1900, pp. 22, 27, 123, 138; Alice Getty, *The Gods of Northern Buddhism*, Oxford, 1914. For literary documents, H. H. Wilson, *Works*, London, 1862-77, ii. 29 (a recension of the visit of Padmapāni to Amitābha); *Kāraṇḍavyūha*, Calcutta, 1873; H. J. von Klaproth, 'On the Oharm Om maṇipadme hūm,' in *JA* vii. [1831] 192; C. F. Köppen, *Die lamaische Hierarchie und Kirche*, Berlin, 1903, ii. 69 (reprint).

L. DE LA VALLÉE POUSSIN.

PADMASAMBHAVA, or PADMAKARA.—This Indian Buddhist missionary, priest, teacher, and saint of the 8th cent. A.D. is of the first importance in Tibetan Buddhism. For, although he is only incidentally referred to by previous writers, merely as the leader of a retrograde movement among the Lāmas, he is shown by the present writer to have been the founder of the order of the first Tibetan Buddhist monks, or Lāmas, as they are generally called. His nationality and training and the circumstances under which he was sent for by the pro-Buddhist king of Tibet, Khri-Srong De-btsan, the son of an ardent Buddhist Chinese prince, to establish an order of Buddhist monks in Tibet, have been indicated in art. LĀMAISM.

Previous to his arrival in Tibet (c. A.D. 747-748) there appear to have been no indigenous Buddhist monks in that country, though Tibet had been visited by occasional Indian and Chinese Buddhist monks since the epoch of King Srong-btsan (†A.D. 650), who had introduced from N. India or Khotan the so-called Tibetan script, and had procured the translation into its characters of some elementary treatises on Buddhism.¹ This universal tradition crediting Padmasambhava with the founding of Lāmaism is also supported by the epigraphic evidence discovered by the writer in the two edict-pillars at Lhasa of the saint's patron, King Khri-Srong De-btsan, dated A.D. 783, or three years before the death of that sovereign. In these two edicts, as well as in a third, of the same date, although referring to religious matters, the word 'Lāma' does not occur; but the king states that 'by a blessing the orthodox religion was procured'²—this term, 'orthodox or inside religion,' is still the ordinary term applied to Buddhism, as opposed to the Bon or other faiths.

The first monastery in Tibet was built under his directions at Sam-yās (c. A.D. 749), after the model, it is said, of the chief monastery of Mid-India, Nalanda, or, according to another account,

¹ In the great Scripture commentary, the *Bstan-gyur Mdo*, vol. 124, are two grammatical works ascribed to his minister, Thonmi, whom he had sent to 'India' (but probably Khotan, which was then Indian in its civilization) to learn the language; also in vol. 123 a doctrinal treatise (*Sku-gzugs-kys mts'an-nyid*) by 'The son of Anu,' an eponym of the same minister (W. W. Rockhill, *The Life of the Buddha*, London, 1892, p. 212), who is generally credited in the vernacular histories with having also translated the *Dhāraṇī* on the *Om maṇi* formula, universal now throughout Tibet.

² L. A. Waddell, *JRAS*, 1909, p. 931 (*nang-ch'os* = 'inside religion').

Udandapur¹ on the Ganges. It was placed under the abbotship of Santa-rakṣita, his reputed brother-in-law, though it is doubtful whether Padmasaṃbhava was really uncelibate, and whether the tradition crediting him with a spouse is not the outcome of later Lāmas identifying him with Avalokita, and so conferring on him a female energy, the counterpart of Tāra (Ishtar), the Buddhist queen of heaven.

It is significant of the enthusiasm and skill imparted by Padmasaṃbhava and his deputy, the abbot, to their students that seven of the very first group of the newly-trained Tibetan monks achieved literary distinction,² and that most of them show by their scrupulously accurate work as translators of different books of the Indian Buddhist canon from Sanskrit into Tibetan that they had attained remarkable scholarly knowledge of both Sanskrit and Tibetan. Especially numerous are the translations by sKa-ba-bha-po dpal-brtsegs (who seems to be the same as dBah-dpal-bahs) and Vairochana. Padmasaṃbhava had also twenty-five ritualistic pupils whose names are preserved.³

Regarding the character of his teaching, there is no certain evidence that it was of the flagrantly magical and necromantic type ascribed to him in the indigenous works on the subject, which are mostly late compositions of the 14th cent. onwards—when works of a similar nature were being issued by the Mahāyāna Buddhists in India ascribing precisely similar ritualistic spells to Buddha himself. From the high literary attainments of his contemporary pupils it seems probable that his teaching was more or less orthodox Indian Buddhism of the Mahāyāna type, and of the 'Middle Path School' (Madhyamaka), to which he reputedly belonged;⁴ and that it afterwards became degraded in the hands of the converts from the indigenous shamanistic Bon religion. The book of spells ascribed to him is of exactly the same class as the *Paritta* or Pāli spells in general use among the southern Buddhists of Ceylon and Burma, and in regular ritualistic use by the Ceylonese Buddhists at the present day.⁵

He is the chief saint of 'The Old Sect' of Tibetan Buddhists, the red-capped Nyin-ma, and, apotheosized, he receives equal worship with Śākyamuni himself, bearing indeed the title of 'The Second Buddha,' and represented as booted, capped, and clad in thick garments, like an ordinary Lāma of the present day.

LITERATURE.—This is quoted throughout the article.

L. A. WADDELL.

PALMISTRY.—Fortune-telling is a superstition which seems destined to survive permanently in the lower strata of even scientific civilizations. Among the ancient Romans it was part of the official religion and the executive procedure. Like gambling, it corresponds to a certain emotional need, the satisfaction of which may justify the existence of a harmless delusion. Of the pseudo-scientific methods of elucidating the past and predicting the future palmistry is the most widely spread. The modern gypsy retails a traditional lore which goes back to the earliest Indian culture.⁶ The Chinese transferred the palmist's attention to the foot, and their curious interest in the compressed female foot has produced a pseudo-science

of 'podoscopy.' The claims of palmistry are in a way a tribute to the human hand and its importance in evolution. The mind has developed *pari passu* with the hand, which as an organic machine is unrivalled.

Chiromnomy professes to read the individual character on the assumption of a correlation between hand and brain; chiromancy claims also to predict the individual future. The general shape of the hand is the first classification; then the flexion-folds of skin (the 'lines') and the muscular projections (the 'mounts') are examined in connexion with the doctrine of signatures and the influence of the planets. Macalister remarks:

'That these purely mechanical arrangements have any psychic, occult or predictive meaning is a fantastic imagination, which seems to have a peculiar attraction for certain types of mind, and as there can be no fundamental hypothesis of correlation, its discussion does not lie within the province of reason.'¹

But palmistry has to be reckoned with as one of the minor psychological factors.

The chief elements of palm-reading were codified by Hartlieb in 1475 (?), and later by d'Arpentigny in 1843.² D'Arpentigny's work is the basis of the modern literature. The individual palmist indulges his fancy and analogical powers, and as a rule is a shrewd judge of human nature.

The left hand, as being less deformed by work, is preferred for examination. Hands are placed by the French authors in seven classes: *main élémentaire* or *à grande paume*, *main nécessaire* or *en spatule*, *main artistique* or *conique*, *main utile* or *carrière*, *main philosophique* or *noueuse*, *main psychique* or *pointue*, and *main mixte*. The outstanding feature of the hand is the thumb. The line surrounding it is the line of life, probably the earliest of the palmist's definitions. Aristotle mentions the belief that a long line of life implies a long life.³ If without sinuosities, the line stands for happiness. The first phalange of the thumb signifies will, the second logic; the ball is termed the mount of Venus, and on its features depends the individual's success or failure in love. The prominence at the base of the index finger is the mount of Jupiter, connoting pride; that of the middle finger is the mount of Saturn, connoting fatality; that of the third is the mount of Apollo, connoting fortune, art, or riches; that of the little finger is the mount of Mercury, connoting science or wit. On the heel of the hand, or the 'percussion,' are the mounts of Mars and of the moon, connoting respectively courage and cruelty, and imagination, fancy, or folly. A simple division of the facts of existence is into life, intellect, emotion, and luck; accordingly the palmist assigns to these the four main flexion-folds of the skin of the palm. Next to the line of life, which it joins beneath the index finger, is the line of head; above and parallel to it is the line of heart; straight up the centre of the hand is the line of fate, and parallel to it, towards the heel of the hand, is the line of fortune. From the origin of the line of life to the base of the little finger runs the line of health. The girdle of Venus is a curved line from the base of the little finger to that of the index. The lines across the wrist, two or more, are the 'bracelets,' *rascettes*, each signifying thirty years of life. The character of the planets controlling each digit is divided among the three phalanges; e.g., the uppermost phalange of the index, referred to Jupiter, implies mysticism, the second intelligence, the lowest instinct.

PALMYRENES.—1. **Introductory.**—Palmyra is the Greek name of the town called Tadmor by its Semitic inhabitants, and so called to the present day. Situated in the middle of the Syrian desert, more than two days' journey east of the cultivated lands, this city apparently owes its origin to an abundant spring which fertilizes the desert and gives birth to an oasis where the palm, olive, vine, and fig-tree flourish. However old it may be, it does not appear on the stage of history until the Græco-Roman period. At that time the inhabitants of Tadmor were Semites, already much imbued with Greek culture. Placed in the Hellenistic world between the two capitals of Syria—Antioch and Seleucia in Lower Mesopotamia—they were the traders of the northern desert, as the Nabateans were between Damascus and Arabia. Like the Nabateans (*q.v.*), they were Arabs who adopted the Aramean language spoken from the time of the Persians by the ancient peoples that cultivated the soil of Syria. Greek was their second language. They borrowed some words of administration from the Romans. Since the *razzia* of the dictator Mark Antony (34 B.C.) they had been under the influence of Rome, which granted them the *jus italicum*. The first inscription dates from the year 9 B.C.; it is generally believed that the last one is from A.D. 271. It is therefore during this period that we must study the religion of the inhabitants of Palmyra. The national monuments are so abundant that we need not seek elsewhere for information which is not so trustworthy.

2. **Inscriptions.**—The inscriptions are mostly honorific. Along the huge colonnade which ran through Palmyra a great many statues had been placed on brackets attached to the pillars. A Palmyrene inscription, often accompanied by a corresponding Greek text, stated why the town, *i.e.* the senate and the people, had conferred the honour of a statue on such and such a person.

Naturally, religious data are more frequent in the inscriptions of dedication to this or that god, usually engraved on altars. In the burying-places each person is named, and more than one genealogy can be reconstructed; but these inscriptions do not give much information beyond divine names contained in certain proper names. On the other hand, very frequent, but very enigmatical, indications of a religious kind are found on small clay tablets to which the name of *tessera* has been given. Unlike the Nabateans and the Arameans of Egypt, the Palmyrenes refrained from engraving their names in order to commend themselves to the remembrance of the gods or the attention of the passers-by. The rocks of their country offered fewer temptations than those of Sinai or Petra; but they might have made use of their monuments as placards. That they have not done so¹ is a noteworthy characteristic of their moral life.

The necessary references for the inscriptions are found most conveniently in the works of M. Lidzbarski, the chief authority on Semitic epigraphy in Germany. We have specially in view the *Handbuch der nordsemitschen Epigraphik* (Weimar, 1898)² and the *Ephemeris für semitische Epigraphik* (Giessen, 1900-12).³ The great work of de Vogüé on *Syrie centrale* (Paris, 1866-77) is so far the most important collection of Palmyrene inscriptions. The *Corpus Inscriptionum Semiticarum* of Palmyra has not yet appeared; the editors have been waiting to get the latest revision of the inscriptions made on the spot by A. Jaussen and R. Savignac in July 1914.

¹ Two graffiti (de Vogüé, *Syrie centrale*, nos. 68 and 69), the only ones known, are in a tomb, and may therefore refer to the dead (Lidzbarski, *Nordsem. Epigraphik*, p. 169).

² Hereafter cited as *NE*.

³ Hereafter cited as *Eph*.

3. **Gods.**—It would be out of place to repeat here the characteristics that are common to all Semitic religions. We shall confine ourselves to the features peculiar to the Palmyrenes.

(a) The Palmyrenes are the only Semites who very often invoked a deity without addressing him otherwise than by extremely vague epithets. Other races substituted an epithet for the name of their god, but this epithet was always and very specially his; *e.g.*, Dusares is probably the lord of ash-Sharā (Dhu'-sh-Sharā), the real name remaining secret. The Palmyrene custom was quite different: with them the same attributes could be and, as a matter of fact, were applied to several deities. Many stelæ and altars are dedicated to him 'whose name be for ever blessed' (ברוך שמו לעלמא, 'good,' 'good god' (טוב, אלהא טוב), 'compassionate' (רחמנא), 'who grants prayers' (חורא), 'rewarder' (שכרא), 'lord of the world.' The last title was interpreted as 'lord of eternity' by the present writer, but he now admits that Lidzbarski is right, who, following de Vogüé, has always preferred 'lord of the world,' since an inscription discovered by Puchstein gave the formula 'lord of all' (*Eph*. ii. 296); in this case 'totality' stands for 'the world' (כרא עלמא=כרא כל). These names raise several problems. It has been thought that the Palmyrene religion, addressing itself, without mentioning any proper name, to a good god, a merciful god, a rewarder, master of the world, was on the way towards monotheism. But it must be noticed that at the same time homage was being rendered to other gods, even to deified emperors, like the god Alexander (Alexander Severus [*NE*, p. 459]); and it is very probable that this monotheism, such as it was, was not the intrinsic development of the religious thought of the people of Tadmor. There were many Jews there, as is proved by the proper names. At that time they held rigorously to the law that they had prescribed for themselves not to pronounce the proper name of their god. They substituted for it several epithets, some of which are similar to the Palmyrene formulæ. Lidzbarski (*Eph*. i. 256 ff.), who unhesitatingly admits Jewish influence, has recalled 'Blessed be his glorious name for ever' (Ps 72¹⁰; cf. *Dn* 2²⁰ etc.). The capital of a small pillar found at Amwas in Palestine has on one side *εὖ θεός*, and on the other *ברוך שמו לעלמא*, 'Blessed be his name for ever,' which is exactly the Palmyrene formula. The 'master of the world' does not figure in the Bible, but is found in the most ancient Rabbinical literature.

It must be admitted, therefore, that, either under the influence of Greek philosophy or under Jewish influence, the Palmyrenes had attained a high conception of the deity, compatible, in the ideas of antiquity, with polytheism. Is the supreme god an ancient god on the way towards universal rule or a new concept? Lidzbarski believed that the supreme god was Bēl. It is indeed certain, since the discovery of the American mission, that the huge chief temple of Palmyra was dedicated to Bēl. This name, pronounced Bēl, and consequently written בל (and not בל, Ba'al), in Greek Βήλος, is the ancient Bēl of Babylon. Because of his supreme rank, the Greeks called him Zeus. We could very well understand the Palmyrenes conferring on him the epithets mentioned above, but, as a matter of fact, we never come across them associated with the name of Bēl. It was said at one time that Arsu and 'Azizu were good rewarding gods, and that 'Azizu especially was good and compassionate (*Eph*. i. 203); a Nabatean at Palmyra calls his god Shaī-elqōm, 'a good rewarding god' (*ib.* i. 345). But—not to mention the last god, a stranger to Palmyra—neither Arsu nor 'Azizu was important enough there to be the master of the world.

Now this title is expressly given to a god of wide diffusion—Ba'al, or Ba'al-shāmīn. We have now four inscriptions containing his name. He is called 'lord of the world' (בַּא'ל עֲלֵמָא) at Palmyra, A.D. 114 (de Vogüé, no. 73; *NE*, p. 474. 4), 'good and rewarding god' (אֱלֹהִים טָבִים וְשׂוֹכְרִים) at Palmyra, A.D. 67 (*NE*, p. 473. 1), 'lord of the world,' at et-Tayibe, near Palmyra, A.D. 134 (*NE*, p. 477. 4), and lastly, in a Puchstein inscription of the Palmyra camp, 'great and compassionate' (בַּא'ל גָּדוֹל וְרַחוּמִים). The Greek text of et-Tayibe reads *Δι μέγιστον κεραυνία*. Lidzbarski at first tried to prove that the Ba'al-shāmīn, or lord of the sky, had not appeared among the Semites until the time of the Persians, from whom they borrowed him (*Eph.* i. 243 ff.). But he is mentioned in an inscription of Esarhaddon for the Phœnician countries, and quite recently H. Pognon discovered him in an inscription of Zakir, dating from the 8th cent. B.C. (*Inscriptions sémitiques de la Syrie, de la Mésopotamie, et de la région de Mossoul*, Paris, 1907-08). Now Lidzbarski thinks that the Semites borrowed him from the Hittites. The present writer has himself admitted the identity of Ba'al-shāmīn with the Teshub of the Hittites, but at the same time (*Études sur les religions sémitiques*², p. 93 ff.) he has recognized him as the principal god of Syria, usually unnamed, if not as the great master or Ba'al, but known under the name of Hadad or Hadad Rammān, the thunder-god. This was a god of the Semites, who had no need to borrow elsewhere the notion of a sky-god—probably of the agricultural Semites especially, for the master of the sky and the thunder gave them the rain necessary for the fruitfulness of the soil. If the Palmyrenes did not know him in this aspect in the desert, they must have adopted him along with Aramæan civilization. In fact, as de Vogüé has always said, the inscriptions mean him rather than Bēl when they refer to the god by periphrases. We must bear in mind, however, the possibilities of syncretism, applying vague epithets to various gods that the worshipper knew in his heart. Perhaps the Palmyrenes also had given the first rank to a great deity, whom tradition does not mention by name, similar to the *summus deus* of the Roman world, whom the last pagans adopted to oppose to the one god of Christianity. The frequent occurrence of *Zeus ὕψιστος* in Palmyra favours this hypothesis, which does not exclude Jewish influence.

(b) A second characteristic of the Palmyrene religion is its solar nature. The Romans were much struck by it, and believed that the great temple of Palmyra was dedicated to the sun. As is well known, Aurelian, the conqueror of Zenobia, conceived the project of uniting all the cults in the cult of the supreme god, the sun. This syncretism, which tried to absorb Mithra himself, was naturally applied to the god of Palmyra. He also ordered the temple to be rebuilt:

'Templum sane solis . . . ad eam formam volo, quae fuit reddi' (*Hist. Aug.* ii. 148 ff. [Aurelianus], ed. H. Peter, Leipzig, 1892).

We know that this temple was dedicated to Bēl (see above, § 3 (a)). One text speaks of the great basilica of the house of Bēl (בֵּית בַּל) (בְּבִלְקָא וְבֵיתָא דִּי בַל). It is quite natural that Aurelian, who was a great sun-worshipper, should have inclined in the direction of his tastes; but the Palmyrenes, who were themselves addicted to the worship of the sun, gave the same aspect to Bēl on the *tessera*, where the name of the god is accompanied by a small solar disk. It has been noticed also that this Bēl must be the Bēl-Marduk of Babylon, the god of the spring-time sun. It is, however, unquestionable that Bēl is a supreme god rather than a solar god. With the Greeks he is Zeus. On the bas-

relief of Lammens, explained by Ronzevalle, the person called Belos below the figure is called Keraunos above, like Zens the thunder-god (*Eph.* ii. 83, 310). The real sun-god of Palmyra is Malak-bēl (מַלְאֲכִי בַל). He is often mentioned after 'Agli-bēl, the moon-god, following the ancient custom of naming the moon before the sun. In one of the two Roman inscriptions—comparatively late, it is true (middle of 3rd cent. A.D.)—instead of 'to Malak-bēl and the gods of Tadmor' the Latin text says: 'Soli sanctissimo.' On this Lidzbarski has outlined a somewhat astonishing theology: Malak-bēl is 'the messenger of Bēl' (מַלְאֲכִי בַל); then, as if the two ideas were necessarily connected, 'the visible manifestation, the revelation of Bēl' (*Eph.* i. 256 f.). This theory, which seems to be inspired by the 'angel of Jahweh' of the OT, rests on the form Malak, corresponding to מַלְאֲכִי, and proved by the transcriptions Μαλαχβήλος, Malachi-belus, Malag-bel, Malag-belus. The argument would prove only that Malak-bēl is the angel of Bēl, but it does not follow that the messenger-gods are the visible manifestations of the god who sends them: Hermes, e.g., is not a hypostasis of Zeus. Further, the form Malak may be a Palmyrene equivalent of the Hebrew Melek or of the Assyrian Maliku. The present writer has shown elsewhere that the Assyrian Maliku is connected with the Assyrian sun-god Shamash. His wife was called Malkatu (*Études*², p. 107), which cannot mean anything but 'queen.' Malak-bēl, therefore, is rather the king-Bēl, in whom the solar aspect of Bēl is more prominent than in Bēl, although no theological speculation has connected them as the essence of the sun and its perceptible manifestation. For practical purposes, Bēl was the supreme god, otherwise Ba'al-shāmīn and Malak-bēl the sun.¹

There is one more sun-god, viz. Yarhi-bēl (יָרִיחִי בַל). If we take Bēl for the Palmyrene form of the Canaanite Ba'al and the Babylonian Bēl, Yarhi-bēl is another name compounded with Ba'al or Bēl. For a long time the word יָרִיחִי, 'month,' has suggested a lunar deity, but the Lammens relief, with a rayed disk, makes it a solar god. A *tessera* of G. Schlumberger represents 'Agli-bēl with the crescent, and Yarhi-bēl with the rayed disk' (*Eph.* ii. 310). But the present writer is tempted to regard this merely as a result of the progress of the solar cult. Etymology must decide the original meaning. The two gods, who were often associated, were doubtless originally two aspects of the moon-god. 'Agli-bēl was the bull-lord (עֲגִילָא), i.e. the lunar crescent, Yarhi-bēl the lord of the months, to which the sun is a perfect stranger. Both are qualified by 'bull' (חֵרָא) on a *tessera* published very recently (*Eph.* iii. 153). The bull is the special emblem of Hadad, the storm-god; but it is also the symbol of the moon, because of the horns of the crescent moon. There is no doubt that it was when the cult of the sun and the moon became general that Yarhi-bēl became the sun. Another proof of this identification is the name Ἡλιόθεος, the translation of יָרִיחִי.

Lastly, the sun was worshipped at Palmyra under its common name 'sun' (שֶׁמֶשׁ [*NE*, p. 474]) changed into a proper name, exactly as in Babylonia.

(c) The Palmyrenes would not be of Arab origin if they had not worshipped the morning star, which is also the evening star, the planet Venus. With the Southern Arabs it was the god Athtar, who became in Babylonia the goddess Ishtar. With the Palmyrenes the god appears to be double (like the goddess among the Babylonians), and both are masculine in form, Arsu and 'Azizu (אַרְסֻ, אִזִּי), 'good rewarding gods.' The bas-relief con-

¹ The distinction between Bēl and the sun is clear in Zosimus (i. 61), who says of Aurelian: Ἡλίου τε καὶ Πηλίου καθ' ἑαυτὰς ἀγάλματα.

taining this inscription (*Eph.* i. 203) is difficult to interpret.

Clermont-Ganneau (*Recueil d'archéol. orient.* viii. 32 ff.) is of opinion that the scene has 'singular analogies with that of the adoration of the Magi. It may have been images of this kind that had not only an iconographic but also an iconological influence on the formation of the legend relating to Jesus, who like Azizos, was also the *deus bonus puer phosphorus* of Christianity.'

This whole induction takes it for granted that the bas-relief represents the god; on the contrary, it is certain that it represents the giver of the stele. According to Lidzbarski's interpretation (*Eph.* i. 201), there are three persons sitting on the left—two men and a woman; the latter holds a naked child on her knee. On the right there stands a person, probably a man, who is perhaps playing a harp; then come a camel-driver and a person on horseback. There is no trace here of worship, and no reason why the child should be the *bonus puer phosphorus* or the morning star, since the dedication is made to the two spirits.

'Azizu is elsewhere the morning star, who afterwards became al-'Uzzā, the female divinity known in the Qur'ān. A Greek writer, Bartholomew of Edessa, says that the morning star, τὸ ἑσπέρου δῶρον, was the merciful, compassionate god known by the Arabs before Muhammad (*PG* civ. 1385). This is a surprising confirmation of the Palmyrene text which calls 'Azizu a 'good and compassionate god' (אלהא כבא ורחמא). 'Azizu was familiar to the Greeks under his name of Ἀζίζος (*Julian, Or.* iv. 150). His companion Arsu is not so easy to trace. He is found much less frequently than 'Azizu in the Palmyrene texts, but, on the other hand, he was known to the Nabataeans. He may be disguised under the name of Μόνημος placed by the emperor Julian alongside of Ἀζίζος (*loc. cit.*). Lidzbarski very ingeniously identifies him with the god of the Arabs whom Herodotus (iii. 8) calls Ὀροδάλ. The phonetic resemblance would be effected with a reading Ὀροτάρ, which is quite near to the Arab

form *ruḍan* (رذ), preceded by a prosthetic *κ* (*Eph.* iii. 91). Moreover, Arsu would be the real name of Dusares, the god of the Nabataeans. But this point might compromise the former one, for, according to Herodotus, Orotalt is Dionysos—which agrees quite well with Dusares, but not with Arsu, if Arsu is the companion of 'Azizu. Perhaps their union is merely factitious, for the dedicator is a priest of 'Azizu only. All that can be asserted is that Arsu has remained in Palmyrene from the original Arab ground-work; but this also shows the poor esteem in which ancient cults were held, for Arsu is met with only about twice.

(d) Another very clear, although negative, characteristic of the Palmyrene religion is the infrequency of worship rendered to female deities. The great Arab goddess found in Herodotus, Ilāt or Allāt, the feminine of the divine name *par excellence*, is mentioned only once (de Vogüé, no. 8), although she figures in many proper names, of which Wahballat is the most famous. The transcription Athenodorus proves that Allāt was identified with Athene. And it is Athene that figures under her Greek name in the bas-relief of Lammens. Unfortunately only the first two letters (C E) of the Semitic equivalent, also written in Greek under the figure of the goddess, are known. The word was completed by Ronzevalle as CEMIA, which is very probable. Later he proposed CEMIPΩMEI, representing Semiramis, but this is much less likely.

We must also call attention to the absence of ʿĒl (אל), the primitive form of the god of the Semites, whom the Arameans knew down to the 8th cent. B.C. as a separate deity. This want is a fresh proof of the lightness of the Palmyrene

attachment to their ancient deities. ʿĒl is found in some rare theophoric Palmyrene names, and it is very frequent in this form in S. Arabia.

(e) We have still to mention Balti (בלתי), named on the *tessera* de Vogüé, no. 155, and Atargatis (אתרגת) in de Vogüé, no. 3, which are Syrian names, and שררה (*NE*, Lexicon), which is the Phœnician Satrapes.

The theophoric names lead to the conclusion that there was a certain cult of ʿĒl (אל), mentioned above, Bōl (בול), which must be the Palmyrene form of Ba'al, and which probably never was a proper divine name, Nebo (נבו), 'Athe (עה), and 'Ashtor (עשתור), a Palmyrene form of Ishtar or Astarte (עשתר). The name 'Athe was very important in Syria; its fusion with Athar in Atargatis made it impossible to know whether it was masculine or feminine. According to the Palmyrene name נתאם, 'Athe is a mother; Lidzbarski (*Eph.* ii. 303) is in favour of the female sex.

A Latin inscription (Mordtmann, 'Palmyrenisches', p. 47) of a Palmyrene (Theimes=תמיס) is dedicated: 'diis patriis Malachel et Bebellahamon et Benefal et Manavat.'

Below the gods, but perhaps more highly esteemed than some of them, we must place the Gad of the sacred spring which gave existence to the oasis (לגרא יר עינא כרימא). Gad, in Greek Τύχη, or Fortune, was a spirit like that of a tribe (see below, § 4 (b) (i)).

4. Cult.—(a) *Places of worship*.—No high places have been found in Palmyra, hidden in the mountain, like those of Petra. It must be remembered that Palmyra was a great, Hellenized city, surrounded by deserts scoured by caravans. Like all the ancient towns built under the Empire, the town was crossed by a huge avenue, which started from the great temple with a triumphal arch and ended beside the mountain in a small building, probably water-works. On the left were the theatre and the palace, on the right hot baths, a library, and a small temple—that of Ba'al-shāmū.

The great temple, following the plan of every Semitic sanctuary, consisted of a large enclosure, containing the house of the god proper. From the outside this enclosure, a piece of ground 227 metres square, planted with trees, looked like a huge compact building, with rows of storeyed windows. On passing through the gate, one entered a large court, and then discovered that the outside walls simply served as supports for double porticoes, the columns of which, 474 in number, and 14 metres high, corresponded to a row of pilasters. In the centre was the *cella* of the god, a building of considerable dimensions.

The whole building was constructed according to the Corinthian method, adapted to the Semitic principle; e.g., while in the Parthenon the huge temple containing the *cella* opens its porticoes on the side next the public, those of Palmyra were hidden behind a high wall, in conformity with the arrangement of the Temple in Jerusalem as it was built by Herod, but with much larger enclosures. Those of Palmyra are called 'the basilica of the temple of Bēl,' in a text which we have already mentioned (above, § 3 (b)). Another text calls this temple 'house of their gods' (Littmann, *Semitic Palmyra*, p. 50 f.). It was therefore a sort of pantheon. It of our era. The material of the temple as everywhere else in the Semitic East. Attention should be called to a *hammana* (חמנא), which evidently corresponds to the *hammān* of the Bible (2 Ch 14^s 344.7, Ezk 64.6). Rashi had explained this word as 'column of the sun'—a very plausible explanation, as the first *hammana* known by Palmyra was consecrated to the sun-god (*NE*, p. 474.2). We now know of a second one at Ologesias. In this case the place of the column is mentioned, i.e. probably its base or its socle, and the roof of the *cella* which covered it (*Eph.* ii. 280 f.). These allowed of a certain amount of ornamentation (same inscription).

Other objects are mentioned in Greek—a libation-carrier and a censer of gold, a pillow for the sacred bed of the *temenos*, εἰς τὴν . . . κλίνην (*Eph.* ii. 284). This sacred bed (חמנא), placed in a niche (κλῆς, in Greek καμάρα or ψαλῆς (cf. *NE*, p. 477; Lagrange, *Études*, p. 508 f.)), or *arcosolium*, corresponded to the Roman *pulvinar* employed in the solemn *lectisternia*. There were, of course, altars (ἀλτήρ) and braziers (βωμῆς) (*Eph.* ii. 301)). The altars were often dedicated to certain deities—practically forming columns for containing inscriptions.

(b) *Religious associations*.—The religious groups were of two kinds: (i.) natural groups, and (ii.) associations properly so called.

(i.) The cult of the *génos*, or *gens*, existed among the Palmyrenes as clan- or tribe-worship. Certain devotees dedicated a *hammana* (see above, § 4 (a)) to the sun-god, the god of their family (מִן הַבְּיֹטָה). Probably each gens had its own particular god, a Gad (גַּד), which the Greeks assimilated with Fortune (Τύχη). Our authority for this statement is the inscription de Vogüé, no. 3, which is incomplete in Palmyrene, and translated into Greek as [Μαλακ]βήλω καὶ Τύχη θαμνείας. Although this nominative is very strange, it certainly represents a Palmyrene tribe. Perhaps it ought to be translated: 'To Malak-bêl and to the Gad of the Taymi,' or even 'To Malak-bêl, Gad of the Taymi.' The name Gaddi-bôl signifies 'My Gad is Bêl' (Eph. ii. 281); the Beni-Gaddibôl tribe may have had Bêl as their Gad. In this case the god of the tribe would be imposed on it by tradition.

Whatever we may make of this very obscure point, we see that the tribes commended themselves much more frequently to the great god Bêl. The formula in which they did so is really difficult to translate. But, if there are at times doubts as to the exact meaning of the word which unites Bêl and his worshippers,¹ there is no doubt that the Beni-Hela, the Beni-Hanefi, the Beni-Barsa'a, and the Beni-Taymi placed themselves under Bêl's protection just as particular individuals did. We read, e.g., on a *tessera*: 'Bêl bless the Beni-Taymi' (NE, p. 488).

(ii.) Besides these natural groups, there were in Palmyra religious associations which might be described by the Greek word *θλασσι*. This institution is designated כְּרִמָּה, the meaning of which is not given in Lidzbarski's *Handbuch*. Clermont-Ganneau has shown that this word meant the religious feast, the merry banquet held by certain associations. Recently, as originally in the Bible and a Punic inscription, the word has been found among the Jews of Elephantine (Eph. iii. 120), at Petra (ib. p. 278), and at Palmyra. At Palmyra a religious college (כְּרִמָּה [כְּרִי]) where כְּרִי is inserted by Clermont-Ganneau dedicated an altar 'to Aglibôl and to Malak-bêl, their gods.' It was therefore a *θλασσι* consecrated to these gods, and it need not have been composed exclusively of priests, although there was a college of priests of 'Aglibôl (Eph. iii. 300: כְּכִרִי עֲנִיבֹל). It is the same with Bêl. The inscription Waddington 2606 a in Greek takes it for granted that the laity formed part of the association of the priests of Bêl. Two recently-discovered texts mention the post of director or chief of the sacred banquets (כְּרִמָּה=συμποσιαρχία) of the priests of Bêl (Eph. ii. 281, 304)—in Greek, in the second case: ἀρχιερεὺς καὶ συμποσιαρχὸς ἱερῶν μεγίστου θεοῦ Διὸς βή[λου]. In these last two cases did the *θλασσι* include laymen? Undoubtedly in certain circumstances the priests of Bêl formed a group by themselves. On a *tessera* three busts are accompanied by the inscription, 'the priests of the god Bêl' (Eph. ii. 320). We should say nowadays that they had been photographed in a group. These *tesserae* are often connected with the worship of Bêl. Clermont-Ganneau says:

'For a long time I have been inclined to believe that among those numerous Palmyrene *tesserae* which have come down to us, certain groups are connected with the religious associations and priestly colleges of Palmyra. They are a sort of token' (p. 23).

Lidzbarski is of the same opinion, and, as the inscriptions on the *θλασσι* mention the month of April, he conjectures that this was the time of the principal ceremony. Spring-time would suit Bêl very well (Eph. ii. 304).

There is nothing more to be said about the

¹ As in the case of כְּרִי, translated 'protect,' Lidzbarski proposes to translate 'Make to sit, O Bêl, at thy table' (Eph. ii. 320). But then what would כְּרִי mean standing alone?

priesthood. The word מְזַכֵּר, which recurs in Babylon, probably denotes an official in the temple of 'Azîzu (Eph. i. 202).

5. Attitude towards the gods.—Of more importance than their exterior worship are the inner feelings of the Palmyrenes towards their gods. We have already seen that, like all ancient peoples, they had preserved the cult of the national gods (θεοὶ πατρίοι or πατρίοι), the gods of Tadmor. Nevertheless they had reached the idea of a master of the world, good, a rewarder, compassionate, propitious. This conception of the goodness of the god is an admirable trait, and must have given birth to love for this god in their hearts. The inscriptions, however, give no indication of this feeling. The senate and the people render homage to two distinguished citizens, 'who feared the gods and loved their town' (יהוה אלהים ורחם כיריהן). The Greek is εὐσεβεῖς, which we translate 'pious.' The predominating sentiment, therefore, was always the one which is at the foundation of the Semitic religions—fear. But there is no sign of this fear drawing forth vows from the Palmyrenes when in danger. At least the fulfilled vow, which occurs so often in Carthage, does not figure on the stelae. They express merely the gratitude of the worshipper: 'because he has invoked him and he has replied' (de Vogüé, no. 5); 'because he has protected him on land and sea' (ib. 79). We therefore cannot speak of votive stelae except in a very broad sense. Usually the person who dedicates a monument states that he entreated the gods for 'his life,' and adds sometimes one person, sometimes another—his sons, his brothers, etc. What is the meaning of 'life'? It would be tempting to translate 'for his safety,' meaning by that all temporal good expected from the gods, especially health. In an inscription dedicated 'to him whose name be blessed,' Διὶ ὑψίστῳ καὶ ἐπηχ[όρῳ], 'life' is rendered in Greek by *υἱα*, 'health' (Eph. ii. 295). The Palmyrenes, therefore, looked to their gods for success in their enterprises and prosperity. In return they saw to it that the gods were honoured, and especially that the supreme god was blessed. They believed that their prayers were heard, and—what is more remarkable—they believed that the gods could publicly bear witness to those who were distinguished for their devotion to the city. At least this is stated of Yarhi-bôl in a text dating from A.D. 242.

Julius Aurelius Zenobius rendered great services to the army, etc. 'It is of this that the god Yarhi-bôl and Julius have borne witness' (ὡς διὰ ταῦτα μαρτυρηθῆναι ὑπὸ θεοῦ Ἰαριβώλου καὶ ὑπὸ Ἰουλίου). It no doubt refers to an oracle which had added its approbation to that of the leader of the army.

The guardian of the spring was also chosen by the same god (ἐπιμελητὴς ἀειθεὶς Ἐφκάς πηγῆς ὑπὸ Ἰαριβώλου τοῦ θεοῦ [CIG 4502]).

The inscriptions do not imply that the Palmyrenes expected salvation in the future life from the gods. At most we may find an indication of this belief in the epithet 'rewarder' (שָׂכָר). It probably corresponds to the Jewish belief that God gives a good reward (שָׂכָר טוב) to the just in the world to come (Eph. i. 202). But it would certainly be imprudent to build a theory on a word which may apply to the rewards of the present life, upon which the Jews also laid great stress.

6. The dead.—It is to the worship of their dead that we owe the greatest number of Palmyrene inscriptions. The funerary monuments were of two kinds. The most perfect type was undoubtedly the hypogae hollowed in the rock. Those who undertook this difficult work afterwards gave up one or more chambers as a perpetual grant. The dead were placed along the walls in recesses perpendicular to the walls. This is the ordinary Semitic practice. What is peculiar to Palmyra is the very high towers, containing dead bodies on

all the storeys, arranged as in a burial vault. They seem to have wished to imitate the Roman *columbaria*, adapted so as to preserve the dead instead of reducing them to ashes. Each compartment was closed by a stone, which is a bust of the dead person, with indications of his or her name, parents, date of death, and the inevitable 'Alas!' (חל).

While Greek epitaphs sometimes express hopes, doubts, or even denials concerning the future life, the sepulchral inscriptions of the Palmyrenes are, like those of the Phoenicians and the Nabataeans, silent on this point. Evidently, like those peoples, they set great store on not being disturbed after death; although with less verbal insistence, they wish that their tomb may be 'a dwelling-place for ever.' But they do not tell us whether or not it is in view of an existence in the other world that they ask that their bodies may rest in peace. It is probably to the body merely—to the bones—that an inscription refers which mentions this rest (נפש), at Constanza in Rumania [*Eph.* iii. 30]. Desire for the preservation of the body led to the practice of embalming. Some mummies have been found at Palmyra (Simonsen, *Sculptures et inscriptions de Palmyre*, p. 63).

7. Ethics.—The Palmyrene inscriptions do not throw much light on Palmyrene ethics. The welfare of the city depended on its commerce, and particularly on the management of its caravans, and traders were encouraged. The famous tariff of Palmyra shows the amounts collected by the customs-house on the admission of merchandise. On the other hand, the heads of caravans regarded it as a point of honour to be faithful, for the people showed them gratitude by raising statues to them.

The status of women seems to have been higher than in Greek or Roman countries, as the story of Zenobia proves. Their queens, however, do not seem to have been, as a rule, so highly honoured as among the Nabataeans. In this matter, too, the Palmyrenes are far removed from the traditions of Arabia—before Muhammad. Nevertheless the present writer cannot believe, with Lidzbarski (*Eph.* ii. 271), that, contrary to what took place at the Hegira, women had been excluded from the inheritance of tombs. A woman is expressly called 'inheritor of the house and the funeral cave' (רשתה) [*Eph.* ii. 275].

A slave might be set free (כר חרי), but continued to belong to the house of his former master, now his patron; he mentions him, not his father, in his genealogy.

The Palmyrenes' excessive love for statues probably comes from the Greeks. It bears witness to an intense municipal life, and a great desire for glory.

We may say, however, that the basis of Palmyrene ethics is its connexion with religion.

PAMPEANS.—I. Origin and classification.—The problem of the Red Man is one of the yet hidden mysteries of the world. The history of the S. American continent, as well as that of C. and N. America, previous to the Columbian era is still to a very large extent shrouded by the same dense mists of obscurity as it was when

Cortes and Pizarro landed on the coasts of Mexico and Peru respectively.

Whence came the various nations, what were the origins of the various civilizations, what the many migrations over hundreds of leagues of territory, what the many blendings of the various families, and whether the nations, the original inhabitants, were of one stock or have become one stock owing to countless ages of occupation, are questions which are still puzzling the scientists of both the Old and the New World.

It seems clear that the main strain in N., C., and S. America may be legitimately traced to one origin, but it must have been long before the Christian era that these first immigrants landed on the shores of what is known to us as the New World. Although they approach very closely to what we may call the Malay-Mongol type, the great movement by which the Americas were peopled must have taken place before either the Malay or the Mongol became a marked type; for all practical purposes we must regard the American Indians as now a distinct type.

As far as S. America is concerned, there are signs of four distinct migrations, and it is probable that the great bulk of the population came by way of the Pacific Coast, some from the north, some by way of the islands of the Pacific. Easter Island (*q.v.*), could we unveil its mysteries, might throw some light upon this subject. Probably the first comers were driven eastward and southward by succeeding waves, and a somewhat higher culture thus took possession of the western side. Countless blendings account for the midland peoples. There are Indian traditions and other evidences that at a period long anterior to the Incas, probably 1500 years, an ancient civilization possessing considerable culture existed in Peru and neighbouring regions. This civilization seems to have been upset by warlike migrations from the south and east, of harder but more barbarous races. The fact that signs of very ancient human occupation are claimed to have been discovered in these regions does not necessarily prove that the present peoples derive their origin from any such pre-historic race. We cannot overlook the possibility of there having been a great cataclysm at some remote period which may have destroyed life there. Science may confine itself to proven facts, but such facts depend entirely upon the conclusiveness of the proofs, and the ablest scientists will readily admit that they are far from having complete knowledge in all its branches upon which to build. Few are privileged to live among and study a primitive people for half a generation. In many cases hasty conclusions are arrived at, almost willingly, because they support a theory; even Darwin erred in attributing cannibalism to the modern Fuegians. Their intelligence has been compared to the stationary instincts of animals;¹ but Yahgans with whom the present writer has lived in closest touch had very retentive memories and were not lacking in ordinary intelligence; they certainly believed in the presence of unfriendly spirits, as well as the ghosts of their dead. These ideas were purely native, and had no connexion with Christian or other training. Darwin draws a contrast between the taciturn, even morose, aborigines of S. America and the light-hearted, talkative Negroes. Although S. American tribes may not be as light-hearted and as talkative as the Negroes, it is unjust to assert, in the case at least of many of them, that they are taciturn or morose, except, perhaps, in the presence of strangers. The S. American Indians are very reserved in the presence of foreigners, but, once the latter are on

¹ A. H. Keane, *Central and South America*, London, 1909, vol. i. ch. ix.

perfectly good terms with them, they throw off this reserve and are in reality quite light-hearted and talkative, jokes and puns being a favourite mode of amusement among them.

At the present day many of the tribes that existed in early Spanish times have disappeared, and few Indians of Pampean or Patagonian race proper now survive.

The Indian tribes known by the Spaniards as Pampa Indians were undoubtedly closely allied to and part of the great Araucanian race, but, as these nomads were in the habit of travelling immense distances, even in comparatively modern times, it is highly probable that a large Carib element existed among them, and in the ages that have passed the peoples must have crossed freely from eastern plains to the Pacific sea-board and *vice versa*. Intercourse with Europeans and other modifying influences were exerted upon them by contact in time of war, and earlier they must have come into close touch with the Chaco peoples—a great part of the Taluhets were destroyed in wars with the Mocovies of the Chaco; nevertheless, in spite of such influences, the Pampeans are essentially a part of the Araucanian family, though those of Chile were influenced to some extent by the Incas.

There are two chief nations of Indians who inhabit the land on both sides of the Andes of Chile, the Moluches and the Puelches.¹ Two types of original man inhabit these regions down to the Straits of Magellan, the round-headed races comprising the Moluches, or Araucanians, and the Pampa Indians proper, and the long-headed people including the Patagonians, with the Tehuelches, Onas, and Yahgans; but the Patagonians became so mixed up with the round-headed Pampas that much in common is found among the tribes.

1. **MOLUCHES.**—The Moluches were known by the Spaniards as 'Aucases' and 'Araucanos.' The word *araucaños* signifies 'wild,' 'untamed,' 'savage,' is used not only of men but also of animals, and is derived from their own name Moluehe, from *molan*, 'to wage war,' and *che*, 'people.' The Moluches were divided into the Picunches, Pehuénches, and Huilliches; they held both the Pacific and the Atlantic slopes of the Andes.²

(a) The *Pehuénches*, or northern people, occupied the country from Coquimbo to San Jago de Chile. They were the most valiant and largest-bodied men of this race. Those who live to the east of the Cordillera, reaching somewhat lower than Mendoza, are called by those of the other side 'Puelches,' *puel* signifying 'east.'

(b) The *Pehuénches* border on the Picunches to the north and reach over against Valdivia to 35 S. latitude. They derive their name from the word *pehuen*, 'pine-tree,' because their country abounds with those trees.

These two nations were very numerous formerly, but were in great part destroyed by repeated wars with the Spaniards and the ravages of disease imported by the Europeans.

(c) The *Huilliches*, or southern people, reached from Valdivia to the Straits of Magellan, and were divided into four distinct tribes. They spoke a mixed form of Moluehe, differing from the Picunches in using the letter *s* (the Picunches used *r* and *d* instead of *s*, and *t* instead of *ch*, as, e.g., *domo*, 'a woman,' *somo*, 'a woman'; *vuta*, 'great,' *vuche*, 'great').

II. **PUELCHE.**—The Puelches (eastern people, because they live to the east of the Moluches) are divided into the *Taluhets*, *Diuhets*, *Chechehets*, and *Tehuelhets*. The termination *het*, taking the place of *che* in the Moluehe, means 'people,' or 'people of the mountain.'

It is an interesting fact that the Towothli or Enimaga of the Pileomayo use in some cases the same termination for 'people.' They call the Sanapaná people north of the Paraguayan Chaco the Isonhet, the same as the Wana, and Indian, the Chanca confederacy of ancient Peru. Can it be that the *het* in this case was also connected with the mountain people, and might this show any connexion with the ancient Peruvian legend that the pre-Inca dynasty was overthrown by a great invasion from the south?

Garciasso de la Vega³ claims that his people were Antarctic Indians.

It is probable that a people bearing the name Puelche were distinct from the Araucanian Puelche, by whom they were ousted.

² See T. Falkner, *A Deser. of Patagonia and the adjoining Parts of S. America*.

³ See Clements R. Markham, *The Incas of Peru*, London, 1910, p. 31.

2. **Organization and civilization.**—The Moluches and the Puelches are divided into a multitude of small tribes under their own chiefs, who, however, exercise comparatively little power, that power depending entirely upon the personal prowess and capacity of the holder for the time being. The chieftainship was generally hereditary, but during war-time various clans and even tribes would join together, and appoint their ablest man as war-chief, who for the time exercised almost absolute power. Their favourite time for attack was the early morning about the rising of the morning-star, but before attacking they were in the habit of sending out well-organized scouting-parties, who did their work with great skill and exactitude. These customs are identical with those at present existing among the wild tribes of the Chaco.¹

The Pampean and Patagonian especially were from the earliest days of known history true nomads, always on the move from one place to another, and, as the old Jesuit chronicler remarks, 'neither age nor infirmity would prevent them satisfying their nomadic craving.'² Of civilization even in a rudimentary form we can find no distinct traces, and their religious ideas were always of a very primitive type. The history of the world, however, furnishes us with ample proof that a high type of religion, unless vigorously maintained, tends to degenerate, and even nations once highly civilized have sunk under unpropitious conditions to a very low level. From Indian traditions generally we cannot gather that there is any absolute proof that these people at some remote period had not been influenced by some higher race, but clear evidences cannot be produced.

3. **Religion.**—It is very difficult in these days to obtain accurate information on the primitive religious ideas of the Pampean peoples. Indians are given to absorbing traditions and religious ideas from strangers, especially of other Indian races, altering and accommodating them to suit their own views and ideas of life in general. We have therefore to depend a great deal upon the information handed down to us by early travellers and missionaries, whose lack of thorough knowledge of the Indian language and mode of thought, together with an almost unconscious tendency to read into their conception of spiritual things meanings which may not really be there, leads us to approach such testimony with great caution. On the other hand, the modern tendency is to explain away tradition and so to water down the religious ideas of primitive peoples that they may fit in the better with the scientific theories. Too frequently pseudo-scientific theory is first launched and then proofs to support it are carefully sought, and the tendency is to ignore or modify such Indian views as are obtained to fit in with the theory already launched.

So far as is known, the early Pampeans believed in two supreme beings, one good and the other evil. Among the Moluches the good spirit was termed Toquichen, 'the governor of the people,' the Taluhets and Diuhets called him Soychn, 'he who rules in the land of strong drink,' while the Tehuelhets named him Guayavacunne, 'lord of the dead.'

This somewhat resembles the belief of the Gnara-yos, who regard their great god as the kind grandfather of their people, believing that he lives in a far distant city, which the faithful Indian reaches after a long and perilous journey through spirit-land. In this city he provides the happy ones with an unlimited supply of the very finest *chicha*, or maize-beer. Their ideas of perfect bliss are to

¹ See W. B. Grubb, *An Unknown People in an Unknown Land*, London, 1911, ch. x.

² See Falkner, p. 102.

spend eternity with a number of heavenly wives and a perpetual drunken feast. The Pampeans believe that the good deity made the world, created the Indians in caves, gave them arms with which to hunt and fight, and then left them to shift for themselves. The Lenguas of the northern Chaco have a somewhat similar idea. With them the deity is symbolized by a beetle who created our first parents male and female, but left them to fight the battle against a previous and more powerful race of spiritual beings as best they might.¹ The Spaniards, or Whites, they believe to have been created likewise, but at a later date, and to them were given cattle. The Indians themselves might have had the use of these animals; only, being so frightened at the sight of such large animals and their formidable horns, they stopped up the mouth of the cave from which they were about to issue with great stones and left it to the more courageous Whites to permit their exit. The smaller animals, however, they allowed to come forth from the cave and multiply on the vast plains. The Guayaquil of Paraguay have a somewhat similar idea. But the Pampeans are convinced that the work of creation is not yet finished and that new animals and men may be forthcoming.

The evil spirit the Moluches call Huecuvœ, or Huecuvu, 'the wanderer without.' The Tehuelhets and Chechehets name him Atskannakanatz, and the Puelches Valichu. With him are a great number of demons wandering about the earth, and they are responsible for all the evil done. The wizards are supposed to have two of these demons as assistants who enable them to foretell future events and to know what is passing even at a distance, and to cure the sick by driving away the other demons who molest them. Wizards are supposed to become members of these demon bands after death. The Pampeans, feeling that the good spirit no longer cares for or aids them, devote their whole energies to warding off or appeasing the evil one by means of drums and gourds filled with small shells to make them rattle. The wizards have certain spells which they keep in painted hide bags. They feign fits, during which they are supposed to be struggling with the demon, and doubtless their faith in these matters, together with their great superstitious fear, produces real fits of hysteria in many of them. They hide in a corner of their huts or are shielded from the public gaze by a screen of hides, and, when the opportune moment is supposed to have arrived, announce to the people, by making peculiar noises, that the demon has been vanquished; they lead their tribesmen to believe that such noises proceed from the demon, who, now disappointed, is taking himself off to a safe distance. When they prophesy, they claim to be free from all blame should their prophecy prove to be false, maintaining that the lying information given is entirely the fault of the demon; but they demand their payment all the same. These wizards, however, do not always escape scathless, and, if their intervention, especially in the case of sickness, fails, violent hands are sometimes laid upon them. The wizards are of both sexes and are generally selected when young; the males are compelled to adopt the female costume and are not allowed to marry, although the females may. Wizards must lose their male sex and adopt the female character as far as possible.

In addition to the two leading spirits, there is an infinite number of minor evil spirits attached as familiars to the various clans and families.

The spirit-world is generally believed to be located under the earth in caves beneath hills and lakes. The fact of human remains being found does not of necessity prove the uninterrupted continuance

of the race. Antediluvian man may have lived in these parts, and yet the present race may have come from quite another direction and be of a different type. These religious ideas are very common among the S. American tribes, nor are they unknown among other branches of the human race. The general idea of the spirit-world may have had its origin in the overthrow of the antediluvian world when the great deeps were broken up, the population was engulfed by great earthquakes, and large territories were submerged by new seas, lakes, etc.

Those who have lived for many years in close intercourse with these aboriginal peoples find numerous signs leading to the conclusion that in many cases their religious ideas have degenerated, and that formerly they had a clearer and more perfect grasp of things spiritual, and this in spite of the fact that the present-day idea seems invariably to be that these races, when first we came in contact with them, were gradually developing their religious sense.

It is recorded about 150 years ago, and probably continued to be the custom long after, that, on the death of an Indian, certain women were chosen to make a skeleton of his corpse by cutting out the interior organs, which they burned, and stripping off the flesh as far as possible, burying what was left until the bones were quite clean; this operation completed, the remains were removed to the burial-place of their ancestors. This custom was adhered to by the Moluches, Taluhets, Dimihets, Chechehets, and Tehuelhets, who were in the habit of placing the bones on a platform of canes or twigs, where they dried and whitened by exposure to the sun and rain. The Indians blacken their faces with soot, chanting in a mournful tone and striking the ground to frighten away the demons. It was the custom with many to place the remains with the face towards the west. This is generally supposed to have been simply symbolical of the spirit's winged flight to a setting sun, symbolizing the land of the dead. But, as with some tribes known to the writer, it may have indicated the place from which they originally came. The desire of the spirit would therefore be, while it left its earthly tabernacle with the bones of its immediate ancestors, to wing its way to the traditional land in which dwelt its more remote forefathers; if so, this would point to a connexion with lands which may have previously existed in the Pacific.

The Indians buried with the dead his horses, weapons, and other belongings—a custom widespread among primitive people. Widows were obliged to mourn for a year for their husbands. They abstained from washing their faces and hands and from eating flesh, remained as secluded as possible, and were not allowed to marry during the time of mourning on pain of death. The Tehuelhets and others generally kept the skeletons above ground in their burial-places. Most of their customs were similar to those practised by some of the indigenous Chaco tribes to-day. They have no temples or what might be justly called organized religious worship.

It appears that some venerated the eagle and foretold events by the flight of birds, and that on occasion and for some special reasons they made drinking-cups of skulls, and flutes from human bones (neighbouring tribes assert that this custom is in vogue among the Aii of the Chaco). It seems as if the spilling of soup and other food and drink upon the ground before partaking of it was an offering to the earth-mother, but it may have been derived from contact with ancient Incas.

PANCALISM.—'Pancalism' is the name recently given to a point of view which goes back to Aristotle, from which 'the æsthetic mode of being real, apprehended in the contemplation of the beautiful, is all-comprehensive and absolute.' The word 'pancalism' summarizes the Greek motto τὸ καλὸν πᾶν.

Aristotle held that the true and the good, the supreme idea and the *summum bonum*, were united in the divine contemplation of the universe as a work of art. Kant found in the 'judgment of taste' (*Urtheilskraft*) a function by which the limitations of theoretical and practical reason were overcome in an intuition of harmony between nature, the world of truth, and freedom, the world of ends and values. Schelling explicitly taught that rationalism, founded on intellect, and voluntarism, founded on will, reached their synthesis in æstheticism, founded upon the activities and products of fine art (cf. Baldwin, *Genetic Theory of Reality*, New York and London, 1915, ch. ix. § 4, and ch. xiii. ff., from which both the term 'pancalism' and the definition given above are taken).

The detailed working out of the pancalistic point of view has awaited the modern researches in affective logic and the theory of the artistic imagination, the former due primarily to T. Ribot and the latter to T. Lipps. In view of the former, the experiences upon which the 'love' of Plato and the ecstasy of the Italian and German mystics rested have been taken out of the domain of mere individual feeling and given valid epistemological force. Feeling finds in the artistic or semblant imagination its instrument as organ of a genuine appreciation of the real. And in the outcome, in the work of art, the demand of the reason for the true and that of practice and morals for the good alike find their satisfaction in a synthesis of the self and its object—as intimated speculatively by each of the three thinkers Aristotle, Kant, and Schelling.

In such a view a third alternative takes an articulate form in modern philosophy. Feeling, so long despised by intellectualists and voluntarists alike, attains its true dignity as an organ of the apprehension of reality. The raptures of mysticism are explained and the claims of intuitionism are justified in the reasonable conclusions of the philosophy of art.

PĀNCHĀLA.—Pānchāla is a term used in India to describe a group of five castes of artisans, formerly more closely connected with each other than they now are. According to J. T. Molesworth and G. and T. Candy, *Mahratti-English Dictionary* (Bombay, 1857), Pānchāl is a common term for five castes: Sonar (goldsmith), Sutar (carpenter), Lohar (blacksmith), Kansar (copper-smith), and Patharvat (stone-mason). The popular derivation of the term is *panch*, 'five,' and *āl*, 'to melt,' because Pānchāls are said to melt the five metals—gold, silver, copper, brass, and zinc; but

the more probable origin of the term is to be sought in the Pānchālā tribe.

Pānchāls are found in the Bombay and Madras Presidencies and in the Mysore State. In Madras they are more commonly known as Kammīāls. The numbers given in census enumerations are quite unreliable, as members of the Pānchāla community frequently describe themselves as belonging to one of the five castes mentioned above, instead of using the name Pānchāla. The origin of the term is a matter of much speculation. Pānchālas lay claim to the status of Brāhmins, and have some support for this claim in the rights and privileges which they commonly possess. It is not at all easy to decide whether a gild of artisans, working in the five materials, gold, iron, copper, wood, and stone, has in the past raised itself to Brāhmanic status, or whether, on the other hand, Brāhmins, having taken to work in these materials, contrary to the laws of Mann, have become an artisan caste while retaining their superior position. The fact that the skill required for working in metal, wood, or stone does not vary much would explain to some extent both an affinity between castes working in the different materials and the fact that a caste, abandoning literary pursuits for the handicrafts, could adopt all these methods of earning a living. It is on the whole more probable that the caste had its origin in a Brāhmanic group becoming artisans than in an industrial gild rising to the dignity of Brāhmanic rights and privileges. Indeed, the case seems to be a survival from the period in India when status ceased to be determined by occupation and became hereditary. The wealthy position of workers in precious metals may very probably have assisted the Pānchāls to uphold their claims to Brāhmanic status for a long period in face of the strong opposition evinced towards them by Brāhmins of a more orthodox calling. This was notably the case during the rule of the Peshwas, who did not deny to Sonars the right to style themselves Daivadnya Brāhmins.

Care is necessary to distinguish between Pānchāls properly so described and the distinct castes of Sonars, Sutar, Lohars, Kansars, and Patharvats, which in many cases have established a Pānchāla subdivision and show a tendency to adopt the traditions of the Pānchāla caste. They are entirely different in origin, and this is made clear by their remaining as five distinct endogamous groups, not possessing the close resemblance of Pānchāls to Brāhmins in rites and appearance. Pānchāls proper usually intermarry freely; but Thurston (*Castes and Tribes of S. India*, iii. 108) mentions that in certain towns the Sonar section no longer marry willingly with Lohars.

The Pānchāla caste has five *gotras*, or exogamous divisions, known as (1) Suparna Daivadnya, (2) Ababhuvana Tvaṣṭa, (3) Prasthana Silpi, (4) Sanag Manuva, and (5) Sanatan Maya. These names are connected, as shown, with the five sons of Viśvakarma, the divine architect, i.e. Daivadnya, Tvaṣṭa, Silpi, Manuva, and Maya.

Pānchāls have the Brāhmanic *sanskars*, or sacraments, and perform their ceremonies according to the Vedic ritual. Frequent attempts were made in the days preceding British rule to deny them the right to these Brāhmanic privileges; but the decision of the *panḍits*, or religious advisers, when referred to, was in their favour. They are followers of both Śiva and Viṣṇu, and are even found wearing the *liṅgam* of the Liṅgāyats (*q.v.*). They have their own priests and do not call in Brāhmins to perform their religious ceremonies. They will not eat food cooked by Brāhmins, of whom they consider themselves at least the equals.

R. E. ENTHOVEN.

PANCHPIRIYĀ.—**1. Introductory.**—Panchpiriyā is a term applied to the worship of the Pānchoñ Pīr, or 'five saints'—a form of belief very common among the lower Hindu castes in W. Bengal, the United Provinces of Agra and Oudh, and E. Panjāb. It seems to be a combination of various forms of animism characteristic of the lower strata of the population and Muhammadan saint-worship.

The Pānch or Panj Pīr, the 'five saints' of Islām, are, properly speaking, the five great saints of the Shī'ah sect—the Prophet Muhammad; his daughter Fātimah; 'Alī her husband, cousin-german and adopted son of the Prophet; and their sons, Ḥasan and Ḥusain, the two martyrs whose pitiful death is celebrated yearly by members of the Shī'ah sect during the first ten days of the Muharram festival (*DI*, p. 407 ff.). But this orthodox cult has little connexion with the Panchpiriyā beliefs, in which each worshipper or group of worshippers selects, according to individual taste, the saints whom he prefers as objects of reverence. Thus in the Panjāb the quintette sometimes consists of the saints Khwājah Qutb-ud-dīn, Khwājah Mu'in-ud-dīn Chishtī of Ajmer (*q.v.*), Shaikh Nizām-ud-dīn Auliya of Delhi, Naṣir-ud-dīn Abu'l-khair, and Sultān Naṣir-ud-dīn Maḥmūd. A second list gives their names: Bahā'ud-dīn Zakariyā of Multān, Shāh Ruq'a-i-'ālām Ḥazrat of Lucknow, Shāh Shams-i-Tabriz of Multān, Shaikh Jalāl Maḥdūm Jahāniyā Jahān-gasht of Uchchā, and Bābā Shaikh Farid-ud-dīn Shakarganj of Pakpattan. In the United Provinces the group usually includes worthies of a much lower rank, one list giving Ghāzī Miyān, Aminā Sati, Bhairon, Buahnā, and Bandē, Aminā being a *sati*, or faithful wife who died on the pyre of her husband, and the three last deified worthies or malignant spirits propitiated by the lowest classes. Here, as in W. Bengal, the enumeration varies from district to district, according to the tastes of the worshippers or the local cults which have been absorbed into this form of worship.

Practically all the lists in the United Provinces and Bengal are headed by Ghāzī Miyān, who has some pretensions to be regarded as a historical personage. His history is found in the *Mirāt-i-Maṣūdi*, of which an abstract has been given by J. Dowson (*H. M. Elliot, Hist. of India*, London, 1869, ii. 513 ff.; cf. *NINQ* ii. 109).

Dowson calls the book 'a historical romance. In it fact and fiction are freely mingled, and the great actions and exploits of other men are appropriated, without scruple, to the hero of the tale.' The conqueror, Maḥmūd of Ghazni (A.D. 997 or 998-1030), it is said, learning of an attack by the Hindu infidels on a division of his forces, sent his nephew, Sālār Sāhū, in command of a force to relieve them. After waging successful war upon the infidels, he was finally slain near Bahrāich in Oudh (A.D. 1034).

It is one of the curious aspects of popular Hinduism that a Musalmān martyr, who waged unceasing war against Hindus and destroyed their temples, should become the head of a quintette of saints widely venerated by the lower orders of Hindus. Wise, remarking that in E. Bengal the *guru*, or spiritual preceptor, of the sect is the *mahant*, or provost, of the Nānakshāhī or Sikh order of devotees, suggests that the origin of the Panchpiriyā beliefs may be traced to Nānak (*q.v.*), the famous Sikh *guru*.

Nānak 'taught universal toleration, and insisted that not only were the essential doctrines of Hinduism and Muhammadanism analogous, but that the Supreme Being, adored as either Hari [Viṣṇu] or Allāh, was sought after by the devout of both creeds. It was natural that in such a tolerant sect eclectic teachers

should spring up, selecting from the ritual of each religion whatever was likely to recommend itself to the vacillation of either party' (*Notes on the Races, Castes, and Trades of E. Bengal*, p. 18 f.).

There seems, however, to be little ground for associating the growth of the Panchpiriyā beliefs with the rise of Sikhism, because it prevails widely in parts of the country where Sikh influence is altogether wanting. It also seems probable that the cult was older than Sikhism itself. It is more reasonable to suppose that it supplies one of many examples of the eclectic character of popular Hinduism, particularly in its lower strata, where the worshipper is prepared to venerate any impersonation of the divine energy from which he hopes to obtain a favour, or by the neglect of which he imagines that he may be exposed to malign influences. In this spirit lower class Hindus will visit the tombs of Musalmān saints or even make offerings at the graves of Europeans, in the former case believing that the vicinity of the grave of the holy man exhales an influence which will be beneficial to them, in the latter dreading that the angry ghost of the powerful stranger, if not duly propitiated, may do them injury.

It does not seem necessary to connect the cult with that of the five Pāṇḍava heroes of the *Mahābhārata* epic in a special way, as some writers have suggested. In fact, in Hindu belief five is a perfect, holy number. Hence comes the respect paid to the *pañchāyat*, or the body which should properly consist of five arbitrators or assessors, the tribal or caste council of the group or locality, which deals with social affairs, such as marriage, divorce, violations of caste rules, and so forth. *Pañch jahān Paramēśvar*, 'Where five agree, 'tis God's decree,' is a common proverb which expresses popular feeling. In the same way there are five great gods worshipped by the orthodox Hindus. The offerings presented to the gods are usually five or some multiple of that number; five unmarried girls or five married women whose husbands are alive bring good luck to the marriage rites, and so on. At the same time the cult of the five Pāṇḍava heroes extends from the Himālaya to Madras, and this was possibly one of the sources contributing to the Panchpiriyā beliefs (*PR*² i. 206).

The Panchpiriyā beliefs, then, appear to be the result of a fusion of Hinduism and Islām, and probably arose after the Muhammadan conquest had impressed upon the minds of the lower classes of Hindus the assurance that the saints worshipped by the newcomers must be powerful personages to whom the success of the invaders might reasonably be attributed. With these saints were naturally associated some of the myriad local deities and malign spirits which the menial classes of Hindus habitually worship. The result was the extraordinary amalgam of divine personages and dangerous spirits which we find in the various lists.

2. Local types of the cult.—(a) *Bengal.*—In W. Bengal the 'five saints' form one of the main objects of adoration, not only of Muhammadans, but also of Hindus of the lower grades. They are often worshipped as family deities, being represented by a small mound on a clay plinth erected in the north-west corner of one of the rooms of the house. On this is fixed a piece of iron, resembling in its shape the human hand, each finger symbolizing one of the quintette, with a piece of yellow cloth bound where the wrist should be.

'Every Wednesday the mound is washed, incense is burned before it and offerings of flowers are made. On special occasions sacrifices are offered, either of goats or cocks. Where the votary is a Hindu he often engages a Dafālī [one of the drummer caste] Fakir to perform the ceremony on his behalf. The Panchpiriyā Hindus eat the flesh of goats killed by Muhammadan butchers in accordance with the forms prescribed by their religion and will not touch the flesh of animals which have been sacrificed before a Hindu god. They do not, how-

PANCOSMISM ($\pi\acute{\alpha}\nu$, neut. of $\pi\acute{\alpha}\varsigma$, 'the whole,' 'all' + $\kappa\omicron\sigma\mu\omicron\varsigma$, the universe in its order or arrangement).—This term is of rare occurrence, because the theory denoted by it has seldom been held in the strict acceptance by any competent philosophical thinker; Czolbe (1819-73), in his first period, was a notable exception. It means that all being or reality consists exclusively of the physical universe existing under the conditions of space and time. As a rule, the view has been confused with one or other of the protean forms of pantheism (*g.v.*). Now, when examined closely, pantheism, considered metaphysically, presents but two legitimate standpoints. On the one hand, by participation, all phenomena in the universe share the nature of the absolute substance and, to the extent of this participation (which may be matter of degree), are real. On the other hand, the phenomena are transitory forms or appearances of the absolute substance and thus, in effect, illusions. Whether the doctrine of *metexis* or that of *mimesis* be accepted, the metaphysical problem of immanency presents itself. On the contrary, pancosmism implies the ejection of all metaphysical questions—there is no room for a transcendental factor.

The theory exemplifies a recurrent logical error, a common mark of unphilosophical thinking always, but especially in periods of reaction against dominant theological or 'spiritual' doctrines. Briefly, second intentions are either mistaken for or employed as if they were first intentions. That is to say, conceptual results of reflective thought are taken, *prima facie*, as direct percepts. Phrases like 'the universe' and 'natural law' (e.g., Haeckel's 'law of substance') belong distinctively to mind. Any 'object' indicated by them is 'in' mind. But, according to pantheism, such 'objects' precisely are out of all relation to mind. This fallacy is one among many consequences of a tendency rendered familiar by the premature generalizations of 'modern thought' so called, particularly on the biological side; for the vagueness inseparable from the sciences of organic nature rather than the mathematical exactness of the sciences of physical nature has favoured philosophical delusion. It originates in forgetfulness that the business of science is to offer descriptions of particular things—things whose existence is conditional upon the existence of other things. Thus, 'laws of nature' do not refer to nature as a whole, but to separate parts of it. To extend them to the 'universe' in its totality is quite unwarrantable. Much more is it unwarrantable to transfer descriptions of things, no matter what their cogency or accuracy, to the sphere of the ultimate and necessary—a main vice of pantheism and allied theories. For this reason, then, the pantheist hypothesis has failed to recommend itself to serious thinkers. As history shows, it is associated with deductions drawn from empirical observation, or presumed to be so drawn. These, in turn, when sanctured with the mysticism or even poetry which, by a curious paradox, seems to be compatible with materialism (*q.v.*), come to do duty as a theory of reality. Evidence, itself in need of thorough criticism, is treated as if it guaranteed an ultimate explanation of the universe. Critical analysis of the categories of space and time, in their relation to the category of change particularly, would serve to bare the vicious procedure at once.

R. M. WENLEY.

PANDHARPUR.—Pandharpur is a famous religious town and place of pilgrimage in the Sholapur District of the Bombay Presidency.

situated on the right bank of the river Bhīma, a tributary of the Kistna; lat. 17° 41' N., long. 75° 28' E. The place derives its name from the cult of a deity now regarded as a form of Viṣṇu, variously called Pāṇdurang, Paṇdhari, Viṭṭhal, Viṭṭhaināth, and Viṭhobā, whose noted temple near the centre of the holy part of the town is held in great reverence by Brāhmins.

Viṭhobā, according to Paṇḍit Bhagvānlāl Indrajī (*BG* xx. 423), 'is a short form of Viṭṭhal bāva, that is "Father" or "Dear" Viṭṭhal; Viṭṭhal does not appear to be a Sanskrit name, nor, though several attempts have been made, can the word be correctly traced to any Sanskrit root. The name is probably Kanarese.'

Others explain it to mean 'standing on a brick,' from the position of the image of the god (J. M. Mitchell, *Hinduism Past and Present*, p. 169; M. A. Macauliffe, *The Sikh Religion*, vi. 23). It is more probable that the name is a corruption of Viṣṇupati, 'lord Viṣṇu,' through the local form Bistu or Biṭṭu. The present name Pāṇdurang, usually interpreted to mean 'white-coloured,' is more probably a Sanskritized form of Pandaraga, 'belonging to Pandargē'—the old name of the place. From these facts Viṭhobā seems to be a local deity admitted into Hinduism as a form of Viṣṇu.

The date of the erection of the original temple, which has been repeatedly restored and extended, is unknown. It seems to have been erected under the Yādava dynasty of Devgīri, and to have been destroyed by the Muhammadans, as several figures are wilfully destroyed. According to local tradition, the image was several times removed to save it from desecration at the hands of the Muhammadans. It is about 3 ft. 9 ins. in height, and together with the base seems to be cut out of a single block of trap rock. It stands with arms akimbo and hands resting upon the hips, the left hand holding a conch-shell and the right a discus, the emblems of Viṣṇu. No other Vaiṣṇava temple in India seems to possess a similar image. It is served by a colony of Deśaṣṭh Brāhmins, including priests (*badvā*), ministrants, choristers, bathmen, singers, barbers, mace-bearers, and lamp-lighters. The service is performed five times during each day and night.

About 3 a.m. a priest humbly begs the god to wake; the door is opened, the food placed in the bed-chamber on the previous day is removed, and butter and sugar-candy are laid before the god. A torch made of muslin soaked in butter is waved before him from head to foot. Many votaries come to behold the god at this time. After this he is again fed, butter and sugar being placed in his mouth. Lights perfumed with camphor are again waved, the faded garlands are removed, and the feet of the image are washed first in milk and then in water. The service proper (*pūjā*) then begins. The image is unrobed and bathed, a sheet being held before the door while he is naked. After his oath he is wiped dry and dressed in new robes. His face is wiped and rubbed with scented oil until it shines. A turban is bound round his head and garlands of flowers are hung on his neck, while the barber holds a mirror before him. His feet are washed and rubbed with sandal; sandal paste is applied to his brow. After the morning service, about 3 p.m., the god is again dressed; the ministrant bathes and adorns him.

The days specially sacred to the gods are Wednesday and Saturday, unless these fall at the conjunction of sun and moon or ominous conjunctions of planets occur. As in the case with all Vaiṣṇavas, the 11th day of the month is a fast day. The chief fairs are in June to July and October to November, when immense crowds assemble from all parts of the Deccan and S. India. The other temples in the town are numerous, but not of special importance.

LITERATURE.—This art. is mainly based on the full account of the place, the temple, and its ritual by Paṇḍit Bhagvānlāl Indrajī, in *BG* xx. [1884] 415 ff., and J. M. Mitchell, *Hinduism Past and Present*, London, 1885, p. 163 ff. On the local saint, Nāṁdev, see M. A. Macauliffe, *The Sikh Religion*, Oxford, 1909, v. 23, 34. On the anti-Brāhminical influence of the Marhātā poet Tīkārām see M. M. Kunte, *Vicissitudes of Aryan Civilisation in India*, Bombay, 1880, p. 464, 497.

W. CROOKE.

PANGENESIS.—The theory of pangenesis, though to some extent foreshadowed in the writings of Buffon, Spencer, and others, was originally put forward by Charles Darwin in 1867. By means of it he sought to connect together many different classes of biological facts with which his studies had brought him into close contact. It was a tentative explanation of phenomena so diverse as the general process of development, the regeneration of lost parts after injury, reversion in offspring to characters present in remote ancestors, the inherited effects of the use and disuse of organs, and graft-hybrids. For these and other phenomena of life Darwin attempted a general explanation in the theory which he termed 'pangenesis.' The tissues of plants and animals are composed of small microscopical units called cells, which increase by self-division. According to Darwin, this is not the sole mode of reproduction whereby these units increase in number. He supposed that they continually throw off minute particles, or gemmules, which permeate the whole system of the individual. Under suitable conditions these gemmules multiply by self-division and ultimately give rise to units similar to those from which they sprang. At the spot where the sexual elements are formed a special attraction is exerted on all the different kinds of gemmule from the body. Here they congregate and constitute the sexual elements. As the sexual cells themselves, especially those produced by the male, are often very small, it must be supposed that the gemmules are exceedingly minute, and quite invisible under the highest powers of the microscope. Fertilization means the union of two sets of gemmules, and subsequent development results in offspring bearing resemblances to the parents by whom these two sets were supplied. In this way is explained the general likeness between parents and offspring. A further supposition is that under certain circumstances gemmules may become dormant and remain so for many generations. Then, through unknown changes in the conditions, they may re-awaken into activity, and bring about the sudden reappearance of the character or characters to which their activities give rise. In this way is explained the phenomenon of reversion on the part of offspring to features which were found in some more or less remote ancestor.

The co-ordinated aggregation of the gemmules which serves to explain the process of normal development serves also to explain the remarkable phenomenon of the regeneration of lost parts, such as occurs when a limb of the lobster is lost or the tail severed from a lizard. The appropriate gemmules congregate at the point of injury and attract others to themselves, so that a complete set necessary for the re-formation of the lost part is eventually assembled.

Darwin also considered that the theory served to explain cases such as the development of an antenna in a crustacean in place of an eye, or the appearance of buds in unlikely places on a plant. Such teratological cases are due to the wrong gemmules having arrived first at the point of growth, and having attracted their own complement of gemmules instead of that necessary to complete the normal sequence.

Some of the phenomena which Darwin sought to explain by the theory of pangenesis have since been shown to be either of doubtful nature or susceptible of a totally different interpretation. The supposed inherited effect of the use and disuse of parts, in which Darwin believed strongly, is now generally discredited by biologists. Recent work, too, has shown that graft-hybrids are in reality made up of two distinct individuals, of

which one supplies certain tissues and the other one the rest. A graft-hybrid may consist of the body of one plant covered over by the skin of another. The resultant is more or less intermediate in appearance, but the cell-tissues of the two kinds remain distinct, and the compound plant breeds true to the member of the combination that supplies the cell-layer from which the germ-cells arise. Of such phenomena the theory of pangenesis offers no explanation.

From the outset Darwin's theory was subjected to much criticism. A few years after its promulgation Galton questioned its validity on experimental grounds. He argued that, if representatives of all the various gemmules given off by the body of an animal are collected into the sexual glands, as the theory demands, they must travel by the passage of the blood. Hence the blood must be full of them, and they must be capable of living in the blood for some time. If, therefore, the blood of one form were replaced by that of another, the offspring of animals with such transfused blood should show effects derived from the interchange of gemmules. Galton accordingly made blood-transfusion experiments between silver-grey rabbits and lops, and subsequently bred from both classes. In spite of the transfusion each class bred true, and in no case did the offspring exhibit any differences that might be set down to the operation. These experiments of Galton are supported by the case of the graft-hybrids mentioned above. A graft-hybrid, as has already been stated, consists of a permanent fusion between individual plants which may belong to different allied species, as, e.g., between the tomato and the common weed *Solanum nigrum*. Nevertheless experiment has shown that the offspring of such compound plants belong entirely to one of the two forms of which the plant is made up. If the doctrine of pangenesis were true, and the gemmules of both forms were collected together in the sexual tissues, some effect would undoubtedly be looked for in the offspring. That no effect is produced certainly tells against the doctrine.

Nor does pangenesis receive any support from what is now known of cell-division. The science of cytology, largely concerned with the characters, origin, and growth of cells, has been revolutionized since Darwin wrote, and the ascertained phenomena lend no support to the view that new cells arise in any way other than by division of pre-existing cells.

Whatever its shortcomings, the theory of pangenesis probably contains one essential truth. The conception that the various characters exhibited by plant or animal depend for their manifestation upon definite units which are transferred unchanged from generation to generation is a conception which has been borne out by recent experimental work (see art. HEREDITY). It is a conception, too, which has formed an integral part of the more important theories of inheritance that have been put forward since Darwin's time, and to this extent pangenesis may be said to have formed the basis of modern heredity. In one respect, however, Darwin's theory differs fundamentally from those which succeeded it, viz. in the conception of the manner in which the somatoplasm is related to the germ-plasm. For Darwin there was no very sharp distinction between the two. At an early stage in development the sexual cells were non-existent as such, but were represented by innumerable gemmules scattered throughout the body. As development proceeded, representative gemmules from the various tissues became aggregated together in the sexual gland, ultimately giving rise to the reproductive tissue or germ-plasm. Sexual cells gave rise to body tissue and

body tissue in its turn, through the formation of gemmules, gave rise to sexual cells. In the sequence of the generations there was a continual alternation between somatoplasm and germ-plasm, the connecting link between them being the gemmules. The theory involved the transportation of the gemmules from the fertilized ovum to the body tissues, and again from the body tissues to the fertilized ovum. Strong objections to this hypothetical transportation of gemmules were soon raised by Galton and others, and the idea was abandoned by Weismann and other successors of Darwin. Following Weismann, most biologists to-day draw a sharp distinction between germ-plasm and somatoplasm. The sexual elements continue to be germ-plasm after their fusion, but from this fused germ-plasm a portion is gradually set aside as development proceeds, is specialized as the body of the new individual, and functions as the carrier and protector of the remaining and unmodified germ-plasm. The body eventually dies; the germ-plasm carried by it alone retains the property of fusion with other germ-plasms to repeat the sequence. After each fusion of separate germ-plasms resulting from the union of two sexual cells a portion is sacrificed to ensure the continued activity of the rest. The germ-plasm goes on from fusion to fusion, from generation to generation, and at each generation is side-tracked a portion which becomes somatoplasm, which drifts thenceforward from the evolutionary current and ultimately perishes. The case for or against pangenesis rests largely upon what is termed the inheritance of 'acquired' characters, upon whether changes in the somatoplasm induced by changed conditions can be transmitted to the next generation through the medium of the germ-plasm. Darwin believed in such inheritance; Weismann did not. As time has gone on, the evidence has become more and more in favour of Weismann and consequently against the view of the relation between somatoplasm and germ-plasm which the theory of pangenesis implies. On the other hand, it is becoming more and more apparent that any explanation of the phenomena of heredity demands the conception of small particles whose presence in or absence from the germ-plasm decides the characters of the somatoplasm that arises from the germ-plasm (cf. art. HEREDITY). To this extent the theory of pangenesis contains an element of truth.

PANJAB AND NORTH-WEST FRONTIER PROVINCE.—I. Pre-historical creeds.—

It is difficult to say what the primitive religion of the Panjāb or north-west corner of India must have been, but easy to conjecture its general outlines. It was doubtless a form of nature-worship, combined with magic, whose object was to attain power over the material universe generally and in particular to get children, ensure good harvests, and destroy enemies or at least secure immunity from their onslaughts. A type of this primitive religion may have long survived the Vedic period in the *Bon chos*, or religion of the Tibetan Bonpos. The *Bon chos* was also called *Lha chos*, or 'spirit-cult,' and in the *gLing chos* of Ladākh we have probably the earliest type of it.¹

The gods of the Bon religion were those of the red meadow (the earth), of the sun, of heaven, King Kesar and his mother Gog bzang lhamo.² But

¹ A. H. Francke, *Antiquities of Indian Tibet*, Calcutta, 1914, p. 21; cf. art. *gung chos*, vol. viii. p. 75.

² Francke, pp. 2, 65.

at least as primitive were the *pho-lhā* and *mo-lhā*, or deities of the 'male and female principle.'¹ Sun-worship must have been important, as the cult was also called *gyung-drung-bon*, or the *swāstika-bon*.²

Human sacrifice was probably a leading feature of this primitive creed. Oaths at important treaties were made binding by human as well as animal sacrifices, new houses were consecrated by immuring human beings in their walls, and a person was killed when one was first inhabited.³ A. H. Francke mentions a *lāma* in the Sutlej valley who had recently beheaded his father while asleep in order to render his new house habitable.⁴ The old were apparently put to death—a custom toned down in modern times to a rule which relegates a father to a small house when his son marries, and a grandfather to a still smaller one.

The ibex was worshipped for fertility, and figures of it were often carved on rocks. Nowadays 'flour ibex' are offered by neighbours to the parents of a new-born child.⁵ Kesar, a Bruguma, and other pre-Buddhist divinities are still invoked to grant children,⁶ but it does not follow that this was their real or principal function in the *Bon chos*. The *swāstika* was already a symbol of the sun, and the *yonī* of the female principle.⁷ The dead were buried, burned, exposed to the air, or cast into the waters, as might seem appropriate. Thus people who had died of dropsy were cast into a stream.⁸ Even in recent times the people of Kanaur used to practise immersion of the dead in water (*dūbant*), eating (*bhakhant*), and cremation as well as burial.⁹ Corpses were also cut into pieces and packed into clay pots.¹⁰

Spirits played a great part for good or ill. That of the Miru monastery was carried off even in Buddhist times to Hemis in a bundle of twigs.¹¹ When the country suffered from violent gales, the spirits of the wind were caught in pots and stored up in a *stūpa* which had already been built over the home of an evil spirit.¹²

2. Vitality of early beliefs.—J. G. Frazer has noted the unchanging character of the popular, real religious beliefs in India,¹³ and has also pointed out how the confusion between magic and religion, so general among primitive peoples, was rife in ancient India¹⁴ (see *MAGIC [Indian]*, vol. viii. p. 292). But the 'spirit basis of belief and custom' is probably the key by which Indian magic is to be interpreted. However this may be, we find very little difference and no essential variations in the magical art of destroying an enemy by injuring his image to the accompaniment of appropriate spells, rites, or incantations as described in the *Atharvaveda* and that practised by modern Muhammadans in N. India.¹⁵

(a) *Sun-god*.—The cult of the sun-god is probably most widely conserved in the legend of Rājā Rasālu, in spite of R. C. Temple's efforts to find a historical basis for it.¹⁶ No doubt many historical kings and heroes have been identified with Rasālu, but the principal episodes of his epic are stock incidents in sun-myths. Of these incidents some are found in Buddhist iconography; e.g., his horse is born at the same hour as himself and he is the result of a miraculous conception, like the Buddha

himself, and like the hero-god Gūga of later times.¹

(b) *The headless horseman*.—Another cult, if it can be so termed, of extraordinary vitality in the Panjāb is that of the headless horseman.² The devoted warrior, champion, or devotee who sacrifices his head in fight or sacrifice for his country, his faith, or his honour is found in every creed and at every epoch of the history of the province. According to the Hindu *Mārkaṇḍeya Purāṇa*, Devī assumed ten incarnations in order to destroy the *rakṣasas*, or demons, and one of them was Chhin-namastakā the 'headless,' which she took upon her to destroy Nisumbha. She is the modern Chām-unda or Chaunda, and appears to be the type in which several modern cults are moulded.

A similar cult of a headless champion of the faith is that of the famous Ghāzi Sālār, or Ghāzi Miyān, the historical Sālār Masaud Ghāzi, nephew of Mahmūd of Ghazni who was killed in A.D. 1033. His headless body is buried at Bahrāich, and his shrine is a place of pilgrimage. He is worshipped in the Panjāb principally in the south-west (cf. above, p. 600).

Other cults of this type are those of Lakkhe Shāh Darwesh, who was killed in a great war in Multān, and whose headless trunk fought its way to Ambāla, which town he cursed so that to this day all the wells within its walls are brackish; the Sayyids of Sonapat, Mirān Shāh and his sister's son Sayyid Kabīr; and the Binsirā, or 'headless' saint, of Pānīpat.

The Hindus of the modern Panjāb still preserve such cults. Thus the Bhandāri section of the Khattrīs reverence Bābā Chūda (? Chāmunda) of Batāla, and perform the ear-piercing ceremony of their sons at his shrine. He too fell fighting, after his head had been severed from his body, in the streets of the town, about 1730 (probably during Nādir Shāh's invasion in 1738), and he is revered as a god.

The Sikhs have several similar legends. The Sikh *miśl*, or confederated regiment of the Shahīds (lit. 'martyrs,' a term borrowed from the Muhammadans), is sometimes said to be a *miśl* of the Akālīs, but other accounts ascribe its name to the heroic death of its founder who fought on horseback long after his head had been struck off in an attack on a Muhammadan governor. See, further, art. SHAHID.

3. *The Vedic cults*.—The Aryan invasions introduced the Vedic religion into the Panjāb, if, indeed, it did not take its rise in its plains. The Veda is not, however, a collection of popular poems, but a redaction of hymns composed in the main by a priestly class, and below or beside the Vedic cults the primitive creeds probably survived. Moreover, the Vedic theology was itself largely a worship of nature. It begins with the worship of things of heaven and ends with worship of those of earth. First come the sky-gods, the sun, also known as Savitar, the enlightener, and Bhaga, 'the bestower of blessings'; then Viṣṇu, the kindly god destined to become one of the Hindu triad. As Pūshan, god of agriculture, roads, and cattle, or Kapardin, 'he of the braided hair,' he is also regarded as forming a link between the Vedic gods and Siva. Dyaus, the shining sky, and Varuna, the sky-god—still worshipped in Chamba as Bīr Batāl or under the Muhammadan name of Khwājāh Khizr³—complete the list. Second comes the god of mid-air, Indra, who gained his ascendancy on

Indian soil, where agriculture depends on the periodical rains. As a war-god he leads the Kṣatriyas on earth as he fought in heaven against the demon that dispersed the rain-clouds. Last come the earth-born gods, Agni, the fire-god, and Soma, the moon-plant (*Aselepias acida*), with intoxicating properties, later to be identified with the moon. Below these is the anthropomorphous Yāma, god of the nether world, whose heaven is guarded by two monstrous dogs. Thither are led the souls of the *pitr̥s*, or sainted dead, who have constantly to be refreshed by the food-offerings of their descendants lest they lose their place in the abodes of the blessed. Hence arose the *śrāddha*, or periodical feast of the dead, which has had far-reaching effects on the development of the theory of sacrifice. The *pitr̥s* themselves have also become godlings. This religion has never perished. It has been transformed out of all recognition, but its elements still survive.

4. **Buddhism.**—The Vedic period lasted from 1500 (or even earlier) down to 200 B.C., but the pretensions of its later developments led to at least two great protestant movements, Jainism and Buddhism. Neither originated in the Panjāb, yet both profoundly influenced its religious evolution. The earlier, Jainism, has left its monuments all over the Panjāb, and is still an organized creed within its borders, especially in the south-east. Buddhism, founded by the Buddha (c. 596–508 B.C.), not only became the State religion under Aśoka and his successors, but penetrated into the valleys which run up into the ranges on its western frontier, flourished especially in the Peshāwar valley, and spread all over the mountainous regions west and north of the Indus into modern Buner, Swāt, Dir, and Chitral, over Kashmir, over all the Himalayan region of the N.E. Panjāb, and into Tibet on its northern frontier. The petty modern State of Mandi (known to Tibetans as Zahor) was a seat of Buddhist learning, and its sacred lake of Rawalsar is still an object of Buddhist pilgrimage. But of the Himalayan cantons only Lahul, Upper Kanaur (in Bashahr State), and the Tibetan valley of Spiti are now at all Buddhist by creed, and the only true Buddhists are the pure Tibetans of the last-named valley.

The protestant movements against orthodox or Brāhmanical Hinduism have, however, often been renewed in other guises. From time to time religious revivals have taken the form of revolts against priestly pretensions or theological intricacies. Of all these movements that of the Sikhs, contemporary with the Reformation in Europe, was the most important and enduring (see art. **SIKHS**).

5. **Zoroastrianism.**—Such are the ingredients of which we have literary evidence, but many other elements enter into the composition of the Panjāb religions. Of these the Iranian is the most important and the most obscure. The connexion of the provinces, especially of the Indus valley, with Persia has often been very close from the days of Darius, son of Hystaspes (521–485 B.C.), onwards, though it was frequently interrupted. The Rāvi, a river of the central Panjāb, anciently called the Iravati (Skr. Airavati¹), is etymologically identical with Haraqaiti, now the Helmand (Arghandāb) in Arachosia. Whether these names were brought into the Panjāb by Indo-Aryans formerly settled in E. Irān, or by Iranians who penetrated into it after the Indo-Aryan invasions, it is impossible to say; but, judging from the history of later times, it is certain that the intercourse between India and Irān was once much closer than it became subse-

quently, and Iranian influences may have been considerable.¹ Similarly, the sacred Sarasvatī, now a mere stream of the eastern Panjāb in the Jamnā valley, probably takes its name from the old designation of the Indus, though the descriptions given of it may refer to a time when it was a far greater river than it is now. Hillebrandt's theory that its name, too, was even applied to the Arghandāb² seems to be untenable. However this may be, the later Vedic period saw the Kurukshetra, or 'battle-field of the Kurus,' marked out in the Jamnā valley, between that river and the Sarasvatī or beyond it. Roughly speaking, it corresponded to the modern Sirhind,³ or rather to the Mughal province of that name, but it extended further south than Cunningham would acknowledge.⁴ Known also as the Dharmakṣetra, or 'holy land,' it was the country of the allied Kuru-Panchāla tribes, and within it the great Brāhmanas were undoubtedly composed. But the rest of the Panjāb, exposed to constant invasions from the north-west, rapidly fell away and was lost to orthodox Hinduism, Vedic and Brāhmanical, with the exception of the Himalayan area, where Brāhmanism has always held a strong footing. The Hinduism of the later Vedic and post-Vedic periods was elastic. It admitted not only Kṣatriyas and Vaiśyas, but even men of the lowest castes, to Brāhmanhood, and was able and willing to receive foreigners into its fold. Thus, as D. R. Bhandarkar has shown,⁵ Greeks (or at any rate Græco-Bactrians) became Hindu Vaiśnavas as well as Buddhists. Sakas, Abhīras, and Kushanas similarly entered both folds, and on the coins of the latter dynasty we find Hindu, Greek, and Iranian deities figured as well as the Buddha. Just as the Hūnas, or White Ephthalites, became one of the thirty-six genuine Kāṣṭh families, so they and their contemporaries, the Gñjars, became Hinduized. But some of these invaders brought with them Persian *magi*, who became Maga or Sākadvīpi Brāhmanas; and the *Bhaviṣya Purāṇa* relates how Sāmba, son of Kṛṣṇa, suffering from white leprosy, was advised by the sage Nārada to build a temple to Sūrya, the sun-god, on the Chenāb. Thus was founded the great sun-temple at Multān (Sāmba-pura) which was destroyed in the Muhammadan invasions. To serve it ten Maga families had to be brought from Sākadvīpa. They are described as descended from Jarashasta (Zoroaster), and as belonging to the Mihira (a Sanskritized form of the Old Persian Mihr) *gotra*. But Mihirakula (a Sanskritized form of the Persian Mihrkul), son of the Hūna king Toramāna, was converted to the worship of Śiva, and founded a dynasty in Kashmir, which was long a staunch patron of Brāhmanism. Traces of Zoroastrian fire-worship, however, still existed in the Panjāb down to the time of Timūr, as he mentions his destruction of temples dedicated to it⁶ in the valley of the Jamnā.

6. **Islām.**—Side by side with these Hindu and Hinduized cults, Buddhism held its ground, at all events in a debased form, until the Muhammadan invasions. Beginning with inroads from Sind and the conquest of Multān in A.D. 712, Islām obtained a firm footing in the S.W. Panjāb before the rest of these provinces came under its influence, and the oldest Muhammadan shrines in the Panjāb are those at Uch Sharif, now in Bahawalpur, and other places in that State and the adjoining British territory. The later conquests of Muhammad of

¹ It is not necessary to go as far as A. Hillebrandt and place the action of the sixth *maṇḍala* of the R̥gveda in Arachosia.

⁷ The gods Yazdān and Ahīmān are expressly said to be worshipped.

¹ J. W. McGrindle, *Ancient India as described in Classical Literature*, London, 1901, p. 27. Its Vedic name was Parusini (A. A. Macdonell and A. B. Keith, *Vedic Index of Names and Subjects*, London, 1912, I. 499).

Ghor and Mahmūd of Ghaznī had singularly little effect on the religions of the Panjāb people as a whole. Though Delhi fell to the former in 1193, the Muhammadans under the Turk Sultāns were too fully employed in the conquest of Hindustan to force conversion on the province, and it was probably not until the Pathāns or Afghāns established themselves firmly in the tracts west of the Indus in the 15th cent. that Islām became the dominant creed, as it is now, in the N.W. Frontier Province and the W. Panjāb. Tradition still preserves memories of Aurangzib's proselytizing zeal, but all the influences combined only succeeded in making the fertile tracts along the great rivers Muhammadan. The naturally barren uplands and the hills to the north and east of the Panjāb remained Hindu or became Sikh. The Kohistān, or mountain region north of the Indus, appears to have been slowly conquered or converted to Islām, and Kāfiristān (*q.v.*) remained primitively pagan down to the time of the late Amīr Abdurrahmān of Afghānistān, if, indeed, it can be said to have yet entirely lost its independence or its ancient faiths. Moreover, the Muhammadan conquest of Sind and Multān was largely effected by schismatics who were compelled or encouraged to find scope for their activities on the remoter frontiers of the Khalifate, rather than at the heart of its dominions. Heretical movements were thus potent from the inception of the Islāmic inroads, and to this cause may be ascribed the chequered history of its progress in the Panjāb. Šūfiistic ideas have always found a congenial soil on the frontiers of Islām, and among the Khojas and other followers of the Ismā'īlian doctrine some of the earliest protestants against its most rigidly orthodox system are still represented.

It is hardly open to question that many of the first Muhammadan shrines were founded on the sites of ancient Buddhist, Hindu, or Jain fanes. Uch itself was anciently known as Deogarh—a name which suggests a religious origin.¹

Multān was the centre of sun-worship, and derives this, its latest Hindu name, from that of the idol and its shrine (*mūlāsthāna*), which was one of vast wealth in pre-Islāmic days. In the Tochi valley the shrines affected by the Wazīr and other Pathān tribes preserve many traces of a nature-worship older than Buddhism or Hinduism. Thus at the *ziārat* of Mūsā Nikkā, who was the ancestor of all the Wazīrs, stand three trees; to embrace the first will give a man a wife, to climb the second will give him a horse, and to swing from the third a son.² In the Kurram valley, whose present masters, the Tūris, are staunch Shītes and probably modern immigrants from the eastward, the shrines of Muhammadan saints date from an earlier period and some of them must be ancient.³ One of them is Lāla Gul, son of Burqa-posh, the 'veiled' Prophet. Lāla Gul is also known as the Yakh-posh, 'endurer of cold.' At some of these frontier shrines the devotee can obtain proficiency in music, while not far off the orthodox *mūllās* may denounce music as equally immoral with dancing. Farther east, on the Indus, are some shrines of possibly even an older origin. From Uch Sharif upwards the earliest Muhammadan propaganda spread in the valleys of the Indus and the Chenāb, and at such places as Multān, Sitpur, Taunsa Sharif, Sakhi Sarwar, Leia, and many others, rites are in vogue or

practices current which are not easily reconcilable with orthodox Islām. Sakhi Sarwar in particular represents the centre of an ancient cult of the earth and its fertility, and is the object of pilgrimage to the Sultāni sect.

In the Kohistān of the Indus valley, and in Buner, Swāt, Chitral, Gilgit, and other tracts, Islām established itself by slow degrees on the ruins of Buddhism and older cults. Tradition preserves the memory of an old Arab dynasty in Swāt, but the Afghān invasions refounded Muhammadanism in an intolerant form in the southern part of this region, Chitral and the smaller States to the north alone maintaining their older and less orthodox, but equally fanatical, form of that faith. In consequence few traces of Buddhism have survived; its monuments have been defaced, if not destroyed, and, though in its art Buddhist influences may still be seen, as at Darel, the popular religion is Islām with an undercurrent of primitive beliefs now to be classed as folk-lore. As a sample of the *mélanges* of fact and theory which this area presents, Ghulām Muhammad⁴ may be cited. He describes the Shīns as professing Arab descent, but as being probably Jews, who came to the valleys of the Kohistān *via* Afghānistān from Persia or even Turkey. But the Shīns have the characteristic Hindu aversion to eating the flesh or milk (or even *ghī* made from the milk) of the cow, and eschew fowls and fish. The former language of the people was Sanskrit, and the dialect now in use is called Shina. The basic element in the people is thus probably Indo-Aryan, and their festivals preserve many traces of Hindu beliefs.⁵

7. Guga.—The cult of Guga merits somewhat detailed notice.

Guga, or Gugga Chauhan (a Rājput tribe, the ancient Chandamāna), was king of Garh Dadner near Brindaban, and a son of Devi Chand and Bāchila his queen, the latter's sister Kāchila being wife of the king of Garh Mālwa. Both these queens were childless, but by performing *tapas* ('austerities') Bāchila won the regard of Yogi Gorakhnāth. He promised her the boon of a son, but Kāchila, hearing of the promise, forestalled her sister and was given two barleycorns by the Yogi. These she ate and in due course bore twin sons—Arjan and Surjan. When Bāchila visited the Yogi, he reproached her for coming to him again and, incensed at his words, she turned away. Although her hair had already turned grey, she practised *tapas* for twelve years more. Gorakhnāth then came to her again and, placing some ashes in her hand, bade her keep them, but she took umbrage at the form of his gift and threw them away. From them sprang Nurya and Gurya Siddhs, who worshipped Gorakhnāth. He then gave Bāchila a second handful of ashes, bidding her swallow them at home, but she did so on the spot and returned to her palace well advanced in pregnancy. Taunted by her husband with 'having got a bastard from the Yogis and Gosains,' she set out for the house of her father, Rājā Kīrpāl of Ajmer, but on the way her oxen stopped and refused to move. A voice from her womb bade her turn back or her child would not be born for twelve years. When the cart was turned round, the oxen went back to Garh Dadner, and she resumed her place in the palace, where her son, Guga, was born on the first Sunday in Māgh. When he was seven years old, his father abdicated and he became Rājā. Bāchila also had a daughter, Gugerī.

Guga, or Rājā Mundlikh, as he was called, was betrothed to Surjila, a daughter of the Rājā of Bangālā, although she had already been promised to Bāsāk Nāg. Guga set out for Gaur Bangālā with an army of 900,000 men and 62 *bīrs*, or champions, including Kailū Bir his *kottāl* and Hanumān Bir. Kailū Bir, mounted on his steed Agandūāria, sprang across a river to spy out a hostile camp. Leaving his horse, he disguised himself as a Brāhman and met Kalihar Nāg, Bāsāk Nāg's chief officer, who told him of his master's intent to destroy Mundlikh's army and Kailū Bir himself. The latter bade Kalihar conceal his men in some long grass and ambush Mundlikh's army as it advanced. Then he mounted his steed and made it prance. At the second kick its hoofs struck out sparks which set fire to the grass and destroyed the Nāg army. A third bound carried Kailū Bir back over the river to Mundlikh's army. Advancing to Bangālā, he was met by a sorceress commissioned by Surjila to bewitch

¹ *Bahawalpur State Gazetteer*, Lahore, 1904, pp. 161, 385. But it may be named after its Hindu ruler, Deo Singh. Tradition ascribes one of its mounds (*ucha*, 'the height') to the mythical Rājā Hodi.

² Lal Shah, 'Notes on some Frontier Shrines,' *IA* xxxv. [1906] 124; *Nikkā* means a 'chief,' and is still used in that sense among certain Pathān tribes.

³ *Id.* p. 119 ff.

⁴ *On the Festivals and Folk-lore of Gilgit* (Monographs A. S. Bengal), Calcutta, 1905.

⁵ *E.g.*, the Shino Bazono, or spring festival, is clearly the Basant Panchmi of the Panjāb (*ib.* p. 95). The moon is eclipsed by Gralin, a giant (p. 107). The worship of a goddess is still in vogue among the women; she is called Sri Bai (p. 103). Nāgi Suchami, another goddess, is still remembered, if not worshipped (p. 103).

him into losing all desire to return to Garh Dadner. She cast a garland of flowers round his neck, but Hanumān detected the spell and at his cry the garland broke and fell off. Thrice this occurred, and the third time the sorceress fell down, exposing her nakedness, who reproved Hanumān for behaviour, took offence and returned to Garh Dadner, declaring that his master would be condemned to remain twelve years in Bangla. After the marriage Mundlikh was overcome with love for his wife, and his followers also came under a spell and were dispersed as servants or slaves all over Bengal for twelve years. Meanwhile disasters fell upon Garh Dadner. Arjan and Surjan regarded themselves as in a sense the sons of Bāchila, having been born in virtue of the boon promised to her, and as such entitled to a share in the kingdom. A wondrous calf, called Panch-kālāni, was also born about this time in Dadner, and they also coveted its possession. So they invaded the kingdom and invited Mahmūd of Ghazni to help them. It fell an easy prey, as all its warriors were absent, but Bāchila and her daughter Gugerī held out in the citadel. Looking from its ramparts and seeing the city in ruins, Bāchila called to Mundlikh, but in vain. Then Gugerī entered his chamber and found all as he had left it. When she invoked his name, his sword flew to her hand, and, donning his head-dress, she sallied forth, attacked the enemy, and routed them single-handed. Then she bethought her of her husband, who lived not far away, and sent him word.

He had been practising *tapas* for a long time, and had seen Mundlikh in a dream fighting without his head. Accompanied by Narsingh Bir, Kāl Bir, and three other bīrs, he reached Bengal, and, disguised as mendicants, he and his companions went from door to door singing the songs of Garh Dadner. One day Mundlikh heard them and insisted on seeing the singers. Recognizing Ajālpāl, he threw off the spell, freed his enthralled followers, and, accompanied by Surjia, returned to Dadner, where he resumed his throne. He is said to have fought thirteen battles with the Muhammadans, and in the last of them his neck was cut through by a *chakra*, or discus, hurled from above, but his head did not fall. Mounted on his steed Nīlarath, and attended by Ajālpāl, who recollected his vision, he fought on. It was believed that, if his head did not fall for two and a half *gharis* (60 minutes, but two and a half is probably a euphemism for three, so 72 minutes may be meant), he would survive, but, when two *gharis* had passed, four kites appeared and exclaimed at the sight of Mundlikh fighting without his head. Hearing their words, he put up his hand to his turban and turned towards Ajālpāl. His head thus lost its balance and rolled off. He himself fell dead from his horse. This befell on the ninth day of the dark half of Bhādon, the Gūganaumi, and during that month and for eight days after that date his *śrāddha* is observed every year at his shrines.

After his death Surjia refused to don a widow's garb, averring that every night he visited her and was alive. But once Gugerī was allowed to conceal herself in the room where Surjia awaited his coming. At midnight a horse's tramp was heard and, when Guga had dismounted, she slipped out and clasped his horse round the neck. In this position she remained and was carried for some distance when Guga rode off. At last he detected her presence and said that, having been seen by her, he could never return.

J. Hutchison, of the Chamba Mission, from whose MS notes the last paragraph above is taken, adds: 'The above version of the Guga legend is current in the Chamba hills; and it is noteworthy that in it there is no mention of Guga having become a Muhammadan or of his having held any intercourse with Muhammadans. It may therefore be assumed to represent the older versions of the legend. As to the historical facts underlying the legend, it seems not improbable that by Guga is indicated one of the Rājput kings of the time of Muhammad of Ghor. The mention of Ral Pithora or Prithvirāja, the last Hindu Rājā of Delhi, makes this probable. He reigned from A.D. 1170 to 1193. The name Mundlikh was probably a title given to Rājput warriors who distinguished themselves in the wars of the time. There were five Rājās who bore this title among the Chudāsana princes of Gīrnār in Kāthiāwār, the first of whom joined Bhīma deva of Guzerāt in the pursuit of Mahmūd of Ghazni in A.D. 1023. From the Chauhan bards, his enemies, we learn that Jaya Chandra Rāthor, the last king of Kannauj (killed in A.D. 1194), also bore this title. He had taken a leading part in the wars with the Muhammadans, whom he repeatedly defeated and drove back across the Indus. But at last, enraged with Prithvirāja of Delhi, he invited Muhammad of Ghor to invade the Panjāb, with the result that both Delhi and Kannauj were overthrown and the Muhammadans triumphed. Jai Chand was drowned in the Ganges in attempting to escape.'

This is, of course, pure legend. Guga probably typifies the devotion of the champion who sacrifices his life in battle and, like him, bears the title of Mundlikh.

8. Hinduism.—Although Hinduism in the Panjāb was for centuries depressed under the Muslim domination, it never lost its vitality even in the plains, and in the Himālayas it flourished. In W. Panjāb it was at one time almost suppressed, but it was largely revived under the Mughals by Bairāgi

Gosains.¹ All through the Muhammadan period Tilla, the Bālnāth of the Yogis, in the eastern Salt Range, preserved its character as a centre of Hindu pilgrimage and worship. The Kurukshetra never lost its sanctity, and Thānesar remained and still is the centre of a great yearly religious fair. But no great seat of religious teaching survived. Modern Hinduism in the Panjāb largely owes its revival to the Arya Samāj (*q.v.*). The great sects of modern Hinduism are equally represented in the Panjāb, but Śaivism appears to have been the first in the field, if the peculiar sanctity attaching to Kailās, the great Himālayan peak in the upper Sutlej, is proof of its antiquity in that tract. It is the home of Śiva. In Chamba State also the Gadderan, or territory of the Gaddi tribe, is a Śiv-bhūmi, or land of Śiva. But this tribe's traditions make it a comparatively modern immigrant into its present seats, and the cult of Śiva cannot be said to be native to or even very ancient in the Himālayan area.

In the Panjāb Himālayas.—The processes by which the ancient faiths of the Panjāb—the Vedic religion, Buddhism, Jainism, and the popular forms of its animistic philosophy—gave birth to modern Hinduism differed in no way from those at work in the rest of India, and will not be described here. It will suffice to say that, though the Jains of the modern Panjāb are few in number, Jain ideas still subsist among the people.² Buddhism merged into Hinduism by easy stages, and in the Himālayan State of Chamba, in Kulu, and other Himālayan valleys, that *nāga*-worship which latter-day Buddhism revived or at least tolerated is still widespread.³ Its ritual differs little from that of the worship of Devi. But the distinctive feature of Himālayan Hinduism is best preserved in the Simla Hills, which are split up into religious jurisdictions, analogous to but not identical with those of the secular or temporal kingdoms and feudatory States into which they are divided. It is possible that some of these territorial gods are of great antiquity, but, owing to the system which prevails of getting rid of an inefficient deity and replacing him by one more successful, it is improbable that many very ancient deities have survived to the present day. A type of such a deity is Jungū, with his twenty-two *īkās*, or feudatory gods, who gives his name to the capital of the State now called Keonthal, near Simla.⁴ When a temple is struck by lightning and burnt—as may easily happen to a wooden temple in the hills—its destruction is attributed to the new god, and the old one disappears, or at least his cult is abandoned.⁵ In other cases he is reduced to a position of vassalage or becomes the new god's chief minister, champion, or servant. Another typical cult is that of the Dūms,⁶ who are found at several centres either singly or as a pair of twin brethren. A third, the family of Mareehh, is represented by seven members, each located at his own temple. The original Mareehh was also named Dithu and came from the Mansarowar lake nearly 4000 years ago. The name Mareehh is said to mean 'dirty' and to be due to the original worship of this deity, which consisted in burning the hair of the dead in *ghī*. A similar cult is that of Māl Padoi, who appears under four names at as

¹ E. D. MacLagan, *Panjāb Census Report*, Calcutta, 1892, p. 127 f.

² Rose, *Panjāb Census Report*, Simla, 1902, p. 218. The aversion to a widower's re-marrying is on the whole strongest in the S.E. Panjāb, where Jain influence is greatest.

³ Vogel, in *Chamba Gazetteer*, Lahore, 1904, p. 185 f.; see also pp. 170-189 for an account of these cults. The antiquity of *nāga*-worship may be gauged from the metamorphosis of the Vedic Indra into Indrū Nāg (*ib.* p. 185). For some other Devil cults see *Simla Hill States Gazetteer*, Lahore, 1904, under 'Keonthal State,' Appendix, p. viii, and *Simla Gazetteer*, Lahore, 1904, pp. 45-48.

⁵ *ib.* p. iv.

⁶ *ib.* 'Kunharsain State,' p. 101.

Ghor and Mahmūd of Ghaznī had singularly little effect on the religions of the Panjāb people as a whole. Though Delhi fell to the former in 1193, the Muhammadans under the Turk Sultāns were too fully employed in the conquest of Hindustan to force conversion on the province, and it was probably not until the Paṭhāns or Afghāns established themselves firmly in the tracts west of the Indus in the 15th cent. that Islām became the dominant creed, as it is now, in the N.W. Frontier Province and the W. Panjāb. Tradition still preserves memories of Aurangzib's proselytizing zeal, but all the influences combined only succeeded in making the fertile tracts along the great rivers Muhammadan. The naturally barren uplands and the hills to the north and east of the Panjāb remained Hindu or became Sikh. The Kohistān, or mountain region north of the Indus, appears to have been slowly conquered or converted to Islām, and Kāfiristān (*q.v.*) remained primitively pagan down to the time of the late Amīr Abdurrahmān of Afghānistān, if, indeed, it can be said to have yet entirely lost its independence or its ancient faiths. Moreover, the Muhammadan conquest of Sind and Multān was largely effected by schismatics who were compelled or encouraged to find scope for their activities on the remoter frontiers of the Khalifate, rather than at the heart of its dominions. Heretical movements were thus potent from the inception of the Islāmic inroads, and to this cause may be ascribed the chequered history of its progress in the Panjāb. Śūfistic ideas have always found a congenial soil on the frontiers of Islām, and among the Khojas and other followers of the Ismā'īlian doctrine some of the earliest protestants against its most rigidly orthodox system are still represented.

It is hardly open to question that many of the first Muhammadan shrines were founded on the sites of ancient Buddhist, Hindu, or Jain fanes. Uch itself was anciently known as Deogarh—a name which suggests a religious origin.¹

Multān was the centre of sun-worship, and derives this, its latest Hindu name, from that of the idol and its shrine (*mūlasthāna*), which was one of vast wealth in pre-Islāmic days. In the Tochi valley the shrines affected by the Wazīr and other Paṭhān tribes preserve many traces of a nature-worship older than Buddhism or Hinduism. Thus at the *ziārat* of Mūsā Nikkā, who was the ancestor of all the Wazīrs, stand three trees; to embrace the first will give a man a wife, to climb the second will give him a horse, and to swing from the third a son.² In the Kurram valley, whose present masters, the Tūris, are staunch Shītes and probably modern immigrants from the eastward, the shrines of Muhammadan saints date from an earlier period and some of them must be ancient.³ One of them is Lāla Gul, son of Burqa-posh, the 'veiled' Prophet. Lāla Gul is also known as the Yakh-posh, 'endurer of cold.' At some of these frontier shrines the devotee can obtain proficiency in music, while not far off the orthodox *mūllās* may denounce music as equally immoral with dancing. Farther east, on the Indus, are some shrines of possibly even an older origin. From Uch Sharif upwards the earliest Muhammadan propaganda spread in the valleys of the Indus and the Chenāb, and at such places as Multān, Sitpur, Taunsa Sharif, Sakhi Sarwar, Leia, and many others, rites are in vogue or

practices current which are not easily reconcilable with orthodox Islām. Sakhi Sarwar in particular represents the centre of an ancient cult of the earth and its fertility, and is the object of pilgrimage to the Sultāni sect.

In the Kohistān of the Indus valley, and in Buner, Swāt, Chitrāl, Gilgit, and other tracts, Islām established itself by slow degrees on the ruins of Buddhism and older cults. Tradition preserves the memory of an old Arab dynasty in Swāt, but the Afghān invasions refounded Muhammadanism in an intolerant form in the southern part of this region, Chitrāl and the smaller States to the north alone maintaining their older and less orthodox, but equally fanatical, form of that faith. In consequence few traces of Buddhism have survived; its monuments have been defaced, if not destroyed, and, though in its art Buddhist influences may still be seen, as at Darel, the popular religion is Islām with an undercurrent of primitive beliefs now to be classed as folk-lore. As a sample of the *mélanges* of fact and theory which this area presents, Ghulām Muhammad⁴ may be cited. He describes the Shīns as professing Arab descent, but as being probably Jews, who came to the valleys of the Kohistān *via* Afghānistān from Persia or even Turkey. But the Shīns have the characteristic Hindu aversion to eating the flesh or milk (or even *ghī* made from the milk) of the cow, and eschew fowls and fish. The former language of the people was Sanskrit, and the dialect now in use is called Shīna. The basic element in the people is thus probably Indo-Aryan, and their festivals preserve many traces of Hindu beliefs.⁵

7. Guga.—The cult of Guga merits somewhat detailed notice.

Guga, or Gugga Chauhān (a Rājput tribe, the ancient Chandamāna), was king of Garh Dadner near Brindaban, and a son of Devi Chand and Bāchila his queen, the latter's sister Kāchila being wife of the king of Garh Mālwa. Both these queens were childless, but by performing *tapas* ('austerities') Bāchila won the regard of Yogi Gorakhnāth. He promised her the boon of a son, but Kāchila, hearing of the promise, forestalled her sister and was given two barleycorns by the Yogi. These she ate and in due course bore twin sons—Arjan and Surjan. When Bāchila visited the Yogi, he reproached her for coming to him again and, incensed at his words, she turned away. Although her hair had already turned grey, she practised *tapas* for twelve years more. Gorakhnāth then came to her again and, placing some ashes in her hand, bade her keep them, but she took umbrage at the form of his gift and threw them away. From them sprang Nurya and Gurya Siddhs, who worshipped Gorakhnāth. He then gave Bāchila a second handful of ashes, bidding her swallow them at home, but she did so on the spot and returned to her palace well advanced in pregnancy. Taunted by her husband with 'having got a bastard from the Yogis and Gosains,' she set out for the house of her father, Rājā Kīrpāl of Ajmer, but on the way her oxen stopped and refused to move. A voice from her womb bade her turn back or her child would not be born for twelve years. When the cart was turned round, the oxen went back to Garh Dadner, and she resumed her place in the palace, where her son, Guga, was born on the first Sunday in Māgh. When he was seven years old, his father abdicated and he became Rājā. Bāchila also had a daughter, Gugerī.

Guga, or Rājā Mundlikh, as he was called, was betrothed to Surjila, a daughter of the Rājā of Bangālā, although she had already been promised to Basāk Nāg. Guga set out for Gaur Bangālā with an army of 900,000 men and 62 *bīrs*, or champions, including Kālū Bir his *kotwāl* and Hanuman Bir. Kālū Bir, mounted on his steed Agandūāria, sprang across a river to spy out a hostile camp. Leaving his horse, he disguised himself as a Brāhman and met Kālīhar Nāg, Basāk Nāg's chief officer, who told him of his master's intent to destroy Mundlikh's army and Kālū Bir himself. The latter bade Kālīhar conceal his men in some long grass and ambush Mundlikh's army as it advanced. Then he mounted his steed and made it prance. At the second kick its hoofs struck out sparks which set fire to the grass and destroyed the Nāg army. A third bound carried Kālū Bir back over the river to Mundlikh's army. Advancing to Bangālā, he was met by a sorceress commissioned by Surjila to bewitch

¹ Bahāwalpur State Gazetteer, Lahore, 1904, pp. 161, 385. But it may be named after its Hindu ruler, Deo Singh. Tradition ascribes one of its mounds (*ucha*, 'the height') to the mythical Rājā Hodi.

² Lal Shah, 'Notes on some Frontier Shrines,' *I.A.* xxxv. [1906] 124; *Nikkā* means a 'chief,' and is still used in that sense among certain Paṭhān tribes.

³ *Ib.* p. 119 ff.

⁴ *On the Festivals and Folk-lore of Gilgit* (Monographs A. S. Bengal), Calcutta, 1905.

⁵ *E.g.*, the Shīno Bazono, or spring festival, is clearly the Basant Panchmi of the Panjāb (*ib.* p. 95). The moon is eclipsed by Grahni, a giant (p. 107). The worship of a goddess is still in vogue among the women; she is called Sri Bai (p. 105). Nāgi Suchami, another goddess, is still remembered, if not worshipped (p. 103).

him into losing all desire to return to Garh Dadner. She cast a garland of flowers round his neck, but Hanumân detected the spell and at his cry the garland broke and fell off. Thrice this occurred, and the third time the sorceress's nether garment also fell down, exposing her nakedness. She complained to Mundlikh, who reproved Hanumân for behaving like a monkey. At this he took offence and returned to Garh Dadner, declaring that his master would be condemned to remain twelve years in Bangālā. After the marriage Mundlikh was overcome with love for his wife, and his followers also came under a spell and were dispersed as servants or slaves all over Bengal for twelve years. Meanwhile disasters fell upon Garh Dadner. Arjan and Surjan regarded themselves as in a sense the sons of Bāchila, having been born in virtue of the boon promised to her, and as such entitled to a share in the kingdom. A wondrous calf, called Panch-kallāni, was also born about this time in Dadner, and they also coveted its possession. So they invaded the kingdom and invited Mahmūd of Ghazni to help them. It fell an easy prey, as all its warriors were absent, but Bāchila and her daughter Gugerî held out in the citadel. Looking from its ramparts and seeing the city in ruins, Bāchila called to Mundlikh, but in vain. Then Gugerî entered his chamber and found all as he had left it. When she invoked his name, his sword flew to her hand, and, donning his head-dress, she sallied forth, attacked the enemy, and routed them single-handed. Then she bethought her of the champion Ajiapāl, who lived not far away, and sent him word to bring back Mundlikh. He had been practising *tapas* for a long time, and had seen Mundlikh in a dream fighting without his head. Accompanied by Narsingh Bir, Kālî Bir, and three other *biras*, he reached Bengal, and, disguised as mendicants, he and his companions went from door to door singing the songs of Garh Dadner. One day Mundlikh heard them and insisted on seeing the singers. Recognizing Ajiapāl, he threw off the spell, freed his enthralled followers, and, accompanied by Surjila, returned to Dadner, where he resumed his throne. He is said to have fought thirteen battles with the Muhammadans, and in the last of them his neck was cut through by a *chakra*, or discus, hurled from above, but his head did not fall. Mounted on his steed Nilarath, and attended by Ajiapāl, who recollected his vision, he fought on. It was believed that, if his head did not fall for two and a half *gharis* (60 minutes, but two and a half is probably a euphemism for three, so 72 minutes may be meant), he would survive, but, when two *gharis* had passed, four kites appeared and exclaimed at the sight of Mundlikh fighting without his head. Hearing their words, he put up his hand to his turban and turned towards Ajiapāl. His head thus lost its balance and rolled off. He himself fell dead from his horse. This befell on the ninth day of the dark half of Bhādon, the Gughanaumi, and during that month and for eight days after that date his *śrāddha* is observed every year at his shrines.

After his death Surjila refused to don a widow's garb, averring that every night he visited her and was alive. But once Gugerî was allowed to conceal herself in the room where Surjila awaited his coming. At midnight a horse's tramp was heard and, when Guga had dismounted, she slipped out and clasped his horse round the neck. In this position she remained and was carried for some distance when Guga rode off. At last he detected her presence and said that, having been seen by her, he could never return.

J. Hutchison, of the Chamba Mission, from whose MS notes the last paragraph above is taken, adds: 'The above version of the Gugga legend is current in the Chamba hills; and it is noteworthy that in it there is no mention of Gugga having become a Muhammadan or of his having held any intercourse with Muhammadans. It may therefore be assumed to represent the older versions of this legend. As to the historical facts underlying the legend, it seems not improbable that by Gugga is indicated one of the Rājapūt kings of the time of Muhammad of Ghor. The mention of Rai Pithora or Prith-wirāja, the last Hindu Rājā of Delhi, makes this probable. He reigned from A.D. 1170 to 1193. The name Mundlikh was probably who distinguished themselves were five Rājās who bore this title among the Chudāsama princes of Guznār in Kāthiāwār, the first of whom joined Bhima deva of Guznār in the pursuit of Mahmūd of Ghazni in A.D. 1023. From the Chāuhān bards, his enemies, we learn that Jaya Chandra Rāthor, the last king of Kanauj (killed in A.D. 1194), also bore this title. He had taken a leading part in the wars with the Muhammadans, whom he routed at the battle of the Indus, and drew back across the Indus. But at the arrival of Prithwirāja of Delhi, he invited Muhammad of Ghor to invade the Panjab, with the result that both Delhi and Kanauj were overthrown and the Muhammadans triumphed. Jai Chand was drowned in the Ganges in attempting to escape.'

This is, of course, pure legend. Guga probably typifies the devotion of the champion who sacrifices his life in battle and, like him, bears the title of Mundlikh.

8. Hinduism.—Although Hinduism in the Panjāb was for centuries depressed under the Muslim domination, it never lost its vitality even in the plains, and in the Himālayas it flourished. In W. Panjāb it was at one time almost suppressed, but it was largely revived under the Mughals by Bairāgi

Gosains.¹ All through the Muhammadan period Tilla, the Bālnāth of the Yogis, in the eastern Salt Range, preserved its character as a centre of Hindn pilgrimage and worship. The Kurukshetra never lost its sanctity, and Thānesar remained and still is the centre of a great yearly religious fair. But no great seat of religious teachings survived. Modern Hinduism in the Panjāb largely owes its revival to the Arya Samāj (*q.v.*). The great sects of modern Hinduism are equally represented in the Panjāb, but Saivism appears to have been the first in the field, if the peculiar sanctity attaching to Kailās, the great Himālayan peak in the upper Sutlej, is proof of its antiquity in that tract. It is the home of Siva. In Chamba State also the Gaddēran, or territory of the Gaddi tribe, is a Śiv-bhūmi, or land of Siva. But this tribe's traditions make it a comparatively modern immigrant into its present seats, and the cult of Siva cannot be said to be native to or even very ancient in the Himālayan area.

In the Panjāb Himālayas.—The processes by which the ancient faiths of the Panjāb—the Vedic religion, Buddhism, Jainism, and the popular forms of its animistic philosophy—gave birth to modern Hinduism differed in no way from those at work in the rest of India, and will not be described here. It will suffice to say that, though the Jains of the modern Panjāb are few in number, Jain ideas still subsist among the people.² Buddhism merged into Hinduism by easy stages, and in the Himālayan State of Chamba, in Kulu, and other Himālayan valleys, that *nāga*-worship which latter-day Buddhism revived or at least tolerated is still widespread.³ Its ritual differs little from that of the worship of Devi. But the distinctive feature of Himālayan Hinduism is best preserved in the Simla Hills, which are split up into religious jurisdictions, analogous to but not identical with those of the secular or temporal kingdoms and feudatory States into which they are divided. It is possible that some of these territorial gods are of great antiquity, but, owing to the system which prevails of getting rid of an inefficient deity and replacing him by one more successful, it is improbable that many very ancient deities have survived to the present day. A type of such a deity is Jungi, with his twenty-two *īkās*, or feudatory gods, who gives his name to the capital of the State now called Keonthāl, near Simla.⁴ When a temple is struck by lightning and burnt—as may easily happen to a wooden temple in the hills—its destruction is attributed to the new god, and the old one disappears, or at least his cult is abandoned.⁵ In other cases he is reduced to a position of vassalage or becomes the new god's chief minister, champion, or servant. Another typical cult is that of the Dāms,⁶ who are found at several centres either singly or as a pair of twin brethren. A third, the family of Marechh, is represented by seven members, each located at his own temple. The original Marechh was also named Dithu and came from the Mansarowar lake nearly 4000 years ago. The name Marechh is said to mean 'dirty' and to be due to the original worship of this deity, which consisted in burning the hair of the dead in *ghī*. A similar cult is that of Māl Padol, who appears under four names at as

² Rose, *Panjāb Census Report*, Simla, 1902, p. 218. The aversion to a widower's re-marrying is on the whole strongest in the S.E. Panjāb, where Jain influence is greatest.

³ Vogel, in *Chamba Gazetteer*, Lahore, 1904, p. 183 f.; see also pp. 176-189 for an account of these cults. The antiquity of *nāga*-worship may be gauged from the metamorphosis of the Vedic Indra into Indrā Nag (*ib.* p. 155). For some other Devi cults see *Simla Hill States Gazetteer*, Lahore, 1903, under 'Keonthāl State,' Appendix, p. viii, and *Sirmūr Gazetteer*, Lahore, 1904, pp. 45-48.

⁴ Rose, in *IA xxxvi*, [1907] 33 ff., reprinted as Appendix to 'Keonthāl State,' in *Simla Hill States Gazetteer*.

⁵ *ib.* p. iv.

⁶ *ib.* 'Kumbhārain State,' p. 10 f.

many places. His original name was Mūl and he is only 1500 years old, but he is now generally called Padoi. In Malāna, an inaccessible valley in Kulu on the Tibet border (but not in direct contact with the Tibetan canton of Spiti), the cult of Jamlū has its centre, and the valley is governed by a theocratic republic.¹ Jamlū is probably the Hindu Jamdagga, but one tale makes him Jaimal Khān, a Mughal general.

Nevertheless in the Panjāb Himālayas the cults of these primitive types are inextricably interwoven with the fabric of orthodox Hinduism, and tradition preserves some of the history of its advent into the hills. Thus the most interesting Vaiṣṇava cult in Bashahr State and other parts of the Sutlej valley is that of Pars Rām, whose apostles, the Parsrāmi Brāhmins, are said to have introduced the Bhūnda sacrifice, in which a low-caste Beḍa rides down a huge rope stretched 400 or 500 ft. down a ravine. This rite was subsequently adopted at any place where a Parsrāmi settled and even celebrated in honour of deities other than Pars Rām.² The State of Bashahr itself was founded by Pardhuman, a grandson of Śrī Kṛṣṇa, who came to marry the daughter of Rājā Banasur,³ the 'demon' king, whose capital lay in Kamrū, in a remote canton of Kanaur on the upper Sutlej. Having killed the Rājā, Pardhuman usurped his kingdom, but the Rājā's three sons became *maheśras*, or village deities, and are still worshipped at picturesque temples in as many villages, while his daughter is the goddess Ukha at Nachār. But the State religion is centred in the temple of Bhīma Kālī at Sarāhan, to which one of the *maheśras* is now *wazīr*, or chief minister.⁴

9. Nature-worship.—Throughout the hills nature-worship may be described as dominating all other cults, indigenous or imported. Thus Kālī embodies *sakti*, the female principle, and the great majority of the hill people are Śāktas, or worshippers of it. The tops of hills are usually sacred to this goddess, but the Dhār Chūr, or Chūr Peak, is the abode of Śhrigul (probably Śrī Gurū), a manifestation of Śiva himself.⁵ With his cult is connected that of Bijat, the lightning-god (whose sister Bijār has a temple seven storeys high), and also that of Ghat-rālī, another goddess sister to Bijat.⁶

But the worship of nature in all its aspects is not confined to the hills. It may with truth be said to be at any rate the basis of most of the popular cults in the plains also.

10. Proselytism.—Changes of religion in the Panjāb are not uncommon. Thus a Hindu, even a Brāhmin, may become a Sikh, and many Khattris are adherents of that sect—which is natural enough, seeing that its founder was himself a Khattri by caste. Islām claims many converts, but has made no marked progress since the time of Aurangzib, who put pressure on the Hindus and constrained many to adopt his faith. Modern converts to Islām, Christianity, and Sikhism are largely drawn to those creeds by the prospects of social promotion which they offer, conversion freeing those of low caste or out-castes from the stigma which Hinduism affixes to them. Such converts

may form new castes, like the Mazbi or Mazhabī Sikhs, who were by origin Chūhrās, or scavengers, outside the Hindu pale. Muhammadan converts hardly form new castes, but they are known as Nau-Muslim, 'new Muslims' or Din-dār, 'holders of the faith.' Khoja is a term applied to any man of Chūhrā status converted to Islām, but it is also the term for a body of high-caste Khattris who were converted to Islām some centuries ago, and who now form a distinct caste, if such a term can be applied to a Muhammadan group. A curious type of 'conversion' is found in one or two tracts where Hindu tribes dwelling on a Muhammadan border-land take wives from their neighbours. The bride, by birth a Muslim, is made to enter the Hindu fold. Strange as it may appear, it is very usual for Hindus to affect Muhammadan saints, and many Hindus or so-called Sikhs affect the famous Sakhi Sarwar, while the Hindu Sunārs ('goldsmiths') are often devotees of the Āghā Khān of Bombay, the representative of the sect of the Assassins.⁷ The most striking instance of this blending of Hinduism and Islām is found in the south-east of the Panjāb, in the Mewāt or Meo country.

The Meos are a Hindu people, made up of fragments of Rājput tribes, and they bear indifferently Hindu or Muhammadan personal names. The great saint of the Mewāt was born of Muhammadan parents, but bore the Hindu name of Lāl Dās. He is associated in worship with the stream which bears the name of Chuhar Sidh, a legendary personage famous only as a vulgar miracle-monger. His life was spent in its neighbourhood, and, when its overflow formed a pool, a Lāl Dāsī *sādh*, or monk, was regarded as its natural custodian. But Lāl Dās's own teaching was singularly practical and free from self-glorification and superstition. He inculcated industry and condemned mendicancy. The *sādh* was to be fearless in speech. Spiritual courage was enjoined, and, though asceticism is praised, its absurd excesses are not recommended. Kindliness is justly claimed as an essential part of his system, but it was tempered by a just severity. He caused the death of a Mughal who had laid hands on another man's wife, and bade his successor designate, who shrank from the responsibility of governing the infant sect, either accept the office or bury himself alive. While he performed miracles, he taught that fame and wonder-working would pass away like the wind, that purity and gentleness alone availed. He died about 1647, at the age of 107, if tradition speaks true.⁸ Another saint, Charn Dās, also born in the Mewāt, founded a more orthodox Hindu sect and is buried at Delhi.⁹ Wilson classes his followers as a Vaiṣṇava sect.

11. Christianity.—In such a tolerant milieu Christianity makes considerable progress, but its converts are nearly all drawn from the lower castes, who by adherence to Christianity or to Islām obtain release from the bondage of the Hindu caste system. The invincible eclecticism of India causes members of the higher castes to absorb Christianity, weld it into their own and other established creeds, and sometimes found a new comprehensive sect like that of the Chetrāmis, which teaches that Allāh is the Creator, Parmeshvar the Preserver, and Khudā the Destroyer, while holding to the doctrine of a Christian Trinity.⁵

PANPSYCHISM.—Panpsychism is the doctrine that whatever exists is essentially soul or spirit—in the sense, however, not of a single or universal spirit, of which all thought and life are the 'appearance' or expression, but of distinct individual souls. Being a soul implies the power

¹ Lit. 'faithful.'

² Converts to this cult are not confined to the goldsmith caste. They may be of any caste, are called Ismā'īlis, accept 'Alī as God, and yet appear to remain good Hindus.

of representing or being aware of the world (i.e. other souls), the possibility of change, and the power of striving to resist change or to direct it towards expansion or development—presentation, affection, and conation. All material things, organized or unorganized, living or dead, are 'in reality' souls. The difficulty is to decide what is 'a thing.' This difficulty is obviated by the assumptions (1) that the universe is made up of discrete entities, that matter is not divisible *ad infinitum*, but that everywhere science in the last resort will come upon the atom, the individual; each such atom is 'animate'; (2) that, when atoms form groups which act independently upon other groups, it is a higher soul that gives unity and consistency—'thingness'—to the group; instances are the living cell, the animal, the 'world' (sun, planet, etc.). Hence we have a hierarchy of souls, from the simple to the complex, with increasing width of representation and intensity of feeling

and of effort. The theory neither requires nor excludes the idea of a single dominant spirit, but most panpsychists do assume that there is one supreme in intelligence, love, and power, by which the activities of all others are co-ordinated to a definite end.

Leibniz (*q.v.*) is the classical panpsychist, but in some form or other the doctrine has prevailed throughout the whole history of philosophy, from the Greek Hylozoists down through G. Bruno and T. Campanella to G. T. Fechner, R. H. Lotze, William James, and H. Bergson.

PANTHEISM.

Introductory (A. E. GARVIE), p. 609.

Greek and Roman (FRANK THILLY), p. 613.

PANTHEISM (Introductory).—1. Definition.

—Pantheism, according to the etymology, is the view that all is God, and that God is all, but, since thought may move either from God to all or from all to God, it can assume two forms. If it begins with the religious belief or the philosophic faith in God as infinite and eternal reality, then the finite and temporal world is swallowed up in God, and pantheism becomes acosmism (*q.v.*), i.e. the world is an illusion in comparison with God as reality. If it begins with the scientific conception or the poetic vision of the world as unity, then God is lost in the world, and pantheism becomes pancosmism (*q.v.*). The first is theistic, and the second atheistic; for in the first, if inconsistently, there still survives as a rule a vague apprehension of God as theism conceives Him, and in the second the *deus* becomes but a name for the unity of the world, the multiplicity of which alone is real for observation and imagination. A. M. Fairbairn is not quite just to the religious worth of the first type as compared with the second when he regards them as identical.

'Pantheism and Pankosmism are but the ideal and real sides of the same thought. The pantheist is a metaphysician, the pankosmist a physicist, and they are distinguished by what is but a verbal difference. In neither case can what occupies the place of Deity be an ethical and personal Being' (*Studies in the Philosophy of Religion and History*, London, 1870, p. 302).

The pantheist of the first type is usually more than a metaphysician, as he is often dominated by a religious rather than speculative interest; e.g., how different are Spinoza and Haeckel! The one clothes an intense piety in an altogether too scanty philosophical garment; the other uses the word 'God' only as a fig-leaf to hide the nakedness of his materialistic monism.¹ We may dismiss the

¹ Haeckel denies that his system is materialistic and defines his position as follows: 'On the contrary, we hold, with Goethe, that "matter cannot exist and be operative without spirit, nor spirit without matter." We adhere firmly to the pure unequivocal monism of Spinoza: matter, or indefinitely extended substance, and Spirit (or energy), or sensitive and thinking substance, are the two essential attributes, or principal properties, of the world, the universal substance.'—*Monism*, tr. J. McCabe, London, 1903, p. 8).

This identifying of spirit with energy gives his system, in spite of his protestations, a materialistic character, and matter and mind in the working out of it are not left as parallel and distinct attributes of one substance, but are causally related. One difficulty of the system, Kūpe points out, is that 'the terms energy and spirit or soul are used without distinction beside and for one another.' Another is that 'the soul life on the one

Hindu (A. S. GEDEN), p. 617.

second type of pantheism as equivalent to naturalism (*q.v.*), and confine ourselves to the first.

2. Origin and emphasis.—The origin of this type of pantheism is either philosophical or religious. The pantheism of Hegel has its roots in the soil of the speculative intellect, the pantheism of Brāhmanism in the soil of the religious spirit. However philosophical in form Spinoza's pantheism is, yet its essence is religious; and the piety often breaks the bounds of the philosophy. According to the origin, so will the emphasis of the system lie on the transcendence or the immanence of God. While it is usual to distinguish monotheism (*q.v.*) from pantheism on the one hand, and deism (*q.v.*) on the other, because it combines the two attributes of immanence and transcendence which each of the others holds apart (pantheism asserting immanence and deism transcendence), this distinction is only theoretically valid. In some forms of religious pantheism the infinitude (i.e. the transcendence) and the absoluteness of God are so emphasized that the finite and relative world as known to man, while identified with God, obscures rather than manifests His reality, and He is so far other than it is that He is the inconceivable. *Brahman* is for the Indian thinker above all knowledge, and man must lose all consciousness of difference in a supra-conscious unity as the goal of the search for God. While Spinoza regards all things and persons as only modes of the two divine attributes of extension and thought, and so asserts immanence, yet he treats these attributes as not exhausting the divine nature, which, on the contrary, possesses an infinite number of attributes, and so he asserts the transcendence by God as He is of the world as we know it. It is in this emphasis on the transcendence by the inconceivable God of the known world that pantheism joins hands with mysticism (*q.v.*). The mystic claims the immanence of God in himself and strives to realize his identity with God, but, be it observed, not by plunging himself into the full tide of the world's life as one with God's, but rather by winging his lonely flight to the God who is above rather than in and through all. For

hand is found in every kind of matter, on the other appears as a function of a particular kind of matter, the psychoplasma.' In asserting this causal relation between matter and energy, brain and thought, Haeckel contradicts his fundamental assumption of the two attributes of the one substance, and he is thus unjustified in his claim that his system is a pantheism like Spinoza's (see O. Kūpe, *Die Philosophie der Gegenwart in Deutschland*, Leipzig, 1911, p. 42).

mysticism identity with God is an achievement rather than an actuality, and God is found away from rather than in the world. At its goal more than its starting-point mysticism is pantheistic, while its starting-point is rather emanationist. Spinoza's principle, 'Omnis determinatio est negatio,' is thoroughly mystical in raising God above all definition and even comprehension; and yet inconsistently for him the world consists of modes of divine attributes and so God should be known in it.¹

3. Neo-Platonism.—It is at this point that the discussion of Neo-Platonism (*q.v.*) is most relevant. Can it truly be regarded as either philosophically or religiously pantheistic? It does not affirm the identity of God and the world, but that the world of sense is the lowest of a series of emanations from God, each possessing a lower degree of perfection, and God Himself is an absolute unity excluding all determinations and relations. This is clearly an inconsistent position, as God is related to the world as His emanation. God cannot be reached by thought; only in the subjective condition of ecstasy is the soul absorbed into divinity. Neo-Platonism is the typical mysticism; but can a system which does not identify God and the world, but relates the world to God as an emanation, be properly called pantheism? J. Allanson Picton, a modern representative of pantheism as religious, in expounding his faith, declares:

'I only wish to premise plainly that I am not concerned with any view of the world such as implies or admits that, whether by process of creation, or emanation, or self-division, or evolution, the oneness of the Eternal has ever been marred, or anything other than the being of God has been or can be produced' (*Pantheism: its Story and Significance*, London, 1905, p. 13).

If pantheism is the theory, as he maintains, 'that there is nothing but God,' Neo-Platonism, which allows reality to the series of emanations, is not pantheistic. For the same reason Picton denies the pantheism of the Christian mystics.

'Their favourite comparison of creature life to the ray of a candle is not really a Pantheistic conception; because to the true Pantheist the creature is not an emanation external to God, but a finite mode of infinite Being' (p. 16).

The distinction between creation as a free act of God and emanation as a necessary process, important as it is, does not justify our describing systems of emanationism as pantheistic so long as so great a distinction is made between God and the world which emanates from Him as is made by Neo-Platonism. If we describe them as pantheism, we should recognize that we are stretching the meaning of the word to include them.

4. Brāhmanism.—Most imposing of all the systems of pantheism which can claim a religious origin is the Brāhmanic in India. P. Deussen's account of Indian thought on the relation of God and the world is worth reproducing. He calls realism the view which regards matter as eternal, and independent of God, and God as only a world-

¹ 'In a word,' says Schwegler, summing up the discussion of this point, 'the two attributes are but empirically derived determinations that are incommensurate besides with the nature of substance. Substance stands behind them as the absolute Infinite which cannot be comprehended in any such special notions. The attributes explain not what substance really is; and in its regard consequently appear contingent. Spinoza fails to supply any principle of union between the notion of absolute substance and the particular manner in which it manifests itself in the two attributes' (*Hist. of Philosophy*, tr. and ed. J. H. Stirling, Edinburgh, 1879, p. 171f.).

In this aspect of it Spinoza's pantheism may be shown to have affinities with Spencer's agnosticism (*q.v.*). Although epigrams are perilous, one may venture to say that Spinoza knows either too much of the substance or too little of the attributes. If the only attributes known to us are extension and thought or the finite modes of things and persons, how does Spinoza know that there is an infinitude of attributes? With all his parade of reasoning on the lines of mathematical demonstration, it is not by his logic that he gets the conception of God which gives his teaching such religious influence as it possesses. The 'God-intoxicated man' did not get his inspiration from his system; that has its source in a plety of which the philosophy gives quite an inadequate interpretation.

fashioner (*δημιουργός*) if His existence is not altogether denied, as in the Sāṅkhya philosophy. According to theism as he defines it, 'God creates the universe out of nothing, and the latter then has a real existence independently of God' (this, it must be said in passing, is not a true or fair representation of theism as it is understood in Christian faith). His description of pantheism as found in the *Upaniṣads* must be fully given:

'God creates the universe by transforming himself into the universe. The latter confessedly has become God. Since it is real and also infinite, there is no room for God independently of the universe, but only within it. The terms God and universe become synonymous, and the idea of God is only retained in order not to break with tradition.' It is evident that Picton would not call this pantheism, and that it is rather to be called pancosmism. What is generally regarded as the typical Indian pantheism is, however, described under the title of Idealism. 'God alone and nothing besides him is real. The universe as regards its extension in space and bodily consistence is in truth not real; it is mere illusion, as used to be said, mere appearance, as we say to-day. This appearance is not God as in pantheism, but the reflection of God, and is an aberration from the divine essence. Not as though God were to be sought on the other side of the universe, for he is not at all in space; nor as though he were before or after, for he is not at all in time; nor as though he were the cause of the universe, for the law of causality has no application here. Rather, to the extent to which the universe is regarded as real, God is without reality. That he is real, may the sole reality, we perceive only so far as we succeed in shaking ourselves free theoretically and practically from this entire world of appearance' (*The Philosophy of the Upaniṣads*, tr. A. S. Geden, Edinburgh, 1909, p. 160f.; cf. also a similar discussion at p. 237f.). A briefer definition of the prevalent doctrine of the *Upaniṣads*, which, he says, 'may conveniently be described as pantheism,' is given at p. 405: 'The universe is real, and yet this Atman remains the sole reality, for the Atman is the universe.'

What Deussen calls 'pantheism' emphasizes immanence as it identifies God and universe; what he calls 'idealism' is pantheism of the type which, while identifying God and reality, yet so distinguishes the world as appearance from reality (acosmism) that God as He is transcends the world as known, and thus cannot be known in or through the world, but remains incomprehensible, undefined. This Indian pantheism was a movement of religious thought away from the popular polytheism; and yet here as elsewhere pantheism was ever ready to compromise with polytheism.

'The anthropomorphic form of the gods, especially the multiplicity of the gods with their imperfections, awakens criticism, which springs out of moral demands and advanced thinking. A many-coloured and manifold world of gods is resolved into the all-working power, which stands behind the worship' (T. Steinmann, *RGG* iv. [1912] 1121 f.).

Brahman becomes the sole reality, and yet a place is found for the multitude of gods as manifestations of *Brahman*. An instance of this compromise is the Hindu trinity, or the Trimurti.

'Brahman [neuter], the Absolute, manifests himself in three persons of equal rank—Brahma, the creator, Vishnu, the preserver, and Śiva, the destroyer. Kalidasa sings:

"In those Three Persons the one God was shown—
Each first in place, each last—not one alone;
Of Śiva, Vishnu, Brahma, each may be
First, second, third, among the Blessed Three"

(G. F. Moore, *Hist. of Religions*, Edinburgh, 1914, l. 344).

Into this scheme of thought the popular heroes Kṛṣṇa and Rama are fitted as incarnations (*avatāras*) of Viṣṇu. All the gods may even be represented as such incarnations. Pantheism thus becomes the speculative justification of polytheism. See, further, PANTHEISM (Hindu).

5. Egypt.—This relation is found in other religions also, although reached in another way. Syncretism (*q.v.*) in Egypt leads to pantheism.

'Let the gods once lose the individual character that keeps them separate from each other, and it is possible for one god, who grows strong and great enough, to swallow up all the rest, till they appear only as his forms. . . . The god who did most in the way of swallowing up the rest was Ra, the great sun-god of Thebes. The Litany of Ra (*Records of the Past*, viii. 105) represents that god as eternal and self-begotten, and sings in seventy-five successive verses seventy-five forms which he assumes; they are the forms of the gods and of all the great elements and parts of the world' (A. Menzies, *Hist. of Religion*, London, 1895, p. 145f.).

A similar movement took place in regard to Isis (q.v.). In the mysteries of Isis, as described by Apuleius (*Met.* xi.), 'Isis is all the goddesses,' but at a later initiation she gives place to Osiris as supreme god.¹

6. **Babylonia.**—The Babylonian texts sometimes represent the many gods as only names of Marduk; but behind this liturgical self-glorification there is no speculative thought deserving the title of pantheism.

7. **Zoroastrianism.**—One school of Zoroastrian thinkers, the Zervanites, placed before and above Ormazd and Ahriman a first principle, space or time; but this speculation had no religious influence.

8. **China.**—A Chinese thinker Chu Hi (A.D. 1130-1200) developed a theory of the universe resembling Stoic pantheism (see Moore, i. 45 f.).

9. **Greece.**—When we turn to Greece, we find a pantheism which had religious roots, and yet for the most part bore philosophical fruits. The earliest Greek thinkers found the explanation in a material principle—Thales in water or moisture, Anaximenes in air, but Anaximander in τὸ ἀπειρον, the undifferentiated primal matter. More abstract conceptions are advanced by the Pythagoreans (number), Eleatics (being), and Heraclitus (becoming). It is the Eleatic school that is of special interest for our purpose. Xenophanes thought that there could be only one god, and that he was one with the world. This view is expressed in the phrase ἐν καὶ πᾶν. Of him Aristotle says:

Ἐνὸς ἄνθρωπος δὲ πρῶτος . . . εἰς τὸν ἕλον οὐρανὸν ἀποβάλλας τὸ ἐν εἰναι φησὶ τὸν θεόν (*Met.* i. v. 980b 24).

Parmenides no less taught the unity of all. Xenophanes was a critic of the prevalent anthropomorphism; he pointed out not only that all peoples pictured the gods in likeness of men, but even that they ascribed to them national or individual traits. The Thracians thought of them as red-haired, the Ethiopians as black; had the oxen and asses gods, they would represent them like themselves. His attitude to the prevalent polytheism was tolerant; but in Greece there was not the close connexion of pantheism with polytheism. Heraclitus also reduced the universe to a primal divine fire. Here pantheism comes in close contact with naturalism. Stoicism developed this conception. According to Diog. Laert. vii. 139, the Stoics taught τὸν ἕλον κόσμον ἴδωον ὅντα καὶ ἐμψύχον καὶ λογικόν and οὐσίαν δὲ θεοῦ Ζήνων μὲν φησὶ τὸν ἕλον κόσμον (148). The world is the σῶμα, and God the πνεῦμα. Plutarch explains this relation as follows:

'It is one and the same being which presents itself now as individual unity (God), now as divided multiplicity (world)' (*de Stoic.* 41).

And Cicero testifies that 'Cleanthes ipsum mundum deum dicit esse' (*de Nat. Deor.* i. 14). It may be pointed out, however, that, while the identity of God and the world is affirmed, a distinction is recognized: the world is the multiplicity or body, but God is the unity or spirit. This type of pantheism would lie between the religious pantheism which so emphasizes the transcendence of God as to regard the world as illusion (*māya* [q.v.]) and the philosophical pantheism which so emphasizes immanence as absolutely to identify God and world. There is a divine mystery behind all, and yet a divine manifestation in all. It should be noted as a third type; it is so far religious as to make some distinction between God and world; it is so far philosophical as to think of God as identical with the world. It touches closely the type of thought, to which the pantheistic name should not be given, which represents the world as an emanation of God. The history of pantheism shows that it is not so clear-cut a system as at first we might be

¹ According to Plutarch (*de Is. et Osir.* ix.), a temple of Isis bears the inscription, 'I am all that hath been, is, or shall be; and no mortal hath lifted my veil.'

led to assume that it would prove to be. See, further, PANTHEISM (Greek and Roman).

10. **Scholasticism.**—Under the influence of pseudo-Dionysius, John Scotus Erigena shows a pantheistic tendency. The language is, however, not quite consistent; for he affirms, on the one hand, that God is the essence of all things, and, on the other, that God is the totality of things.

'In Deo enim immutabiliter et essentialiter sunt omnia, et ipse est divisio et collectio universalis creaturae' (*de Div. Nat.* iii. 1).

This, according to Rudolf Eisler (*Wörterbuch der philosophischen Begriffe und Ausdrücke*, Berlin, 1899, p. 556), is equivalent to the other statement,

'Deum in omnibus esse, i.e. essentiam omnium subsistere' (i. 72).

This does not necessarily mean quite the same as his description of God as the *universitas* (ii. 2). He surely departs from pantheism altogether in this statement:

'Nam et creatura in Deo est subsistens, et Deus in creatura mirabiliter et ineffabiliter modo creatur, seipsum manifestans' (iii. 17).

Pantheism does not and cannot consistently speak of the creature. An exact anticipation of Spinoza's system is ascribed by Albertus Magnus to David of Dinant:

'Ponit . . . talem conclusionem, sic dicens: Manifestum est unam solam substantiam esse, non tantum omnium corporum sed etiam omnium animalium, et hanc nihil aliud esse quam ipsum Deum, quia substantia, de qua sunt corpora, dicitur hyle, substantia vero, de qua omnes sunt animae, dicitur ratio vel mens. Manifestum est igitur Deum esse substantiam omnium corporum et omnium animalium. Patet igitur, quod Deus et hyle et mens una sola substantia est' (*ap. Eisler*, p. 556).

11. In spite of the deism of Islam, the system of Averroës has a pantheistic tinge, and the Sufi mysticism also tends to pantheism; even in Judaism in the speculation of the Kabbālā is this influence felt. While mediæval mysticism showed the same tendency, it is not in the strict sense of the term pantheism.

12. **Bruno, Spinoza, etc.**—The revived interest in nature at the Renaissance issued in Giordano Bruno (q.v.) in an explicit pantheism.

'God is everywhere, and whole in all, as a voice is heard in all parts of the hall' (*De la Causa*, dial. ii.). 'Accordingly you see how all things are a Universe, and the Universe is in all things, we in it, it in us, and thus all issues in a complete unity' (dial. v.).

He warns us against a common misunderstanding of pantheism, the distribution of God throughout the universe.

God is 'whole in all and whole in every part, so that we speak of parts in the Infinite, not of parts of the Infinite.'

He approaches acosmism in declaring that these parts are only passing appearances of the One. But the distinction of God as unity from the world as multiplicity already noted reappears.

'The one highest Being in whom capacity and reality are un-separated, which in an absolute way can be all and is all that it can be, is as not unfolded a Single, Immeasurable, Endless, which embraces all being; as unfolded on the contrary is it in the sensibly perceived bodies' (dial. v.).

As Spinoza is treated separately in another article, his system need not at this stage be discussed. What needs to be said about him in the general treatment of pantheism has already been said. J. Toland, in his book *Socinianism truly Stated* (1705), openly avowed himself a 'pantheist' (the first use of the term). In 1720 he published a book with the title *Pantheisticon*. According to Eucken, his opponent Fay was the first to use the term 'pantheism' (1709). E. Benoist, in his *Me-langes* (Delft, 1712, pp. 252-265), uses both terms *panthiste* and *panthisme*. In the 18th cent. orthodox controversialists treated pantheism as no better than atheism (see *OED* vii. 430).

13. **German philosophy.**—At the beginning of the 19th cent. there was a reaction from the deistic tendency of orthodox and heretical thought alike. Schleiermacher (q.v.), who revived Christian theology, and set it on the path which it followed in

that age, considered that it was a matter of indifference to piety whether God was conceived personally or impersonally, and speculatively he was a pantheist.

'Each single being is as such a definite form of the Being of the Absolute Identity, but not its very Being, which is only in the Totality' (*Werke*, Berlin, 1834-64, i. iv. 131).

This speculative Spinozism was modified, however, by his inheritance of Moravian piety, although his theology was affected by it. While the position of Kant was deistic, the idealist philosophy which was after him developed in Germany had a distinctly pantheistic character.

'The idealist systems of a Fichte, Schelling, Hegel, make the whole content of existence the nature of the Divine (Absolute)' (Eisler, p. 557).

Fichte regards God as 'a moral order immanent in and also transcendent of the world.' Schelling's indifference to the ideal and the real recalls the God above all determination of Brāhmanism, Neo-Platonism, and Spinozism, and resembles von Hartmann's 'the Unconscious.' Of these systems the most important and interesting is Hegel's. For the static deity of Spinoza or substance he substitutes the dynamic deity or spirit. Spirit he conceives as reason, as a logical process. Accordingly his pantheism has been described as 'panlogism' (*πᾶν λόγος*). A modern disciple of Spinoza insists on the static view of God:

'The processes called evolution, though everywhere operative, affect, each of them, only parts of the infinite whole of things; and experience cannot possibly afford any justification for supposing that they affect the Universe itself' (Picton, p. 12).

Hegel (*q.v.*) with speculative daring takes the dynamic view and presents to us, on what seems the more probable interpretation of his system, an evolving God. That he has taken up the idea of evolution into his interpretation of the world is his merit as a philosopher; that he has treated that evolution from too exclusively intellectual a standpoint is his defect.

'That he apprehends the world as development, in which reason is the ground, law, and object of all becoming, this is Hegel's strength: his weakness is that he apprehends this development only as an ideal, logical one, which accordingly is to be built up by pure notional dialectic' (O. Pfleiderer, *Philosophy of Religion*, tr. A. Menzies, London, 1887, ii. 791.).

It is impossible in this article to discuss the question whether Hegel's system is or is not pantheism, an identification of God and the world or not. Does he or does he not identify the human apprehension, the cosmic manifestation, and the divine reality in his Absolute? Is the world's evolution a logical process? And is this logical process God's coming to self-consciousness? Hegel claimed to be a sound Lutheran, and maintained the consistency of his philosophy with the Christian doctrine of God, but the system itself appears pantheistic. For Hegel the world-process was logical; in it reason was manifested, and purpose fulfilled. The challenge and contradiction of the philosophy which affirmed that the real is the rational (panlogism) is the affirmation that the real is irrational (a blind will, pantheism [*πᾶν ἐθέλω*]) in Schopenhauer's pessimism, which has affinity with the Indian conception of *karma* (*q.v.*).

14. Pantheism and panentheism. — Since the beginning of the 19th cent. the divine immanence in the world has been emphasized. Instead of a creation by a series of divine acts at the very beginning, men think of a gradual evolution not yet completed, in which God is continuously active.

'If, then, the history of man be the continuation of the record of creation, it follows that the creative energy has not ceased to operate, and that its character, qualities, tendencies, modes of working and relation to the forms developed, can be better studied here than in the field of nature. This position is fundamental to our argument, and follows from the parallel between the immanence of God in nature and in man. He dwells in both and He works through both, though always in methods agreeable to the medium employed. What is energy in nature is reason and will in man, but they are no less ours that they are inspired by Him, and no less His that they

appear in us as conscious and voluntary activities' (A. M. Fairbairn, *The Philosophy of the Christian Religion*, London, 1902, p. 171.).

A position such as this is not pantheistic. It might be called 'panentheism' (*πᾶν ἐν θεῷ*), the name which C. Krause gave to his system, in which God is a unity enclosing the world, but superior to it. In one place Plotinus corrects pantheism by panentheism:

'The perfect Being consists of all beings, rather it embraces in itself all beings' (*Enn.* vi. vi. 7).

The term might also be applied to the teaching of Malebranche:

'Toutes les créatures, mêmes les plus matérielles et les plus terrestres, sont en Dieu quoique d'une manière toute spirituelle' (*Rech.* il. 5; see Eisler, p. 555.).

Lotze (*q.v.*), in his doctrine of causality, lays himself open to the charge of pantheism; but his most valuable discussion of personality in God and man rebuts the charge. To regard natural forces as the finite exercise of infinite power, or natural laws as the finite expression of infinite wisdom, is only to assert such a dependence of the world on God and such an immanence of God in the world as are consistent with Christian theism. To emphasize immanence, so long as transcendence is recognized, is not to be regarded as an acceptance of pantheism. We must not call pantheism the sense which poets have had of God's presence in nature—*e.g.*, Wordsworth's *Lines composed a few Miles above Tintern Abbey*:

'And I have felt

A presence that disturbs me with the joy
Of elevated thoughts; a sense sublime
Of something far more deeply intertused,
Whose dwelling is the light of setting suns,
And the round ocean and the living air,
And the blue sky, and in the mind of man;
A motion and a spirit, that impels
All thinking things, all objects of all thought,
And rolls through all things.'

Tennyson's *The Higher Pantheism* is misnamed, as the poet's exhortation to personal communion with God shows:

'Speak to Him thou for He hears, and Spirit with Spirit can meet,

Closer is He than breathing, and nearer than hands and feet.'

A pantheist could not speak thus. Yet a vivid sense of God in nature may lead to a poetic pantheism.

15. Modern pantheism. — Before offering some criticism on pantheism as a mode of religious faith or philosophical thought, there are a few questions about it which a modern exponent, J. A. Picton, may be allowed to answer.

'If Pantheism affirms God to be All in All, it does not follow that Pantheism must hold a man, or a tree, or a tiger to be God.' While God is the whole, no part by itself can be regarded as God, but as part of the whole it can be nothing else. For pantheism, 'so far from tolerating any doubt as to the being of God, denies that there is anything else.' God is not, however, merely the sum of things. 'That Unity is not merely the sum of the finite objects which we observe or infer, but it is itself in infinite variety' (p. 10).

... refuses to regard as properly pantheistic every theory of emanation of the world from God; and maintains that evolution can be true only of the parts, not of the whole. From the point of view of pantheism, 'all change, evolution, progress, retrogression, sin, pain, or any other good or evil is local, finite, partial; while the infinite co-ordination of such infinitesimal movements makes one eternal peace' (p. 33). Avowing himself a disciple of Spinoza, of whom he says that he 'was the first Pantheist who was also a prophet, in the sense of speaking out the divine voice of the infinite Universe to its human constituent parts' (p. 56 f.), he suggests a modification of Spinoza's pantheism, which would purge it of all the taint of materialism, which gives Haeckel the pretext for claiming to be also a Spinozist. 'The whole trend of philosophy during the nineteenth century was towards a view of Extension itself as a mode of Thought, and therefore toward the absorption of one of Spinoza's theoretical divine attributes in the other' (p. 63). The 'it, as known to us, might then be conceived as thought. For the pantheistic tendencies of modern thought Picton finds two reasons: (1) 'Science has made unthinkable the old-world conception of a three-storied Universe, constructed by an artificer God, who suddenly awoke from an eternity of idleness to make Heaven, Earth, and Hell' (p. 88). Here Picton stoops to a rhetorical device unworthy of a thinker. He first caricatures what he then rejects. Modern theism can meet modern

science on more equal terms than this statement allows. (2) But faith protests against materialism as the conclusion of science: 'All the hints given us by science of the ultimate oneness of all things, converges in the faith that All is God, and God is All' (p. 88). In opposition to the theist's view that religion and morality must be a personal relation to a personal God, the caricature of which on p. 91 need not be quoted, he asserts that pantheism 'regards obedience and devotion to God as the ultimate and most inspiring application of that principle of the loyalty of the part to the whole which runs through all morality' (p. 91), and yet the illustrations which he gives of that loyalty are all in the personal relations of family, school, club, municipality, and nationality, although he gives a show of reason to his argument by making the object of loyalty or devotion the abstraction 'the law of the whole.' This modern pantheist is as tolerant as the old ancient pantheism of polytheism and idolatry. 'If we can attain to that intellectual love of God in which Spinoza was absorbed, we have no quarrel with any mode of sincere devotion. Pious Catholic, Protestant, Vedantist, Mohammedan—all, by the implicit, though unrecognized necessities of their faith, worship the same God as ourselves' (p. 92f.). But actually and practically the explicit creed or code makes a very great difference in religion and morality.

16. Criticism.—Pantheism is so impressed with the vastness of the universe that it rejects any explanation of its origin, whether by necessary emanation from or by free creation by God; it simply cuts the Gordian knot by identifying God and world. It is so impressed by the infinitude and absoluteness of God that it not only rejects the extreme anthropomorphism of popular religion, but even refuses to consider seriously such an argument as Lotze's for the personality of God as not contradictory of, but even harmonious with, the attributes of infinitude and absoluteness. It is at these two points that it must be speculatively met. If God is not to be absorbed in the world (pancosmism), or the world in God (acosmism), such a difference of world and God must be recognized as demands some explanation of their relation. Whether the explanation that theism offers is or is not adequate, it at least faces a problem which pantheism simply shirks. Common thought and life assume, and cannot but assume, the difference which pantheism merely ignores. To deny personality to God as pantheism does is to offer to thought and life not a higher object of worship and service, but a lower, a sub-personal unity or whole, even if described as living. Should pantheism, following Picton's modification of Spinoza, speak of that unity or whole as infinite thought, can thought be conceived without the subject thinking? We can now think of personality without the anthropomorphism of popular religion; and so pantheism, in opposing itself to anthropomorphism, is avoiding the real issue for modern thinking.

Practically pantheism refuses to regard morality and religion as the relation of the 'I' of man to the 'Thou' of God, and substitutes for it that of the part to the whole. Accordingly its ideal is not self-realization of the 'I' in distinction from, and yet in relation to, the 'Thou,' but the self-losing of the part in the whole, which may of course be represented as the self-recovery, since the whole is, as it were, the essence of the part. As an escape from the egoistic and the egocentric standpoint, pantheism has a relative value for morality and religion; but self-realization in distinction from, and yet in the relation of dependence on, communion with and submission to God is neither egoistic nor egocentric. Pantheism so identifies the part with the whole, and so subjects the part to the whole, that the human personality loses its sense of freedom and assurance of immortality. Contemplation tends to take the place of action, and a quietistic disposition is encouraged. As the distinction between right and wrong becomes relative, the nerve of moral effort and conflict is severed; and the belief in and hope of progress are lessened, if not altogether lost. The sense of sin, the feeling of penitence, and the effort of amendment become, and must become, to the consistent

pantheistic thinker illusive. As there is no necessity for, so there is no reality in, the Christian redemption for a thorough-going pantheist: Christ's work for man must be dismissed as mythology. Does what pantheism offers to the moral conscience and religious consciousness compensate for what it takes away, and must take away, if consistent? This question the writer leaves the reader of this article to answer for himself. There is much pantheism which is not consistent—a tendency rather than a system; and it has some value as a corrective of a crude anthropomorphism, or hard deism, and as an emphasis, if exaggerated, on God's affinity with and immanence in man, on the truth that in Him we live and move and have our being, for we also are His offspring.

LITERATURE.—Besides the books referred to throughout the article, and those given under POLYTHEISM, etc., the standard Histories of Philosophy or of religions and works of Christian apologetics may be consulted; and the following works may be added from Picton's bibliography: *SBE* i. [1893]; J. Allanson Picton, *Christian Pantheism*, London, 1873, *The Religion of the Universe*, do. 1904; P. H. Hengenoltz, *Ethisch Pantheismus*, Amsterdam, 1903 (not translated). T. Steinmann (*RGG* iv. [1912] 1125) also recommends W. Diltz, 'Der entwicklungsgeschichtl. Pantheismus,' in *AGPh* xiii. [1900] 307-390, 445-482; H. Scholz, 'Der Pantheismus in seinem Verhältnis zum Gottesglauben des Christentums,' *PJB* cxli. [1910] 439-464; M. Scheide, 'Pantheismus und Persönlichkeit Gottes,' *Protestantische Monatshefte*, xvi. [1912] 361-378.

A. E. GARVIE.

PANTHEISM (Greek and Roman).—The definitions of pantheism generally agree in identifying God with the world: God and the universe are one and inseparable; all is God and God is all; nature and God are identical. So far as the terms go, such statements are acceptable, emphasizing, as they do, the oneness and the divineness of reality. Everything, however, depends upon the meaning of the notion of God employed in these definitions, and on this point authorities differ. Recent naturalistic systems like Haeckel's, which call themselves pantheistic, conceive of God as the universal substance which obeys the physical law of energy, and the ancient naturalistic philosopher Strato is frequently characterized as a pantheist, although his God is, in Cicero's words, 'without sense and form.'¹ To call the world God in such cases is, however, as Schopenhauer justly declares, merely to increase the language with a superfluous synonym for the word 'God.' If we mean by deity nothing more than the ultimate independent substance, whatever may be its nature, then every monistic theory of the universe is pantheistic, and we should have to include materialistic monism among the pantheistic systems. This we are not ready to do in the following account. Nor shall we consider as pantheistic those world-views which reduce deity to the sum of all things, even when these things are regarded as having each its separate psychic life: panpsychism is not necessarily pantheism, although it often accompanies it and may be a preparation for it. By pantheism we mean that doctrine which conceives of reality as one in essence and form, and thinks of this unity as somehow rational and divine. Hence, according to this teaching, God is an entity not separate from the world and remote from it, but in it and of it—immanent, not transcendent; everything partakes of the nature of God. The particular objects and individuals have no absolute existence of their own, but are either modes of the universal substance or parts of the divine whole. Moreover, all things arise from God by necessity; they follow inevitably from His infinite being.

The development of pantheistic theories goes hand in hand with the development of monism, which springs from the intellectual craving for unity; with the development of the notion of law and order in the world; and with the evolution of the conception of mind. We find the monistic

¹ *de Nat. Deor.* i. 13, 25.

idea consciously realized and the notion of uniformity at least dimly recognized among the Greek physicists or physiologists of the 6th and early 5th century B.C. Here, therefore, we may look for the beginnings of, or perhaps it would be better to say preparations for, pantheism: all things spring from an original stuff which is vaguely conceived as alive or animated (hylozoism). All that we know of the teaching of the Milesian Thales is that he called this primary substance water. But the fact that Ætius later understood him to mean that the god in all things is the divine energy of water shows the pantheistic possibilities of this simple theory. Pantheistic tendencies become more pronounced in Anaximander, the fellow-townsmen of Thales, whose principle, the *ἀπειρον*, is the one boundless uncreated and indestructible being. It is indeterminate, and yet everything specific, every quality, lies embedded in it and is differentiated from it only to be merged again in its infinite source. Aristotle tells us that Anaximander's *ἀπειρον* embraces everything and rules everything, and that it is divine. Whether Anaximander himself taught the divinity of his principle or it is merely inferred by Aristotle we cannot say, but that such a conclusion could have been drawn at all is evidence of the pantheistic possibilities of the view. We find similar tendencies in Anaximenes of Miletus. All things are transformations of the primary substance, air, which is hylozoistically conceived: air is an ensouled matter.

¹ Just as our soul which is air holds us together (*συνκρατέει*), so it is breath (*πνεῦμα*) and air that encompasses the whole world (*περιέχει*)' (*Plac.* I. 3 f., *Doz.* 278 [Ritter and Preller, *Hist. philosophiæ Græcæ*, p. 20]).

A later follower of Anaximenes, Diogenes of Apollonia, a contemporary of Anaxagoras, who lived at a time when the notion of mind had been made somewhat more definite in Greek thought, carries the idea of his teacher still further in the direction of pantheism:

¹ Air is the being in which reason dwells, which guides and rules all things, for it lies in its nature to extend everywhere and to be in everything' (*Simpl. phys.* 33r. 162, 21 D [Ritter and Preller, p. 174]).

The thinkers whom we have been considering centred their attention upon the problem of substance; the Pythagoreans began to speculate upon the problem of form, law, and order, and sought the explanation of things in their numerical and geometrical relations; for them numbers constitute the essence of things and the cause of all the harmonies in the world. Numbers are odd and even, i.e. limited and unlimited; hence the universe is a harmony of the limited and unlimited. And, since unity is the product of the odd and even numbers, it would have been easy to infer that the universe is comprehended in unity. The notions of unity and order are suggestive of pantheism, and it is not surprising that this philosophy should have been developed into pantheism in the 1st cent. B.C., after Stoic pantheism had become popular in the Roman world. Some of the Neo-Pythagoreans derived all numbers from the universal *monas* and, under the influence of Platonism, identified them with the Platonic ideas.

The traces of pantheistic speculation appear in still more marked form in the younger contemporary of Pythagoras, Xenophanes of Elea, who approaches the world-problem from the religious side. God is for him the changeless and imperishable, timeless being, and is conceived as a unity endowed with intelligence: 'the whole of him sees, the whole of him thinks, the whole of him hears,' and He rules all things by the power of His mind. Aristotle informs us that he taught the unity of the all and called this unity God. He evidently looked upon the world of plurality and change as

the manifestation of the changeless God, without becoming aware of any contradiction in his thought. Parmenides, the pupil of Xenophanes, develops the theory of his teacher in metaphysical form, omitting, as A. Fischer has said,¹ the theological flourishes. Being is for him one, timeless, unchangeable, indestructible, always the same. Like the God of his predecessor, the being of Parmenides is intelligent: thought and being are identical. Since there can be neither change nor differentiation in being, the world of plurality and change is but an illusion, a mere appearance, a world of falsehood. We have in this teaching of Parmenides a static pantheism, which, however, fails to account for our world of experience, the world of plurality and change. The name of pantheism is frequently denied to it on the ground that being does not manifest itself in the world of change, that nature or the phenomenal order is not exhausted in God. This would be a valid objection to including this doctrine among the pantheistic systems had not Parmenides ruled out the entire sense-world as mere appearance.

According to Parmenides, motion, change, becoming, are unthinkable and therefore cannot be real. It is for this reason that he does not know what to do with our world of experience and treats it as an illusion. Heraclitus (*q.v.*), on the other hand, finds in change and becoming the very essence of reality: all things are fundamentally forms of one and the same (hylozoistic) principle, the ever-living fire. There can be no world without change: everything is transformed into its opposite; fire becomes air, water, earth, and then passes upwards again through the same stages and returns to fire. Reality is a union of opposites, and war is the father of all things. Moreover, the fire-principle acts according to law and measure; it is therefore a rational principle (*λόγος*)—rational in the sense that law is immanent in the cosmic order. Everything happens according to the *λόγος*, according to the law of opposites; *λόγος* and fate or necessity (*ἐναγκή*) are identical. It is rational also in the sense of guiding the universe; it is the wisdom steering all things through all things. This philosophy is a well-developed dynamic pantheism: the universe is the expression of an all-pervading active reason; indeed, it is the universal reason in ceaseless action. It is true that Heraclitus did not describe the fire-*λόγος* as acting with conscious deliberation, but neither did he conceive it merely as objective reason, as the indwelling law or order of the universe, as some interpreters hold. The pre-Socratics had not reached a clear-cut conception of mind—they were too much interested in the external side of reality for that—but it is reasonable to suppose that all except the materialistic atomists placed in nature something akin to the human soul, and that Heraclitus as well as the Eleatics recognized the logical aspect of mind as of primary importance in the universe. The particular human soul, too, is a part of the universal fire-*λόγος*, according to our pantheist; indeed, it is a spark of the divine fire itself and remains in constant living touch with it. If this is so, all men ought to know the truth and act in accordance with it. Heraclitus, however, does not draw the full consequences of his pantheism here: according to him, the individual persists in his subjective opinions (*ἰδίᾳ φρονήσει*); men do not know the eternal *λόγος*; it is in them, but they do not see it; nor do they order their conduct in conformity to it. Yet, if everything real is rational, how does it happen that man alone can oppose the *λόγος* or the law of the world? It has been suggested that Heraclitus introduced

¹ 'Die Grundlehren der vorsokratischen Philosophie' in *Grosse Denker*, I., Leipzig, 1911, p. 42.

the notion of free will at this point, as did nearly all the later pantheists—in utter disregard of the logic of their systems. There is, however, no evidence of such a teaching or that he was at all aware of any inconsistency in his thinking here.

The notion of a universal mind (*νοῦς*) acting with deliberation and design appears in the teaching of Anaxagoras (*q.v.*), an elder contemporary of Socrates. Mind is ruler over all; it holds sway over the whole revolving universe; it knows all things and it regulates all things. Anaxagoras, however, is not a pantheist, but teaches a vague dualism; his countless substances or elements of specific quality are distinct from mind, the nature of which seems to be immaterial, but is not clearly defined. Moreover, as the beginner of the world-process, his *νοῦς* is transcendent. It is true that mind is also present in the world, in organic forms, and even in minerals, and therefore immanent, but it is always brought in as the cause of motion only where mechanical explanations do not avail.

In Socrates, Plato, and Aristotle, who dominated Greek thought during the latter part of the 5th and the whole of the 4th cent. B.C., the conception of mind as a principle different from matter is sharply defined, and philosophy enters upon its dualistic stage. There are, however, lines of thought in the Platonic theory which easily lend themselves to pantheistic interpretation and were later turned to pantheistic account by the Neo-Platonists. Thus, Plato speaks of nature as *ἐμφρων*, of the world as *ἄνθρωπος ἐμψυχον ἐννοον τε*, and calls the world a blessed God. Or God is the supreme Idea which embraces all the others in itself, the Unity which comprehends in itself the true essences of things. Since each idea is a unity which comprehends the many in itself, and all ideas are comprehended in the supreme idea of the Good, as the species are contained in the genus, the world is a manifestation of the Good, of the divine purpose, of beauty, truth, and goodness. The ideas are conceived by Plato as active, forming forces of nature, hence as purposive or final causes. In spite of these pantheistic leanings, however, the Platonic system remains dualistic: opposed to mind stands an obdurate element, non-being (*μὴ ὂν*), whether it be conceived as space or as matter.

Basing itself upon the philosophy of Heraclitus and aided by Platonic-Aristotelian conceptions, Stoicism worked out a thoroughgoing system of pantheism, a system that has influenced nearly all the pantheistic philosophies which have appeared in the Western world since its birth at the beginning of the 3rd century B.C. According to it, God and nature are one; the world is the manifestation of the universal λόγος. Λόγος τῆς φύσεως or κοινὸς τῆς φύσεως λόγος and κοινὴ φύσις are one and the same. The universe is the evolution of the λόγος; this is the 'germinative reason' of things (λόγος σπερματικός). With Heraclitus the Stoics regard this λόγος as fire or breath and therefore material; but it is an intelligent, purposeful matter. The Stoic substance is spirit and matter in absolute union; it is spiritual matter or material spirit; reason is not a property of the corporeal. This teaching is no more materialistic than is the Spinozistic view that thought and extension are different attributes or aspects of the one substance. God is *σῶμα νοερόν, πῦρ νοερόν, πνεῦμα νοερόν*. Nor is the doctrine dualistic, even though the λόγος is said to fashion matter (*θελῆ*), and God is called the soul of the world (*ἡ τοῦ κόσμου ψυχή*). It is monistic: both the soul and the body of God are the same in principle; all the elements in the world are transformations of the original divine fire, even that part of matter which seems devoid

of all life and motion. From the fire-λόγος everything has evolved and to it everything will again return, only to be produced again in all its details (*παλιγγενεσία*) time without end. The so-called passive stuff, too, is divine, even though only in a lower degree. The term 'God,' it is true, is sometimes applied only to the primary substance with its qualities or to the active principle as opposed to the passive, but that is because the Stoics looked upon fire or ether as the purest phase of deity, the more remote transformations or emanations of the divine fire being less divine. For the same reason they often called the ruling part of the universe (*τὸ ἡγεμονικόν*) God and placed it in heaven. It is also true that the later Roman Stoics, more deeply interested in ethics than in metaphysics, sometimes identify God with the soul of the world (the universe, says Seneca,¹ consists of matter and God), but in doing this they are weakening, if not abandoning, the old Stoic doctrine.

The universal fire-λόγος contains within itself the rational germs which act in inorganic things and in plants, animals, and man; they take the place of the Aristotelian forms and are the final or purposive causes of the particular things. Everything in the world is determined, subject to necessity or fate (*ἐμπαμένη*). Yet this necessity is not blind; it is the law of the λόγος, rational; and everything is arranged by Providence for the best, God being the Father of all, beneficent and kind. Hence physical evil is not evil at all, but helps to realize the divine purpose; the Stoics offer a complete theodicy. The human soul, like everything else, is a part of the divine λόγος; indeed, it is a spark of the divine fire. If man, too, falls under the law of necessity, as he must according to the logic of the system, then God and not man is responsible for moral evil. This conclusion, however, the Stoics were not always willing to draw, holding that the soul is free and that the realization of the ethical good depends on ourselves. We have the power over our judgments and impulses (indeed, our passions are reducible to judgments); we are self-determining and can free ourselves from the contingencies of life. In other words, the Stoics, while teaching determinism in their metaphysics, make an exception in favour of man in their ethics; they are reluctant to deny the autonomy of the human will. Their philosophy is therefore not consistently pantheistic: the human individual is not a link in the universal chain of causality.

Stoicism, which was itself a synthesis of many Greek systems, exercised a great influence upon all the schools of philosophy that continued in the Græco-Roman world after the golden age of thought. Indeed, a kind of eclecticism arose which represented an amalgamation, and often a mere conglomeration, of Platonic, Peripatetic, Pythagorean, and Stoic elements and led to a sad confusion of philosophical conceptions and to a misunderstanding of the great schools. A shining example of such confused thinking is furnished by Antiochus, the teacher of Cicero; according to him, the teachings of the Academy, the Lyceum, and the Stoa are all pantheistic. The unknown author of the Peripatetic treatise *περὶ κόσμον* fuses the transcendent *νοῦς* of Aristotle with the immanent God of the Stoics, holding that the *νοῦς* is separate from the world, but that his power, like the Stoic λόγος, pervades the universe. Here we have an anticipation of the hypostatic λόγος which appears in the later Jewish-Greek and Neo-Platonic systems; but the doctrine is neither clearly developed nor consistently carried out. The writer vacillates between transcendence and

¹ *Epp.* lxx. 22.

immanence; sometimes God and His power are separate; sometimes God is the all-pervading principle. Theism and pantheism are here contending for the mastery. We find a similar conflict and a similar tendency to compromise between theism and pantheism in all the philosophies of the centuries immediately preceding and following the birth of Christ.

The Jewish-Greek philosophy of Alexandria makes the *lógos*-idea the centre of its teaching and develops it along theosophical lines. It is a kind of Jewish scholasticism, combining Greek thought and the theology of the OT, making copious use of allegorical interpretations, after the manner of the Stoics, in order to harmonize philosophy and religion. Aristobolus, a Peripatetic Jew who lived in the reign of Ptolemy Philometor (181-145 B.C.), lays the foundation of this theology by fusing Peripatetic and Stoic elements in such a way as to make them square with Jewish ideas. He inclines to Stoic pantheism, but cannot give up the transcendent Jewish God. The power of God (*δύναμις τοῦ θεοῦ*) is placed between God and the world; the divine wisdom is also introduced, but whether as a property of God or as a separate hypostasis is not made clear. The creative word of God, another Jewish idea, is likewise brought in. Not unlike the teachings of Aristobolus are those of the pseudo-Solomon's book of Wisdom, in which a modified pantheism is taught. We discover in all these works the same vacillation between the pantheistic doctrine of immanence and the theistic doctrine of transcendence which we noticed above. The influence of Stoicism prevented these thinkers from conceiving the universe as not sharing in deity, while the Jewish notion of the exalted God, supported by Aristotle's theism, would not let them bring God down from heaven and place Him in the world. God is therefore separated from nature, but the chasm is bridged by intermediate entities—*lógos*, wisdom, power.

Philo, the Alexandrian Jew (born c. 25 B.C.), attempts a complete synthesis of pagan philosophy and orthodox Judaism. Platonic and Stoic conceptions preponderate in his system, but they are regarded, in the Jewish fashion, as derived from the OT. Influenced by Stoic thought, Philo sometimes softens the doctrine of the transcendent God (according to which the absolutely perfect, changeless, and inconceivable being cannot come in contact with an imperfect and changing world), and speaks in the pantheistic strain. Without divine action the universe could not be what it is, nor could it continue in existence; hence God must be the all-pervading being, comprehending the world in Himself. For the most part, however, Philo is unwilling to let his pure God be contaminated by contact with the impure world. Moreover, pantheism makes God responsible for evil—a view which the Jewish thinker likewise hesitates to accept. Here the *lógos*-doctrine, with which his predecessors had been experimenting, offers itself as a means of reconciling the Jewish doctrine of transcendence with the Stoic doctrine of immanence. God's power of thought, of creating ideas, is substantialized and made a separate organ; the *lógos* is the unity of archetypes, *ἰδέα ἰδεῶν*, the intelligible pattern of the sense-world. The divine ideas or thoughts of God (*λόγοι*), which have their place in the *lógos*, fashion and preserve the world; the world is therefore a copy of the divine reason and pervaded throughout by divine reason. Philo, however, is vacillating in his conception of the relation of the *lógos* to God; sometimes the *lógos* is conceived as separate from God, sometimes as identical with Him. God is called *ψυχὴ τῶν ὄντων*, or *νοῦς τῶν ὄντων*, in true pantheistic fashion; then, again, the *lógos* is a living active unity of ideas,

created by God but working outside of God; and functions are ascribed to it which are not in keeping with the nature of the deity. He also tells us that God is beyond the world and outside of His work, but that He has filled the world with Himself, i.e. by means of His power which He has stretched to the outermost limits of the world, and that thus He has woven everything into a beautiful harmony. The *lógos* is sometimes also identified with the Jewish creative word of God, by which Philo means reason as well as speech, here making use of the Stoic distinction between the *λόγος ἐνδιάθετος* and the *λόγος προφορικός*. The Jewish doctrine of wisdom is likewise connected with the *lógos*-teaching; indeed, wisdom is identified with *lógos*. The *lógos* is also called the servant, messenger, and interpreter of God, the image or shadow of God, the son of God, the oldest or the first-born son of God, the universe being *νεώτερος*.

All these doctrines have a pantheistic ring and might easily be fashioned into a pantheistic system, were it not for the fact that Philo also teaches the pre-existence of matter.

Another Stoic note in the Philonic world-view is the doctrine of necessity (*ἐμπαρμένη*), an exception, however, being made in favour of man, who is free from necessity. No effort is made to reconcile the doctrine of human freedom with this teaching, or with the view that the human understanding is an emanation of the divine mind or a kind of extension from it, or with the view of man's original bent for matter, which is a fetter of the soul and the cause of sin, or with the view that virtue depends upon man's participation in the divine *lógos*. We find a similar inconsistency in the Stoic system, and again in Neo-Platonism.

Philo's philosophy culminates in a religious mysticism: God is beyond all knowledge; hence, in order to reach Him, man must transcend both the world of sense and the *lógos*, lose his individuality in a state of ecstasy, and become merged in the divine Being.

Philo's philosophy may be regarded as the forerunner of Neo-Platonism (*q.v.*); indeed, the latter might be described as a development and systematization of the thoughts of the Jewish thinker. It exhibits the same tendency to eclecticism: Platonic, Aristotelian, Stoic, and Neo-Pythagorean teachings are used and fashioned into a great philosophic edifice—the last of which Greek culture can boast. Other precursors are the Pythagorean Platonists—Plutarch, Maximus, Apuleius, Galen, Celsus, and Numenius. These thinkers, like the early Alexandrians, oscillate between the doctrine of transcendence and the doctrine of immanence; they make concessions to pantheism, but the thought of the absolute, indivisible, and changeless being keeps them from completely identifying God and world. Plotinus, the chief figure in the Neo-Platonic school, conceives God as the absolute unity, of which nothing can be predicated: He is higher than being, thought, goodness, beauty, and activity. And yet, in spite of the exalted nature of his absolute, Plotinus derives the world of plurality and change from Him: He is the fountain-head of everything that is; out of the fullness of His being flows the world, proceeding by gradual stages or degrees of worthiness until matter—the lowest of His emanations and the principle of evil—is reached. God is too pure and exalted to soil His being by contact with the world, but the *νοῦς*, which is both thought and being, is His copy and product, receiving from the absolute the power of creation. This *νοῦς* produces the ideas or the *κόσμος νοητός*—an ideal unity in diversity, embracing everything in itself as the whole comprehends the parts or the genus the species, even to the ideas of individual things. Only the evil is not

included among the ideas of the *νοῦς*. The *νοῦς* has a yearning for the transcendent—it contemplates God; but it has also an earthward bent and so creates a world-soul, or *λόγος*; or, rather, the world-soul flows from it as it itself flows from the transcendent God. The *λόγος* is a copy of the *νοῦς*; its contents, the *λόγοι*, received from the ideas contained in the *νοῦς*, are copies of these ideas. The world-soul, or *λόγος*, contemplates the *νοῦς* above it; it contemplates itself; and it contemplates that which is below it. It reflects and deliberates, possesses life and motion (*ἐξ αὐτῆς κινουμένη*), and produces the visible universe. Matter proceeds from the world-soul; it is as such absolute privation, *ὄλη*, formless, without quality. Through the *λόγοι* the *λόγος* forms or fashions matter, matter really never being without form. Every particular body consists of matter and has its own particular *λόγος* in it, which does not act mechanically upon matter, but through the concept—organically, one might say. Nevertheless, the *λόγοι* do not act consciously and with deliberation. It is these active *λόγοι* that constitute the essential elements of the seed and account for the differences among the various organisms. We have here a teleological explanation of organic life which goes back to the Stoic *λόγοι σπερματικοί* and Aristotle's forms. The *λόγοι* are copies of the ideas in the *νοῦς*; the *νοῦς* is a copy or emanation of God; hence the ultimate source of order and harmony is God.

It follows that the entire universe is fashioned and sustained by the all-pervading *λόγος* and is under the governance of reason; everywhere the world reveals traces of the beautiful and the good, which have their source in the *νοῦς* and ultimately in God. Hence matter cannot be altogether evil, as Plotinus held; indeed, it turns out to be evil only in the sense that it is an obstruction to the pure ideas, that it is the cause of plurality and imperfection. It is hard to see how it can be evil at all when we remember that matter is an emanation from God, that the *λόγος* is predisposed to it, that the *λόγος* fashions it according to the beautiful and good ideas of the intelligible order, that in the visible harmony everything—even the seeming evil—is in place. God is really responsible for the physical evil in the world, as the Stoics had taught. But Plotinus refuses to burden Him with the responsibility for moral evil or to explain it away; this he attributes to man's free will. His freedom, however, is only an intelligible freedom, each individual having chosen his particular character in a pre-existent state. We have here a similar difficulty to that which confronted us in the systems of the Stoics and of Philo. The causal nexus is broken by man's power to choose his own character; an element seems to be introduced into the universe over which the divine *λόγος* has no control.

The Stoics, basing themselves on Heraclitus, offered the first clearly developed system of dynamic pantheism in Greek thought, while Plotinus made the most thoroughgoing attempt to reconcile pantheism with theism. In spite of the transcendence of the Neo-Platonic God, the world proceeds from Him; the *νοῦς* springs from Him; the *λόγος* springs from the *νοῦς*, and expresses itself in the visible garment of matter, which is itself a remote product of God. Nature is impregnated with the divine ideas, with the ideal forces which have their ultimate source in the absolutely good being. But God does not exhaust Himself in His product, according to Plotinus; He loses nothing by giving birth to a world. Plotinus's teaching here resembles the German philosopher Krause's 'panentheism' (cf. above, p. 612), in which, however, God is a self-conscious and free personality—a con-

ception which was foreign to the thought of the Greeks or at any rate not clearly defined and consistently carried out by any one of their thinkers. And yet it must not be forgotten that even the Stoics attributed something like personality to God when they identified Him with providence (*πρόνοια*), and that Plotinus himself conceived God not as an irrational being, but as a superrational being.

FRANK THILLY.

PANTHEISM (Hindu).—I. Introductory.—It has frequently been affirmed, by none more emphatically than by A. Barth, who has done so much for the elucidation of Indian thought, that the tone and tendency of Indian conviction and belief are as a whole pantheistic. It may fairly be questioned, however, whether any wide generalization upon the set of the many cross-currents of Indian thinking is justified. With at least equal truth the assertion might be made that India reasons upon theistic presumptions, and that her favourite philosophy reaches idealistic conclusions. Under other skies and in other lands it might appear difficult to induce harmonious working of principles and theories so diverse. In the Indian mind they coalesce, or, if the figure be preferred, occupy different compartments without impairing the unity of the whole. The Indian merchant or peasant is a philosopher, who is generally ready to

give a reason for the faith that is in him, and always eager for a debate thereon. In most instances his views of God and the universe will be found to be pantheistic, dominated in the ultimate issue by idealistic traditions and teaching. But he is far too practical to allow these to modify or impair the sagacity and determination with which he takes his part in the competition of daily life. Religiously he is an earnest theist, and usually a monotheist, if the term be allowed to cover a creed which recognizes in all the gods manifestations of the one and only God. Historically and in the past in India a monotheism of this character has been hardly distinguishable from a rich and riotous polytheism. More recently Christian and other influences have strengthened the ideal element. The pantheistic tendency, however, maintains its position, and as an undercurrent continues to exercise an influence upon the outlook and life as a whole which is little if at all impaired.

Indian pantheism, moreover, originated in different conceptions, and aimed at satisfying different types and preconceptions of thought from the European. Historically also it has run a different course. Perhaps the identity of name has led to an exaggerated conception of the strength of the influence which pantheistic ideas have exercised upon the outlook and character of the Indian peoples. In reality, for all practical purposes, it has been slight. Except in the case of a few mystics, pantheism has never been the most forceful motive of action or belief; nor is it at all likely to strengthen its hold in the future.

Within the limits of an article it is not possible to do more than give the briefest survey of Indian pantheistic doctrine, as exhibited in the earliest and succeeding strata of the literature, and of its importance for the creed and life of the people themselves. In its main stream the development is not difficult to trace, but the ramifications and cross-currents are often obscure in their direction and source. A few words will serve to indicate the general tendencies and conclusions which experience and the evidence appear to justify.

2. The Vedic period.—In the hymns of the Rigveda a pantheistic strain of thought is discernible from the beginning, but becomes most marked in the tenth and latest book. The rude and superficial polytheism of the popular faith failed to content the more earnest thinkers among the poets; and the response which in some instances at least was given to the search for a more satisfying creed was in the direction of unifying all gods, all existences, into one. Agni especially was the centre of this assimilating movement. The essence of fire appeared to pervade all things, and to give them warmth and being; when Agni withdrew himself, the life also vanished. All the gods accordingly are identified with Agni, and Agni himself is all the gods.¹ In not a few of the hymns a knowledge of the inner reality of things appears to be the goal of the poet's thought and desire. Three general conceptions or theories of the constitution of the universe are present to the minds of the writers—monotheism, polytheism, and pantheism—and of these the pantheistic view ultimately overshadows and controls the others. Speculative inquiry with regard to the reality that may be supposed to underlie all phenomena is answered in a pantheistic sense. *Ka* ('who?') is not only a name for the unknown, but an indication of the direction which thought is prepared to take. Other suggestive titles for the source or universal principle that comprehends all, and from which the all originates, are *īd*, 'this,' *hiranya-*

garbha, 'the golden germ,' *nārāyaṇa*, 'the primitive man,' *virāj*, 'the shining or illustrious one.' In the ultimate systematization these were all merged in the one *Brahman*. Within the limits of the Rigveda the tendency to pantheism culminates in the hymn to the Unknown God (x. cxxi.). In the hymns, however, there are expressed pantheistic strivings and imaginings rather than a formal and definite system.

3. Upaniṣads.—The culminating point of Indian speculation was reached in the thought of the *Upaniṣads*, and in the system of the Vedānta founded on them. That system assumed finally a pantheistic shape, and, thus formulated, secured the assent and conviction of the great majority of the Indian people. Having failed to establish in intelligible form the mystical and metaphysical doctrine of the *ātman*, the thinkers of the *Upaniṣads* fell back upon a modified pantheism. The universe was the created work of *Brahman*, who (or which) then took possession of it as pervading principle or soul (*ātman*). The postulate of the sole reality of *Brahman* or the *ātman* remained, however, inviolable—one only without a second; and pantheistic speculation therefore regarded the universe as immanent as it were in God, not conversely God immanent in the universe. The doctrine thus formulated was in direct succession with the thought of the *Brāhmaṇas* and the Rigveda. In the latter the framework of presumption and belief is still essentially solar; the human spirit becomes united with the spirit of the sun. The theorizings of the *Brāhmaṇas*, dull and matter-of-fact as these treatises are on the practical and ritualistic side, are freer and more far-reaching, but remain true to the same presuppositions. In the *Upaniṣads* and the Vedānta the endeavour to frame acceptable conclusions came to full fruition. The solution offered, however, was based essentially upon a compromise, the reconciliation of distinct and conflicting lines of thought, of which the idealistic did in fact predominate over the other. The universe was asserted to be fundamentally and altogether unreal, and to have no existence apart from *Brahman*, who is all and in all. The pantheistic strain of thought, therefore, of India is of a type differing from the European, and has sometimes been described as 'idealistic' pantheism. The latter does not assume the presence of God in the universe, informing all, but definitely affirms that the universe does not in reality exist at all, for God alone is. So abstract a theory, and one so far removed from the postulates of ordinary life, remained probably for some considerable time the property of the more metaphysically inclined among Indian thinkers and teachers. It was only slowly and gradually that it took possession of the mind and thought of the people as a whole.¹

4. Epic period.—In the *Mahābhārata* and the epic literature generally the substratum of thought and belief which the writers presuppose, and on which they fall back, is pantheistic, after the manner of the *Upaniṣads*. The divine actors and heroes, however—Kṛṣṇa in the *Mahābhārata* and Rāma in the *Rāmāyaṇa*—are the objects of an intense theistic reverence and devotion; and the cross-currents of popular theism and philosophic pantheism run deep and strong. In general, in the thought and exposition of the poems as a whole the former appears to be in retreat before the vigour and persistence of pantheistic ideas. The theism, however, whether or not it is really the older stratum in this literature, is in no danger of dissolution. The conflict is most apparent in the episode of the *Bhagavad-Gītā*, where the dignity and authority of the divine Kṛṣṇa have attracted to his person a fervour of monotheistic worship

¹ Rigveda, v. iii. 1; cf. the similar statement concerning Aditi (i. lxxxix. 10).

¹ See, further, art. UPANIṢADS.

unequalled elsewhere in the history of India. Yet even here the interwoven strands of pantheism are so intrusive and continuous that the nature of the primitive basis upon which the poem has been built up is still regarded by scholars as doubtful. Unquestionably, however, in the epic period pantheism as a reasoned explanation of the constitution of the universe is gaining ground and commending itself to the thought and acceptance of the people.

5. *Brāhmanism and the Vedānta.*—Hence it is in what is known as Brāhmanism and the philosophic Vedānta that the stronghold of pantheistic thought in India is to be found. And it is a tribute to the energy and conviction of its adherents that their doctrine has so entirely taken possession of the Indian mind. The process of the extension of a teaching, from the point of view of the ordinary man both recondite and unnatural, was certainly gradual and prolonged. Equally certainly in any realized or intelligible sense it was a possession of the philosophers alone. By others it was accepted and professed as a constructive interpretation of themselves and of the phenomenal universe, which they held in theory but made no attempt to bring into relation to daily life; and of the significance of which in most instances they had little real appreciation. Nevertheless there lies behind the speculative doctrine a strength of conviction, which has driven it through the inertia of the minds of the common people, and has made it philosophically the dominant belief of all classes. Barth's assertion is then justified that 'India is radically pantheistic.' It would nevertheless be equally correct to affirm that India is radically mystical or radically theistic. All three statements are true, but need qualification. The pantheism of India is of an essentially mystical and visionary type, and lends itself to dreamy aspirations, far removed from the hard and uncompromising theorizings of the West. If carried to a logical conclusion, it finds itself in conflict both with the practical necessities of life and with ancient theistic beliefs. It compromises with both, and succeeds in living in harmony with habits and deep-seated convictions which to minds differently constituted from the Indian would appear to be fatal to its existence.¹

6. *Sectarian faiths.*—India's popular religious systems, on the other hand, are essentially theistic in character, and contribute little to the significance or thought of pantheism. This is true for the most part of the two greatest of these faiths, Vaiṣṇavism and Śaivism, which in their varied forms share between them the allegiance of the great majority of the people. Their philosophy, however, and doctrine of the nature of the universe (cosmology) they have borrowed or adapted from the speculative conclusions of the *Upaniṣads*. The Vaiṣṇavite is a professed Vedāntist, and holds the latter doctrine with its pantheistic implications as a sort of metaphysical counterpoise to the living theistic faith with which his religious craving is met and satisfied. The Śaivite is usually, in name at least, a follower of the Sāṅkhyan philosophy of the universe and of life. In practice, however, his theoretic belief is largely overborne by pantheistic tendencies. In a broad sense it is true of both Vaiṣṇavite and Śaivite that they are theist and pantheist in one, but that in the urgency of daily life the latter creed is, with rare exceptions, subservient to the former. Whatever his theory may be, the Indian regulates his conduct by the desire to propitiate the gods and to receive help from them, not by a pantheistic doctrine which confines his personality and merges him in the great unknown.

¹ See art. *VEDĀNTA*.

The mystical and devotional Śaivism of the south of India is essentially opposed to the Vedānta, but is nevertheless permeated to a considerable extent by pantheistic conceptions. These would seem, again, to represent an encroachment upon an original monotheism, successfully effected, in part at least, by virtue of a claim to offer to the thoughtful mind a higher and more exalted degree of religious attainment, of which the ordinary man was supposed to be incapable. It was right for him to content himself with an external worship and a rudely conceived personal god. Early Śaivism appears to have been altogether monotheistic; but the emotional Śaivite literature of the south, the religious hymns and lyrics of the Tamil bards, which are certainly for the most part if not entirely of comparatively recent date, although they lay claim to the authority of ancient names, is pantheistic in tone and in spirit, and probably owes something to the influence of Śāfiistic thought. In its more recent history at least, the tendency of this form of Śaivism has been towards a pantheistic philosophy; and, while never ceasing to profess a theistic creed, it has been in the Deccan among the most powerful agencies in spreading and recommending a mystical and vaguely defined pantheism.

7. *Reformed sects.*—Of the reformed faiths of the north also, the Brāhma Samāj and others, it may be asserted that, while in creed and profession they have maintained a monotheistic belief which is affirmed to be the true original faith of India, they have been unable altogether to discard mystical ideas, or to reject conceptions of worship in which the pantheistic strain, so characteristic of India, is readily discerned. They have thrown themselves effectively and for the most part wholeheartedly into practical and social work, which, especially by the Ārya Samāj, has been admirably conceived and carried out on the lines of European example; and speculation of a metaphysical nature has not been to any great extent within their province. Doctrinally their influence has been conservative; and the practical issues of religion and life have generally occupied much more of their attention than the speculative or mystical.

8. *Pantheism and ethics.*—Nor has it been true generally in India that pantheism has opposed itself to the claims of ethics, even in the form or forms in which the moral scheme is understood in the West. The fatalistic doctrines to which Indian thinking and life, in common with the greater part of the East, have been responsive are, of course, inconsistent with ethical principles in any real sense. Pantheistic conceptions, however, have in India accommodated themselves to morals, except in the extreme but logically justified forms in which they have exhibited themselves in some of the Yogin and kindred sects of both north and south, and in some of the higher Brāhman castes. With these men definitions and principles that are ultimately pantheistic have been made the support and justification of unmoral practice. The majority of the people, however, accept the theory on philosophic grounds, but make no attempt to bring it into any sort of harmony with their moral behaviour or allow it to control their ethical habit or belief. The ruling thought and inclination of a people by nature intensely religious is to seek intercourse with a personal God, to enlist His interest and good-will on their behalf, and to satisfy what they conceive to be His moral demand. The abstract pantheism which they profess is for the most part entirely without effect on daily conduct and life.

9. *Summary.*—Historically, therefore, Indian pantheism as a philosophic and religious principle is based upon two conceptions—that of the *ātman*, the soul or spirit, the sole reality on which all

things depend and in which they subsist, and the cosmological thought of the Creator, immanent in the universe which He has fashioned. In the mutual influence of these, and their ultimate more or less satisfactory accommodation to one another, is to be found the real key to Indian thinking, and upon them is made to rest the foundation of Indian constructive theory with regard to the universe and God. In some directions, as in the final views of the *Upaniṣads*, these principles have been thought out to their ultimate conclusions with a remorseless logic that has never been surpassed; but from these conclusions even the thinkers of the *Upaniṣads* fell back upon a more tolerable and practical theory of life, and the majority of those who received their teaching made little if any endeavour to reduce it to practice. As an abstract and philosophic belief, however, the theory gained a strong and permanent hold upon a people naturally inclined to metaphysical speculation.

LITERATURE.—The general Histories of Indian thought and literature by A. Barth (*The Religions of India*, Eng. tr., London, 1882), E. W. Hopkins (*The Religions of India*, do. 1896), and others, discuss the subject incidentally. The art. on pantheism in the encyclopædias are for the most part brief and offer little of interest. For the original sources see esp. *SBE* i. [1900], xv. [1900] (*Upaniṣads*), xxxiv. [1890], xxxviii. [1896], xlviii. [1904] (*Vedānta-Sūtras*), vii. [1898] (*Bhagavad-Gītā*). Cf. Max Müller, *The Six Systems of Indian Philosophy*, London, 1899; P. Deussen, *The Philosophy of the Upaniṣads*, Eng. tr., Edinburgh, 1906; R. W. Frazer, *Indian Thought Past and Present*, London, 1915, ch. iv. f.; art. HINDUISM, VEDĀNTA, UPANISADS. For the Śaiva-Siddhānta doctrines of the south of India see, further, Frazer, pp. 219 ff., 257 ff.; H. W. Schomerus, *Der Śaiva-Siddhānta*, Leipzig, 1912; and art. DRAVIDIANS, vol. v. p. 23 ff.

A. S. GEDEN.

PAPACY.—1. The papacy is theologically the formal completion of the hierarchical conception of Christianity; politically it is the survival of the Roman conception of universal sovereignty. The world on which Christianity entered was Roman; the world-religion which was to leaven it was necessarily cast in the mould and bore the stamp of Rome. First this religion projected the idea of empire into the other world; then, as it were, going back upon itself, it attempted to realize the projection in this. The result was the imposing structure of Roman Catholicism, culminating in the papacy; only so is it formally and actually complete.

2. The hierarchy developed out of the earlier charismatic ministry, (1) when, with the diffusion of Christianity, the spiritual gifts of the first age disappeared; (2) when the breakdown of the belief in the Parousia reacted on the enthusiasm of believers; (3) in self-defence, when heresy and moral relaxation threatened the unity and life of the community; nor (4) can such causes as the ambition of the official class and the infiltration of pagan culture and ideas be overlooked. The 2nd and 3rd centuries of our era, which witnessed the Church's struggle with the various forms of Gnosticism, witnessed also the rise and growth of the hierarchy:

'In defending itself against Gnosticism the Christianity of the primitive age was transformed into the Catholicism of the next' (R. Sohm, *Outlines of Church History*, p. 31).

3. Up to a certain point the process of institutionalizing was common to Eastern and Western Christendom; but, from the first, causes were at work which in the one case arrested and in the other promoted its fuller development. The Eastern Churches have never either in theory or in fact recognized the papacy; in the West the papacy has absorbed into itself all other ecclesiastical institutions, and has become the Church. The Greek mind, even in its decadence, retained its distinctive qualities—curiosity, love of speculation, subtlety. These qualities found an ample, if a barren, field in theology, which has been described as the 'last great offspring of the Hellenic spirit' (Sohm, p. 50). 'The East enacted creeds, the

West discipline' (Milman, *Latin Christianity*, i. 72). And on the latter head the Greek mind was recalcitrant; to this day it conceives the unity of the Church as resting not on hierarchical considerations—these it relegates to the department of canon law rather than to that of dogma—but on the doctrine of the communion of saints. And the temper of the race was, and is, democratic—intolerant of the assumption of superiority, take what shape it may. Its ideal was the small city-State, civil or ecclesiastical. Byzantine Caesarism was a foreign importation, a yoke resting on force and tempered by assassination. The conception of authority embodied in Rome, imperial or papal, is Western, and alien to the Greek mind.

4. The West was frankly unspeculative; it had neither interest in nor the faculty of dealing with ideas. It construed dogma as law and belief as obedience; and the Church, in which this conception had taken shape, was the one living force in a world of decay. Hence its deep root in the European mind. Its mysterious claims and the magic of the name of the traditional seat of empire inspired even the barbarians with awe. 'Tu regere imperio populos'—this was the task of Rome, Christian as well as pagan; the world-empire was the foundation of and is the key to the world-Church.

'From every cause, either of a civil or of an ecclesiastical nature, it was easy to foresee that Rome must enjoy the respect, and would soon claim the obedience, of the provinces,' says Gibbon (*Decline and Fall of the Roman Empire*, ed. J. B. Bury, London, 1901-06, ii. 45);

and Hobbes has concentrated the history of Latin Christendom into an epigrammatic sentence:

'If a man consider the original of this great Ecclesiastical Dominion, he will easily perceive that the Papacy is no other than the Ghost of the deceased Romane Empire, sitting crowned upon the grave thereof. For so did the Papacy start up on a sudden out of the Ruines of that Heathen Power' (*Leviathan*, ch. 47, ed. W. G. Pogeon Smith, Oxford, 1909, p. 544).

Like other human institutions, it was the creature of circumstances; nor is there anything in either its earlier or its later developments which, given a knowledge of these circumstances, need surprise us. The sufficient reason of the papacy is 'Roma caput mundi'—the imperial tradition of Rome.

5. The exegetical and historical questions of which the papacy is the centre are best approached by regarding the alleged evidence not as the cause but as the effect of the institution, as an afterthought—the object of which was to account for an existing state of things. It is on these lines that Roman Catholic writers explain the forged Decretals; and, up to a certain point, the argument must be allowed. The Decretals consolidated and extended the power of the popes, but did not establish it; rather it is only on the hypothesis of its existence that they can be explained. The Petrine texts, and the undoubted prominence of the Roman community in the 2nd cent., have been useful weapons in the hands of controversialists. But the papacy rests on other foundations. Neither the texts nor the facts gave rise to the Roman primacy; rather it was the primacy that gave rise, if not to the texts, at least to their interpretation—to the facts, and to the perspective in which the facts are seen.

6. The earliest sources are theologically colourless. Clement bases the intervention of the Roman community, from which the bishop had not yet emerged, in the Corinthian troubles, not on any special prerogative of Rome, but on the suggestion of the Spirit—an obviously primitive touch; and Ignatius accounts for the consideration enjoyed by this Church by its good works and its local prestige. Before the end of the 2nd cent. a disposition to emphasize this consideration shows

itself; the Petrine legend appears. Neither the disposition nor the legend made its way without opposition; but each was part of a larger movement which fell in with the needs and temper of the age. In numbers and wealth the Roman community soon took the first place. At the time of the Decian persecution it had more than 20,000 members; and through its constitution, which had developed on hierarchical lines, it rivalled the State as a social power. The monarchical episcopate was now in the ascendant. Its apostolic origin and obligation once recognized, the metropolitanate and patriarchate were stages on the road to a higher unity; the papacy was the logical completion of the theory and the inevitable goal.

7. While secondary, however, as sources, the Petrine texts and the Petrine tradition have played a part in the history of Christian beliefs and institutions the importance of which it would be difficult to overstate. The tradition is older than the texts, to which it probably gave rise; but both have made for the legal and ecclesiastical, as opposed to the religious, element in Christianity. From an early date Peter was taken as the representative of this element, because it was desired to oppose an original 'central party' to the larger, more spiritual Paulinism, and because Peter's outstanding personality made him the most conspicuous among the immediate followers of Christ. This tradition gathered content and volume till all proportion was lost, and everything else in religion, even religion itself, became subordinate to it; in the Middle Ages we find it the primary fact in Christendom and the central doctrine of the Church. The development was continuous and consistent—system has from the first been the strength of Ultramontane theology; and the doctrine was brought to formal completeness by the definition of papal infallibility at the Vatican Council of 1870. Imposing as the structure is, its foundations are inadequate; Peter's prominence in the Gospel narrative is an insufficient ground for the belief in a personal or official privilege bestowed upon him by Christ. It can be accounted for by circumstances, by temperament, by the easy intercourse of friends. And that this is the true explanation is indicated by the absence of anything like one-man rule in the Christian community after the Ascension. Paul was beyond question the foremost figure in the Apostolic period:

'If there was any primacy at this time, it was the primacy not of Peter, but of Paul' (J. B. Lightfoot, *The Apostolic Fathers*, London, 1889-90, pt. i. vol. ii. p. 490).

It is conceivable that, had things taken another course, 'a caliphate in the family of Jesus' might have been established. As it was, Peter was a middle term between Pauline and Palestinian Christianity: the former, left to itself, might well have become a theosophy; the latter would almost certainly have narrowed into a sect. And with the disappearance of the Apostles a new age set in. They left no successors; and Peter was no exception to the rule.

8. The ministry of the first age was charismatic and universal; there was no clerical class. As the numbers of the community increased, specialization was inevitable; but the rise of an order of professional clergy was the most momentous change that has ever taken place in the Church. The attempt to account for it by the direct appointment of Christ was natural; traces of this attempt are to be found in what has been described as 'the most important book ever written, the Gospel according to Matthew' (B. W. Bacon, *The Making of the NT*, London, 1912, p. 145). This may be called the anti-Pauline Gospel; the issue is between a closed Palestinian tradition—modified,

indeed, from its extreme Jewish form, but still a tradition—and the onward moving sweep and swing of Pauline thought. The confession of Peter (Mt 16¹⁸.) occurs, though in a simpler form, in the two other Synoptic Gospels; but the famous gloss (vv. 17-19) is found in Matthew alone. That this, even if we retain the passage as it stands, will not bear the interpretation put upon it is matter of fact rather than of opinion. It is inconceivable that a saying of Christ so central as the mediæval theory of the papacy makes this should have been left unrecorded by three out of the four evangelists; that it should have been omitted by two (one of them the Petrine evangelist Mark) of the three who narrate the incident out of which it is said to have arisen; and that no reference should have been made to it by any other NT writer, in particular by Paul. Paul's references to the Twelve are those of a man with a grievance; he goes out of his way to proclaim his independence of them, and in particular of Peter (Gal 2¹¹⁻²¹). The hostile note is unmistakable; the Tübingen school had more to say for itself on this head than its immediate successors allow. It is probable that the passage is an interpolation made in the interests of the rapidly developing official ministry, the origin of which it was desired to throw back into the first age. In any case it is clear that the papacy has its roots not in Scripture, but in history; it is history that must pass judgment on its claims. And the historian will ask, not Does the Petrine tradition justify the papacy? but How was it that people came to believe that it did?

9. The answer is that, shadowy as this Petrine tradition was, it was opposed by no rival. This could not be said of the earlier titles to pre-eminence advanced by Rome. Was Rome, as Tertullian urged, one of a group of apostolic churches? There were other apostolic churches. Was it the seat of a patriarchate? So were Alexandria and Antioch. Was it the metropolis of the world? When Constantine transferred the seat of empire to the East, Byzantium claimed this prerogative. And it was not till then that the Petrine legend was accentuated, and the prerogative of Rome placed on a singular and incommunicable foundation—the succession of the Christian Dioscuri, Peter and Paul. It is one of the ironies of history that it is in a Gnostic source—the pseudo-Clementine *Homilies*—that this tradition is found in its most explicit form. Thus was the organization of the world-Church, modelled, in fact, upon that of the world-State, referred to a divine sanction. The detail was filled in later; and the broad lines of the fabric stand to this day. The diocese represents the *civitas*; the archiepiscopal province the Roman *provincia*; and the Catholic Church under the absolute rule of the pope, the vice-gerent of God, the empire under the *Divus Cæsar*.

'In its old age,' says Sohm (p. 47), 'the Roman Empire bequeathed its constitution to the young Church. . . . It was its last great legacy to the future.'

It was also its most important; for in the Church it rose from the grave to a new and more enduring life.

10. The advance of this organized Church system was not unchequered: in Montanism and other separatist movements the old spiritual liberty resisted the new ecclesiastical law. But, in doing so, it became fanaticism and licence. The Roman conception of Christianity had no serious competitor; and the highest social and religious forces then at work in the world were on its side. The circumstances of the time hastened its development, both by removing possible rivals and by emphasizing the need of stability—of fixed institutions

and beliefs. The walls of the world were falling. Africa was overrun; a torrent of barbaric invasion threatened the Eastern Churches; the West was the prey of rude tribes whose training was the condition of the survival of civilization; the secret of the power of the Roman bishop was the fact that he embodied the best spirit of the age. The story of Attila retiring, overawed by Leo the Great, is legend, but true legend. The papacy represented those forces, not of religion only, but of reason and social order, to which men, cultured and uncultured, recognize their subjection; the pope was heir by default of the Cæsars, and could not escape their function of rule. The national Churches which came into being north of the Alps became rapidly and acutely secularized, while Celtic Christianity, admirable as a pioneer force, was capable only of group organization and unable either to found or to compete with a world-polity. The panegyric of the papacy, familiar in Catholic apologetic, is not without foundation; but it errs when it is transferred from a period of history to history as a whole. Were it limited to the age lying between the fall of the old civilization and the birth of the new, it would be justified. The popes could not save the old world; but they could and did prevent the forces of barbarism from laying waste the ground out of which the new world was in due time to arise. Hence the debt of gratitude which civilization owes to the papacy. It was our pedagogue; and it was assuredly lighter than darkness, if it was darker than light.

11. The memory of the Roman empire haunted the mediæval world. In the darkest age man remembered that there had once been such things as law, knowledge, and civilization. Remnants of the old order had survived among the provincials. Was it possible that the august fabric as a whole should be revived? To effect such a revival the co-operation of the secular and the spiritual power, both in sufficient strength, was needed; and, when, in 800, Charles the Great received the imperial crown from Leo III., the occasion and the man arrived. 'Ab omnibus constitutus est Imperator Romanorum'; the empire was re-born.

12. Great, however, as the idea was, the structure contained from the first the seeds of dissolution. Each of the concurrent powers claimed the supremacy; but, from the nature of the case, neither could either effectually or permanently retain it. It was impossible either for the spiritual power to acknowledge subjection to the temporal or for the temporal to abdicate in favour of the spiritual; they were, and remained, two. Nor was either, as it professed to be, universal. There were kingdoms beyond the empire; there were Christian communities outside the Church. The facts were larger than the frame; and an age of conflict opened. A strong pope was necessarily the enemy of a strong emperor, and a strong emperor of a strong pope. Charles the Great was as truly supreme head of the Church as Henry Tudor; but the older Erastianism was on the larger scale: the control claimed by Henry over a local and national Church was exercised by Charles over the Church as a whole. All the great creations of the Middle Ages—the empire, the Church, scholasticism, feudalism—bear this stamp of universality; hence the dream of unity which to this day haunts Latin religion and the Latin world. It could not—it is probable that it never can—be realized. The mind of the time was dualistic, and could not escape from the charmed circle. An Erigena was suspect; his time was not yet. A more pedestrian philosophy was to provide a speculative foundation for the idealism, the aspirations, and the ethics of the age.

13. The Carolingian empire did not survive

its founder; and on its fall the shadowy but imposing inheritance of universal power fell a second time to the papacy. It at once seduced and strengthened; it misled, but it inspired. Fear of the encroachments of the civil ruler, the desire to place the Church above the vicissitudes of secular governments, in conjunction with the invariable tendency of authority to extend its jurisdiction, led to a notable advance of the Roman claims. The germs of this development were already in existence—the dispensing power, the right to confer privilege and exemption, and to act as universal metropolitan and court of appeal. The wish to place these and similar prerogatives beyond question gave rise to an elaborate series of fabrications and forgeries which, in an uncritical age, silenced objections and were admitted as evidence. They began in the 6th cent. with the *Liber Pontificalis*, and continued with the Decretals of the pseudo-Isidore and Gratian to the end of the Middle Ages. The memorable change of front by which, on the transference of the seat of empire to the East, the Roman bishop met the pretensions put forward by the new patriarch of Constantinople led, in particular, to a deliberate and wholesale falsification of ecclesiastical literature. The endeavour to represent the claims advanced by later popes as already asserted and admitted in earlier times poisoned the sources; suppressions were made, interpolations inserted, documents forged. Hence the obscurity in which much of the history of the papacy is involved. It must be remembered, however, that the advocates of the papal claims were not the first and have not been the last Churchmen to pursue pious ends by dubious means. From an early date theologians have been unable to resist the temptation to exploit popular credulity and pass counterfeit coin for true. The so-called Athanasian Creed and the famous text of the Three Witnesses (1 Jn 5⁷) are evidence of the power of a false tradition over more enlightened Churches and in more critical days.

14. The purpose of the Decretals was twofold: to exempt the clergy from the secular courts, setting up spiritual over against the civil and criminal tribunals in every country, and to establish the immediate jurisdiction of the pope over the whole Church. Thus the easily abused power of the metropolitans, which excited the jealousy of Rome, was broken; and, as the patriarchates were extinct, Rome remained the only source of authority. Nicholas I. (858–867) challenged Hincmar, Lothair, and Photius with equal vigour—in the West with success; but in the East the smouldering rivalries of generations burst into flame. The Western and Eastern Churches were finally separated; the seamless robe was torn.

15. The period which followed the fall of the Carolingians was one of decline for the papacy; internal corruption undermined what external attack had failed to destroy. Before the century closed it had become the prey of local faction; its deliverance came from a foreign and secular power, that of the German Ottonides, who had succeeded to the diminished but still mighty inheritance of Charles the Great. The structure of the mediæval State was loose; the feudal system had shifted and divided the basis of sovereignty. The aim of Otto I. was to strengthen it, and to establish his own power by the elevation of that of the Church. He placed more reliance on his spiritual than on his temporal vassals, and did not foresee that, once conscious of their strength, they might prove more formidable enemies to the empire than the disorganized forces of the feudal lords. Under Henry III. (1039–56) the empire reached its high-water mark; four popes owed their elevation to him; the pontiffs

were elected in Germany and imposed on Rome. But the particularist tendencies of feudalism combined with the needs of the time and the traditional policy of the Roman Church to hinder this state of things from becoming permanent. Had the papacy not been reformed by the emperor—and only the emperor could have reformed it—it would have fallen under the weight of its own vices. But no sooner was it restored to vigour than it turned upon its preserver, upon whom it waged a parricidal war.

16. This forward ecclesiastical movement was powerfully seconded by the reform of Cluny, with which a wave of enthusiasm such as had not been seen since the first ages invaded the Church. From the first Western monasticism had avoided the follies and the fanaticism of Eastern. The monk of the West was neither a *faqir*, like the Syrian pillar-saints, nor a dervish, like the illiterate hordes who swarmed from the Thebaid into Alexandria with riot and destruction in their train. The Benedictine Order, in particular, was a hive of busy workers, sending out a succession of tillers of the soil and pioneers of industry, of scholars and artists, of saints and rulers of men. But decline set in. The primary purpose of the religious life was lost sight of; the setting overlaid the gem. The reform of Cluny over-reached itself; but it met both a religious and a temperamental need of the time. It expressed the dualism of Western thought in its crudest form: spirit and flesh, the supernatural and the natural, the religious and the secular, were sharply contrasted; it was not only that they never met—they diverged. It was impossible to extirpate the lower element; but it was possible, it was believed, to subdue it; the means were asceticism in the interior, and sacerdotal absolutism in the exterior, sphere. The Cluniac movement was a turning-point in the history of the papacy. Till then circumstances had played the greater part in its development, now the prominent factor was design; till then it had been, on the whole, an element of progress, now it became one of reaction; till then there had been no persistent spiritual force behind its growth, now such a force was supplied by the ascetic idea. This was reinforced by the dream of the theocracy. In the secular as in the religious province the pope was king of kings and lord of lords. Asceticism was a protest against much that was ignoble; the theocracy was often an assertion of law against lawless violence and of right against might. This is why both commanded the support of many excellent men. Celibacy was better than promiscuous licence; one distant pontiff was to be preferred to a hundred lesser but no less tyrannous popes nearer home. Unhappily, in neither case was the ideal even approached. Laxity made its way into the most austere communities. The wrong way to meet the evils of the time, the way of law, had been chosen; not so can spiritual forces be guided or controlled.

17. In the person of Gregory VII. (1073-85) the monasticism of Cluny reached its highest point. 'I have loved justice and hated iniquity, therefore I die in exile,' were his last words. It would be truer to say that ambition and unscrupulousness over-reach themselves, and that they that take the sword shall perish by the sword. For the moment the forces at his disposal broke the loose fabric of the empire. But their success was partial and passing; the claims of the Hildebrandine papacy remained in the illusive category of claims. But they captured the religious aspirations of the age. Mediæval pietism was, on a larger scale and under more favourable conditions, what the Romanticism of the post-revolution period was—a protest against the secular spirit. As such, each had its justifica-

tion; but each was exploited by the Church and the clergy for their own ends. In the 12th cent. the Church and the world were fused into one, the Church being the predominant factor. Each suffered in the process; and, though in each there was an undercurrent, it ran too far below the surface waters to be easily perceived. The movement culminated in the Crusades. These wars of religion present points of contact with the *jihād* of Islām; they display the same chivalry, the same fanaticism, the same subservience of spiritual forces to secular ends. But, if they served to fix the yoke of papal rule on Western Christendom, they served also to forge the weapon by which this rule was in the end overthrown. For they gave occasion to the rivalries in which the sentiment of nationality had its origin; and they opened up the forgotten East in which Greek civilization lay buried, but from which, in the shape of the Renaissance, it was to rise.

18. Meanwhile, however, the adroitness of the popes and the mystical tendencies of the time, which the popes were quick to use for their own purposes, combined to exalt the papacy. It bore no rival near the throne.

'Jacobus frater Domini . . . Petro non solum universam Ecclesiam sed totum reliquum gubernandum' (Innocent III., *Epistola ad Acerbum* [in *Mirbt, Quellen zur Gesch. des Papsttums*, p. 130]).

There were two swords, the spiritual and the temporal:

'Uterque est in potestate ecclesie spiritualis scilicet et materialis; sed is quidem pro ecclesia, illa vero ab ecclesia exercendus; ille sacerdotis, is manu regum et militum, sed ad nutum et patientiam sacerdotis' (Boniface VIII., *Unam Sanctam* [in *Mirbt*, p. 140]).

The whole was a strange medley of good and evil. The mystic fervour of a Bernard, the seraphic fire of a Francis of Assisi—both subversed the one end. The papacy has never wanted saints, and they have always bulked large in its foreground; but it is not by saints that the springs of its action have been manipulated.

19. The 13th cent. witnessed the victory of the papacy and of the forces which it controlled over the Hohenstauffen dynasty. It witnessed also a stirring of the life force of Europe. The age was still mediæval; but it could no longer be described as dark. Everywhere there was stir and movement; the day was at hand. The pope, it was felt, had grown in power and influence at the expense of the Church. The episcopate had become weakened by his immediate and universal jurisdiction; the mendicant orders formed an international force at his disposal—an inner Church within the Church. The allegiance of the bishops, often great officers of State in their respective countries, was divided; and it was not to Rome that the balance inclined. Now that its power had become omnipotence, the papacy, once a guiding and organizing force, had become a factor of disintegration. The Curia was a *sentina gentium*; Simon Magus, it was said, had replaced Peter in Peter's see. When the lofty theocracy planned by Hildebrand degenerated into a secular dominion exercised by worldly men for worldly ends, the conscience of mankind revolted. The ideal sovereign of Dante's *De Monarchia* is Henry of Luxemburg; to the spiritual Franciscans the Church was Babylon and the pope Antichrist; before the invective of Oliva and Gerard of Parma that of the Reformers pales. These impassioned protests took legal shape in the *Defensio Pacis* of Marsilio of Padua, and speculative in the nominalism of William of Ockham. The Great Schism emphasized the contrast between idea and fact. The Councils of Constance and Basel attempted to find a remedy. But conciliarism meant anarchy; men of affairs like Æneas Silvius (Pius II.) fell back in despair

upon the papacy, not as good, but as the lesser evil, since, after all, in one fashion or another the government of the Church had to be carried on. No one respected it; the mediæval dream of universal sovereignty had broken down. But it was, relatively and provisionally, a necessity of the situation; it divided Europe less than any alternative that could be proposed. And for another half century the crumbling structure hung together till with Luther the final shock came. It was final in this sense, that the Reformation once for all abolished both the theory and the fact of the mediæval papacy. Philip II. or Louis XIV. would have made as short work of the pretensions of an Innocent III. or a Boniface VIII. as any Protestant sovereign; the supremacy in temporal matters claimed by modern popes is disguised and indirect. The sphere of the Church's *magisterium* is now restricted to faith and morals—though the casuist would be a poor one who could not bring a controverted question, in whatever order, under one or other head. But the mediæval papacy took with a high hand what the modern takes surreptitiously: the latter frames syllogisms—sophistical ones, but still syllogisms; the former laid down and enforced law.

20. Compelled by the growth of the secular State-system, and still more by that of the secular consciousness, to abandon the visionary conception of a theocratic world-monarchy, the papacy fell back upon its position as an Italian principality. This became the key to its policy, the aim of which was the material extension and the political predominance of the Papal State. If the pope could control Italy, directly or indirectly, the rivalries of the powers, aided by the prestige of the Church, would do the rest.

'Was it not profoundly significant,' says Ranke (*Hist. of the Popes*, i. 54), 'that a pope should himself resolve to demolish the ancient basilica of St. Peter . . . and determine to erect a temple, planned after those of antiquity, on its site?'

It was the opening of a new order; the old had passed away. A notable lowering of aim and outlook accompanied it: an Innocent III. would have regarded the vices of Alexander VI. and the triumphs of Julius II. with equal disdain. The Renaissance afforded a diversion which fitted in both with the political designs and with the artistic tastes of the popes of the period, who were princes rather than pontiffs; but it was prematurely crushed by what F. X. Kraus calls 'die brutale Hispanisierung Italiens.'

'Hier fließt die Quelle des trüben Wassers, welche sich über das Land ausgoss, und hier ist der eigentliche Ausgangspunkt des modernen Dissidiums zwischen Papsttum und Italien' (*Cavour*, Mainz, 1902, p. 6).

As regarded Spain and France, the papacy lay between hammer and anvil. The choice fell on Spain; but the Spaniard was a hard master, and remained for generations the evil genius of Rome. For the Roman temper is not that of the enthusiast; it has a certain ease and lightness of touch. While Spain was the Prussia of the 16th cent.—fanatical, pedantic, heavy of hand—Spanish religion had the seriousness which Italian lacked. But the Spanish God was a Moloch; the fire without was kindled by the fire within. It was Spain that inspired the Counter-Reformation, and furnished its weapons of predilection—the rack, the stake, the cord.

21. The Reformation was a spiritual rather than an intellectual movement; it was the greatest moral and religious emancipation that the world has yet seen, or perhaps will ever see. It overthrew false gods—the false conscience of asceticism, and the false authority of the priesthood. Men's fetters were broken; what use they would make of their liberty they only could decide. The watchword of the counteracting movement was

repression, its aim the re-establishment of the captivity of mankind. Open scandals were discouraged; the Rome of the Counter-Reformation was outwardly decorous; the Council of Trent strengthened authority; what had been opinion became dogma; questions which had been open were closed. In the beginning there had been a desire on both sides—a desire of which Charles V. was representative—to avoid schism; the break-up of the historical Church was a misfortune to be avoided at all costs. Now policy and passion dictated another attitude; the object was not to comprehend, but to exclude. The Jesuits gave a veneer of scholarship to the movement; but it was a thin veneer. Petavius, who came a century later (1583–1652), was their one man of real learning.

22. The Inquisition (*q.v.*) was reorganized, the Index (*q.v.*, 1571) established. 'Sica destructa in omnes scriptores' was the judgment of Antonio Paleario, a contemporary. A net of falsehood was thrown over antiquity: the works even of Catholic writers were freely 'edited':

'Ita quidem ut in posterum non liceat affirmare ex lectione istorum auctorum quid illi senserint, sed quænam sit sententia Curiae Romanae, quæ omnia depravit . . . denique possumus certe statuere non dari librum integrum aut non fucatum' (Friedrich, *Gesch. des vatikanischen Konzils*, i. 17).

Orthodoxy itself was suspect; Baronius and Belarmine worked in chains. The period has been variously estimated. Such a life as that of Philip Neri, the 'Apostle of Rome,' shows that genuine spiritual work was done. But this good man was in no way representative of the religious world of the time; neither its temper nor its methods were his. More typical figures were Ignatius Loyola and Charles Borromeo—men of the letter, of rule, of organization, of the ecclesiastical machine. This was the element on which reliance was placed. The external was emphasized; even the better men of the reaction took it for granted that the interior accompanied, or would accompany, it; spirit was ignored. The Inquisition was the distinctive creation of the period.

It was 'peculiarly the weapon and peculiarly the work of the Popes. . . . It is the principal thing with which the papacy is identified,' says Lord Acton, 'and by which it must be judged.' Its principle, he holds, 'is murderous, and a man's opinion of the papacy is regulated and determined by his opinion about religious assassination' (*Letters of Lord Acton to Mary Gladstone*, ed. H. Paul, London, 1913, p. 147 f.).

Acton conceived the content of morality as less changing than in fact it is. We judge of actions by their relation not to an absolute standard, but to the best morality of their time. This, however, will not affect our judgment of the popes of this or any other age. For a divine teacher stands, as such, outside the category of relativity. Nor did either the best or even the average morality of the time sanction their cruelties.

23. This moral declension must be taken in connexion with the sectionalism of the post-Reformation Church. Pre- and post-Reformation Catholicism differ fundamentally. The former, in the West at least, was the Church; the latter is one of the Churches—one of the fragments into which the imposing structure of mediæval Christianity was shattered in the 16th cent.; and there is all the difference in the world between the two things. The mediæval Church contained many and conflicting elements in a state of imperfect equilibrium. At the Reformation the freer and more active escaped, those that were left entering into new combinations and taking on new forms. Post-Reformation Catholicism is Latin, not European; and, as the Latinizing process has become more acute, even the remains of the older freedom have been extruded: Jansenism, Gallicanism, Febronianism, in our own time Modernism—the iron uniformity of Rome has crushed them out, and they have disappeared. The continuity between

the Catholicism of the 13th cent. and that of the 20th is exterior—a thing of ritual, polity, and formula; the spiritual kinship of the great figures of the Middle Ages follows other and larger lines.

24. By 1630 the Counter-Reformation had spent itself; the papacy could reckon up its gains. These were considerable; not a little of the soil on which the Reformed doctrines had fallen was stony ground. Northern, or non-Romance, Europe was from the first Protestant; Southern, or Romance, Catholic; but there had been a debatable land between the two. In the middle of the 16th cent. this was to a great extent Protestant; early in the 17th it had been regained for the popes. This success was due partly to the superstition, more to the indifference, of the nations concerned, partly to the zeal and ability of the Jesuits, most of all to the persistent and ruthless persecution adopted as a policy by Church and State—the spiritual and the civil powers working in close alliance for a common end. But Catholicism was unable to extract the full profit from its victories; other motives, other interests, other combinations, came into play. In 1631 the two great Roman Catholic powers were in league with Protestants; Urban VIII's opposition to Gustavus Adolphus was lukewarm; Innocent XI. was the enemy of the House of Bourbon, and looked with at least mixed feelings on the English Revolution of 1688. The popes were secular princes, and concerned with the balance of power. Policy masqueraded in the cast-off clothes of religion; the world influenced the Church more than the Church the world.

25. The middle years of the 18th cent. witnessed a certain lowering of the temperature; the reasonableness, not to say the rationalism, of the age filtered into the Church. It was the age of Muratori, of Febronius, of Scipio de Ricci. Benedict XIV. (1740-58) and Clement XIV. (1769-75) were moderate rulers and enlightened pontiffs; and, though in Clement XIII. and Pius VI. the tide set in another direction, it is probable that, but for the French Revolution, an era of at least comparative conciliation would have begun. But violence breeds violence: with the Legitimist restoration which followed the fall of Napoleon a new era of the papacy, one of definite political and religious reaction, set in. De Maistre was its prophet, Lamennais its orator, Pius IX. its pope.

26. Pius VII. was personally moderate, and his minister Consalvi shared his temper. But, after the Restoration, the influence of the bigoted Paccia prevailed; and the next three popes were tools of Bourbon and Hapsburg absolutism, enemies of civil and religious liberty under every form. The *Mirari vos* of Gregory XVI. gave no uncertain sounds:

'Ex hoc putidissimo indifferetismo fonte absurda illa sicut ac erronea sententia seu potius deliramentum, asserendam esse ac vindicandam cuiuslibet libertatem conscientiae.'

The note of the modern papacy is here. This reaction reached its climax in Pius IX. (1846-78), under whom the temporal power disappeared. Its disappearance marked the end of an old and the beginning of a new order. The papacy was left free to develop itself as an ecclesiastical institution unhampered by the territorial considerations which limit secular sovereignty, however small its scale; and it is significant that the same year 1870 witnessed at once the definition of papal infallibility and the Italian occupation of Rome. Politically, the pope was influenced by stronger men than himself, in particular by Antonelli; but, on the religious side, his epileptic tendency was the key to the pontificate, during which the reputation of the Church and the papacy sank to its lowest ebb.

27. His theological aspirations were, however, more successful than his political. The triumph of Ultramontanism was complete, though those who

looked below the surface of things saw clearly enough that it was evanescent. What was gained in intension was lost in extension; but the centralizing and acute Romanizing of Catholicism was attained. It was no longer safe to express the Febronian or Gallican principles so commonly held, even in high places, in the preceding century. A series of condemnations directed against independent writers, culminating in a sharp attack on the historical school of Munich, warned thought off the territory of religion and its ill-defined hinterland. Local usages were suppressed, and Italian ritual and devotions introduced into the Cisalpine countries; from the shape of an arch to the cut of a vestment conformity to Roman usage was enforced. But under this surface of uniformity the ground was shifting; a conflict between the Church and the historical conscience of Europe was preparing, in which the latter, defeated for the moment, retired to sharpen its weapons and to plan a more dangerous and radical assault.

28. Resistance from within was crushed by sheer terrorism. The thought of being called to account by the Roman tribunals haunted Newman like an evil dream. It meant, he believed, his death. 'Others,' he wrote, 'have been killed before me' (W. Ward, *Life of John Henry Cardinal Newman*, London, 1912, i. 588). For, over and above the moral power of Rome over a timorous conscience, its administrative pressure is enormous; and the increasing separation between Church and State in the modern world enables this pressure to be persistently and ruthlessly applied. By a stroke of the pen a layman can be deprived of the use of the sacraments, a priest of his functions, a bishop of the special 'faculties' without which the administration of his diocese is impossible. There is a curious ingratitude in the attitude taken by the popes to what they call the Revolution; for only under the conditions brought about by this movement could their present despotism exist. Not for a moment would it have been tolerated by the old legitimist monarchies; these were 'in all causes and over all persons whether ecclesiastical or civil within their dominions supreme' (Bidding Prayer).

29. The most important acts of the pontificate, because, being dogmatic, they bound the Church to permanent and interior assent, were the definition of the Immaculate Conception of the Virgin (1854), the Syllabus (1864), and the Vatican definition of papal infallibility (1870). The first was rhetoric crystallized into dogma; the second was a declaration of war against modern society; the third was the formal completion of the theory of the papacy, the last stone of a fabric on which the labours of generations had been spent. The first met with little opposition; devotion silenced controversy. The second divided the Church into two opposing camps; and, while reason was on the Liberal, consistency was on the Ultramontane side. The logic of the ideas embodied in the Syllabus was beyond question; and these ideas were contained in premisses which the Liberal Catholics either admitted or were not prepared to dispute. The wisest and best men in the Church were on their side; but their attempts to explain away the papal pronouncements were thin, and left an impression of insincerity. The plea, e.g., that the document referred to an abstract and non-existent state of things cannot be taken seriously; the Syllabus was put forward as 'completens præcipuos nostrae ætatis errores.' A later theory maintained that papal utterances of this sort, though dogmatic in form, are disciplinary in substance, and call for exterior submission rather than interior assent. They express, i.e., the existing opinion of the governing body, and are to

a great extent matter of policy; in time they will in all probability be tacitly, if not avowedly, withdrawn. This theory gives a correct account of what, in many cases, actually happens; but its value is historical, not theological. It is impossible to reconcile it either with the terms of the documents or with any intelligible view of the authority of the pope or of the Church.

30. Both the name and, in its modern sense, the idea of infallibility were foreign to the primitive Church. In the first days believers spoke as they were moved by the Spirit, whose power attested the genuineness of their utterances. As time went on, the *charisma veritatis* was held to reside in the office-holders, and, after the rise of the monarchical episcopate, in the bishop, rather than in the community as a whole. Usage tends to harden into ritual, and opinion into dogma; the predominant position early acquired by the Roman Church caused a peculiar weight to be attached to its decisions, in matters both of discipline and of faith. The infallibility of the Roman bishop stood in close connexion with his supremacy; from the notion of a final court of appeal in matters of doctrine it was an easy step to that of the inerrancy of this court. The key to the controversy between the two schools which divided the Vatican Council was that they looked at the question from radically different points of view. To the one papal infallibility was an evident, almost a self-evident, theological conclusion; to the other it was in palpable contradiction with historical fact. The dispute, therefore, resolved itself into one concerning the relation of theology to history, and involved controversies unforeseen, far-reaching, and even now but partially solved. The position of the Munich divines was not always consistent. While refusing to consider the papacy and the Church as convertible terms, they admitted that the former rested on divine appointment. 'The Church from the first was founded upon it; and the Head of the Church ordained its type in the person of Peter.' This admission was their weak point. To the rising critical school, in and outside of Germany, it seemed unwarranted, while the Ultramontanes, stronger in logic than in history, argued that the notions of supremacy and infallibility were contained in that of the primacy, and that, being necessary to make it effective, they had been realized more and more clearly in the Church's consciousness as time went on. The forgeries, which they could not deny, had but stereotyped existing usage; and the plausible, if fallacious, argument that at least till the 16th cent. every considerable reform of the Church had been associated with an advance of the authority of Rome was on their side. See, further, art. INFALLIBILITY, vol. vii. p. 256.

31. The position of the minority bishops was difficult. They were men of greater distinction than their opponents; they had on their side the goodwill of their respective governments and the sympathies of the educated class. But, if history was with them, logic was against them. If Rome was what the current Catholic teaching, which they admitted and by which they were bound, made her, the proposed dogma followed. Again, whatever weight they carried as individuals, as a party they had neither discipline nor cohesion. Some were timid and half-hearted; others were open to the influence and intimidation which the Vatican had at its disposal, and used unscrupulously. Pius IX. had become the object of a more than Byzantine cultus. His flatterers adapted the Breviary hymns in his honour, substituting his name for that of the Deity; Louis Venillot classed him as an object of devotion with the Virgin and the consecrated Host ('Quirinus,'

Letters from Rome, Eng. tr., London, 1870, p. 14). On the other hand, Gratry denounced the dominant 'école d'erreurs et de mensonge' (F. Nielsen, *The Hist. of the Papacy in the sixteenth Century*, Eng. tr., London, 1906, ii. 334); Montalembert spoke of 'the idol in the Vatican' (*ib.*); Newman stigmatized the party identified with the *Univers* and the *Civiltà* as 'an aggressive and insolent faction,' and declared that, 'if it is God's Will that the Pope's Infallibility should be defined, then it is His blessed Will to throw back the times and moments of that triumph He has destined for His Kingdom' (Ward, *Life*, ii. 288 f.). But the opposition collapsed with the definition. Hefele frankly acknowledged himself unable to endure the consequences of resistance; Hohenlohe argued that, while a formula could be explained away or might become obsolete, an act of schism was irreparable, and of two evils chose what seemed to him the less (*Memoir of Prince Hohenlohe*, Eng. tr., London, 1906, ii. 10, 16, 49). It was by such reasonings as these that theologians reluctantly reconciled themselves to what had taken place. The weakness of the position had translated itself into weakness of moral fibre; 'inopportunism' was not inspiring; and did not inspire. To the world, even the Catholic world, at large the quarrel seemed one of the sacristy. The professionalizing of religion had been fatal to its actuality, and removed it from the cognizance and interest of the ordinary man. But, in the improbable event of a theological revision of the definition, it is probable that canonists would find a sufficient reason for holding the acts of the Council null and void in the pressure, moral and even material, exerted by the Vatican over its proceedings. The Council was not free.

32. The weapon forged in 1870 has not so far been used in the manner feared by some and hoped by others. No further positive definitions have been made, and no indisputably infallible pronouncements put forth by the Holy See. Rome has taught rather as if it were infallible than infallibly, though its dogmatic utterances have been more frequent and more detailed than before. When, however, it is asked whether these utterances are or are not infallible, it must be remembered that there are other ways of teaching infallibly than that laid down by the Vatican Council. In opening a new channel for infallibility the bishops did not block up those already existing; these remain as they were before. And, in connexion with such questions, e.g., as those raised by the Pontifical Acts of 1907, if the pope can speak infallibly and does not, it is difficult to reconcile this taciturn infallibility with the function of a divine teacher, while, if he cannot, both the old and the new infallibility—i.e. that existing before 1870 and that defined by the Council—are useless and illusory, names not things. There can be no doubt that, whatever Cisalpine theologians may object to the view, Rome regards such pronouncements as infallible; and that, given the premisses, Rome is right.

33. Leo XIII. (1878-1903) started with this great advantage: he succeeded Pius IX. He was no less impregnated with the Roman spirit; by temperament he was even more imperious; but he was a wise, a wary, and a strong man. From the first he made this felt. Caricaturists had represented Pius IX. as a querulous, scolding old woman. No one—and the fact is significant—ever represented Leo XIII. in this way; the personality of the pope imposed itself and carried weight. For a man of his years and calling, he possessed in an exceptional degree the instinct for fact. He was of the old order, and democracy was temperamentally uncongenial to him; but in his encyclicals on the

labour question, as in the encouragement given to the *Sillon* in France and the *Democrazia Cristiana* in Italy, he recognized and made advances to democracy. The critical movement lay beyond his personal horizon, but he would not condemn Modernism; he can scarcely have loved the French Republic, but only a few days before his death he assured the French ambassador that nothing, nothing (he repeated it emphatically), should make him break with France.

34. He could not change the course of events or direct their development on other than their own lines. But he made the best where others before and after him made the worst of the situation; he arrested the forces that made for dissolution; he encouraged the higher and repressed the lower elements in the vast and complex society with which he had to deal. He left the Church respected. Under his predecessor it had been, under his successor it was to become, a negligible quantity. While Leo lived, it was a power to be reckoned with, not only politically—that it must be for long under whatever government—but in thought and life. It attracted not only the static elements of the body politic, men—of whom Brunetière was a type—who valued unity and action more than speculation, but not a few of the progressives; it was thought possible to graft the methods and conclusions of modern science upon the venerable traditions of Catholicism, and so to make the centuries one. These aspirations took shape in Modernism (*q.v.*)—an attempt to naturalize criticism, scientific history, and the philosophy of spirit in the Church. It overlooked the distinctive feature of Catholicism—i.e. the peculiar development of the notion of authority embodied in the papacy, and the consequent relation of the Roman Church to the modern mind movement, which is that of a residuum left behind when the freer and saner elements of life have broken away. Were Catholicism to lose this character, it would no longer appeal to the social and cultural levels to which it is now so uniquely adapted; its sufficient reason would be gone. Leo XIII. saw this as clearly as his successor; but he saw what his successor did not see—that a Church incapable of movement or adaptation must be left behind by the advancing world, and that Modernism was a development of the human spirit which it was equally impossible for the papacy either to encourage or to suppress. He temporized, trusting to events, to the weight of custom, and to the preponderance of the fixed over the volatile elements in ecclesiastical Christianity—which perhaps was the wisest thing that a pope could do.

35. Pius X. (1903–14) was a man of another type. A peasant by birth, a country priest by training, he possessed at once the virtues and the defects of his order—its simplicity and its narrowness, its piety and its guile. Imposed by the Austrian veto on the Conclave, he was the pope of a reaction, which, like most reactions, carried those concerned in it very much farther than they wished or intended. The temper of Rome is not fanatical. Rather it is that of the permanent staff of a great public department. The men who compose the Curia are officials—cautious, painstaking, unimaginative. They distrusted Modernism, but they would have met it with other weapons than the *Lamentabili* and the encyclical *Pascendi*; they resented the policy of the French Republic, but they would not have lost France. Their disapproval of the pope and of his advisers was undisguised; and Benedict XV. (1914) is not only by temperament and by training unlike his predecessor; he was chosen with the express intention on the part of the electors of ensuring a pontificate which should be the antithesis of the last. His

distinctive virtue, it has been said, is silence. It is a relative virtue. For these are times when speech is called for; in the crisis of a world's history the infallible cannot with impunity be dumb. In the technical province of theology it may be otherwise; he may be silent because he has nothing to say. It is not to be expected that the acts of his predecessor will be reversed or his policy disavowed. But there will probably be less friction, things will be done with greater intelligence and decorum; Roman rather than Spanish methods will prevail. The laws by which the situation is governed are invariable. But they will now work normally. Their operation was abnormally stimulated under Pius X.

36. The history of the Roman Commonwealth is reproduced with singular fidelity in that of the Roman Church. In each we see a body of men strong rather than either intelligent or spiritually minded, indifferent to ideas, bent on material ends, prudent, tenacious, capable of the sacrifice of a present to a future good, and of private to public interest, rising first to prominence, then to domination, and founding a universal State. In each religion was employed as an instrument of policy. Its sanctions were not wanting to the empire; the imperial city and the Cæsars received divine honours; the Church covered secular designs under the disguise of piety; her aims, her weapons, were material; her wisdom was that of this world. Here, as there, decline followed close upon maturity. Some secret poison, it seemed, entered into the system. The governing class, on which the institution as a whole depended, lost the qualities of an oligarchy. Its tenacity became stubbornness, its distaste for ideas ignorance and ineptitude, its caution craft. And the world changed. New forces came into play; new elements made their appearance in society; success called for other qualities—intelligence, quickness, adaptability—than those which had been demanded in the past. The centre of gravity shifted from the empire to the new nations, and from the Church to the Churches. In each case the older body lingered, *informe, ingens*—in that of the Church it still lingers, and may linger long. But it lingers as a survival of a past world in a new order. Slowly detrition works upon it; slowly disintegration advances and cohesion decreases. It may disappear in the short agony of revolution; it may perish, more probably, in the long process of secular decay. In either case its destiny is the same.

* Venit summa dies et ineluctabile tempus
Dardaniæ: fuimus Troes: fuit Ilium, et Ingens
Gloria Teucorum' (Verg. *Æn.* ii. 324 ff.).

37. The Latin genius has great qualities—form, order, unity; but they are discounted by one radical incapacity—the incapacity for dealing with ideas. It conceives belief and religion in general primarily as regulation or enactment; its attitude to dogma is that of the State to law. 'Ecclesia non iudicat de internis': 'I do not ask you what you think; but you must obey.' This position is not, indeed, that of the pietist or of the theologian; but it is that of official Rome. And it is probable that the inevitable loosening of the dogmatic principle among Latin Christians will be brought about less by criticism—for which they have in general neither aptitude, equipment, nor inclination—than by the relaxation of the political and governmental tendencies of the Church under the pressure of the rising democracy, by the conception of the Church as spirit taking the place of that of the Church as law.

38. Meanwhile the papacy remains the most complete and consistent expression of the mediæval outlook on life. Hence its unflinching attraction to

the mediæval mind, where this survives, as it does on a larger scale than we suppose, among men and women of to-day. For it is possible to live in a period without being of it; the modern mind is exceptional even in the modern age. To how many the conceptions on which the life of our time is based—evidence, sequence, causality—are strange and unintelligible! The scientific foundation is wanting; they live fragmentarily, and, as it were, piecemeal, in a connected world. This accounts for the strange reversions to type, the fantastic religious and moral aberrations, differing little in form and less in substance from those of the Lower Empire, which crop up from time to time among us; much more for a reaction, passing indeed but, for the time being, noticeable, in favour of an institution so closely bound up with the past, so intimately associated with religion, founded on so long an experience and so close an observation of human nature as the papacy.

39. Round the dome of the Vatican basilica, where, it is believed, all that is mortal of the Prince of the Apostles rests, the words stand in golden letters, 'TU ES PETRUS ET SUPER HANC PETRAM AEDIFICABO ECCLESIAM MEAM.' It is not without significance that the title-deeds of the greatest of the Christian Churches should rest on a doubtful tradition, an uncertain relic, and words which in all probability were not spoken by Christ. So in human affairs truth and falsehood are mingled; so the colours of good and evil are mixed. But the connexion of religion with external things, however close, is accidental. They pass; it remains. The papacy is a fragment of the Middle Ages surviving in a later generation; and this is its refutation. For life is a stream; and, in religion as elsewhere, a return to the past is impossible; the past is a stage in the process that has been definitely left behind. Those who urge that this applies not only to Catholicism but to Christianity may be met with Richard Rothe's summing up of Church history (*Ausgewählte Schriften*, new ed., Halle, 1900, p. 137): 'Das Christentum ist das Allerveränderlichste; das ist sein besonderer Ruhm.' The papacy has, Christianity has not, arrested and excluded change.

ALFRED FAWKES.

PAPUANS.—It is generally accepted that the term 'Papuan' is derived from the Moluccan word *papúa* ('frizzly' or 'cnrly'), the word being used by the Moluccans to designate people with nlotrichous hair. Outside of Africa this type of hair is found among the Negritos, and among the inhabitants of New Guinea, the neighbouring islands, and Melanesia. Excluding the Negritos, we may regard the ulotrichi to have been the first inhabitants of western Oceania together with Australia and Tasmania, but other stocks have entered into this area and more or less hybridized the population, perhaps with the sole exception of Tasmania. The languages of New Guinea (which is sometimes termed Papua) fall into two groups—the more ancient and mostly un-related Papuan languages, and the Austronesian languages which belong to the great Austric linguistic family. The most primitive of these closely related languages are the Melanesian languages, which are spoken in

Melanesia and various parts of New Guinea, where, from other evidence, we can confidently assert that they are intrusive. The culture of the Papuan-speaking inhabitants of New Guinea is on the whole of lower grade than that of the Melanesian-speaking peoples. We may therefore take it for granted that, as a rule, the Papuan-speaking peoples more nearly represent the original stock, but they need not necessarily be assumed to be of pure 'Papuan' stock. Melanesian-speaking peoples may, in the same way, be regarded as of mixed origin. For the religion of the Papuan-speaking peoples of New Guinea see NEW GUINEA.

A. C. HADDON.

PARABLE (Introductory and Biblical).—1. Definition and general use.—The word 'parable' (*παραβολή*, from *παραβάλλειν*, 'to place alongside of') implies comparison, the placing of one thing alongside of another. As a figure of speech it is the assertion of similarity (in some respect) between an object or conception and some concrete object, action, or scene. When comparison is very simple—e.g., 'that man is like a lion'—it is called a simile. In a simile the likeness is openly asserted (by 'as' or 'like,' etc.). When the word denoting the comparison is omitted, the figure is called a metaphor—e.g., 'that man is a lion.' Metaphor is more complete when the subject as well as the predicate is metaphor (e.g., Nah 2¹¹). A sustained metaphor, i.e. an extended statement in which the significant terms all stand for something else, is an allegory. In this case the hearer or reader must make the proper substitutions in order to get its meaning. A simile may also be extended in various ways. Proverbs frequently imply comparison, often explicitly (e.g., Pr 10²³), more often, probably, implicitly. The concrete picture suggested in the proverb is mentally compared with the thought expressed, making it more real or impressive. Or the simile may be expanded into a story. If the action, in addition to being imagined, is unreal (animals conversing, etc.), it is usually called a fable. If the action is possible—if we can say that it might have happened—the story is usually called a parable. Usage in regard to these terms is not, however, strictly uniform. Parable is, etymologically, the generic term, and was so used in the LXX and consequently in the Gospels (see below).

In practice the distinction between simile and metaphor is easily disregarded (e.g., Dt 33²²), and it is very common for metaphor and plain speech to interchange in the same statement (e.g., Nah 2¹¹). Fable and parable, when told to apply to particular circumstances, often fall just short of being allegories, because the metaphorical meaning of the terms used is so plainly indicated. The famous fable of Stesichorus (Aristotle, *Rhetoric*, ii. 20) is a case in point. While it is useful and necessary to distinguish between simile and metaphor and to construct rhetorical rules against mixing figures, it is over-refinement to hold that, because an explanation of a simple simile is useless, therefore an explanation of an extended simile (the parable) is not to be allowed, although in the case of metaphor and allegory it is quite proper. In actual practice such rules are more often disregarded than known or obeyed. The use of simile and metaphor in all hortatory and argumentative discourse is so common and necessary as to need no remark. While the proverb, fable, parable, and allegory are especially adapted to moral and religious instruction, they hold a recognized place in world literature. Aristotle discusses example, parable,

and fable as *κοινὰ πλάττειν*, 'means of persuasion' (*Rhet.* ii. 20). Cicero recognizes allegory, and Quintilian praises speech in which similitudes, allegories, and metaphors (*translationes*) are mingled (see the ref. in La Grange, *RE* xviii. [1909] 202f.). The book of Proverbs, Æsop's *Fables*, Spenser's *Facrie Queene*, and Bunyan's *Pilgrim's Progress* are conspicuous examples of the universal use of this general type of discourse. Of the parable the one acknowledged master is Jesus of Nazareth, although Rabbinical tradition assigns that place to Hillel (c. 20 B.C.-A.D. 20).

2. The parable as used by Jesus.—The Gospel record of Jesus' teaching shows that He made an abundant, and in some respects remarkable, use of the parable (in the broad sense of the term). In doing this, however, He was not employing a new or only rarely used method involving a radical departure from the practices common to the Jewish schools of His day. Jesus was a Jew. His audience was composed almost exclusively of Jews. His and their culture was mainly, if not solely, that of Palestinian Judaism. It should be self-evident, therefore, that any conclusive study of Jesus' use of the parable must be based upon a knowledge of its use in contemporary Judaism and not upon the rules or practice of classical writers or authorities on rhetoric such as Aristotle, Quintilian, etc., with whose views there is not the slightest probability that Jesus had any acquaintance. The almost total neglect of this all-important principle on the part of Jülicher constitutes the very serious defect in his learned and suggestive work, the most influential of modern discussions of the subject.

1. HEBREW AND JEWISH USE.—(a) *The 'concrete' character of Hebrew and Jewish modes of expression.*—Every reader of the OT or of the later Jewish literature knows how rarely abstract terms are employed. The language is almost always figurative, and the terms concrete. Semitic discourse, as illustrated by the Hebrew and Jewish literature, abounds in suggestive or figurative use of the ordinary words for common objects. The concrete term suggests the more general or abstract idea. Argument is carried on by a succession of concrete pictures. There is frequent use of rhetorical questions. Personification is easy. Discourse developed in an orderly, logical fashion is almost unknown. To a Western mind, or judged by Greek standards, all this is rhetorically faulty, but evidently it was not so to the Semitic mind. The vivid, almost conversational, style of Semitic discourse easily allowed for 'mixed figures' to an extent intolerable to our standards.

(b) *The OT māsāl.*—The antecedent of the NT parable was undoubtedly the OT *māsāl*, usually rendered 'proverb.' The Heb. *מָשָׁל* expresses the idea of comparison, likeness, similitude (see F. H. W. Gesenius and F. Buhl, *Hebräisches und chaldäisches Handwörterbuch*, Leipzig, 1899; or F. Brown, S. R. Driver, and C. A. Briggs, *Hebrew and English Lexicon of OT*, Oxford, 1915, s.v.). The concrete act implied is the same as that of the Gr. *παράβολή* (the placing of one thing alongside of another, the concrete image or picture placed alongside of an idea).

In OT usage *māsāl* designates (1) a by-word (e.g., Dt 28³⁷, 1 K 9⁷); (2) a popular proverbial saying (e.g., 1 S 10¹², Ezk 12²²); (3) a type of prophetic utterance, such as Balaam's oracles (Nu 23 and 24, or Is 14¹²; cf. Mic 2¹, where 'lamentation' is a parallel term, or Hab 2⁶; 'taunt' or 'satire' and 'riddle' are parallel terms); (4) a poetic composition (e.g., Nu 21²⁷, Ps 49¹², 78²; cf. Job 27¹, 29¹); (5) sentences of wisdom such as abound in the book of Proverbs; the fundamental form of these is the couplet, but in chs. 1-9 and in the

latter part of the book a more extended application of the form occurs; (6) a similitude or parable (Ezk 17¹⁻¹⁰, 22³⁻⁴). In this case *hīdā* (הִידָא), 'riddle' or 'enigma,' is used conjointly with *māsāl*, probably to indicate that the parable needed explanation. In the light of this passage the omission of any special designation for Jotham's fable (Jg 9¹²), Nathan's parable (2 S 12¹⁻⁶), the parable in 2 S 14⁷⁻¹⁷, or that in Ec 9¹⁴⁻¹⁵ seems only accidental. *Māsāl* would be the proper term in such cases. Evidently *māsāl* was the generic term, designating various ways of making use of the fundamental principle of comparison which is always (explicitly or implicitly) involved. The frequent association of *māsāl* with *hīdā* ('riddle') shows that the *māsāl* was not always perfectly clear or easy of interpretation (cf. Pr 1⁶). Long study, mental discipline, and close application were necessary in order to grasp the full significance of a *māsāl*. The cases cited also show that the framer of a *māsāl*, or parable, did not hesitate about furnishing its explanation. In every case but one of the parables cited above the explanation or application is pointed out. Finally, it is evident that the theoretical distinction between parable or fable and allegory was a matter of little concern, if indeed known. Jotham's fable, Nathan's parable, Isaiah's vineyard *šēṭr* (Is 5¹⁻⁷), Ezekiel's parable-riddle—all have allegorical aspects. To employ a rhetorical form only in the strictest or purest manner was a rule unknown, apparently, to the OT speakers or writers.

(c) *The use of the parable in the apocryphal, apocalyptic, and early Rabbinical literature.*—In the extant apocryphal and apocalyptic literature (dating c. 200 B.C.-A.D. 100) the *māsāl* is well represented in Ecclesiasticus, which is modelled largely on Proverbs. Incidentally, the original Hebrew of this work, with its frequent anticipations of the later Rabbinical Hebrew, seems to indicate that the cultivation of this form of 'wisdom' was being continued by the *šōphērīm* (the early 'scribes') and their successors, the Rabbis of the NT period (note the suggestive words in 39²² and cf. Wis 8⁹). Since the *māsāl* in general and the parable in particular belong more naturally to oral than to written discourse, it is not surprising that the bulk of the apocryphal and apocalyptic literature, except Ecclesiasticus, consisting of books whose contents are anything but representative of oral instruction, conversation, or oratory, presents very few examples of the parable. 2 Es 4¹²⁻¹³, 9³⁵⁻³⁶ are interesting exceptions. The so-called parables or similitudes of *Éth. Enoch* (chs. 37-71) are hardly such in any real sense.

On the other hand, in the early Rabbinical literature, which, like the Gospels, represents oral instruction and discussion, the use of simile or comparison for purposes of illustration, proof, or otherwise is, as might be expected, very common. The number of similitudes and parables preserved in the Talmud as spoken by the Rabbis of the period approximately contemporary with the NT is much larger than is commonly supposed. Only recently have the Rabbinic parables been made the subject of scientific investigation. But sufficient has been done by Baggé, La Grange, and especially Fiebig to make it certain that hereafter the exegesis of the parables of Jesus must be based upon and start from a knowledge of the significance and use of the parable in the Rabbinical schools. The examples collected by Fiebig include similitudes, parables proper, fables, and partial allegories, as is the case with the Gospels. The use of the *māsāl* was so common that the full formula for introducing one, such as 'I will speak unto you a *māsāl* (מָשָׁל לָכֶם); unto what is the matter like? Unto—' was often abbreviated to a mere phrase, 'A parable (*māsāl*); like—,' or

even to the mere particle *le* ('to,' i.e. 'like unto'). The Rabbis were oblivious to the distinction between similitude, or parable, and metaphor, or allegory. In many Rabbinical parables parable and allegory are blended. The Rabbis also frequently, possibly usually, made the application or explained the meaning of their parables (as did the OT speakers and also Jesus, according to the Gospels). In this connexion it should be noted that in Rabbinic parables certain frequently-used terms had a well-understood metaphorical meaning—e.g., king=God, servants or workmen=men, feast=the future blessedness, etc. (cf. Fiebig, *Die Gleichnisreden Jesu*, p. 231 f.). Parables were commonly used by the Rabbis to explain OT texts. In general they were intended to illustrate or to make the meaning clear, but in many cases they were in themselves somewhat enigmatic and needed explanation. Very frequently Rabbinic parables are somewhat artificial, i.e. the pictures are not drawn from simple, actual, and common experience, but are artificially constructed and lack naturalness. They smack of the schoolroom rather than of the open air or of the experiences of everyday life. Finally, the Rabbinical parables often show the effects of transmission through oral tradition before being committed to writing. Variations as to form, substance, and circumstances are sometimes so great as almost to result in two parables instead of one.

ii. JESUS' OWN USE.—(a) *Extent and variety*.—In the Gospels the Gr. term *παραβολή* connotes (1) a popular proverb (e.g., Lk 4²³); (2) a simile somewhat extended (e.g., Mk 3^{23a}); (3) a teaching stated enigmatically (e.g., Mk 7¹⁵⁻¹⁷; cf. Mt 15¹¹⁻¹³, Lk 6³⁹); (4) a story or parable commonly so called (e.g., Mt 13, and often). Some of these are so perfectly complete that they can be taken out of their context and stand alone without altering a word (e.g., Lk 7⁴¹⁻⁴², or 15¹¹⁻³²). In other cases only a slight change would give the story perfect independence (e.g., Lk 15^{4a} or Mk 4^{31c}). In many cases the brief similitudes (2) might easily have been made into stories, but Jesus did not develop them to that extent.

There can be no doubt that *παραβολή* in our Greek Gospels represents (through the influence of the LXX) the Heb. *māshāl* or the Aramaic *mathlā* in the speech familiar to and used by Jesus. Its use for several forms of illustrative discourse was in perfect accord with Palestinian-Jewish usage.

The number of Jesus' sayings (in the Synoptics) that should be considered *παραβολαί* is variously estimated.

Jülicher's list comprises 53, which he divides into three classes: (a) *Gleichnisse* ('similitudes'), 28; (b) *Parabeln*, 21; and (c) *Beispielerszählungen* ('example-stories'), 4. Examples of class (a) are Mt 11¹⁶⁻¹⁹ or Mk 4²¹, and to class (c) he gives Lk 10²⁹⁻³⁷, 18¹⁴, 12¹⁶⁻²¹ and 16¹⁹⁻³¹. Bugge counts 71, divided into two classes: (a) *Parabelembleme* (short parabolic utterances), 36; and (b) *Parabeln*, 35. In addition he distinguishes 16 'paradoxes,' which he rightly considers a form of *māshāl* (e.g., Mt 5²⁰⁻³⁰, Lk 14²⁶, etc.). Fiebig makes four classes: (a) short proverbial sayings (e.g., Lk 4²³); (b) allegories (e.g., Mk 12¹⁵); (c) pure similitudes (*Gleichnisse*—e.g., Mk 13²⁴); and (d) a mixed form (allegory and similitude) which rests upon familiar metaphor. This class includes most of the parables commonly so called. Fiebig gives no enumeration. The widespread but less accurate enumeration of between 30 and 40 restricts the parable largely to the story form. Trench's list comprises 30.

In general Jesus used the parable in the same way as did the Rabbis, and what has been noted above as characteristic of their usage is, in the main, illustrative of His. With respect to all that was purely formal or technical in this matter, He was not original, but simply worked along very familiar lines. On the other hand, so far as our evidence goes, no Jewish Rabbi ever equalled Jesus in skill with the parable. The naturalness, lucidity, and the aptness of His parables place

them in a class by themselves—the perfect examples of their kind.

(b) *The problem as to Jesus' parables*.—Do the evangelists give us an accurate report regarding this matter? According to the Gospels, Jesus' parables were often but thinly veiled allegories: they were frequently explained by Him, and so as to indicate that they might contain several distinct teachings; they were not always clear, but sometimes purposely enigmatic; and, finally, in choosing to use parables, Jesus at times purposely veiled the naked truth from His hearers (cf. Mk 4¹⁰⁻¹²). Jülicher, adopting Aristotle's definition of a parable, that it is primarily a 'proof' and must be clear, has subjected the Gospels to a severe criticism with the result that their testimony is rejected as contrary to Jesus' mind and practice. He claims that in Jesus' actual use of them the parables were always clear, needed and received no extended explanation (*Deutung*), contained no allegorical element, and, in particular, the view stated in Mk 4¹⁰⁻¹² is the evangelist's, not that of Jesus. While Jülicher's view is admitted by many liberal critics to need some modification, it represents the generally prevalent 'critical' position. Lack of space forbids any extended discussion of this theory. Suffice it to say that the remarkably close agreement between the evangelists' representation of Jesus' use of the parable and that now known to have been the familiar and ordinary Rabbinic usage makes strongly for the credibility of the Gospel statements. In fact, Jülicher's theory is against all historical probability; it is simply impossible. Mk 4¹⁰⁻¹² (and parallels) is admittedly a difficult passage, but it cannot be explained away as an invention of the evangelist (whose own view was really different; cf. Mk 4^{31c}). It rests on sound tradition and is limited to the parables of 'the mystery of the kingdom.' It expresses Jesus' consciousness that His message of the Kingdom would not be understood, as was indicated long before in the experience of Isaiah.

(c) *The general purpose*.—Bugge suggests that Jesus told His parables in some cases as illustrations, in others as proving an argument. In general this is satisfactory, but, whether illustrative or argumentative, there was frequently a distinctively didactic purpose, so that the parable contained a positive teaching. Jülicher claims that a parable has properly but one idea—it must illustrate but one thought; its figures are parts of one picture which represents but one truth. This really useful rule, which operates to do away with the abuse of the parables through excessive allegorizing, is, however, contrary both to the well-known use of the parable in Jewish circles and to the Gospel report of Jesus' own interpretation of His parables (e.g., Mt 13^{35c}). While it is true that the main purpose of a parable is to convey one general idea, subordinate ideas may easily be suggested. The fact is, the purpose of each parable must be ascertained by itself, without the application of theoretical rhetorical principles, with which Jesus had no concern. The old question, whether the parables may be used as sources for doctrine, should then be answered affirmatively, but the interpretation should avoid all allegorical excess and should not go beyond the limits imposed by the *māshāl* itself and its legitimate use in the OT and early Judaism.

LITERATURE.—An exhaustive survey of nearly all the literature (ancient and modern, down to 1897) on Jesus' parables is given by A. Jülicher, *Die Gleichnisreden Jesu*², Tübingen, 1910 (at present the most comprehensive treatment of the whole subject). To this may be added: HDB and DCG, s.v.; C. A. Bugge, *Die Haupt-Parabeln Jesu*, Gießen, 1903, 1. (a thoughtful and searching criticism of Jülicher's position); G. H. Hubbard, *The Teachings of Jesus in Parables*, Boston, 1906; C. Koch, *Gleichnisse Jesu*, Gütersloh, 1910; H. Weinel, *Die Gleichnisse Jesu*, Leipzig, 1910 (a brief popular discussion

defending Jülicher's main position); P. La Grange, in *RB* xviii. (1909) 198-212, 342-387, xix. (1910) 5-35 (a comprehensive and judicious criticism of the position of Jülicher and Loisy); F. Fiebig, *Altjüdische Gleichnisse und die Gleichnisse Jesu*, Tübingen, 1904, *Die Gleichniserzählungen Jesu im Lichte der rabbinischen Gleichnisse des NT Zeitalters*, do. 1912 (a collection of Rabbinic parables together with a severe criticism of Jülicher and a defence of the genuineness of Jesus' parables against Arthur Drews); L. E. Browne, *The Parables of the Gospels in the Light of Modern Criticism* (Hulsean Prize Essay, 1912), Cambridge, 1913 (an able and helpful discussion); G. Murray, *Jesus and His Parables*, Edinburgh, 1914.

EDWARD E. NOURSE.

PARABLE (Ethnic).—The parable as such is not found in the lower culture, but analogies to it are not uncommon. Among the folk-tales of savages are many in which animals or inanimate things act and talk exactly like human beings. In this large class of tales no moral is drawn, but it was quite easy for such stories to become moral apologues with reference to human life and its conduct. Stories describing the wisdom of one animal or the folly of another were made to serve as warnings to men and women, the moral being either implied or expressed. Examples of this are found in many groups of savage *Märchen*—Hottentot, Zulu, American Indian, etc. In others some other moral is taught—e.g., kindness and the danger of ingratitude, as in some versions of the Puss in Boots story.¹ Other examples of savage stories told of human beings may quite probably have been told with some moral purpose. Indeed, many savage tales may have had no other purpose primarily. Examples of this might be found in stories of broken tabus and of the punishment involved to the tabu-breaker. They supported a custom and pointed a warning—'See what happened to So-and-so!'²

Many *Märchen* thus are or may become moral apologues or a kind of parable. Following the savage beast-stories into higher levels of culture, we find that, as in Buddhism, they have become actual parables, even 'literal incidents of sacred history.'³ The Buddhist *Jātakas* (lit. previous births of Buddha, but also stories about these) compose a sacred volume in which earlier Indian beast-stories have become moral tales of incidents in Buddha's previous existences—e.g., as an animal.⁴ These parabolic stories became so real to his followers that relics of these beast-existences survive. Other great collections of similar moral apologues, unconnected, however, with a theory of rebirth, are found in Indian collections—e.g., that of the *Pañchatantra*⁵—or in other Oriental or Arabic groups. In Europe similar collections are those of the Greek *Æsop* and the Roman *Phædrus*, and in later times the mediæval collections, bestiaries, and beast-epics.

T. Benfey traced all such Western tales to Buddhist sources. Later writers have shown that they might have wandered westwards from India in pre-Buddhist, perhaps even prehistoric, days, and there is always a possibility that many of them sprang from existing European beast-*Märchen*. No question is more debatable than the origin and transmission of popular tales.

Examples of the moral apologue are found in Jotham's story of the trees and their king in *Jg* 9¹⁷ and in Jehoshaphat's story of the thistle and the cedar (2 K 14⁹).

Strictly speaking, the apologue has for its characters animals or inanimate things acting as if they were human. The parable deals mainly with human characters, and the moral or spiritual lesson is drawn from their words or actions. It has thus in itself a probability in reality which the apologue has not, and the narrative of an actual incident

might easily become a parable. It was natural enough, however, for both apologue and parable to be commonly used by peoples fond of illustration, of 'truth embodied in a tale.' They show the power of a story, for moral teaching is always of more effect when thus illustrated, as preachers, ancient and modern, know well. Herodotus (i. 141) describes how Cyrus told the parabolic story of the piper and the fish to the suppliant Ionians and Æolians. Buddhism has always been fond of parables or similes, and many of these were used by Gautama himself. He taught by parables, 'for men of good understanding will generally readily enough catch the meaning of what is taught under the shape of a parable.'⁶ This is exemplified by the case of a blind man who denies the existence of things seen by others. The physician traces his blindness to former sinful actions, and, when he heals the man, the latter admits his mistake but learns that he is far from being wise. This illustrates spiritual blindness regarding the true law. The effect of Buddha's preaching is depicted by a variety of parabolic similes; e.g., the falling of rotten-stalked fruits when a tree is shaken, while those full of sap and strongly attached remain fixed, illustrates the wrong or right reception of the law.⁷ The Buddhist life is parabolically described. As an acrobat clears the ground before he shows his tricks, so good conduct is the basis of all good qualities.⁸ *Karma* is illustrated by the parable of various seeds producing all sorts of fruits.⁹ A parable resembling that of the Sower is found in the *Samyutta Nikāya* (xlii. 7). Generally Buddhist parables draw their lessons from incidents of agricultural life, from the life of kings, or from the stories of animals or plants.

An interesting parable is that of the king who rewarded his warriors in various ways, at last giving to the most deserving his crown jewel. So Buddha rewards those who struggle for him, keeping the gift of omniscience to the last.¹⁰

Buddha's disciples are said to have gained his forgiveness by quoting to him the parables which he himself had taught.¹¹

Some have traced the source of Christ's parabolic teaching to the Buddhist use of parables,¹² but, in view of the fact that parables might arise anywhere and already existed on Jewish soil, while the alleged resemblances, even in the case of the Parable of the Sower, are never too close, this is unlikely.

Taoist teachers also made use of parables or parabolic stories. Kwang-tze represents the opposition between Taoism and knowledge by the story of the rulers of the southern and northern oceans who wished to reward the ruler of chaos by equipping him with an equal number of orifices to those of man, since he possessed but one. The result was his death and passing away. So the nameless simplicity of the *Tao* passes away before knowledge. Other instances are found here and there in Taoist writings.¹³ Confucius also used parables, and is said to have illustrated the idea that where the will is not diverted from its object the spirit is concentrated by the story of a hunchback catching cicadas by means of intense application.¹⁴

Several parables occur in the *Qur'ān*, where it is said that 'God strikes out parables for men that haply they may be mindful.'¹⁵ Some of these, however, are more of the nature of similes. Somewhat nearer the true parable, though in an inverted sense, is the teaching that those who expend wealth in God's way are like a grain which produces seven ears, in each of which are a hundred

PARADISE.—See BLEST, ABODE OF THE.

PARADOX.—Analysis of the connotation of this term brings us into contact with some of the main conditions affecting human beliefs—ethical, religious, and scientific. A paradox is a statement or proposition which on the face of it is (a) apparently self-contradictory, or (b) apparently incredible or absurd, or at least marvellous, because contrary to common sense in some wider or narrower sense, or (especially) because contrary to 'generally received belief' on the subject in question. In all these usages the implication is not necessarily that the 'paradoxical' proposition is true—'true though it sounds false' (J. R. Seeley, *Introd. to Political Science*, London, 1896, p. 3)—but that the proposition is not necessarily false because of its 'paradoxical' character. Many times in the history of human thought a bold and happy paradox has been able to overthrow an old and accredited but erroneous belief, and in the course of time has become a universally accepted truth—'sometime a paradox, but now the time gives it proof' (*Hamlet*, III. i. 115). In this sense Hobbes defined a paradox as 'an opinion not yet generally received.'²

As a rhetorical figure, a paradox is a device for illuminating as with a sudden flash a neglected aspect of the subject or for clinching an argument with a memorable phrase. Some of the most instructive examples in literature occur in the NT;³ it is sufficient to refer to Mt 5²⁹ 10³⁹ 18⁹, Jn 12²⁴, 2 Co 6⁹.¹⁰ On the other hand, ethical and spiritual principles may become paradoxes of perpetual freshness because, while admitted as theoretically or ideally valid, they are never acted upon.

(a) A paradox, as an apparent self-contradiction, may have almost any degree of significance and value, from a mere statement of antithetical or conflicting qualities conjoined in the same instance up to a statement involving one or more of the ultimate 'antinomies' of human thought. At the former extreme stands such a merely suggestive statement as that of Leslie Stephen, 'While no man sets a higher value on truthfulness . . . than Johnson, no man could care less for the foundations of speculative truth' (*Hist. of English Thought in the Eighteenth Century*, London, 1881, II. 375), or that of J. S. Mill, 'The conscious ability to do without happiness gives the best prospect of realising such happiness as is attainable' (*Utilitarianism*, London, 1895, p. 23). At the other extreme we find that in certain ultimate problems we may have an apparent logical contradiction between two accepted principles or between conclusions drawn rightly from premisses which have equal claim to objective validity.⁴ The solution of such an antinomy, if solution is possible, consists in the discovery of a still more fundamental principle embracing and harmonizing the truths involved in the original antithetical propositions, which therefore are shown to have been one-sided and partial statements (cf. art. MEAN). The solution of the Kantian antinomies consists in showing that they are due to the tendency to view as absolutely true of things-in-themselves principles which apply only to phenomena.⁵

(b) By 'generally received belief' we mean the body of belief on a given subject held in a particular country or a particular age, or even by most men, always and everywhere. A. de Morgan (*A Budget of Paradoxes*, London, 1872, p. 4 ff.) observes

that in every age of the world there has been an established system opposed from time to time by isolated and dissenting reformers. The established system has sometimes fallen slowly and gradually; it has been either upset by the rising influence of some one man or sapped by gradual change of opinion in the many. It must be admitted, however, as R. Whately (*Rhetoric*, London, 1846, pt. I. ch. III. § 2) pointed out, that the fact of an opinion being 'generally received' implies a pre-occupation of the ground which must hold good until sufficient reason is adduced against it. To this extent there is a presumption against anything 'paradoxical'. The burden of proof lies with him who maintains it; an unsupported paradox can claim no attention. 'If a paradox is false, it should be censured on that ground, not for being new; if true, it is the more important for being a truth not generally admitted' (*ib.* p. 116). The history of science is partly the history of paradoxes becoming commonplaces—e.g., the motion of the earth, the possibility of the antipodes, the pressure of the atmosphere (as against the dogma, 'Nature abhors a vacuum'), the circulation of the blood, the facts of hypnotism, the electrical phenomena produced by Galvani's experiments. Contemporary science is enlarging indefinitely its conception of natural possibility; and hitherto unsuspected and unknown phenomena have emerged in regions of reality which might have been supposed exhaustively explored—e.g., the constituent gases of the atmosphere. Hence extreme caution is needed in deciding whether an alleged phenomenon hitherto unknown is possible or not. We have then 'paradoxes' which, notwithstanding their opposition to prevalent opinions, or even because of that opposition, express truths more or less important. But we have also paradoxical opinions, false or at least doubtful, imagined by their advocates in order to separate themselves from the rest of men, through vanity, ignorance, or a spirit of contradiction. Many of the 'paradoxes' put forward in the history of mathematics, pure and applied, and discussed by de Morgan (*op. cit.*), are of the latter kind.

Philosophers have for long disowned the authority of popular beliefs, even when wearing the imposing name of common sense. The significance of Plato's allegory of the cave¹ has a perpetual relevance from the point of view of speculative reason; the ideals which seem, at the best, unreal are the fundamental realities; and the 'hard facts,' when nothing else is seen, are of the nature of illusion. The source of the paradoxical character which speculative philosophy presents has its origin, in part, in the opposition between unity and multiplicity. Reason aspires to unity, and seeks to unify the obvious multiplicity and variety of the facts of experience, which none the less persist in their mutual differences and oppositions. The satisfaction of this speculative impulse requires more than analysis of the given facts; it requires their co-ordination under a type of higher unity given by pure reason. Involved in this is another source of paradox both in philosophical and in religious thought. For finite thinkers the interpretation of experience, and its rational unification, lead in certain cases to antinomies (see above) due to the conflict of partial truths whose reconciling principle is not yet discerned. Those who embrace both sides of the apparent contradiction are sometimes nearer the whole truth than those who sacrifice comprehensiveness to a one-sided consistency.

Truth may be—perhaps even in the end must be—paradoxical; but not every paradox is true. A healthy intellect may welcome and defend a paradox, not because it is contrary to current opinion, but because in spite of that it reveals an aspect of truth.

PARAGUAY.—The Indians of Paraguay are of heterogeneous stock, by far the most important element being the Guarani tribes of the Tupi-Guarani family. Most of these tribes have long been nominally Christianized, and it is only by research into the customs of the more remote peoples of the Chaco region, such as the Lengua, that any information can be gleaned regarding aboriginal religion. An important addition to our knowledge of the customs of the Indian tribes in times past is Dobrizhoffer's *Account of the Abipones*, which was written in Latin in 1784 and translated into English by a daughter of Samuel Taylor Coleridge in 1822.

Since then contributions regarding native religion have been scanty.

1. *Cosmogony*.—The Gnarani anciently held that in the beginning all nations were separately created 'just as they are now' and distributed in their present territories. When all other peoples had been formed, it occurred to the creator to make a Guarani man and woman, and, as he had already given away all the earth to the other nations, he ordered the *carcara* bird to tell them that for his part he was sorry that he had no more land to distribute, and commanded that the Guarani should always wander through the territory of other nations, killing all adult men, and adopting the women and children to augment their number. The Lengua of the Chaco believe that the creator is symbolized by a beetle which first made the material universe and then sent out from its hole in the earth a race of powerful supernatural beings who for a time ruled the universe. Afterwards he formed man and woman, who were sent into the world joined together like the Siamese twins. These were persecuted by their powerful predecessors, and appealed to the creative beetle to free them from their tyranny. He separated them and gave them power to propagate their species so that they might become numerous enough to withstand their enemies. The supernatural beings shortly afterwards became disembodied and constitute the race of spirits which torments mankind. After granting the request of the first progenitors of the race, the creative insect withdrew and left them to their own devices. It is remarkable that the Lengua Indians (who are cognate with the Gnarani) should regard the beetle as the creative agency, as did the Egyptians, who employed it as the symbol of Rā, the creative god. The fact that this insect dwells in the earth and throws up excretions of soil may account for the Paraguayan myth. The Lengua draw figures of the beetle on their gourds, as well as those of the *kilyikhama*, or evil agencies, of whom they live in constant fear.

2. *The hereafter*.—The Lengua Indians regard the soul as immortal. To them the hereafter (*pischischi*) is merely a shadowy extension of this life—a continuation of the present in a disembodied condition, which they consider will be dull and featureless. But they also believe that physical pain as well as physical pleasure will be absent from it. The shade of the departed (*aphangak*) closely resembles the man while alive. The clan and tribal life continue after death. On awaking to post-mortem conditions, the soul is dumbfounded, and for a month or so wanders about its village, until the funeral feast is held, after which it passes to the realms of the dead. As among other savages, the personal belongings and even the animals of the deceased are destroyed at his death, in order that they may prove useful to him in the after life. Certain of the Lengua Indians—and those the more intelligent—believe that the souls of the departed pass over in a north-westerly direction to what they term 'the cities of the dead.' Those cities are described as of large size with brick-built houses and regular streets. W. Brooke Grubb thinks that this points to an ancient Peruvian Incan connexion. Other Indians seem to hold the view that the dead inhabit a subterranean country—a view usually associated with or evolved from ideas connected with the custom of interment.

3. *The kilyikhama*.—There are various classes of *kilyikhama*, or evil spirits. There is a white *kilyikhama* who is supposed to be seen sailing over the waters of the river Chaco, and who is, perhaps, the most malignant of all. To protect themselves against him, the Indians wear a special head-dress

made of the feathers of a rare bird. A thieving spirit is regarded with some contempt. Hunting and agricultural *kilyikhamas* naturally exist and must be placated. Perhaps the most terrific form is that met with in forests, of a gigantic height and ghastly leanness, and with eyeballs flaming like firebrands. To meet him is supposed to herald instant death. The great desire of a *kilyikhama*, according to the natives, is to obtain possession of a human body into which he can materialize. For a further account of Guarani beliefs see art. BRAZIL.

LEWIS SPENCE.

PARASITISM.—When an organism lives in or on another of a different kind, derives its subsistence from the living material, digested food, secretions, or other products of its host, is inextricably bound up with its host or hosts in the continuance of its life, and is rather injurious than beneficial in its influence, we call it a parasite. Parasitism is a relation of dependence—always nutritive, often more—between the parasite and the host, but the inter-relation takes so many forms that absolutely precise definition is impossible, and it is not easy to separate off parasitism from other vital associations. A living creature habitually growing on a plant is called an epiphyte; it is not a parasite unless it gets its food in whole or in part from its bearer, as dodder and mistletoe do. A living creature growing on an animal is called epizotic, like a barnacle on a whale; it is not a parasite unless it gets its food in whole or in part from its bearer, as is the case with many 'fishlice' that are borne about by fishes. Symbiosis is a mutually beneficial internal partnership between two organisms of different kinds, such as is illustrated by the unicellular Algae which live within Radiolarians, some polyps, and a few worms. Commensalism is a mutually beneficial external partnership between two organisms of different kinds, such as is illustrated by some hermit-crabs which are always accompanied by sea-anemones. As parasites are occasionally of some use to their hosts, the difficulty of rigidly separating parasitism from symbiosis and commensalism is obvious. The unborn mammalian offspring within the womb of the mother is sometimes spoken of as though it were a parasite, but this is an unfortunate usage. Apart from the fact that the concept of parasitism is clearer when it is not applied to creatures of the same flesh and blood, it is the normal function of the mother to nourish and foster her unborn offspring; she is adapted to it as no host ever is to its parasite; and, though the offspring is often a severe drain on the mother, there is good reason to believe that the benefit is not altogether one-sided.

It is not the purpose of this article to enter into a general discussion of parasitism, but rather to suggest how it may be seen in its proper perspective in our outlook on animate nature. First of all, however, a number of general facts must be briefly stated.

(1) Most animals and most of the higher plants have their parasites, but some types, such as omnivorous animals, are much more abundantly parasitized than others. The dog has over forty parasites, and both man and the pig have more. One of the European oaks harbours no fewer than ninety-nine different kinds of gall-flies. In many cases the association of parasite and host is very specific, that is to say, many a parasite is known to occur in only one definite kind of host, and many hosts are unsusceptible to parasites not very

different from those which they harbour. There are, however, some very cosmopolitan parasites that occur in many hosts.

(2) While the number of different kinds of parasites is enormous, there are evidently some types of organization which are not compatible with a parasitic mode of life. Thus among backboneed animals the only parasites are the hags (*Myxinoids*), and they are not thoroughgoing. There are very few parasitic Molluscs or Coelenterates, and there are no parasitic Echinoderms. Similarly, in the vegetable kingdom the great majority of parasites are members of the class of Fungi and relatively few are flowering plants.

(3) There are many grades of parasites, from superficial ectoparasites, which often retain great activity, to intimate endoparasites, which sometimes become almost part of their host. There are partial parasites, which retain independence during a portion of their life, and total parasites, which pass from host to host and are never free.

(4) Corresponding to the degree of the parasitism is the degeneration of the parasite, which is sometimes witnessed in the individual lifetime—*e.g.*, in many crustaceans where the young stages are free-living—and is sometimes inferred by comparing the parasite with related types. The retrogression affects especially the nervous, sensory, muscular, and alimentary systems. The reproductive system is often highly developed, and the multiplication very prolific, which may be associated with the fact that the parasite is often living without much exertion, with abundance of stimulating food at its disposal, and also with the fact that the chances of death are often enormous. The life-histories are frequently intricate and full of risks, and those types which varied in the direction of prolific reproduction have survived. In a number of cases, such as the liver-fluke and some tapeworms, there is self-fertilization, or autogamy, which is of very rare occurrence among animals.

(5) Thoroughgoing parasites are often very effectively adapted to the conditions of their life. Thus a tapeworm in the intestine of its host absorbs food by the whole surface of its body; it has muscular adhesive suckers and sometimes attaching hooks; it can thrive with a minimum of oxygen; it has a mysterious 'anti-body' which preserves it from being digested by its host; and it is exceedingly prolific.

(6) The effect of the parasite on the host is of course very varied. It may be quite trivial or even slightly beneficial; it may mean the disablement and death of the host. Some parasitic worms give off toxic substances and some give rise to serious disturbance by straying from their usual habitat—*e.g.*, by getting into the vermiform appendix. Of an unusual type is the life-history of the sturdy-worm of the sheep, which develops in the brain and spinal cord; and still more remarkable are those parasitic crustaceans, such as *Sacculina*, which infest crabs and destroy the reproductive organs. The constitution of the castrated male crab is profoundly changed towards the female type, a small ovary may develop, the shape of the abdomen approximates to that of the female, and the protruding parasite is actually guarded by its bearer as if it were a bunch of eggs. In general it may be said that, unless the host be weakly and the parasites become very numerous, the effect of the parasite upon the host is relatively unimportant, partly because of the defensive adaptability of the living organism, and partly because very aggressive parasites have probably eliminated themselves from time to time by killing their hosts, which it is not the parasites' interest to do. Occasionally there are striking structural reactions

of the host in response to the stimulus of the parasites. Thus galls grow round about many parasites and sometimes restrict their injuriousness, and some kinds of pearls of fine quality are deposited in various bivalve molluscs around the larvæ of parasitic flukes and tapeworms.

(7) We are inclined to place by themselves cases like virulent bacteria (*e.g.*, the plague bacillus) and virulent Protozoa (*e.g.*, the trypanosome of sleeping-sickness), which are rapidly fatal when transferred to a new kind of host, such as man, which has no constitutional defences against them. These microbes are not in any special way adapted to parasitic life; they might as well be called predatory. Similarly, it does not seem to us that parasitism is well illustrated by cases like that of the ichneumon-larvæ which destroy so many caterpillars. The larvæ develop from eggs which the mother ichneumon-fly has laid in the caterpillar; they feed on the tissues of the caterpillar and pass into a new phase of life after they have killed their host. It does not seem to matter much whether a caterpillar is devoured from the inside or from the outside, and the ichneumon-larvæ are as much beasts of prey as parasites. In any case, such instances illustrate the difficulty already referred to of defining off parasitism in a hard and fast way from some of the other vital inter-organismal associations. Massart and Vandervelde, in their essay on *Parasitism, Organic and Social*, have distinguished nutritive, exploitative or predatory, and mimetic parasitism, and this exceedingly wide conception of the inter-relation has enabled them to suggest a series of very interesting parallels between parasitism in the realm of organisms and in human society. The ideal is plainly the replacement of parasitism by symbiosis.

The number of parasites is legion, and parasitism, though not usually obtrusive, is a common fact of life. To many minds it seems an ugly blot on the fine script of nature, and its repulsiveness must be considered. To begin with, we must see parasitism in its most general setting.

(a) In many cases, probably, it is initiated as one of the responses which living creatures make to environing limitations and difficulties. Individual organisms hard beset may try to survive within a larger organism which has swallowed them, or may discover in their searchings what is to them simply a new world—inside or upon the surface of another organism. When a parasitic relationship has been thoroughly established, it is no longer part of the struggle for existence, but the endeavours which led to its being initiated and perfected were; and, though the parasitism may be spoken of as an evasion of the struggle for existence, it cannot be separated off from any other condition of safety and abundance which organisms may secure.

(b) We have already referred to the difficulty of drawing a dividing line between some parasites and some symbions, and parasitism must be looked upon as an expression of the wide-spread tendency in animate nature to establish inter-relations between organisms, to link lives together, to weave a web of life. It may sometimes be repulsive, but it is to be seen as part of a complex systematization or correlation that has been evolved in the course of ages and is of great importance in the process of natural selection.

(c) A third general fact is that parasites often play a part as eliminative agents, and may work towards conservation as well as wastefully. When a parasite enters or attacks a new kind of host—neither being in any way accustomed to the other—one of three things may happen: the parasite may die, being, for instance, digested, as often

happens with small nematode worms which are swallowed by man in carelessly prepared or imperfectly cooked food; or the host may die, having no adaptive resistance to the intruder, as is very likely to happen when man is infected by the trypanosome of sleeping-sickness and is out of reach of medical aid; or the parasite and the host may establish a viable inter-relation. On the one hand, there is often wasteful elimination of newcomers who come within the range of a parasite which does not do much harm to its wonted hosts, as when horses and cattle enter the tsetse fly belt in Africa and are killed off by the disease called 'nagana,' or when an old population of men or animals has introduced into its midst a parasite to which they are physiologically non-resistant: witness the dire effects of the introduction of some microbic diseases, such as syphilis, among uncivilized peoples. On the other hand, parasites exert another kind of eliminating influence which is apt to be overlooked, namely that they often kill off weakly individuals among their wonted hosts. It must be clearly understood that in an enormous number of cases the parasites do not greatly prejudice their hosts—a *modus vivendi* has been established. The thousands of nematode worms in the food-canal of many a healthy grouse seem to be unimportant. But, if the host be of a weakly constitution or enfeebled by lack of food, the parasites hitherto trivial may get the upper hand and bring about the death of the host. In some cases, we submit, this sifting will tend to conserve racial health. Thus grouse-disease may be the nemesis of an antecedent toleration of weakly birds. Similarly it should be noticed that an exaggerated parasitoid infestation not infrequently occurring on or in organisms of which man has taken charge may be due to the removal of the cultivated plants or domesticated animals from localities where their parasites find some natural check, or may be the result of over-feeding, over-crowding, and the like. Thus, to give one example, a scale insect of trees may be rare in natural conditions and very common under cultivation, the close setting of the trees favouring its increase. But this is man's affair, not nature's.

Certain less important considerations may be briefly stated.

(d) Some parasites are in part beneficial, and approximate to symbions. Thus there are beautiful infusorians in the stomach of herbivores like horse and cow, which seem to help in the breaking down of the food. Many external parasites assist in keeping the surface of the body clean.

(e) In not a few cases—e.g., among crustaceans—the parasitism is connected with the continuance of the race, for it is confined to the mother-animals, the males and young females being free-living.

(f) While many parasites exhibit degeneration and simply lie or float in the food afforded by the host, there are many others, such as trypanosomes in the blood, which live an exceedingly active life, exerting themselves as much as many a free-living creature. Moreover, the frequently passive adult stage may be preceded by a very energetic free-living juvenile stage.

(g) The moral and æsthetic repulsion to a parasitic mode of life is in part justified by the fact that the parasite may cease to do anything for itself, may become a passively absorbent mass of tissue, may lose by degeneration all that makes life worth living (nervous, sensory, and muscular functions), and may become positively ugly. But it should be remembered that there is reason to be repelled by the extremes in other modes of life—e.g., by animals which kill much more than they can eat; that parasites are not always sluggish or

degenerate; and that their host is not to them what it is to us, but must often be simply a vast moving territory which admits of convenient exploitation.

J. ARTHUR THOMSON.

PĀRASNĀTH.—Pārasnāth is the name of a hill and sacred place of Jain pilgrimage, situated in the Hazāribāgh District of Chotā Nāgpur in the province of Bihār and Orissa; lat. 23° 58' N.; long. 86° 8' E. The mountain consists of a central narrow ridge, with many rocky peaks, irregular in shape, but assuming the general configuration of a crescent, rising abruptly to the height of 4480 feet. It is one of the sacred places (*ṭirtha*) of the Jains, known to them as Sameta Sikhiara, 'conjoined peak,' and ranking with their other sacred places, Sātruñjaya, Gīrnār, Chāndrapurī, and Pāwā. Here twenty of the Jinās are said to have attained *nirvāṇa*. It takes its name from Pārsvanātha, the 23rd *ṭirthakara*, and was doubtless, according to the custom of the Jains, selected by them as one of their holy places on account of its isolated situation, which commended itself to the retiring habits of the sect, and the beauty of the scenery.

When we ascend about three miles from Madhuban, a sudden turn in the road brings the Jain temples into view.

'Seen from this point, three tiers of temples rise one above the other, showing some fifteen shining white domes, each surmounted by bright brass pinnacles, and in the case of the Svetāmbara [the white-robed section] temples, by red and yellow flags. The whole forms a dazzling white mass of masonry, set against the huge bulk of Pārasnāth dark in shadow' (Risley, in *Statistical Account of Bengal*, xvi. 219).

There are three important temples, each consisting of an inner and an outer quadrangle, the outer built like a cloister with cells for pilgrims and out-houses. Over the gate of the inner quadrangle is a musicians' gallery, where flutes and drums are played at daybreak, 8 a.m., noon, and sunset. The rest of the inner enclosure is occupied by various shrines with foliated domes, containing images of the *ṭirthakaras*. On the summit of these domes the Svetāmbara sect erect a pole with a short cross-bar, surmounted by three brass knobs, and also fly a red or yellow flag to indicate that Pārsvanātha is at home. No such symbol is used by the Digambara, or 'sky-clad,' section. In recent times no European has been allowed to enter the temples; but a visitor who examined them in 1827 found the image of Pārsvanātha to represent the saint sitting naked in the attitude of meditation, his head shielded by the snake which is his special emblem. The whole mountain is covered with other shrines, which the pilgrim, at some risk to life and limb, must visit. This rite is followed by adoration at the temple of Pārsvanātha, and by the circuit (*pradakṣina*) of the holy site, involving a journey of about 30 miles.

PARIAH.—Pariah, properly Paraiyan, is the name of a low caste in S. India which has obtained some celebrity owing to its being considered typical

of the depressed castes in India. The mistaken use of the term 'Pariah' as being applicable to the whole body of the lowest castes, or even to out-castes, became generally known in Europe through P. Sonnerat's *Voyage* (Paris, 1782), G. T. F. Raynal's *Hist. des établissements et du commerce des Européens dans les deux Indes* (Geneva, 1780), and other French works of the last quarter of the 18th century. The natives of India never designate the low castes of other parts of the country as Pariahs, nor are the Paraiyans of the present day in Madras regarded as the lowest of the low. They constitute the great agricultural labourer caste of the Tamil country, their number amounting to 2,448,295, according to the last census (1911); and they are not lacking in natural intelligence, as is shown by the fact that most of the domestic servants of Europeans in the Madras Presidency are recruited from this caste. It is from their coming into contact with Europeans more habitually than any similar caste that the name Pariah has been held to apply to low castes in general; but there are several castes in the Tamil country lower than Pariahs—e.g., the caste of shoemakers. Moreover, all traditions represent the Pariahs or Paraiyans as a caste which has come down in the world, and they have retained some old privileges. Thus the lower village offices are, in the majority of Madras villages, held by persons of the Paraiyan caste. At the annual festival of the goddess of the Black Town of Madras a Paraiyan is chosen to represent the bridegroom of the goddess. The Paraiyans seem to be of Dravidian origin, and their name is derived (according to R. Caldwell, *A Comparative Grammar of the Dravidian Languages*, London, 1895) from the Tamil word *parai*, 'a drum,' the Paraiyans being the class which furnishes the drummers, especially at festivals. Paraiyans bury their dead; they do not burn them like most other Hindus.

In the times of native rule in S. India the Pariahs used to be treated with great harshness. J. A. Dubois (in India from 1792 to 1823) observes that the Pariahs 'are looked upon as slaves by other castes. . . . Hardly anywhere are they allowed to cultivate the soil for their own benefit, but are obliged to hire themselves out to the other castes, who in return for a minimum wage exact the hardest tasks from them. Furthermore, their masters may beat them at pleasure. . . . They live in hopeless poverty, and the greater number lack sufficient means to procure even the coarsest clothing. They go about almost naked, or at best clothed in the most hideous rags. . . . The contempt and aversion with which the other castes—and particularly the Brahmins—regard these unfortunate people are carried to such an excess that in many places their presence, or even their foot-prints, are considered sufficient to defile the whole neighbourhood. They are forbidden to cross a street in which Brahmins are living. . . . Any one who has been touched, whether inadvertently or purposely, by a Pariah is defiled by that single act, and may hold no communication with any person whatsoever until he has been purified by bathing. . . . It would be contamination to eat with any members of this class; to touch food prepared by them, or even to drink water which they have drawn; to use an earthen vessel which they have held in their hands; to set foot inside one of their houses, or to allow them to enter houses other than their own' (*Hindu Manners, Customs, and Ceremonies*, pp. 49-51). Though the use of the name Pariah is confined to the Tamil country in S. India, the depressed castes whose touch causes pollution are, no doubt, a highly characteristic feature of the caste system all over India. Thus in Kashmir the Meghis, Doms, and other low

castes are still compelled as of old to reside out of the village. They have wells of their own, and must make a sign when they happen to meet Hindus of high caste, or entirely shun their presence. In the N.W. Provinces a number of castes, such as the Dhobi, or washerman caste, the Rangrez, or dyer caste, and the Raysaz, or painter caste, are considered untouchable—i.e., if a member of one of the castes included in this group touches a man of high caste, the latter is bound to wash himself. The depressed races of Gujarāt used to wear a horn as their distinguishing mark. In the ancient caste system of Manu the most degraded out-castes were men called Chandālas. They were not allowed to live in villages and towns or to have any fixed abode. They could possess no other wealth than dogs and donkeys, the two most despicable animals, and had to eat their food from broken dishes, and to wear the garments of the dead. Their transactions had to be among themselves only, and their marriages with their equals. The execution of criminals was assigned to them as their special function, and they were to be distinguished by marks at the king's command, such as branding on the forehead, so as to be recognizable from a distance. At the present day the name Chandāl is throughout India used only in abuse, and is not acknowledged by any caste as its peculiar designation. There exists, however, in Eastern Bengal a non-Aryan caste, engaged for the most part in boating and cultivation, who are generally called Chandāls. At village festivals the Chandāl is obliged to put off his shoes before he sits down in the assembly, and the ordinary washermen and barbers decline to serve him. The Śūdras, the serfs of Indian antiquity, were also a depressed race, of alien origin probably, and are still excluded from the privilege of wearing the sacred thread of the higher castes; but they were at least allowed to enter the outer circles of the Aryan system, and include many highly respectable castes nowadays.

PAROUSIA.—Parousia is the transliteration of a Greek noun (*παρουσία*) which has become a technical term in Christian eschatology (*ERE* v. 383^a) for the second coming or the return of Jesus Christ. The Greek word meant both 'arrival' and 'presence,' and in the papyri it denotes especially the visit of an official or a monarch.¹ In neither sense does it occur in the Greek Bible as a religious term; even the later Jewish writings hardly ever use it of God or of Messiah, preferring *ἐπισκοπή* when they had occasion to speak of the Second Coming for judgment. The primitive Christians avoided *ἐπισκοπή*.² It occurs as a later variant in the eschatological text of 1 P 5⁶ (the allusion in 1 P 2¹² is probably not eschatological), but *παρουσία* was the favourite term for the reappearance of Christ at the end. Paul uses it once (2 Th 2⁹) even of the appearance of Christ's supernatural rival—so fixed had the eschatological sense of the word become (cf. the epistle of the churches of Lyons and Vienne [Eus. *HE* v. 1. 5]). Yet it is absent from the pages of the most eschatological book in the NT, the Apocalypse of John, and it

¹ Cf. G. Milligan, *St. Paul's Epistles to the Thessalonians*, London, 1903, pp. 145-148.

² As a rule. There were exceptions, however; Polykrates (Eus. *HE* v. 24), e.g., writes that Melito of Sardis lies 'waiting for the visitation from heaven' (*ἡνὶ καὶ τῶν οὐρανῶν ἐπισκοπῇ*), possibly with a slight play on the term *ἐπισκοπὴ*. He has just used *παρουσία* in the same eschatological sense.

appears within the Gospels only in Matthew's version of the small apocalypse (Mt 24^{27, 28, 29}), where it denotes the final catastrophe at the return of the Son of Man. Paul's employment of it (cf. *ERE* v. 386) appears to have popularized it in the Christian vocabulary, however. The term *ἔσχατος* never flourished in this connexion (cf. *Iren.* i. 10; *Acta Thomæ*, 28); *παρουσία* became more and more the technical religious word for the Second Coming.

The early Christian use of the Second Coming differed from the Jewish in two respects: it was applied to Christ, not to God,¹ and it was 'second' as opposed to the 'first' coming at the Incarnation, whereas for Judaism the 'first' coming meant the creation of the world.² On the lips of the Greek-speaking Christians in the primitive Church *παρουσία* was almost exclusively applied to the return of Christ in glory, in order to complete the Messianic work and usher in the Final Judgment. But by the time of Ignatius (cf. *Phil.* 9) it was being used of the first coming³ of the Lord at the Incarnation (cf. *Clem. Alex. Strom.* i. 5, etc.), and half a century later Justin Martyr explicitly mentions the two Parousias, in the past and in the future (*Dial.* 14, 40, 49, *Apol.* i. 52, etc.). The more general sense of *παρουσία*, as equivalent to the presence of God in life, was not forgotten, however, and the twofold sense of the term from this point of view may be illustrated from the 2nd (3rd?) cent. *Epistle to Diognetus* (7):

'He [God] will send him [Christ] in judgment, and who shall endure his presence [a reminiscence of Mal 3?]. . . . You see them [Christians] thrown to the wild beasts, that they may deny their Lord, and yet not overcome. Do you not see that the more of them are punished, as many others abound? This does not look like human work; it is God's power, proofs of His presence.'

Here the eschatological sense of *παρουσία* is at once followed by the usage of the term as an equivalent for the divine presence; God's presence is visibly shown in the heroic endurance of the martyrs, and the end is to bring a judgment which is Christ's *παρουσία*, or visitation.

The latter conviction was enshrined in the creeds and confessions, but its influence on life varied. History shows how the relative position of the eschatological hope (cf. *ERE* v. 387 ff.), which either receded or assumed special prominence from time to time, helped to accentuate the present or the future aspect of the divine Parousia in the theology of the later Church. The influence of the Fourth Gospel, accelerated by the emphasis upon the real presence of Christ in the Eucharist or in the heart of the individual believer, laid stress upon the conception of the Parousia as the immanent presence of the divine being; both the sacramental and the mystical phases of doctrine, which often combine, forwarded this tendency. On the other hand, from Montanism (*q.v.*) onwards (cf. *ERE* v. 317 ff.), throughout the history of the Church there has been a succession of more or less eccentric (cf. *ERE* i. 177*, iii. 781) outbreaks of the eschatological belief in an imminent Parousia of Christ, which have generally fixed the end within their own generation,⁴ arguing as a rule from Biblical passages (see *ESCHATOLOGY*, § 15), literally interpreted.⁵

An eloquent, daring expression of this faith will be found in George Giffillan's peroration to his *Bards of the Bible* (3 Edinburgh, 1852, p. 336 f.), where he declares that the immediate advent of Christ, God's Son, is the only hope for the preservation of the Bible, God's Word. 'We are fast approaching the position of the Grecians on the plains of Troy. Our enemies are pressing us hard on the field, or from the Ida of the ideal philosophy throwing out incessant volleys. There are discussions, distrust, disaffection among ourselves. Our standard still floats intact, but our standard-bearers are fainting. Meanwhile our Achilles is retired from us. But just as when the Grecian distress deepened to its darkest, when Patroclus the "forerunner" had fallen, when men and gods had driven them to the very verge of the sea, Achilles knew his time was come, started up, sent before him his terrible voice, and his more terrible eye, and turned straightway the tide of battle; so do we expect that our increasing dangers and multiplying foes, that the thousand-fold might that seems rushing on us, is a token that aid is coming, and that our Achilles shall "no more be silent but speak out," shall lift his "bow, his thunder, his almighty arm"—"shall take unto him his great power and reign."

The term naturally enters even into modern religious speculations which attempt to reconcile the Biblical language of the eschatological sections in the NT with the course of history and the present situation. These (cf. the literature quoted in *HDB* iii. 674-680; S. D. F. Salmond, *The Christian Doctrine of Immortality*, Edinburgh, 1901, p. 244 f.) either define the Parousia as having occurred at Pentecost or the fall of Jerusalem or identify it not with any event in the past or the future, but with the general dispensation of the divine presence among men.

LITERATURE.—In addition to the references in the article, the following studies may be noted: W. P. Lyon, in J. Kitt's *Cyclopædia of Biblical Literature*, Edinburgh, 1870, i. 75-77; H. T. Grieron, in *ExpT* xix. [1907] 165 f.; F. W. Worsley, *The Apocalypse of Jesus*, London, 1912, pp. 142-157; J. Agar Beet, *The Last Things*, do. 1913; J. Davidson, *The Second Coming*, do. 1913; R. W. B. Moore, *The Nearness of our Lord's Return*, do. 1913; G. E. Hill, *Apocalyptic Problems*, do. 1916. JAMES MOFFATT.

PARRICIDE.—See *CRIMES AND PUNISHMENTS*.

PARSIISM IN JUDAISM.—The relation between Parsiism and Judaism has been the subject of investigation and acute controversy for at least fifty years. The date of compilation of the most important Avesta documents is more uncertain than that assumed by so-called higher criticism for the documents of the Bible. Much depends upon this aspect of dates; for, if it can be shown, as is the conviction of the present writer, that the Jewish records are much older than the Avestan or Mazdean documents, especially those containing similar practices and beliefs, then there can be no longer a question of Persian influence on the Judaism of the Bible, and that of the post-Biblical period, till long after the final dispersion, could still be the object of investigation. On these points scholars are most sharply divided. Yet it is obvious that from the time of Cyrus down to Alexander, when the Achaemenian kings ruled over Palestine, nothing positive is known of the existence of Zoroastrianism and its doctrines and practices. And, even if that form of Zoroastrianism had already been evolved which we find in the time of the Arsacids (Parthians), more is required than a mere exercise of suzerain distant power so to influence the faith of the people as to introduce new conceptions of life and death, a new eschatology, and even new laws of purity and defilement in daily life, especially when one nation possessed a sacred book and the others had none as yet. Such changes are the result of long, intimate intercourse between the followers of different religions, during which sufficient appreciation has been gained of the merits of such doctrines as to allow the one religious body access to the inner

Church History is 'delight in the vision which it opens to us of the second coming of the Lord, and of His reign in truth and peace.'

¹ The unusual expression in 2 P 812 (*τὴν παρουσίαν τῆς τοῦ θεοῦ παρουσίας*) is not an exception.

² Cf. *Slav. En.* xxxii. 1, where God says to Adam as he is expelled from paradise: 'Earth thou art and into the earth whence I take thee thou shalt go, and I will not ruin thee, but send thee whence I took thee. Then I can again take thee at my second coming.'

³ Origen, in *de Princip.* iv. 6, uses ὁ ἰσχυρὸς ἐπιδησία.

⁴ It used to be thought that medieval Europe was shaken by terror at the approach of the year 1000 A.D., as though the end of the world were at hand. The so-called evidence for this idea has been completely disproved (cf. R. Flint, *The Philosophy of History*, Edinburgh, 1893, i. 101).

⁵ In *The Ministry of Grace* (London, 1901), p. 2, J. Wordsworth declares that one of the delights offered by the study of

sanctuary of the life of the other. Nothing of the kind has happened in Palestine. No Persian followers of Zoroastrianism lived in compact masses in Palestine, nor is there any trace of intimate intercourse between the Jewish doctors and the Persian *mobeds*. The reverse, however, has happened in Persia and Media. The whole ancient Babylonian empire was honeycombed with Jewish settlements. They spread from the northern frontier of Palestine to the northern frontier of India and possibly beyond, as far as China. They lived there for centuries together, before and during the Achaemenian period, down to the end of the Sasanian period and the Arab conquest—down to this very day. The possibilities are much greater, therefore, that Jewish influences which permeated the inhabitants of these countries should have contributed to the evolution of the new faith propounded by Zoroaster. It is erroneous to imagine that the Jews did not develop an intense missionary activity among the nations with which they came into contact. The reverse is the case. They also lived in compact masses and preserved the knowledge of Hebrew, and still more of the Aramaic tongue, down to the 10th cent. and later. The question of the date of the Avesta, however, has still to be settled. The legend of the burning by Alexander of the Zoroastrian sacred books stands in contrast with the fact that Alexander burned neither the sacred books of the Jews and Samaritans nor those of the Tyrians or the Egyptians. The collection and piecing together of the old fragments in the time of the Arsacids may refer to the literary collection of the *Gāthās* and the publication of the Avesta by the Magi, the priests and the exclusive exponents of the new faith. As Darmesteter has shown in his introduction to the Avesta (*SBE* iv.² [1895] p. lvii ff.), undoubted traces of the Pentateuch in form and contents are to be seen in the Avesta.

Not even after that period (i.e. from the middle of the 3rd cent. to the destruction of the Temple) has there been so intimate a *convivium*, or even a political unity, between the Palestinian and the Parthian kingdoms as to allow for intense influence of Zoroastrianism on the Jews of Palestine. The Jews were separated even more than before from the kingdom across the Euphrates. They gravitated towards Egypt. The only country in which Jews were brought into close contact with Zoroastrianism, in a geographical sense, was ancient Babylon with its teeming Jewish population; but it would be a mistake to imagine that the Jews of Babylon exercised any appreciable influence upon the shaping of the Jewish beliefs and practices which had their centre in Palestine and found expression in the literature of the time. The affinities between the two, however, as well as the possible relation between Parsiism and the post-Biblical and Talmudic literature, would still be worth examining.

The extent of the Aramaic influence is best seen in that extraordinary bilingual Pahlavi literature in which the text is written in Aramaic and read in Persian. No doubt those who wrote it first read it also in the language in which it was written, viz. Aramaic, but then it was read by the Persian Magi in the language of the Avesta. The predominant influence, therefore, in Babylon was that of the Aramaic-speaking population, among them the Jews.

Three periods have to be distinguished in which Parsiism might have influenced Judaism and *vice versa*, viz. Achaemenian, Arsacid, and Sasanian, corresponding roughly to the Biblical, post-Biblical, and Talmudic periods. In these, references will have to be made to the eschatology, angelology, and demonology. Before entering upon this

investigation, it is necessary to establish a fact of fundamental importance. The views and beliefs found scattered through the post-Biblical literature do not form any essential part of Judaism, nor have they any dogmatic value, except the mere vague mention of the existence of angels, immortality and resurrection, and punishment and guilt, as abstract theories only, without any detail or any concrete shape and form. These are Midrashim—legendary embellishments of no binding character. The descriptions, e.g., of a heavenly hierarchy or of the divisions of Gehinnom are left to individual believers, just like so many other eschatological legends found in the Rabbinical literature. Judaism as a faith lays no stress upon them. They are part of the religious folk-lore and no more. But even among this Midrashic matter we must seek for traces of Parsi theories which may have influenced the Judaism of Palestine in the first place.

(1) *Achaemenian*.—As already remarked, the existence of the Parsi dualistic faith with its celestial hierarchy, its hell, the *drujs* and *divs*, and all the other ceremonial, lustral and sacrificial details, worship of fire, etc., cannot be traced positively as far back as the Achaemenian rule and the time of Cyrus and Darius. No trace of this teaching can be found explicitly in the books of the OT (the allusion in Is 45⁷ to God as creator of light and darkness cannot be strained to express a view polemical to Zoroastrian dualism; it rests purely on the beginning of Genesis). Nor have traces of immortality been found corresponding to those of Zoroastrianism. This belief in immortality in Judaism has not yet been sufficiently elucidated (see below).

We can now follow up a systematic development of angelology and divine hierarchy in Ezk 1st, and especially in Dn 8¹⁶ 9²¹ 10¹³⁻²¹ 12¹¹, to which may be added 1 K 22¹⁹, Is 6^{1st}, Ps 89² 103²⁰. None of these shows the slightest similarity to the Zoroastrian hierarchy, to the Amesha Spentas (which are mere shadows), or even to the Fravashis—all probably ancient natural gods reduced to ghosts, whilst the angel in the Jewish literature is conceived as a concrete being. In the introduction to Job Satan differs fundamentally from the Zoroastrian Angra Mainyu with his hosts of *drujs* and his hell. The attempts made to find in Proverbs and the Psalter reflexes of Zoroastrian influence and the theory of creative 'Wisdom' have been shown not to be well-founded.

(2) *Arsacid*.—More important is the period of the Arsacids from c. 260 B.C. to A.D. 260, the period of the Apocrypha and the Pseudepigrapha, as well as the NT writings. During this whole period of close on 500 years, except for a few years of Parthian domination, the Jews of Palestine had practically no communication with the Parthian kingdom and with the Zoroastrian fire-worshippers. Yet the Jewish literature contains a fully-developed angelology, demonology, and eschatology. There are, no doubt, various points of contact, especially in the last-named, with Parsiism, but a careful examination reveals the fact that the similarity is only in general principles and beliefs, and, if we descend to details, the differences are as numerous as they are profound. Tobit shows exactly how different the product is under Zoroastrian influence. This book was written in the Parthian kingdom, among the ten tribes. Rhage, the centre of that worship, is mentioned; the danger which Tobit incurs when burying the dead is understood only when one remembers the Zoroastrian horror of burial. The angel Raphael acts like a Fravashi, but his name is a typological and symbolical Hebrew name. The demon who possesses Sarah is Ashmedai,

1 T. K. Cheyne, in *Semitic Studies in Memory of Dr. A. Kohut*, p. 111 ff.

not Angra Mainyn, a simple *div*, Aēshmadaeva.¹ There is no further reference to any of these incidents in the other apocryphal and pseudepigraphical literature. The heavens through which Enoch, Moses, Baruch, and Isaiah pass as well as that of the heavenly halls, Hehloth, differ in every detail from the Zoroastrian heaven, and not one of the Amesha Spentas or Fravashis is mentioned by name. All the names are pure Hebrew.

The heavenly economy is built up on a different basis. It is the astrological, with the fundamental principle of seven—seven heavens, seven angels, seven planets.

Herein lies the key to the explanation of the relation between Judaism and Parsiism, especially at the time when Babylonian beliefs and traditions were still all-powerful. The Babylonian system of mythology has, unfortunately, not been preserved in the cuneiform literature as a definite system. Everything seems to be in a fluid state, and the true relation between the manifold divinities is rather vague and subject to local influences. Out of the mass of gods, however, a heavenly hierarchy could easily have become crystallized under the prevalent astrological influences. Some of the ancient minor gods could have been turned into no less vague Amesha Spentas to correspond to the more pronounced Jewish angels. It is Judaism that works up the Babylonian material and makes it acceptable in a more concrete form to the founders and shapers of Zoroastrianism also. This agrees with the tradition recorded in the Rabbinical writings (Jer. *Rōsh Hashānāh*, i. 4; *Gen. Rabbāh*, 48), that the names, not the principle, of the angels had been brought from Babylon and not from Persia. Even Metatron, who has been compared with Mithra, cannot be identified with the latter either philologically or functionally. There is no resemblance whatever to Mithra in the position assigned to Metatron in Jewish mysticism, where he is the substitute for Enoch. The direct mediator between God and man, he stands near the throne of God, and it is therefore likely that we have here a hybrid combination of the name Mithra with a Greek work like *μεταθρόνος*, due to popular etymology; in any case he is neither the counterpart of Mithra nor derived from him.

The demonology of the Apocrypha and Pseudepigrapha is still farther away from that of the Avesta. Satan is not like Angra Mainyu in any detail. There is no real dualism to be found—no conscious rebellious and antagonistic power opposed directly and independently to the other power, almost equal in strength, which will have to be broken at the end of days to ensure the final decisive victory of the good over the evil principle. This point must be retained, for it is the only really characteristic principle of Parsiism, although it is not at all improbable, as H. Gunkel,² W. Bousset,³ and others have shown, that it goes back to the ancient Babylonian dragon myth, which, as snēh, and not in the Zoroastrian form, reappears in some allusions in the OT, especially the dragon in Revelation. The dualistic conception appears more pronounced in the Gnostic, and more definite still in the Manichean doctrines. But not a trace of it can be found in the ancient Jewish literature of the period under consideration. The Jewish demonology resembles the Babylonian more closely. The names of evil spirits are Shiddim and Lilith. There is no opposition to God, only the desire of hurting man because of his innate wickedness and because of sin. Satan is originally an angel who has fallen from heaven,

¹ If the form 'Ashmedai' is the primitive form, then we have here a late form, just as it occurs in the Talmud, or this late form may be due to a late copyist.

² *Israel und Babylonien*, Göttingen, 1903.

³ *Rel. des Judentums*², Berlin, 1906.

and the evil spirits are also angels who have followed their leader. Pride caused their downfall—a rash act of disobedience—and nowhere are they considered as in real opposition to God. In the NT teaching the power of Satan is broken by the Messiah.

In the Jewish eschatology the fundamental principle is the immortality of the soul and then the economy of the world. Various references in the OT show that the belief in the life of the soul after its departure from this world was known from ancient times. The references to Sheol, however shadowy they may be, suffice to prove it. The researches of N. Söderblom¹ and E. Böklen² have shown how slight the similarity is between Parsiism and Judaism even in those points where the greatest affinity apparently exists. Except for a few details, which may have been taken over directly by one from the other, in all important points there is profound divergence of view. The very nature of a hell inhabited by *drujs*—a cold, dark abode without hope of salvation—differs in every detail from the Jewish popular conception of a hell filled with fire and brimstone; and the divisions of hell, the names of the evil spirits, etc., have no similarity. Here the present writer ventures to point not only to Babylonian beliefs, which seem to be the direct source for the Zoroastrian hell in the Avestan writings, and to some extent for the old Jewish conceptions of Sheol, but also to what has not hitherto been considered in that connexion, viz. the fully-developed Egyptian eschatology with its beliefs in life after death, accompanying gods (or spirits, or angels), the judgment of the soul after death, and the final decision as to salvation and perdition. It was this fatal decision that every worshipper of Osiris wished to escape, and this is the ultimate source of so many ceremonies and practices, and even religious movements—the desire to avoid complete annihilation after death and to obtain guarantees in this life of everlasting salvation, the salvation after death from hell and destruction, from punishment and purgatory, which is the secret teaching of many Greek mysteries, Orphic, Ophitic, etc. (see G. Anrich, *Das antike Mysterienwesen*, Göttingen, 1893; W. Bousset, *Hauptprobleme der Gnosis*, do. 1907).

How much of this is Jewish, how much Egyptian, how much can be traced to Thracian W. Asiatic traditions anterior to Parsiism, has not yet been decided, though the investigations are moving in that direction. Mention may be made here also of the Sibylline literature akin to the Jewish Apocalyptic and yet independent of Zoroastrian influences. It is remarkable, however, that these notions appear in Judaea after Alexander, and practically for the first time in the apocryphal literature shortly before the Christian era. There is now one factor, the importance of which cannot be gainsaid, which the present writer is able to add, as he believes, more fully, for the first time—the Samaritan angelology, demonology, and eschatology. The information hitherto has been so scanty that it is not to be wondered at that scholars from A. Reiland downwards have gone totally astray on the subject. By the aid of the material in the present writer's possession, it can be stated that the Samaritans and Jews agree most closely in all essentials. The Samaritans believe in angels, even mentioning some by name: at the birth of Moses angels surround the place and sing hymns, very much as the angels did at the birth of Jesus; Balaam worships seven angels who preside over the phenomena of nature, like the

¹ *La Vie future d'après le Mazdéisme*.

² *Die Veranschaulichung der jüdisch-christl. mit der parssisch. Eschatologie*.

angels in Enoch; the angels meet Moses before his death. The Samaritans know also of the evil influences of wizards and demons (*shedim* of the Pentateuch).

Still more interesting is their eschatology. Gaster's Codd. 872 and 1156, especially the latter, contain an elaborate description of the fate of the soul after death, of paradise and Gehinnom, of the joys of the former and the fire and brimstone in the latter, of the resurrection of the dead, of the Day of Judgment, of punishment and reward, and of the advent of the Tabeb (Messiah), who plays as colourless a part as the Messiah in the *Test. of Twelve Patriarchs* and in the *Apoc. Baruch*. We are moving here in the same atmosphere as were the contemporaries of the Second Temple and the beginnings of Christianity. The source of these beliefs must be sought in Palestine and in the beliefs then shared by Jews, Samaritans, and Judaizing mystics. At that time there was no connexion between the Jews in Palestine and the Parthian kingdom, and it cannot be emphasized too strongly that the body of practices and beliefs which Jews and Samaritans held in common are very ancient. They go back to a primitive common source. Neither Jew nor Samaritan has borrowed consciously from the other. Egyptian and other heathen mysteries may have contributed to fashion older beliefs of a Judæo-Babylonian origin. We are dealing, of course, primarily with those beliefs which are held by all the Jews. Local influences have produced some particular beliefs and practices, but these cannot be put down as Jewish in the wider sense of the word. This refers especially to the third or Sasanian period, when there was close contact in Babylon between Jews and the Zendiks, or Magi, as they were then called.

(3) *Sasanian*.—Zoroastrianism, as soon as it became the State religion and enjoyed the special support of the kings, became as intolerant as every victorious Church has been. The Parthian kings were very tolerant. Greek and Mithraic cults flourished side by side with Jewish worship and Buddhist faith. Not so the first Sasanian king, Ardashir, who succeeded in ousting the Parthians and founded a new dynasty thoroughly and fanatically devoted to Zoroastrianism. A period of persecution began against the numerous Jewish population in Babylon, to be followed soon by a similar fanatical outbreak against Christians and Manichæans—in fact, against every heterodox worship. The relation, however, became gradually less strained until the Arab conquest put an end to Zoroastrianism. Traces of the conflict and of the relaxation of persecution are found in the Talmud.¹

Friendly relations existed between Shabur (Saporas) the king and Jewish sages like Samuel, and during that period many old Persian (Pahlavi) words entered the popular language of the Jews in Babylon.² In the popular development of angelology and demonology some traits borrowed from Zoroastrianism have been added to the more primitive conceptions of the angels and demons, of their attributes of good and evil. Ashmedai becomes the king, and Lilith the queen, of the male and female demons. Many legends connected with life and death have been more embellished in conformity with Zoroastrian popular beliefs, but nothing fundamental has been added to those notions found in older literature, and even here it is difficult to distinguish how much of it is originally Babylonian or known to us only from the Zoroastrian counterpart. Extreme views have

been expressed by O. H. Schorr¹ on the dependence of Talmudic practices, but most of them have since been discarded and the rest greatly modified by the researches of Kohnt, Darmesteter, and others. What influence Zoroastrian literature may have had on Jewish legendary literature, such as the Targum of Esther, and other Haggadic stories, like the Nimrod legend, must be the subject of special investigations on the part of students. Possibly through Gnostic mediation, a more marked dualism is noticeable in those mystical ideas which found their fullest expression in the Zoharistic literature (see ZOHAR). On the religious side, however, with but few exceptions, the Jews preserved their original independence. Though willing to adopt and assimilate collateral details and embellish their primitive creations with elements borrowed from elsewhere, they did not owe anything vital to Parsism and Zoroastrianism. Indeed, the contrary can be asserted with more plausibility. Principles which are common to the whole of Jewry, held also by the Samaritan and found in the oldest Apocrypha, may have been communicated to the nascent faith of Zoroaster and have contributed to lift the latter to the higher position of a modified monotheism, far above the polytheism of India and Babylon or Greece and Egypt. The historical and geographical evidence points in that direction.

See also JEWS IN ZOROASTRIANISM.

LITERATURE.—In addition to the Avesta, Fr. and Eng. tr. by J. Darmesteter, and the other Pahlavi texts translated principally by E. W. West and M. Haug, *SBE* v. [1880], xviii. [1882], xxiv. [1885], xxxvii. [1892], xlvii. [1897], the following are the most important publications bearing on the relation between Parsism and Judaism: A. Kohut, *Über die jüdische Angelologie und Dämonologie in ihrer Abhängigkeit vom Parsismus*, Leipzig, 1866 (see bibliography of his Persian writings on Parsism in the Kohut Memorial Volume, also 'Memor of Dr. Alexander Kohut's Literary Activity,' by his son, in *Proceedings of the Fourth Biennial Convention of the Jewish Theological Seminary Association*, New York, 1894, reprinted in *Tributes to the Memory of Rev. Dr. Alexander Kohut*, do. 1894, pp. 49-64); T. K. Cheyne, 'Book of Psalms, its Origin, and its Relation to Zoroastrianism,' in *Semite Studies in Memory of Rev. Dr. Alexander Kohut*, Berlin, 1897; N. Söderblom, *Les Fravashis*, Paris, 1899; E. Stave, *Über den Einfluss des Parsismus auf das Judentum*, Haarlem, 1898; M. Flügel, *The Zend-Avesta and Eastern Religions*, Baltimore, 1898; N. Söderblom, *La Vie future d'après le Mazdaïsme*, Angers, 1901; E. Böklen, *Die Verwandtschaft der jüdisch-christlichen mit der persischen Eschatologie*, Göttingen, 1902; F. Cumont, *The Mysteries of Mithra*, tr. T. J. McCormack, Chicago, 1903; L. H. Mills, *Zarathushtra and the Greeks*, do. 1905, *Zarathushtra, Philo, the Achæmenids and Israel*, do. 1906, *Avesta Eschatology compared with the Books of Daniel and Revelation*, do. 1908; M. N. Dhalla, *Zoroastrian Theology*, New York, 1914.

M. GASTER.

PARSIS.—'Parsi' is derived from *Pars*, which is identified with the modern *Fars*, one of the provinces of the ancient *Pârça*, the *Persis* of the Greeks. It is the name under which the Persian Zoroastrians, who landed on the shores of Gujarrât in the 8th cent. A.D., are known. No trace is left of the different bodies of Persian settlers who are supposed to have come to other parts of India. The refugees were successively called by European travellers *Parseos*, *Perseos*, *Persees*, *Parsees*, *Parsis*, etc. The Parsis are still found in Gujarrât (Bombay Presidency), and the largest population is in the city of Bombay.

I. *STATISTICS*.—It is extremely difficult to form an approximate notion of the number of the Parsi population under the different rulers of Gujarrât—Hindus, Muhammadans, Portuguese, Maráthas. The numbers of the first immigrants are totally unknown, and the later estimates of European travellers, based on personal or second-hand evidence, are most uncertain, so that there is no need to record them. From the history of the refugees themselves we can derive more useful information. When they landed in India, it is probable that they were not very numerous; for, if they had been,

¹ See H. Grätz, *Gesch. der Juden*, Leipzig, 1866-78, iv. 291 f., Eng. tr., London, 1891-92, ii. 629 ff.

² See Aruk. *Hashalem*, ed. A. Kohut, Vienna, 1878-92, *passim*.

¹ *He-Hatuf*, i.-iii., Lemberg, 1852-56, iv., Breslau, 1859

seeing that they came from Hormuz and Kāthiāwār by sea, it would have required a large fleet to convey them. But, being of a prolific race, they increased rapidly, and, after spreading into villages, they settled in larger localities, and at last in the great town of Surat, the emporium of the East in the 18th century. A new start was made with the beginning of the 19th century, when they deserted Surat, being attracted by Bombay, the centre of European commercial activity. Bombay is at present the headquarters of the community.

The censuses taken by order of the British Government are, in fact, the only reliable documents for the 19th century. The *Account-book of the Parsi Panchayet*, Bombay, A.Y. 1281-82, A.D. 1912 (Gujarātī), gives most accurate statistics of the Parsi population. It contains the results of those different censuses and such available information as it has been possible to collect in foreign countries (see Appendix, pp. i-xviii).

According to the last census (1911), the number of Parsis in India, including Aden, the Andaman Islands and Ceylon, the Straits Settlements, China, and Japan amounted to 100,499, of whom 80,980 belonged to the Bombay Presidency (*Account-book*, App. pp. i, xvii f.). The distribution of the population is as follows:

I. BRITISH PROVINCES.

Total	6,532	7,350	13,941

III.

Localities.	Males.	Females.	Total.
Ceylon	108	75	183
Straits Settlements	12	2	14
China	132	23	177 ¹
Japan	20	4	29 ²
Total	272	104	408 ³
Total for whole of India	51,123	48,973	100,096
Total for other countries	272	104	408
Total Parsi population	51,395	49,077	100,499

The above is completed by another exhaustive table (see App. pp. i-xviii), in which the Parsi population of the towns contained in the above localities is given. The largest total is in Bombay, numbering 50,931 Parsis (26,764 males, 24,167 females [p. xvi—see the census of the Bombay Parsis, according to the wards or districts]); then comes Surat, with its small community of 5458 souls (2404 m., 3054 f.); and, in the Baroda State, which comprises 7955 Parsis (3420 m., 4535 f.), Nansari with its 4221 Parsis (1630 m., 2591 f.). The trustees of the Parsi Panchayat have given in the Appendices of their *Account-books* of 1900-01 and 1913 the result of the different censuses 1811, 1816, 1829, 1849, 1864, 1872, 1881, 1891, either from the *Parsi Prakash* of B. B. Patell or from information derived from various sources, official and private.

Since the middle of the 18th cent. the Parsis have been divided into two religious sects, Shahenshāhīs, or Rasmīs, and Qadīmīs. The former adhere to the era accepted by their forefathers, the first emigrants from Khorāsān, whereas the latter have adopted the old Persian year observed by the present-day Zoroastrians in Persia.

In 1872 there were in Bombay 40,809 Shahenshāhīs and 3232 Qadīmīs, and in the Bombay Presidency and the whole of India⁴ 29,833 Shahenshāhīs and 1770 Qadīmīs, forming a total of 70,647 Shahenshāhīs and 5052 Qadīmīs. In 1881 there were in Bombay 43,292 Shahenshāhīs and 5305 Qadīmīs, and in the Bombay Presidency and the whole of India 24,001 Shahenshāhīs and 548 Qadīmīs, forming a total of 67,293 Shahenshāhīs and 5853 Qadīmīs. But the distinction is not of great importance, and the figures are not sufficiently comprehensive to be worth publishing, so that we need not investigate this point. A census of the two sects was made in the Baroda State in 1911, and of the total of 7955 Parsis the Shahenshāhīs number 7778, and the Qadīmīs number 177.

II. *ETHNOGRAPHY*.—The Parsis, as a race, have preserved some of the qualities of their ancestors, the Persians, but have undergone changes, due to climate, food, and surroundings. Early travellers always noted them as different from the other natives. The men, in general, are described as well-proportioned; their stature, says Mandelslo (*Voyages*, p. 186), is not among the tallest, but their complexion is fairer than that of the other Indosthans, and their women are far fairer and handsomer than the natives and the Muhammadans. La Boullaye le Gouz (*Voyages*, p. 189) insists on the whiteness of the complexion of the Parsis, while Stavorinus (*Voyages*, ii. 495 f.) finds it little different from that of the Spaniards. Fryer (*E. India and Persia*, ii. 115, letter iv. ch. vi.;

¹ Including 22 children.

² Including 5 children.

³ Including 27 children.

⁴ Exclusive of Bombay.

cf. i. 294, letter iii. ch. iii.) had already given to it the epithet of 'straw-colour.' According to Stavorinus, the women, fairer even than the men, had a slender figure, large black eyes, and finely-arched ebony eyebrows, placed at some distance from the eyes, as if to enhance their beauty. Their forehead was high, their nose slightly aquiline, their mouth small with shining teeth, their breast well shaped, and their gait easy. Forbes (*Oriental Memoirs*², i. 112) says that the Parsis are a comely race, athletic and well formed. He praises the beauty of their women, but deprecates the precocious and almost masculine stoutness which disfigures them after the age of twenty. The travellers add that the Parsis abstained from marrying outside of their community in order to preserve their purity of blood. Nowadays their characteristics are easily summed up as follows: 'They are, in feature, in the main, of a high-Aryan type, somewhat intermixed, perhaps after a very long residence in India, and somewhat blunted and thickened as compared to the sharper and more chiselled northern faces; but still there is generally the prominence of feature which we might expect from an extraction originally Persian' (M. Justice Campbell, *JASBe*, supplementary number, vol. xxxv. pt. ii. [1866], 'Ethnology of India,' p. 140).

III. HISTORY.—The sole document that we possess on the events of the early history of the Parsis and their arrival in India is the *Kissah-i-Sanjân* ('History or Story of Sanjân'), a Persian book written in verse in A.Y. 969 (A.D. 1600). The author is one Bahman Kaikobad of Nausari. He says that he wrote the book on the authority of older traditions and accounts, and of what he had heard from his elders (see E. B. Eastwick, *JRASB* i. [1842] 167-191; and J. J. Modi, 'A few Events in the Early History of the Parsis and their Dates,' in *Zarhosti*, i. [1273 A.Y.], ii. [1274 A.Y.]). The first MSS of the *Kissah-i-Sanjân* were brought to Europe by Anquetil du Perron, who gave an account of them in his *Zend-Avesta*, vol. i. pt. ii. pp. xxxiv-xxxv, and a résumé in the 'Disc. prélim.' pp. ccxviii-cccxliii.

The *Kissah* starts with the loss of the sovereignty of Yazdagird. On the fall and death of the king (A.D. 651) a number of Zoroastrians 'abandoned their houses and gardens and palaces for the sake of their religion, and lived in Kohistan for one hundred years.' There they also became 'anxious for their religion,' and went to the city of Hormuz (A.D. 751), where they resided for fifteen years; but, being harassed by the Darvands (the Arabs), they left for India. They landed on the shores of Kâthiawâr, at Div (A.D. 766). After a stay of nineteen years they sailed for Gujarât, and reached Sanjân (A.D. 785). The local ruler (Jâi Rânâ or Jâdi Rânâ) allowed them to settle and found a colony of their own, with liberty to follow their religion, on condition that they would adopt the language and customs of the country. After a time (A.D. 790) they obtained permission to build a fire-temple (*âdash-bahrâm*). Three hundred years after this event (A.D. 1090) the Parsis began to disperse in different directions, and went to Vânkâner, Broach, Variav, Ankleswar, Cambay, and Nausari.

Four hundred years after this dispersion the Muhammadans invaded the land, and Sanjân fell into the hands of Alaf Khan, a general of Sultan Mahmud Bigarah. The Parsis, after having assisted the Hindus in the defence of Sanjân, in which they lost many of their followers, fled with the sacred fire to the adjoining mountain of Bârhût, and took refuge there (1490). We know very little of the life of the Parsis during the centuries which elapsed after their arrival in India. The *Kissah*

shows that they were active, hard workers, and had brought industries with them from Khorâsân. They seem to have been contented, and were apparently Hinduized, having become intermingled with the surrounding populations, whose dress, language, and social customs they assumed, simply forming a new caste among the numerous family sections of the Hindûs.

The Parsis were divided into two classes: the *behdîns*, or laymen, and the *athornans*, or priests.

1. Laymen (*behdîns*).—At the end of the 15th cent. the *Kissah* mentions the name of a layman, Chângâh Asâ, of Nausari, who, as far as is known, was the first rich man of the community, and who was appointed *desai*, i.e. farmer of large territories, a position which was held henceforth by Parsi families under the successive Muhammadan and Marâthâ governments (see Pallonji Burjorji Desai, *Hist. of the Nausari Desais*, Bombay, 1887 [Gujarâti]). He was a pious man, and leader, or *dâvar*, of the community. He renewed and spread the true religion, and gave to the needy Parsis the sacred shirt and girdle, the symbols of their faith, by which they were distinguished. He brought to Nausari the sacred fire which had been transferred from the Bârhût mountain to Bansdah, and caused a building to be built at Nausari (1516) for its installation. He sent emissaries to Persia in order to refer doubtful religious and social questions to the opinion of the learned Irani priests—a custom which prevailed till the 18th century. Nausari at the end of the 16th cent. was a prosperous place among the 31 *mahals* of the *sarkar* of Surat, being 19th in point of area as well as in point of the revenue that it brought to the State. Its area was 17,353 *bighas*, and its revenue 297,720 *dâms* (about £740). It was noted for 'a manufactory of perfumed oil found nowhere else' (*Ain-i-Akbari*, ed. H. Blochmann, Calcutta, 1873, vol. i. p. 498, l. 13, col. 1, tr. H. S. Jarrett, ii. 257).

The Parsis in Gujarât were engaged in agricultural pursuits; most of them were farmers and also toddy-drawers. They appear at Surat as early as the 15th century. They are known there by European travellers as carpenters, cabinet-makers, ship-builders, and, lastly, brokers to the European factories. From that time dates the true era of Parsi prosperity and importance. In the 18th cent. the Parsi community at Surat was flourishing. The old wards inhabited by them still bear testimony that they were numerous (see M. Edalji Burjorji Patel, *Hist. of Surat*, Bombay, 1890 [Gujarâti]). Forbes (i. 110) gives an approximate total of the population at the beginning of the 19th cent., stating it at 20,000 families. Several Parsis enjoyed honour and influence at the court of Delhi, and some of them received grants of land, *khilats* (dress of honour), and other marks of distinction. They were the first to venture to China and Burma and to open branches and firms there. The famines which desolated Gujarât and the commercial decline at Surat were the sources of the increase in the Parsi population of Bombay. The Parsis had settled there even under the Portuguese rule (17th cent.), and, after the arrival of the English, they seem to have been associated with the fortunes of the latter; so much so that it can be said without exaggeration that Bombay owes much of her present greatness to the industry and enterprising spirit of the Parsis (see S. M. Edwardes, *Census of India, 1901*, vol. x., 'Bombay [Town and Island], pt. iv., 'History'). White marble statues in the squares and public halls perpetuate the memory of some of the leading men of the community. The Parsis gradually increased in number and importance, and their co-religionists of the Mofussil came to them for support. The

same had happened in the case of Snrat, whither the surrounding populations had flocked in fear of the inroads of the Maráthas and Pindáris.

At the beginning of the 19th cent. they were rich and influential, and were praised for their honesty and benevolence. An example of the best type of Parsi merchant-prince was Jamshedji Jijibhai of Nansari, who in 1842 received the honour of knighthood, and in 1857 was raised to the dignity of Baronet of the United Kingdom—a title which had never before been conferred upon any native of India. Later other members of the community were similarly honoured by the British Government: Sir D. M. Petit, Sir K. J. Readymoney, Sir M. M. Bhownagree, M.P., and others. The late Jamshedji N. Tata represented the mingling of the old energetic spirit of the ancient Parsis and the new methods of commercial and industrial enterprise.

In 1852 Briggs (*The Parsis*, p. 25) could truly say that 'the bent of the Parsi community was purely commercial'; but a great change was to take place. The Parsis were the first among the natives to avail themselves of Western education. At first they attended the schools conducted in Bombay by Eurasians, but gradually a large section frequented those established by the Government, such as the Elphinstone Institution, and aimed at university degrees. The first schools for the exclusive benefit of the community founded by Sir Jamshedji Jijibhai (Parsi Benevolent Institution) were opened in Bombay in 1849. He had bitterly resented 'the hopeless ignorance' in which the Parsi children were permitted to grow up, and had invested the sum of 300,000 rupees for the carrying out of a scheme to relieve and educate his co-religionists, men and women. At the dawn of the 20th cent. the intellectual status of the Parsis is eloquently witnessed to by figures.

If we take the term 'educated' as designating one who can read and write in one language, we find that in 1901 the number of educated Parsis in the Bombay Presidency, including the Native States, was 51,000 out of 78,552, while in 1911 it was 60,005 out of 83,565, which gives an increase of 34.5 per cent in favour of education in the last decade (*Account-book*, 1901, App. p. 14, 1912, App. p. xii). Now a study of the statistics dealing with the literacy of the leading religions of the Presidency in 1891 and 1901 discloses the following movement, which can be summarized: number of literates per 1000—Parsis, 650; Christians, 292; Jains, 269; Hindus, 59; Muhammadans, 41 (*Census of India*, 1901, vol. ix. pt. i. p. 123). Christians and Parsis in the first instance are rivals for the first place in the literary contest, but the former are easily outdistanced by the Parsis when it comes to be a question of the proportion of literates to the total population.

Of the Parsis in the Baroda State 4946 persons are literate, of whom 2367 are males and 2579 females. The illiterates are numerically fewer than the literates—a state of things not to be met with in any other religion. They number 3009 persons, 1053 males and 1956 females; i.e., the illiterates are 60.8 per cent of the literates. In no other religion, again, is the proportion of female literates so large; almost one-third of the literate females in the State are Parsis (*ib.* 'Report of Baroda State,' pt. ii. p. 38). Female education is, of course, in great favour among the Parsis, and some Parsi women have B.A., M.A., B.Sc., LL.B., and M.D. degrees.

By this system of education the Parsis were soon fitted for entering such professions as medicine, law, and engineering, as also for Government employments and political life. They have secured seats in the corporations, in legislative and vice-regal

councils, and even in Parliament. The first Indian returned to the House of Commons was a Parsi, Dadabhai Naorozi (1892). In the Native States the Parsis are usefully employed as *divans* (ministers) and officials. The same Dadabhai Naorozi was the first Parsi *divan* appointed to a Native State, the Baroda State (1874).

The change in the social customs has been no less remarkable. Through contact with the English, European life and habits gradually took the place among the higher classes of the Hindu customs which had been adopted by the first settlers. A split ensued, and the community was divided into two classes—the orthodox party, steeped in pure social conservatism, causing a confusion between their own religious prescriptions and the ways of their new countrymen, and the liberal party, bent on introducing the Western spirit. Associations and newspapers were started on both sides. The history of social reform among the Parsis has yet to be written. The materials are contained in the *Reports* of those associations and papers—among the latter, the *Rast Gofstar*, which, for half a century, fought in favour of social reform. All the changes advocated in its columns by the spirited editor, K. N. Kabraji, have been realized. The results—every one can see them in the actual *modus vivendi* of the Parsis—are due to the energetic efforts of men like Naorozi, Furdunji, Sorabji Shapurji Bengali, Dadabhai Naorozi, Behramji K. Ghandhi, K. N. Kabraji, K. N. Cama, K. R. Cama, and others. The same spirit had incited the Parsis to support the Hindu reformers, and it was a Parsi, B. M. Malabari, who took the lead in the great campaign in favour of the abolition of infant-marriages, and was successful enough to have the Age of Consent Act promulgated in 1891, which is expected to put an end to them.

In the field of literary activity the Parsis are equally distinguished. An absolute command of English has taken the place of 'the mediocrity of the English tongue' noticed by H. Lord (*Religion of the Perses*, London, 1630, *Introd.* p. ii) in the 17th century. A study of figures shows that in 1901 the number of literates in English in the Bombay Presidency was 163,000, of whom the Parsis numbered 20,252. Comparing the proportions of the various religions, we have for literates in English per 1000 of the population: Parsis, 258; Christians, 209; Jains, 9; Hindus, 4; Muhammadans, 2. Thus one Parsi out of every four (of every three in 1911) is able to read and write the English language (*Census of India*, 1901, vol. ix., 'Bombay,' pt. i., 'Report,' p. 134).

Gujarati, which the Parsis, in common with the Hindus of Gujarat, may be said to have implanted in Bombay, is still the familiar, domestic, and commercial language of the community, and is taught in their own schools. The Gujarati local press is mostly in the hands of the Parsis; it was a Parsi, Furdunji Mnrzbanji, who started the first native paper in the Bombay Presidency (1822), the second in the whole of India. We may mention, as a remarkable speaker and debater, the Hon. Sir P. Mehta, and, as an eminent publicist and journalist, and also a powerful English writer and Gujarati poet, the reformer B. M. Malabari, proprietor and editor of the now defunct *Indian Spectator* and *Voice of India*, and of the magazine *East and West*.

(a) *Panchayat*.—The Parsis adopted for their internal government the system of the *Panchayat*, which commits to a certain number of leading men the management of the affairs of the community. European travellers always noticed that they submitted their differences to the elders of their own nation, and never applied to the judges of the ruling Power (Mandelslo, p. 184). Anquetil

du Perron gives few particulars regarding the civil organization of the community. He simply states that the headman was called *dāvar*, and that the power of the *dastūr dastūrān* was above all spiritual and only nominal. But Stavorinus, in a very accurate account of the social life of the Surat Parsis in the 18th cent., explains how the chiefs were entrusted with the settling of quarrels without going to law. Robbery, murder, and other crimes were punished by the *nawab*, or governor, of the town; but the latter was obliged to be careful, the Parsi population being numerous and powerful, almost independent in their wards (bk. i. ch. xxviii. p. 362). A single glance at these old quarters is a good illustration of Stavorinus's account. If the Parsis boasted of a low proportion of crime, this must be attributed to the fact that no stranger was allowed to penetrate into their premises, and no one could control the accuracy of this assertion, inasmuch as the executions through poison, cudgel, or drowning were always kept secret.

The historian of the Parsi Panchāyat has to grope in the dark. There are gaps and mysterious periods due to lack of materials. The first mention of a meeting of a Panchāyat held in 1642 at Nausari is to be found in *Parsi Prakāśh*, p. 14. As regards Surat, the records of the Panchāyat are lost, if anything like written accounts ever existed. The headman was named *dāvar* (in Persian, from Pahlavi *dāto-bar*, 'bearer of justice'). [The family of the *dāvar* of Surat still exists. The numerous *firman*s and *parwanas* issued to them by the Mogul emperor and *nawabs* are unfortunately destroyed; but there remain sufficient proofs to establish the identity of that family, recognized by the British Government.] The *dāvar* possessed plenary jurisdiction over the Parsis, and could inflict any punishment except death. As with the Hindus, excommunication, which deprived the out-caste of any intercourse with his co-religionists, of any share in the religious ceremonies, was a terrible weapon in the hands of the elders. The meetings were held in open courts in the house of the *dāvar*; there was no limit to the number of Parsis who were permitted to attend; the *dāvar*, after consulting the leading men, pronounced judgment. The sentence was carried out by the corpse-bearers (*nasā-sdār*); as there was no prison, the culprit was confined in the *nasākhāna*, a place where biers are kept.

It seems that before and during 'the divided rule' the *dāvar* had support from the English and the people of their factory; but, as the British rule gained ground and supplanted that of the *nawab*, by a strange irony of fate the rights and prestige of the *dāvar* declined. The power of imprisonment was declared incompatible with some Government regulations; and so with corporal punishment, which had to make way before another regulation. But in many cases—in civil matters—the courts used to transfer them to the cognizance of the *dāvar*, who is always styled *Modi*. This Hindu surname ('supplier of provisions') was due to the help given by the *dāvar* to the British factory staff in their struggles with the Portuguese and the Muhammadans, and even with the people of the Dutch factories.

It seems that the Bombay Parsi Panchāyat was constituted as early as the coming of the English to the island in the 17th cent., and till 1778 its power was strong; but at that time a contest arose about the custom of 'beating' the delinquent 'with a shoe'—a punishment which till then had met with no opposition. A petition to the Government was drawn up asking for full permission to resort to it. The request was granted; it was the first

time that the Government gave to the power of the Panchāyat a regular sanction, which, later on, was renewed. In 1786–87 the regulations invested the Bombay Panchāyat, formed of its elected members, with full powers to promote the welfare of the community, as is the custom among the natives, subject to the British rule. This continued till 1818, when a meeting at the Dadyseth fire-temple elected 18 members (12 laymen, 6 priests), and made useful reforms. The laws and regulations enacted by the Panchāyat were called *bundobusts* ('agreements'), and, though signed by only some of the members, were binding on the whole community. Any sort of affair was submitted to and discussed by the Panchāyat: the salary of the priests, the expenses of funeral and marriage parties, the evils and consequences of infant-marriage, private quarrels in houses, cases of divorce, bigamy, etc. As regards the morality of the women, they were particularly strict. They took care that the Parsi women should not be seen at dusk alone in the streets or the country, that they should not mix with Hindu and Muhammadan religious ceremonies, or attend their shrines and *dargahs*; travellers, in fact, testify that it was extremely difficult to seduce a Zoroastrian; and the Parsis can boast that, up to the present time, very few Parsi women have anywhere been reckoned among the victims of vice and debauchery.

The power of the Bombay Panchāyat, like that of the Surat Panchāyat, gradually decreased as the rule of the English became stronger, and also on account of a slight spirit of favouritism which prevailed and blunted the sense of justice. In 1823 there was a sort of dislocation, and in 1836 a firm and detailed letter from a strong-minded and impulsive man, Framji Kavasji Banaji, depicted the former high standing and the wane of the Panchāyat. Schism commenced. In 1838 the members made a new attempt to recover their authority, and asked for a formal investiture by the Government Council; but it had no effect. The Parsis having neither codes nor written customs of their own, like the Hindus, the time had come when a new organization was needed. The Parsi Law Association, established in 1855, took in hand the pioneering work of investigating the old texts and actual requirements. The English authorities co-operated in the work, which ended in 1865 with the passing of the Parsi Marriage and Divorce Act and Parsi Succession Act, followed by the establishment of the Parsi Matrimonial Courts. Henceforth the Panchāyat was deprived of its authority—cases being decided by the English courts, litigations settled by the new enactments—but it did not disappear. The members became trustees of a charitable association. The chairman is regarded as the headman of the community, and has no other influence than that which belongs to a philanthropic and cultured gentleman. The funds are managed by the trustees, who, since 1841, have even the custody, though not the direct administration, of those of Surat. The money is destined to minister to the wants of destitute Parsi families, to maintain schools, fire-temples, and *dakhmas*, to provide for the expenses of the *gāhānbārs* and other religious feasts. In the territory of the Gaekwar of Baroda disputes regarding marriages are still settled by the local councils. At Nausari the council, or *anjuman*, is composed of the high priest, or *dastūr*, and the leading priestly families of the *desais* as chief members, and other people of mark as members.

(b) *Social customs*.—The social customs of the Parsis have been more or less accurately described by European travellers (see Literature below). Anquetil du Perron has given an account of them

(*Zend-Avesta*, ii. 527-591), which is useful both as showing the conservatism of the Parsis and as offering a comparison with their new *modus vivendi*. Later the Parsis made their customs known and explained them to non-Zoroastrians.

(c) *Dress*.—According to Herodotus (i. 135), no nation so readily adopted foreign customs as the Persians, who assumed the dress of the Medes, considering it superior to their own. This faculty of adopting foreign dress is still one of the characteristics of the Parsis of India. On their arrival in Gujarāt, one of the conditions imposed on them by the local ruler was that the women were to discard their national dress and assume the Hindu fashions. 'The next condition,' says the *Kissah-i-Sanjān*, 'regards the dress of women, which must resemble that of the women of this land. . . . These weapons and this armour must be laid aside and discontinued. . . . To European travellers the Parsis were distinguished from the surrounding populations only by the *sudrah* and *kusti* (sacred shirt and girdle) (Mandelslo, p. 183). In the 18th cent. Anquetil du Perron found them at Surat intermingled with the Banians, and wearing the same dress, turban, and tunic as the people of that caste, but adding to the *sudrah* and *kusti* the *penom* (*padān*), a sort of veil which the Parsi priests and laymen had to wear, the priests always, the laymen on special occasions, such as reciting prayers or taking meals—a custom now totally discarded by the laity. The Parsis are still faithful to the Banian dress, and have introduced few changes in it; the men wear the *angarakha*, but, instead of the Hindu *dhoti*, large trousers, and on their head they put a dark turban (*pagri*) worn over a skull cap. At funeral and wedding parties they array themselves in a large cotton double-breasted coat (*jama*), with a muslin waistband (*pichori*), very becoming and distinguished-looking. The use of European leather shoes instead of curved slippers has been gradually adopted. The women wear the Banian *sari*, and cover their heads with a thin white cloth (*mathabana*) tied behind the chignon, according to the religious injunction which forbids a Zoroastrian to have his head uncovered by day or night. The *mathabana* is cast off by almost all the young generation. We must notice that the archaic style still prevails in the Mofussil (out of Bombay), and that many Western refinements have been introduced among the Parsi women, and again that any change in the old ways has created a regular battle in the newspapers of the orthodox and liberal classes—the names of the women who put aside the *mathabana* or adopted English shoes are still remembered. Parsis, when in Europe or America, generally dress like Europeans; and their wives and daughters are beginning to give up their *sari* and Hindu finery, which is quite out of place in colder climates.

(d) *Ceremonies*.—The chief ceremonial occasions in a Parsi family are pregnancy, birth, sacred cord-girding, marriage, and death. They are all fully treated under separate headings; see BIRTH (Parsi), INITIATION (Parsi), MARRIAGE (Iranian), and DEATH AND DISPOSAL OF THE DEAD (Parsi).

2. *Priests (athornans)*.—The priests play a prominent part in the history of the community. According to the *Kissah-i-Sanjān*, the exiles had been guided by *dastūrs* in all their peregrinations. There seem to have been several priestly families, though the Parsi tradition ascribes to the priests in India a common origin. The priests followed the *behātins* in their various settlements in Gñjarāt. In 1142 Kamdin Zarthost came from Sanjān to Nausari, and in 1215 the sons of the same Kamdin, Rana and Movad, summoned a priest of Sanjān, Hom Bahmanyar, who brought with him his son Fredan; the latter had three sons, who

divided the work and the fees, and thus, with the two sons of the first comer, Kamin, formed the five *pols* (families) of Nausari. Later the name of *bhagarias* ('dividers') was given to the priests of the five *pols*, because they divided the work and the fees. In the 13th cent., according to a Persian poem written by Dastūr Shapurjī Sanjāna (18th cent.), the *Kissah-i Zartushtiān-i Hindustān*, the Parsi population of Gujarāt was divided into five *panthaks*, or spheres of influence and ecclesiastical office and jurisdiction, from Sanjān in the south to Cambay in the north, including Nausari, Broach, and the villages of the Sñrat District (Godāvrēh) (1290). The records of the communities are not well preserved. Those of Cambay and the Godāvrēh are apparently lost; at Broach they have been dispersed on account of a lawsuit, which is much to be regretted, for Broach was formerly a seat of Zoroastrian knowledge and faith (see *A Genealogical Remembrancer of the Broach Dastur Family*, Bombay, 1878 [Gñjarāt]). Nausari can boast of its records, and from the *valis* (registers) and *fihrists* (lists) much light can be obtained on the priestly class (see Ervad R. J. Dastūr Meherjirān, *The Genealogy of the Bhagarsath Section of the Parsee Priests*, Nausari, A.Y. 1268, A.D. 1899 [Gñjarāt]). The history of Nausari is interesting: it shows how troubles and disputes arose among the priestly class, and how the presence of the Sanjāna priests who accompanied the *ātash-bahrām* on its removal from Bānsdāh, by Chāngāh Asā, was the cause of a rivalry which ended in murders. The Sanjāna priests were even obliged finally to remove to Udāda with the sacred fire, after two escapes to Bulsar and to Surat, to avoid the raids of the Malrattas (M. S. M. Desai, *Hist. of Nausari*, Nausari, 1897 [Gñjarāt]). Several religious controversies disturbed the community at Surat; two of these turned upon whether the legs of a corpse should be stretched or folded, and whether the face of the deceased should or should not be covered with a cloth (*padān*). These questions have not yet been settled. The third dispute was about the proper reckoning of the year, which ended in the split of the Parsis into Shahenshāhīs and Qadīmīs. It had its origin in the discovery made first by a *mōbed* named Jāmāsp Vilāyātī, who came to Surat from Persia in 1721, and then by Jamshid, who came from Persia in 1736, of the difference of one month between the Persian and Indian Zoroastrians in the matter of their *rōz-māh* reckoning (calendar). It is called the *Kabīsāh* controversy. The town of Broach was the scene of deadly riots (1783) (see Dastūr Aspandiyārjī Kāmīnījī, *The Historical Account of the Ancient Leap Year of the Parsis*, 1826 [Gñjarāt]), and K. R. Cama, *The Yezdardi Tarikh*, 1870 [Gñjarāt]). The feud between the two sects is almost settled, and the old passions are not likely to be aroused again; but still the Shahenshāhīs and Qadīmīs continue to have their separate temples and priests; and, if the Parsis do not do away with the difference, this is simply because 'the change would create so much confusion in the dates of old events and records that they prefer to do as they have hitherto done' (Karaka, *Hist. of the Parsis*, i. 113 f.). Ill-feelings have completely abated, and intermarriage takes place between families belonging to the two sects.

For the organization and special functions of the priesthood see separate art. PRIEST (Iranian).

IV. *MODERN PARSISM*.—1. Religion.—Modern Parsism is considered as the transmitter of the tenets of Zoroastrianism, as it was understood and practised at the time of the Sasanian princes, themselves the restorers of the antique Mazdean creed (see SASANIANS and ZOROASTER).

After the destruction of the Persian empire the religion of the great prophet of Irân was enveloped in oblivion for centuries. The faithful in Persia had to submit to the hardships of a foreign and intolerant rule (see GABARS); in Gujarât they were lost among the Hindu populations, and in both countries they were considered by the European travellers who came into contact with them as a down-trodden people, supposed still to possess some remnants of the teachings of Zoroaster. The Western scholars who took an interest in the religion and philosophy of the Iranians had only the classical authors for reference. The large work of B. Brisson, *de Regio Persarum principatu libri tres*, Paris, 1590, is the best compilation from that point of view. H. Lord, chaplain to the British factory at Surat, had the privilege of conversing with a *mobed*, and was able to give a more or less accurate account of the religion of the Parsis (17th cent.). Fragments of their sacred books, *Vendidad*, *Yasna*, *Visparad*, brought to Europe, soon excited the curiosity of the learned few who cared for such study, but these remained undeciphered, and their language a complete enigma. The last work before the Avesta was made known to Europe and translated was T. Hyde's exhaustive history, *Veterum Persarum et Parthorum et Medorum religionis Historia* (Oxford, 1700). The conquest of the Avesta was due to a Frenchman, Anquetil du Perron, who brought a copy of the precious MSS to the Bibliothèque du Roi on 15th March 1762 (see account of the discovery of the Avesta in art. AVESTA, vol. ii. p. 271 f.). Henceforward Parsis and Parsiism made their reappearance, as it were, in the modern world, and reassumed their position as a people and a religion. As regards Anquetil du Perron's stay at Surat, it left no trace. The community was totally ignorant of the consequences of the sale of a few MSS to a poor wayfarer. The Parsis continued to keep aloof from the non-Zoroastrians, even from men like R. C. Rask (1820) and N. L. Westergaard (1841). At last the *dastûrs* were obliged to come forward and to disclose the precious treasure of their faith on account of the attempts at conversion made by the missionary John Wilson (1839). From that time the leading principles of Parsiism were openly discussed by Parsi priests even in scientific meetings and congresses. The catechisms are easily obtained by non-Zoroastrians (see J. J. Modi, *Catechism of Zoroastrian Religion*, Bombay, 1911).

Parsiism has a claim to rank among the great religions of the world, for the reason that we find in it the essence of any dogma, i.e. immutability in the union of the dogma itself and the liturgical prescriptions—a union that still exists in spite of the vicissitudes that it has experienced. Its most striking feature is its traditional character. In fact, it is almost incredible that a community lost among foreign sects should have been able to preserve the integrity of its creed, without holding councils or synods, simply grouped round the living symbol of its faith, hidden in the recesses of humble sanctuaries, its priests chanting hymns in a language which could not be understood, and the bulk of the faithful steeped in religious routine.

After the renewal of the intercourse with Persia (15th cent.) a regular infiltration of Pahlavi literature made its way to Gujarât through emissaries, and a certain activity reigned in the priestly class and the elders or leaders of the *anjumans*. The *Rivâyats*, i.e. the collections of questions and answers, are most precious and eloquent. They are in some measure the mouth-piece of the indigenous Parsi religion, and show that the interest turned exclusively on ritualism or discipline, never on dogmas.

Darmesteter says that modern Parsiism is partly derived from the essential ideas expressed in the *Gâthâs*, according to that sentence of Neriosangh Dhaval, that 'all the laws and deeds contained in Avesta were revealed to Zoroaster in the *gâthâs*' (*Zend-Avesta*, Paris, 1892-93, i. [= *AMG* xxi.], Introd. vii. 'The *Gâthâs*,' p. cv). The enumeration of 'the laws and deeds' would carry us too far; we have simply to point out the leading beliefs of the Parsis; they are: (a) revelation, (b) monotheism, (c) immortality of the soul, (d) future life, and (e) resurrection of the dead.

(a) *Revelation; sacred books.*—Zoroastrianism is a religion based on the revelation of the deity, Ahura Mazda, to men, through the medium of the holy Zarathushtra Spitama, the son of Pourushaspa, of the royal family of the Peshdâdian kings. He unites in himself the threefold character of philosopher, poet, and prophet. He is elevated to the rank of *aokhtondmano yazata*, i.e. one whose name is mentioned among the worshipful beings—a distinction never conferred upon another man throughout the Avesta (see ZOROASTER).

Zarathushtra's life, date, and mission are the subject of much controversy among scholars. The data are derived not only from the pure Zoroastrian tradition, but also from Armenian and Muhammadan authors. According to A. V. Williams Jackson, following to some extent the Parsi tradition: (1) Zoroaster was a perfectly historical personage, belonging to the Median tribe of the Magi; (2) he flourished about the middle of the 7th cent. B.C., and died in 583 B.C.; (3) he was a native of Western Persia (Atropatene or Media) and went to Bactria (Balkh), where he succeeded in converting King Gushtasp; (4) the *Gâthâs* are the oldest portion of the Avesta, and are to be considered as the real substance of Zoroaster's preaching at Balkh; (5) the religion of Zoroaster spread from Bactria throughout Persia, and became dominant in Pars under the late Achemenians; but it is impossible to fix the date of its introduction or of its adoption by the people or rulers of Pars.

Outside of the Avesta, the Parsis derive their information about Zoroaster from Pahlavi books and from a Persian poem of the 13th cent., the *Zartusht-nâmah* (see Anquetil du Perron, vol. i. pt. ii. pp. 1-70, 'Vie de Zoroastre'; E. B. Eastwick, *Parsi Religion*, Bombay, 1843, pp. 417 ff., 477 ff.; J. Menant, *Zoroastre: Essai sur la philosophie religieuse de la Perse*, Paris, 1857; F. Rosenberg, *Le Livre de Zoroastre*, Petrograd, 1904; E. W. West, *SBE* xlvii. [1897], Introd. pp. xx-xxiv). It seems to have been written, according to the author, after Pahlavi books. In fact, some fragments of old MSS handed down to us contain glimpses of the history of the prophet; two of the old *nasks* of the Avesta apparently referred to Zarathushtra.

For the Parsi traditions regarding the Avesta see art. AVESTA. The books now in possession of the Parsis are: the *Vendidad*, the *Yasna*, the *Visparad*, and the *Khorda-Avesta*. The same are to be found in the hands of the Gabars in Persia.

For the Avesta and Pahlavi literature see art. AVESTA and LITERATURE (Pahlavi).

There exists also an exhaustive Gujarâtî and Persian literature, which was developed as the community felt the need of having translations or transcriptions of their sacred books, and also of communicating with the brethren of Persia. This is also treated in art. LITERATURE (Pahlavi).

(b) *Monotheism.*—The Parsis claim to be monotheists. Is that monotheism of theirs in keeping with the old texts or the beliefs current under the Sasanians, when the primitive teaching of the

prophet was disfigured by the numerous sects which undermined Zoroastrianism? We do not know which doctrines were brought to India by the refugees. To whatever sect they belonged, the modern Parsi very properly claims the appellation of *mazda yasno*, 'worshipper of Mazda,' and believes in one God. That God has all power, all knowledge; He is Ahura, the Lord, Mazda, the All-Wise. His body is the Infinite Light; His abode the Supreme Heaven.

Ahura Mazda, besides having many other attributes, is spoken of in the *Gāthās* as having chief attributes personified as the Ameshā-spentās (the holyimmortals). Including Ahura Mazda, there are seven Ameshā-spentās: Ahura Mazda, the living wise or all-giving Lord; Vohu Manō, the good-mind; Asa-vahista, the best order or the excellent holiness; Kshathra Vairya, the absolute power; Spenta-Armaiti, the beneficent piety; Haurvatāt, the wholeness; Amêrētāt, the immortality. The last six abstract notions have sometimes been considered as archangels, or celestial beings, at the head of whom Ahura Mazda is placed. It is the same with the *yazatas*, genii or natural deities or existences to whom men pay homage. Ahura Mazda is the first of the heavenly *yazatas*; Zarathushtra, the first of the earthly *yazatas*. The explanation of this hierarchy is extremely difficult, and includes the real essence of Zoroastrianism on which scholars and *dastūrs* do not agree. Ahura Mazda created two spirits: good comes from the spirit Spenta Mainyu; evil comes from a destructive spirit, Angra Mainyu or Ahriman.

Zoroastrianism has been considered by Muhammadan and Christian authors as the perfect expression of religious dualism, and scholars have by turns accepted or rejected the doctrine of duality. The modern Parsis absolutely deny that their Prophet Zarathushtra preached dualism, and they try to restore to Ahura Mazda the character of unity and eternity of which misunderstood dualism deprives him. We need not enter into the discussion here, as the subject is fully dealt with in art. DUALISM (Iranian).

The Parsis, pure monotheists as they claim to be, indignantly repudiate the appellation of 'fire-worshippers,' with which they have been branded for ages. Travellers in India always recorded their reverence for fire, and gave them the name of *ātash-parastan*. The Parsis are not fire-worshippers; they are the worshippers of God only. Such is the answer made by Parsi children, according to their catechisms. Fire, of course, plays a conspicuous part in the ceremonies of the Parsis. It claims homage from the modern Parsis as it did from the ancient Iranians. It is seen on the Achæmenian sculptures and on the Sasanian coins, and is still kept in the Indian *dar-i-mihr*, as Strabo (*Hist.* xv.) describes it: 'in sacred places, fed with barkless pieces of wood,' etc. And Pausanias (v. xxvii. 3) places it 'in a room . . . where a priest repairs to put dry wood upon the altar, the tiara on his head, singing sacred hymns . . . from a book in a language utterly unintelligible.' The modern Parsis offer the explanation that, if the Iranians regarded fire as the symbol of divinity, and as such worthy of respect and reverence, they never professed themselves to be worshippers of fire. Zoroaster, in his *Gāthās*, speaks of fire as a bright and powerful creation of Ahura Mazda, and prefers it as a symbol of divinity to idols or other objects; but nowhere does he enjoin the worship of fire.

(c) *Immortality of the soul*.—Man is represented as a compound of physical and psychological parts. His nature is double—material and spiritual, body and soul. His spiritual parts are immortal, and were created before his material parts. Of his spir-

itual parts the principal is the *urvan*, the soul, with its faculties, and the *fravashi*, a notion perhaps of post-Zoroastrian belief. The *urvan*, or the soul, is responsible, and, according to its acts, receives reward or punishment. On the morning of the fourth day after death the *urvan* enters into the spiritual world, and never returns to the material world. There is no trace of metempsychosis. As regards *fravashi*, it is a peculiar inner power of *urvan*—a most interesting notion, and very much like the Platonic *idéa*. The *fravashi* of the holy soul is honoured as a holy spirit, and its help is invoked as a sort of guardian-spirit of the soul. The soul is endowed, during its earthly career, with such helps as may enable it to fight against the evil influence of Ahriman. These helps are knowledge, wisdom, sense, thought, speech, the religious conscience, revealed religion, etc. It cannot look for any other help; there is no vicarious salvation in Parsiism. Cf. art. FRAYASHI.

(d) *Future life*.—Such a struggle deserves a reward. The Parsis, according to the Zoroastrian creed, believe in a life to come. The Avesta writings of the *Hâtôxt Nask*, the 19th chapter of the *Vendidad*, and the Pahlavi books *Dindî-Mainôgî-Xrat* and *Arîstî-Vîrâf Nâmak* treat of the fate of the soul after death. Even in the *Gāthās* we find general hints about it. The soul of the virtuous crosses the Chinvat bridge, and is admitted into the house of purity and eternal light and song (*garô demâna*), where it enjoys the company of holy souls. The soul of the wicked goes to the house of impurity and darkness, reproached by its conscience, bemoans its state, and utters cries of lamentation. The state of reward or punishment is to continue till *Frashô-kereti* or *Farshogard*, i.e. the renovation of the world, when the whole creation is to start afresh. The notion of the immortality of the soul and a future life, distinctly expressed in the *Gāthās*, pervades the whole of the later Avesta literature, and is entirely accepted by the Parsis. See, further, BLEST, ABODE OF THE (Persian).

(e) *Resurrection of the dead*.—The resurrection, or *Ristâkhêz*, will take place at the end of the present cycle; then will come the last of the Saoshyants (see ZOROASTER), who will consummate the work of purifying and regenerating the world and removing all evil effects of the work of Ahriman. All the souls of the wicked will be brought out from hell, and will be purified through the supreme ordeal; the souls of the righteous, too, will rise, and they also will pass through the *Ristâkhêz* and be submitted to the same trial; but the flames will not burn them—they will cross them as a sea of milk. Henceforth the world will enter upon a new cycle, free from all evil and misery, ever young and rejoicing. All souls will be furnished with new bodies, and will commence a life of ineffable bliss. Hell itself will be purified. The Parsi theories of the resurrection, the last judgment, and the fate of Ahriman are found in the *Bundahishn*.

2. *Ethics*.—'The Zoroastrian religion,' as has been pointed out by Darmesteter (*Parsiism*, p. 11f.), 'was a religion of life in the noblest sense of the word; it brought two things of which the old Aryan religions, in the midst of which it rose, had no idea, or only a dim apprehension; those two things were *moral* and *hope*'; so that 'the Zoroastrian faith not only gives its follower a moral rule through life; not only directs his heart, his tongue, his hand, teaching him *good thought, good word, and good deed*; but it tells him that the good will prevail at last if he does his duty; that a son of the prophet Saoshyant will come and open the eternal reign of Ormazd, and exterminate the evil from the world. The poorest, the meanest

Zoroastrian in the world knows that he is born a soldier of Saoshyant, and that Ormazd will conquer through him.' The development of activity—free and voluntary—introduces a quite modern factor into Parsiism, and enables it to stand on a level with the contemporary systems of philosophy through the triumph of effort. One is even justified in wondering how Zoroastrianism arrived at the low ebb which caused the final success of the Arabs and Islām; but, in studying attentively that portion of history, we see that it can be fully explained by the fact that, having become a State religion, it perished miserably, stifled by the priesthood and weakened by the struggles among the sects. In any case, as it appeals at the present day to a small number of followers, it divests itself of any sacerdotal or sectarian character in order to speak only to the reason of the individual. Zoroastrianism—become Parsiism—appears to us, above all, a system of moral philosophy, and it is in that direction that it will probably develop more and more. Though the Pahlavi writers have handed down copious materials on Zoroastrian ethics, no special treatise has ever summed them up. Strange to say, the sublime precepts of morality enjoined by the Zoroastrian religion have never been codified. According to the sacred books, all morality is divided into three great classes: *humata*, good thoughts; *hūkhta*, good words; *huvarshata*, good deeds. Similarly, there are three categories of immorality: *duzhmata*, evil thoughts; *duzhukhta*, evil words; and *duzhvarshata*, evil deeds. All good thoughts, words, and works are done with wisdom. All evil thoughts, words, and works are done without wisdom. All good thoughts, words, and works lead to paradise. All evil thoughts, words, and works lead to hell. To all good thoughts, words, and works (belongs) paradise. So (is it) manifest to the pure. Of all Zoroastrian virtues, the first, holiness, or *asha*—a very comprehensive term—embraces all sorts of purity, truthfulness, and beneficence. The *ashem vohd*, the prayer-formula that every Zoroastrian learns, teaches that 'Holiness is the best good and happiness; happiness to Him who is the Holy one for the sake of the best Holiness.' Cf. art. ETHICS AND MORALITY (Parsi).

The list of Zoroastrian virtues would be too long to reproduce here. Most of them are common to the great religions of the world—Buddhism, Judaism, Christianity; but some of them have, so to speak, expanded in the modern development of Parsiism. Charity, for example, formerly restricted to the Zoroastrian brethren, is now extended to every caste, race, and religion. Again, as a deviation from certain ideas, the modern Parsis repulse converts, and seem to have totally forgotten that it was through preaching and proselytism that their religion was established, and that the admission of the adherents of a false religion to the true religion was allowed. The question of investing non-Zoroastrians with *sudrah* and *kusti* was a pressing one, and was settled lately; the community as a body is averse to proselytism. The Parsis do not admit conversions to Christianity, and Parsi converts are very few. Moreover, the Parsis have never sacrificed themselves for their religious ideas; they may have suffered, from the storming of their old centre Sanjān, the ordinary evils of war, and under the Portuguese from the strict regulations of the Damaun and Bassein authorities; but their faith was never at stake in India. Hence they have no occasion to boast of their modern views of toleration, when they enjoy equality of protection under an enlightened Government. Those views are quite opposed to the spirit of the Sasanian kings, who were ardent persecutors of

alien worships. For them there was only one good religion. All others, especially those of the Jews, Manichæans, and Christians, were attacked. Any communication with unbelievers was a cause of impurity; to eat with them was sinful. The same view is found in the *Rivâyats*, and, among the modern Parsis, the adherents of old customs clung to it as late as the early fifties. At that time the prejudice was still so strong that even men like Sir Jamshedji Jijibhai declined to dine with the Governor of Bombay.

It is a most important fact that the Parsis, since their arrival in India, may have submitted to some Hindu customs in order to please the Rana of Sanjān; but they never felt the moral or religious influence of Hinduism. Whatever common origin the two branches of the Aryan family may have, each has separately achieved its own evolution. The Parsis borrowed neither the fasts of asceticism nor the ecstasy of mysticism—both opposed to pure Zoroastrianism. Indian philosophy also they ignored. The great Brāhmanical schools were not meant for alien races, and not open to the Persian refugees, who, even at Nansari, did not attempt to start a school of their own. Now, in contact with European thought, active, living, communicative as it is, what will become of the community? Neither the Roman Catholic saints nor the religious reformers of Christianity will gain influence over the Parsi youths; but Darwin, Huxley, Stnart Mill, Comte, may perhaps do so, and the future of Parsi ethics and philosophy depends on the way in which they are understood and adapted. See art. PHILOSOPHY (Iranian).

3. Liturgy: worship and ceremonies. —(a) *Temples*.—The Parsi temples for a long time did not differ in outward appearance from the better-class houses. Now the fronts of some of them, at Udvada and Bombay, are decorated in the neo-Persepolitan style. The word for temple is *dar-i-mihr*, 'door or palace of Mithra.' In India they are commonly called *āgārīs* (from *āg*, the Sanskrit *agni*, 'fire'). They are of three grades, *ātash-dādgāh*, *ātash-ādarān*, *ātash-bahrām*, according to the quality of the fire kept in them. (1) The *ātash-dādgāh* may be touched both by priests and by laymen; never by non-Zoroastrians. It is the ordinary fire preserved in a fire-temple, or even in the houses of Zoroastrians, and used in sacred ceremonies; (2) the *ātash-ādarān* may not be touched by any one but priests; its consecration requires great ceremonies; the utmost care is taken in watching it and keeping it perpetually burning; (3) the *ātash-bahrām* is the highest of all; its consecration entails heavy expenses and a long series of ritual—for a year or more. The sacred fire is constantly watched by priests who have undergone the highest purifications. Its extinction would be regarded by the Parsis as a calamity. Non-Zoroastrians are not admitted into the *dar-i-mihr*. The chief feature of the temples is the absence of statues or representations of divinities. The temple is divided into two parts: the *ādarān*, or place for fire, and the *izishn-gāh*, in which the ceremonies are recited. (i.) *Ādarān*. In a small domed room the fire is kept burning in a silver or copper-brass urn resting on a stone stool, or *ādōsh*, with a metallic tray hanging from the dome (*tāj*); five times a day (at each watch, or *gāh*) a priest, his month covered with a *padān*, or piece of cloth, to prevent the effluvia from defiling it, cleans the room, washes the stool, arranges the cinders, and puts fresh sandal or other wood on the fire. The ceremony is called *bōi dēvi*. (ii.) *Izishn-gāh*. This is a large quadrangular room, divided by *pāvis* (small channels), and is used for the celebration of the ceremonies. There is space enough for a stone stool (*ādōsh*) for

The daily obligations of the orthodox Parsi are numerous: the untying and retying of the sacred girdle (*kusti*) on the sacred shirt (*sudrah*) is performed several times after the washing of the hands, face, and feet with pure water, and is called *padyāb*. The custom of saying grace before and after meals still subsists.

III. RELIGION.—Anquetil du Perron, *Zend-Avesta*, 'Usages civils et religieux des Parses,' pp. 587-591, and 'Système théo-

logique, cérémoniel et moral,' pp. 592-618; J. Wilson, *Parsee Religion, as contained in the Zend-Avesta*, etc., Bombay, 1843; M. Haug, *Essays on the Sacred Language, Writings, and Religion of the Parsis*², London, 1878; J. Darmesteter, *Parsiism—its Place in History*, a Lecture delivered at Bombay, 2nd Feb. 1887; S. Laing, *A Modern Zoroastrian*³, London, 1888; J. J. Modi, *The Religious System of the Parsis*, Bombay, 1885; S. D. Bharucha, *A Brief Sketch of the Zoroastrian Religion and Customs*, do. 1893.

D. MENANT.

PARTHENOGENESIS.—Parthenogenesis is the development of an egg-cell which has not been fertilized. It is of frequent occurrence (1) in many of the lower crustaceans, such as the brine-shrimp *Artemia*, the large freshwater *Apus*, and some water-fleas—*e.g.*, *Daphnia*, *Moina*, *Cypris*, and *Candona*; (2) in some insects, notably among the gall-wasps (*Cynipidæ*), in certain species of which males have not been found, and among saw-flies (*Tenthredinidæ*); and (3) in most of the rotifers or wheel-animalcules. In most rotifers parthenogenesis is the rule; in some cases males have never been found. In most of the cases of parthenogenesis among crustaceans and insects males are absent for months or years, but reappear at intervals. Among plants there are few examples of normal parthenogenesis in the strict sense, for we cannot include cases, like many of the lower fungi, where the whole sexual reproduction is degenerate. An undoubted parthenogenesis obtains in *Chara crinita*, one of the water-stoneworts. For in N. Europe only the female plants are represented. It should be noted that there is no reason whatever to associate the dominance of parthenogenesis with any loss of racial vigour. A hundred successive parthenogenetic generations have been carefully observed in the case of *Daphnia*, and there was no suggestion of any degeneration. In a few cases the occurrence of variation in parthenogenesis has been demonstrated.

It may be useful to distinguish several different grades of parthenogenesis. (a) What may be called *pathological* parthenogenesis is illustrated when the egg-cell, say, of a hen, exhibits without fertilization a number of divisions. In none of these cases has the development been known to go far. (b) The term *casual* parthenogenesis may be applied to cases where the occurrence is observed as a rare exception—*e.g.*, in silk-moths. It occasionally happens that worker-ants, not normally reproductive at all, produce ova which develop parthenogenetically. Since the discovery of what is called 'artificial parthenogenesis' (see below) these instances of pathological and occasional parthenogenesis have become more intelligible. (c) *Partial* parthenogenesis is well illustrated by hive-bees. The queen receives from the drone a store of male elements or spermatozoa, and it rests with her, in laying the eggs, to fertilize them or not. Those eggs that are fertilized from the store of spermatozoa develop into workers or queens (according to the nurture); those that are not fertilized develop into drones. The same is true of some other Hymenoptera, such as ants. (d) The term *seasonal* parthenogenesis may be applied to cases like green-flies or Aphides, where one parthenogenetic generation succeeds another all through the summer, but males reappear in the autumn and fertilization occurs. This is also illustrated by some of the water-fleas. (e) The term *juvenile* parthenogenesis may be applied to some curious cases (*e.g.*, in the midge *Miasmor*) where larval forms exhibit precocious reproductivity without any fertilization. It becomes difficult, however, to draw a line between such cases and multiplication by means of spores, such as is seen in the larval stages of the liver-fluke and in many plants. Spores are specialized reproductive cells which develop without fertilization; they are familiar to every one on the fronds of ferns. The formation of spores is a primitive mode of re-

production, but the parthenogenetic development of ova is probably in all cases secondary and derivative—a relapse from the normal spermic development. None the less it seems to work well in certain kinds of organisms and in certain conditions of life.

It may be asked whether egg-cells which normally develop without being fertilized are in any way different from ordinary ova. But the answer is not at present very clear. In some cases (ants, bees, and wasps) the ova go through the ordinary process of maturation, involving a reduction of the number of nuclear rods or chromosomes to half the normal number. In some other cases (rotifers, some water-fleas, and green-flies) there is no reduction when the conditions of life are favourable, though there may be when they are unpropitious.

Of great interest and importance is the establishment of the fact that in a variety of cases the ovum may be artificially induced to develop parthenogenetically. The demonstration of this has been mainly due to Jacques Loeb and Yves Delage. If the unfertilized eggs of a sea-urchin be left for a couple of hours in sea-water the composition of which has been altered (*e.g.*, by adding magnesium chloride), and be then restored to ordinary sea-water, many of them develop into normal larvæ. A mixture that Delage found to be very effective for sea-urchin ova consisted of 300 c.cm. of sea-water, 700 c.cm. of an isotonic solution of saccharose, 15 centigrams of tannin dissolved in distilled water, and 3 c.cm. of normal ammoniacal solution. It works equally well if the volume of the sea-water or of the saccharose be doubled. The ova were left for an hour in the mixture, then washed several times, and then placed in sea-water, where they soon developed. In a few cases fully-formed sea-urchins have been reared. There are two points of special importance: first, that the artificial parthenogenesis has been induced in a great variety of types (*e.g.*, sea-urchin, starfish, marine worm, mollusc, fish, and even amphibian); and, second, that the artificial stimuli effectively used are very varied—chemical, physical, and mechanical. Artificial parthenogenesis has been induced by altering the chemical composition of the water by adding or removing certain salts, or by altering the concentration by adding salt and sugar, or by subjecting the ova to various influences, such as superabundance of carbon dioxide, vapour of chloroform, ether, benzol and toluol, the presence of butyric acid, blood, serum, and extracts of foreign cells, or by exposing the ova to electric currents or to mechanical stimulation. Frog's eggs pricked with a needle and washed with blood may proceed to develop rapidly and normally. In a few cases the parthenogenetic development has been successfully carried beyond the completion of the tadpole metamorphosis. The effective stimuli, such as have been enumerated above, differ for different kinds of eggs, and even for eggs of the same kind at different stages of ripeness. There is probably some common factor in all the effective stimuli, but what it is remains uncertain.

It is too soon to make more than a tentative statement as to what happens in artificial parthenogenesis. According to some, the artificial changes in the medium do not in themselves directly induce segmentation, but modify the intimate constitution of the egg in such a way that, when it is returned to its natural medium, it becomes auto-parthenogenetic. According to Loeb, the physico-chemical agency induces the formation of a 'fertilization membrane' by a change in the surface of the egg comparable to that which follows the entrance of a spermatozoon. The first step is a cytolysis or partial solution of the cortical layer of the ovum, perhaps a liquefaction of fatty substances in the cellular emulsion. The result is the formation of the 'stabilizing envelope' or 'fertilization membrane.' But the appearance of this membrane seems to lead to an acceleration of the oxidations

going on in the egg; the egg is activated, and segmentation begins. But this may simply lead to disintegration, if there is not also a corrective factor, and it has been possible to devise experimental conditions that induce activation only and others that induce activation and stable development. Thus the presence of a fatty acid, such as butyric, may bring about membrane-formation and the activation of the egg, while the presence of a hypertonic solution (i.e. with increased osmotic pressure) may serve as the essential corrective. The life of the activated egg may also be saved by putting it after the membrane-formation for about three hours into sea-water practically free from oxygen or containing a trace of potassium cyanide. In either way the over-active oxidations in the egg may be suppressed. If the eggs are thereafter transferred into ordinary sea-water containing free oxygen, they often develop normally. Similarly, pricking the ovum of frog or toad with a platinum needle and the entrance of some blood corpuscles may serve to activate, while the return to the normal medium may serve as the necessary counteractive of disintegration.

One must not conclude that the rôle of the complex living spermatozoon is exhaustively replaced by the chemico-physical agencies referred to, for normal fertilization implies more than activation and a regulation of the subsequent cleavage. It implies a mingling of the heritable qualities of the two parents. What the experiments show is that the ovum is quite complete in itself, that certain factors involved in what the spermatozoon effects may be artificially mimicked, and that perfectly normal larvæ may be reared from various unfertilized eggs which are not known ever to develop parthenogenetically in natural conditions. The remarkable facts that have come to light since 1899 show that one cannot set limits to the possibility of the occurrence of parthenogenesis. Some of the experimental conditions which are effective in inducing parthenogenetic development might find a parallel in natural conditions. As yet, no instance of either artificial or natural parthenogenesis has been observed in the animal kingdom above the level of amphibians.

J. ARTHUR THOMSON.

PARTHIANS.—1. The country.—The position of Parthia was south and a little east of the Caspian Sea. It was bounded on the north by Hyrcania and the Turanian desert, on the south by the great salt desert of central Irân, on the east by Ariana, and on the west by Media. Roughly, it corresponded with the northern part of Khorâsân. The name of the country, Parthia, is regarded as having been derived from that of its south-west province, Parthyene.

2. The people.—The Parthians were an Iranian tribe named in the inscriptions of Darius *Parthava*, called by the Greeks *Παρθαίοι*. Justin (xli.) describes them as Scythian exiles, their name being explained as meaning 'refugee' in that language. It is doubtful whether any of the stories as to the origin of the Parthians are trustworthy. Moses of Chorene calls them descendants of Abraham by Keturah, whilst Strabo and others regard them as Scythians sent by Sesostris from Scythia when he returned from that country. The first authentic information concerning them, however, is that of Darius, who represents them as inhabiting the tract with which they have always been associated. It is therefore probable that they were added to the Persian empire by Cyrus, the conqueror of Babylon, about 550 B.C. Herodotus

(iii. 93) speaks of them as belonging to the 16th division, or satrapy, of Darius, and as paying, with the Chorasmians, Sogdians, and Areians, a tribute of 300 talents of silver.

3. History.—However faithful the Parthians may have been to their overlord in the years preceding the accession of Darius Hystaspes, there seems to be no doubt that, while he was at Babylon, they revolted, with other tribes or nationalities, in favour of one of the pretenders with whom he had to contend. Their sympathies were evidently with Phraortes the Mede, and in this they had the support of Hyrcania. As Darius's father, Hystaspes, was the general who defeated the allied rebel armies there, it seems probable that they were in the province which he governed. The first battle took place in Vispanzatis (*Hyspaostisa*), in Parthia, but, notwithstanding the success which Darius claims for his father on that occasion, it is clear that he had not troops enough, and reinforcements had to be sent from Persia. The second battle, in which Hystaspes was entirely victorious, took place near the city of Patigrabana, also in Parthia. In the war of Xerxes against the Greeks the Parthians were in the same division as the Bactrians, and were commanded by Artabazos (Herod. vii. 66). To all appearance they remained faithful to Persia to the end, serving in the army at Arbela against Alexander, to whom, however, they made but a feeble resistance when he passed through their country on his way to Bactria.

4. Rise to power.—Very scanty materials for the early history of the Parthian kingdom exist, and only fabulous legends concerning it are given by Arrian in his *Parthica* (Photius, cod. 63; Syncellus, p. 539 f.). Hero Arsaces, the founder of the great Parthian dynasty, with his brother Tiridates, originates in the royal house of the Achæmenians. The young Tiridates having been insulted by the prefect Agathocles or Pherecles, the brothers, with five companions (like the seven Persian supporters of Darius), slay him, and Arsaces mounts the throne. There is nothing improbable in all this, but the statement that Arsaces died after two years and was succeeded by Tiridates seems impossible, in view of the fact that the former reigned about 37 years. Arsaces I. maintained himself not only in Parthia, but also in Hyrcania, though constantly threatened by Diodotus of Bactria (Justin, xli. 4). Arsaces is said to have fled, about 233 B.C., to the nomadic tribe of the Aspasians, owing to the march of Seleucus II. eastwards (Strabo, xi. 513). A rebellion in Syria, however, soon compelled Seleucus to retire, and Arsaces returned victorious to Parthia. According to Justin (xli. 4), the day of this victory was celebrated as that of Parthian independence. Arsaces was proclaimed king at Asnak (Kuchan in the upper Atrec valley) and founded Dara in Apavartikine, now Kelat, farther to the east. His son, Arsaces II., was attacked by Antiochus III. (the Great) in 209 B.C., and certain Parthian and Hyrcanian towns were captured by him. The successor of Arsaces II., Priapatius (Justin), ruled 15 years (190–175 B.C.), and Phraates, who followed on the throne (175–170 B.C.), subjugated the Mardi in the Elburz. This ruler, notwithstanding that he had many sons, left his throne (following an old Elamite custom) to his brother, Mithridates I. (170–138 B.C.). Having subdued the Medes, the Elymeans, the Persians, and the Bactrians, Mithridates extended his conquests in India beyond those of Alexander, subjugated Syria, and added Babylonia (see § 9) and Mesopotamia to his empire, which now had the Ganges as its eastern and the Euphrates as its western boundary. Among other great rulers of Parthia may be mentioned Phraates II. (133–127 B.C.), who defeated Antiochus Sidetes,

but was himself slain in a battle with the Scythians who had helped Antiochus; and Phraates III. (70-57 B.C.), who supported the younger Tigranes of Armenia against his father, and re-obtained possession of Mesopotamia in consequence. He was murdered about 57 B.C. by his two sons. The dynasty of Arsaces lasted until A.D. 229, when it was ended by the native Sasanian dynasty of Persia, under Artaxerxes I., son of its founder.

5. Character.—An active mountainous race, the Parthians were very warlike and courageous. They early learned the value of accurate shooting, and attained renown as archers, owing to their skill with the bow on horseback. Their fame as horsemen was for this same reason equally great. Even whilst going at full speed, they discharged their arrows with such precision that they could prevent an enemy from following them in their flight. The cavalry formed the strength of the Parthian army; as for the infantry, this was composed mainly of slaves who had been bought and trained for military service.

6. Civilization and language.—It is doubtful whether the Parthians were of Scythian origin or not (§ 2), but it is known that certain Scythian nomads became the ruling race in the State. Extensive landed property was given to them, and they formed the king's council, which appointed the successor. These Scythians, however, ultimately became, as was to be expected, one with the Parthian nation. Such an amalgamation was rendered all the easier because of the likeness of their language, for Parthian was looked upon as a mixture of Scythian and Median (according to E. Meyer=Iranian). Being, however, 'philhellenes' and altogether under the influence of Greek art and civilization, the kings, on their coins, and probably also in official documents, used the Greek language, so that no specimens of ancient Parthian have come down to us. That their language should have been the original of that strange jargon, Pahlavi, as contended by some (Meyer regards the word as a corruption of *Parthava*, 'Parthian'), is in the highest degree improbable. The tongue which, mingled with Pahlavi, made it a 'jargon' was not Greek, but Aramaean. The Iranian element of Pahlavi was Persian.

7. Religion.—As the early history of the Parthians is practically unknown, the religion which they professed is still a hidden detail. The Scythian element in the country is said to have adopted the religion of Zoroaster, and this probably became its official creed—an 'everlasting fire' was maintained in the royal town of Asnak.

8. Personal characteristics.—The Parthian coins show, on the obverse, the king's head in profile. He is bearded, and his hair, combed down on to his forehead, is confined by a fillet. The later kings have tiaras and shorter beards than the earlier. On the reverse of some of the coins is a representation of a soldier seated. He is beardless, and wears a hat with a brim, tight-fitting breeches, and a short cloak. In his outstretched hand he holds the national weapon, the bow. This apparently gives the costume of their renowned archer-cavalry.

9. The Parthians in the late Babylonian inscriptions.—There is hardly any doubt that more information concerning the Parthians will come to light from excavations and explorations in the nearer East. Several large Babylonian tablets, giving very minute details of the history of the Arsacidean period, are preserved in the British Museum. So far, however, the distinguishing names of the individual kings of the dynasty are rarely obtainable from this source, as they all bear the dynastic appellation *Arsakaa* or *Arsakam*, i.e. Arsaces.

One of these tablets states that the Babylonians of Seleucia on the Tigris opposed Antiochus, and refers to a conflict with the Elamites, led, apparently, by a general named Parsō. Antiochus fled with a few soldiers. Another fragment refers to the people having fled from certain plunderers (*Arbāya*, 'Arabs'), who then infested the country. Later on (seemingly) fighting took place between the Babylonians (people and leaders) and 'the son of the king and his army.' After a gap an announcement follows in which (the king of Parthia?) refers to some one (who belonged [?] to Artabanus, his brother) having been killed. He fought with (the enemy) and effected a great slaughter, and those who saved themselves by flight (including the son of the king) were pursued into the mountain-fastnesses. The 'Arabs' thereupon began plundering again, as in former days, but the writer notes that Arsaces (*Arsakaa*), the king, proceeded in that month 'into the remote cities of the land of Gutium' (Media), to make battle. It may, from this, be conjectured that the ordered rule of the Parthians was a welcome relief from the anarchy which seems previously to have prevailed in some of the lands which they conquered. As Artabanus was brother of Arsaces vi. (Mithridates I., 170-138 B.C.), some or all of the above details probably refer to his reign.

The Babylonian inscriptions of the Parthian period were written with the object of furnishing astrological data for historical forecasts. In addition to these, tablets of the nature of contracts have also been found. Their dates generally combine the Greek equivalent era with that of the Arsacide. As far as can be judged from the records handed down, the national life of Babylonia, as well as the religious institutions, went on much the same as during the reigns of their own kings, and it is probable that the same liberal rule prevailed in all the provinces under Parthian sway.

LITERATURE.—G. Rawlinson, *The Sixth Great Oriental Monarchy; Parthia*, London, 1873; A. von Gutschmid, *Gesch. Irans und seiner Nachbarländer von Alexander dem Grossen bis zum Untergange der Arsaciden*, Tübingen, 1883; Smith's *Dict. of Greek and Roman Geography*, London, 1872, s.v. 'Parthia'; Smith's *Dict. of Greek and Roman Biography and Mythology*, do. 1880, s.v. 'Arsaces', etc. (very detailed); *HDB*, s.v. 'Parthians'; *EB*, s.v. 'Parthians', 'Arsaces', 'Phraates', 'Mithridates', 'Orodes', 'Gotarzes', 'Facoruz', etc.

T. G. PINCHES.

PASCAL.—Blaise Pascal was born at Clermont-Ferrand on 19th June 1623, and died in Paris on 17th Aug. 1662. His father, Étienne Pascal, was president of the Court of Aids at Clermont when Blaise was born. The earliest anecdote told of the child recounts that, when he was a year old, he was cured by magical means of an illness which was supposed to have been superinduced by a witch. In 1626 Pascal's mother, née Antoinette Bégon, died; in 1631 his father, with his family, consisting of Blaise, Gilberte (born in 1620, afterwards married to M. Périer), and Jacqueline (born in 1625, afterwards Sœur de Sainte Euphémie in Port-Royal), moved to Paris in order to devote himself to the education of his son, whose precociousness was remarkable. There he fell into disgrace with Richelieu for having protested against an administrative reduction of the *rentes* of the hôtel-de-ville, some of which he had purchased. Being, however, restored to favour, he was appointed intendant of Rouen by the cardinal in 1639. After nine years' residence in Rouen there followed a stay of two years in Clermont, and in 1650 the Pascal family returned to Paris. Shortly afterwards Jacqueline joined Port-Royal (she was professed on 5th June 1653)—Gilberte had already married Périer—and Étienne, the father, died in Sept. 1651.

Such is the bare outline of the history of the family in which Pascal was brought up, and, as we shall see, what little light it throws on the origin or development of the genius which illuminates it comes from the father and the sister Jacqueline. We are, nevertheless, forced, perhaps not without advantage, to rely for an estimate of Pascal's place in history mainly on the events of his own life as illustrated by his literary remains. And that place will be found to be determined by three principal factors: his aptitude for mathematics, his writings on religion, and his psychology.

1. His mathematical aptitude.—Pascal's sister, Madame Périer, is our authority for the statement that, the study of geometry being withheld from him by his father, he was found one day by the latter with the figures of the first 32 propositions of the first book of Euclid worked out independently, and this while still a boy. He was now encouraged to study mathematics and was admitted to the weekly meetings of a small body of scientists who formed the nucleus of the future Royal Academy of Sciences. When only sixteen years old, he drew up a treatise on conic sections under six heads, entitled (1) 'Generatio conic sectionum tangentium et secantium,' (2) 'De hexagrammate mystico et conico,' (3) 'De quatuor tangentibus et rectis puncta tactuum junctibus, unde rectarum harmonicæ sectarum et diametrorum proprietates oriuntur,' (4) 'De proportionibus segmentorum secantium et tangentium,' (5) 'De tractionibus conicis,' (6) 'De loco solido.' This treatise was found among Pascal's papers after his death and was communicated to Leibniz, who, in 1676, urged its instant publication on account of its importance and originality. A *résumé*, however, of its results had been published by Pascal himself in 1640. The keystone of his theory was what he called the mystic hexagram, as to which he proved that the intersections of the three pairs of opposite sides of a hexagon inscribed in a conic are collinear. From this he deduced more than 400 corollaries.

While assisting his father in the collection of taxes at Ronen, Pascal found that long and tedious calculations were frequently necessary. His impatient spirit and fertile brain hit accordingly on the idea of making a machine which should automatically work out these troublesome arithmetical problems. He was so hampered by difficulties in the manipulation of the necessary material that, though he conceived the idea in 1643, it being, as he said, 'the effort of a man of twenty years old,' he did not secure the royal privilege for it till 1649, and it was not till 1652 that he was able to show that final form of his machine which is now deposited in the Conservatoire des Arts et Métiers.

From pure mathematics Pascal now turned to physics, after this excursion into mechanics. In the 17th cent. the dispute whether Nature abhorred a vacuum or not was unsettled. An intermolecular vacuum was admitted on both sides, but it was doubtful if any other kind of vacuum were possible in Nature. Descartes affirmed such a vacuum impossible and inconceivable. The atomists affirmed the contrary. The experiments of Torricelli (1608-47) under the inspiration of Galileo had resulted in the proof of the weight of the air and in the record of this fact in the barometer (the 'Torricellian vacuum') which was manufactured in 1643. Pascal interested himself in the subject, and in 1647 published his *Nouvelles expériences sur le vide*, followed by experiments in the next year in the Puy-de-Dôme and in Paris to determine whether the weight of the air was identical at all heights above sea-level.

'It,' as he said, 'is found that the height of the quick-silver is less at the top than at the bottom of the mountain, we must necessarily conclude that the weight or pressure of the air is the sole cause, and not any horror of a vacuum, since it is quite certain that there is more air at the bottom than at the top, for nobody could hold that nature abhors a vacuum more at the foot than at the top of the mountain' (*Œuvres*, iii. 265).

It is not too much to say that modern physics dates from the conclusions of Pascal come to in 1648. He broke with reluctance, he tells us, from the dogmas of the schools.

'From the first of these principles, that nature has an invincible horror of a vacuum, I have passed to the second, that she has a horror but not an invincible horror, and lastly, from that to a third belief that nature has no horror of a vacuum at all' (*ib.* ii. 371).

Pure mathematics still held Pascal, however, as is shown by his exercises on the cycloid, which date from 1658. Roberval had defined the area of the curve and the volume described by its revolution round its axis and round its base. Pascal then determined the segments of the area and the volumes as well as their centres of gravity, and, under the pseudonym of Dettonville, invited the leading mathematicians of the day to contend for a prize for the solution of such problems. Though Wallis of Oxford and others sent in essays, the proposal came to nothing, and Pascal finally published his own conclusions. These give Pascal high rank among the professors of the infinitesimal and differential calculus. It is worthy of note that, while engaged on this laborious work, Pascal was continuously under bodily suffering, and that his ideas on the properties of the cycloid came to him while sleepless through violent toothache.

It is not possible to fix precisely the date of another work of Pascal's which was concerned with the theory of probabilities. In that period of his life which preceded his 'second conversion' and followed the death of his father, he was familiar with sundry young men of fashion such as the Duc de Roannez and the Chevalier de Méré, and out of their experience of the gaming table rose a desire that he should treat mathematically the laws of chance. On this ensued a correspondence of Pascal with Fermat (see I. Todhunter, *Hist. of the Mathematical Theory of Probability*, Cambridge, 1865, pp. 7-21), but Pascal, though he seems to have contemplated a larger work, printed in 1654 only a fragment on the arithmetical triangle, which, however, was not published till 1665.

2. Writings on religion.—Though Pascal occupies an honorable place among the leaders of mathematical thought, he will always be most widely known for his writings on religion, especially the *Pensées* and, above all, the *Provinciales*. To appreciate these duly, however, we must first understand the ground and consequence of Pascal's religious outlook.

The first factor, in order of time, which falls to be considered is the atmosphere of the home of Pascal's early days. It might be too severe to think of it as darkened by any Puritanical gloom. The words, 'We only think of Aristotle and Plato as clad in the philosopher's toga. But they were good fellows and like the rest they laughed with their friends' (*Pensées*, no. 55 [vol. i. p. 150]), seem to describe accurately the two sides of Étienne Pascal's home. It was the home at once of a Stoic philosopher, a grave man of affairs, and a cultured man of the world to whom a wise gaiety was not unknown. Moreover, the greater part of Blaise Pascal's life was spent in Paris, and the nine years spent in the capital of Normandy—a province where culture was specially developed—were dignified by the friendship of the illustrious Corneille. In any case, whether in Paris or in Ronen, Pascal was thrown into a society whose polish and refinement would effectually open to him whatever joys the 'morale des honnêtes gens' might give.

On the other hand, Pascal's father was of an aristocratic Stoicism, with strong views about the education of his family and belief in his power to supply it. He had his 'system,' and this demanded the study of languages and literature before that of mathematics. It also insisted that the pupil should take nothing for granted, but in all things abandon prejudice and think for himself. This enabled us to understand partly why Pascal stood forth in all that he did as original, whether as discoverer or inventor or as the champion of religion. But at the last it is to the imperious genius of Pascal himself that we must attribute

that character of masterfulness, self-assuredness, and readiness to follow the argument whithersoever it might lead which we find in all that he set his hand to.

Two authors have been singled out as having contributed beyond others to the development of Pascal's mind—Epictetus and Montaigne—and not only because of the 'entretien sur Epictète et Montaigne' held by him with Isaac Lemaistre de Saci soon after his entrance into Port-Royal. There Pascal maintained against his friendly opponent that those two authors were neither dangerous nor useless. Of Epictetus he said:

'Behold the light of this great spirit who has so well known the duty of man. I dare to say that he would deserve to be worshipped if he had known equally well his impotence, since one must be God to teach man both. Also, as he was earth and ashes, after having so well understood what we ought to do, see how he loses himself in the presumption of what we can' ('Entretien de Pascal avec M. Saci,' *Œuvres*, iv. 85).

For man to count on himself is to Pascal the sign 'd'une superbe diabolique' (*ib.* iv. 36), and it was this, he said, that led Epictetus to believe that the soul is part of the divine substance, and that pain and death are not evils. Instinctively Pascal felt that the humility of Epictetus (though it might be the humility of Jean Jacques Rousseau) was not the humility of the Christian.

If Epictetus attracted Pascal by his insistence that man was but an actor in a comedy whose length depended on the will of the Master, it was Montaigne among the critics of 'le moi haïssable' who most deeply affected him. And he did this because of a certain affinity of scepticism which drew the bold intellect of Pascal irresistibly to the mocking humanist who went to Mass because Cicero bade him go. Sainte-Beuve has finely said that Montaigne can be studied in the bosom of Pascal.

'He was for him at certain times the fox of the Spartan boy concealed under his cloak. Pascal was frequently laid hold of by him, bitten and devoured. In vain he overthrows and rejects him; the wily one returns. He is disturbed by him, he quotes and transcribes him. . . . We might sum it all up in saying that Pascal in all his life and work has only done and only wanted to do two things: to fight to the death the Jesuits in the *Provinciales*, to ruin and annihilate Montaigne in the *Pensées*' (*Port-Royal*, ii. 387f.).

But Pascal could neither be content with the sceptical indifference of Montaigne nor do more than justice to the rational Stoicism of Epictetus. On the other hand, he was still less attracted by sceptical Epicureanism, if only because its ultimate moral effect is a general relaxation of the will to good. He was sufficiently conscious of man's unworthiness to draw upon himself the appellation of 'ce sublime misanthrope' (Voltaire, *Lettres philosoph.* xxv.). He testifies to his sense of man's weakness apart from grace when he says that 'man is neither angel nor beast, and the evil is that he who would make the angel makes the beast' (*Pensées*, no. 358 [ii. 271]). Again, though a bold, keen, and original thinker, he was deeply convinced of the limitations of reason and of human culture in general. This conviction led him to say that 'to mock at philosophy is true philosophy,' that 'true eloquence mocks at eloquence, true morality at morality; that is to say, that the morality of judgment mocks at the morality of feeling, for this is under no rule' (*ib.* no. 4 [i. 17]). He sees clearly enough that philosophy can do something, but that it cannot do all. A higher principle is required to carry on the work of philosophy, and he finds this in faith. Pascal saw that 'there are reasons which transcend our reason'; that, though 'all our dignity consists in thought,' yet that that thought is folly; man's thought never attains to satisfaction, for 'nature confounds the sceptics and reason the dogmatists.' Even from this misery of a nature hopelessly divided against itself Pascal draws the consolation

that, though 'to know one's self miserable is misery indeed, yet this misery is a mark of our greatness since we are conscious of it. It is the misery of a grand Seigneur, of a dispossessed King' (*ib.* no. 398 [ii. 303]). Pascal's indomitable spirit preserved him from all pessimism of the heart. He refused to rest in impotence as the last word about man. Impotent though in himself he might be, yet he was not left to himself. With him and above him was God, and the bridge by which God was reached was called faith. The radical contradictions in man's nature did not for him point to religious indifference, or to a 'religion de coutume,' but they drove him to that religion which promised to show how they could be got rid of or be reconciled.

In Jan. 1646 Étienne Pascal fell on the ice and dislocated his thigh. Then followed a period of retirement, during which he and his family studied works by Jansenius, Arnauld, and Saint Cyran, from which resulted what is called the 'first conversion' of Pascal, the nature of the Port-Royal appeal and its effect on him being somewhat similar to those of the *Serious Call* on Dr. Johnson. This did not lead him to surrender his scientific interests, for in the same year he was engaged on his researches on the question of a vacuum referred to above. Meanwhile his sister Jacqueline, with his sympathy, was being drawn towards Port-Royal, though she did not take the vows till 5th June 1653. At the same time (1647) Pascal was attending sermons preached by Antoine Singlin, confessor to Port-Royal. There ensued a period of worldliness broken by the death of his father on 24th Sept. 1651. Soon after he wrote his short *Discours sur les passions de l'amour*. Much has been made of a carriage accident which happened as Pascal was being driven over the Pont de Neuilly, when the horses ran away, and two out of the four (or six?) fell into the Seine. Whether this had anything to do with Pascal's second and definite conversion is doubtful. What is certain is that towards the end of 1653 he was the recipient of an extraordinary spiritual illumination by which he was raised above all the interests that had before occupied him, or, to be more accurate, was enabled for the rest of his life to approach them as merely affording materials for heavenly contemplation. This ecstasy is dated 23rd Nov. (1653 or) 1654, and an enigmatic record of it was found in two copies, one of parchment and one of paper, stitched up in his doublet after his death. It ran:

'The year of grace 1654,
Monday 23rd November, day of St. Clement,
pope and martyr, and others of the martyrologium;
Eve of St. Chrysogonus, martyr, and others,
from about ten at night
to half past twelve.

FIRE.

God of Abraham, God of Isaac, God of Jacob,
Not of philosophers and savants.
Certainty, joy, certainty, feeling, peace, joy.
God of Jesus Christ.

My God and thy God (Joh. 20¹⁷)
Thy God shall be my God (Ruth).
Forgetfulness of the world, and of everything save God.
He is only found by the ways taught
In the Gospel. Greatness of the human soul.
Righteous Father, the world has not
Known thee, but I have known thee (Joh. 17).
Joy, joy, joy, and tears of joy.
I have separated myself from it.
Dereliquerunt me fontem.
My God, wilt thou leave me?
That I may not be separated from thee eternally.
This is life eternal that they may know thee
The only true God and him whom thou hast sent,
Jesus Christ.

JESUS CHRIST.

I have separated myself from it, I have renounced it, and
fed it
That I may not be separated from him for ever.
He is only to be kept by the ways taught
In the Gospel.

Renunciation Total and Sweet.

Total submission to Jesus Christ and to my director.
Eternally in joy for one day of trial on earth.
Non obliviscar sermones tuos. Amen.'

Of the two copies of this memorial (sometimes perversely called 'amulet') the paper copy in Pascal's own handwriting seems to be a rough draft for the other, which in the present form is a *copie figurée* made by Louis Périér from the now lost parchment. Along its left side is written at right angles to the text:

'Here is the *copie figurée* of a parchment found after the death of Mr. Pascal, my uncle, written by his hand and sewn in the lining of his doublet—Périér L., Priest and Canon of the Cathedral Church of Clermont.'

This memorial is a decisive landmark in the history of Pascal, and serves to mark the transfer of his interest from the worldly life and the life of reason to the religious and ascetic mode of living. He had received the call of the living God, and all things else henceforth were to his taste but Dead Sea apples. He had before tried what reason and custom—i.e., what the conscious mind (*l'esprit*) and the unconscious—could do. By custom he means those blind, automatic forces which are stronger than all merely conscious activities, and it is this that he had in mind when he gave the advice that we should follow what the converted do, 'for in doing what they believed in, in taking holy water, hearing Mass, etc., you will naturally come to believe and you will stupefy yourself (*et vous abêtira*)' (*Pensées*, no. 252 [ii. 185]), where *abêtir* means only that the mind will enjoy the immediacy of feeling of the lower animals undisturbed by ideal constructions of the intellect. Now, Pascal has learned what can be done by a new and higher power—inspiration. Before, he would have said that the heart is creative in us; now, he discovers that it is God Himself who immediately acts in us and through us. The direct result of the experience of this presence and power of God in him was the decision to join the Port-Royal recluses, which he did in Jan. 1655. There he found the solitude and ascetic mode of living which had now become necessary to him, and there, too, he found himself amid kindred spirits. He did not, however, definitely enrol himself as a member of the community, and did not consider himself as really belonging to it. To use a familiar distinction, he was an adherent rather than a member of Port-Royal, and he often left the lay convent to live for a time in Paris.

On Friday, 24th March 1656, an event occurred at Port-Royal which had a remarkable effect on the now prepared mind of Pascal—the miracle of the holy thorn.

An abbé, Roi de la Porterie, had lent from his private chapel to the convent of Port-Royal of Paris a thorn from the holy crown of our Saviour. The relic was placed for adoration in the middle of the choir. Among the worshippers came Marguerite Périér, the ten-year-old niece of Pascal, who was suffering from an ulcer of the eye which had affected the bone of the nose. When her turn came, she applied the thorn to her eye and prayed that it might be cured. It was cured, and the cure was proved to be complete. Other miracles of healing took place, and the holy thorn refused to do cures outside Port-Royal.

So much was Pascal impressed that he took for his emblem an eye surrounded by a crown of thorns with the motto: 'Scio eui credidi.' And the certitude which he now felt could hardly be increased by the remarkable conversion of Charlotte Gouffier de Roannez, sister of his old friend, the Duc de Roannez. Pascal became for a time her director, and in that capacity wrote her a series of letters of which only a few fragments remain. Mlle. de Roannez was received into Port-Royal in July 1657, and as long as Pascal lived she resisted all efforts to get her back to the world. Afterwards, however, she left Port-Royal, married the

Duc de la Feuillade, and died in 1683 after having for twelve years repented her apostasy.

Les Provinciales.—But a far more important work was begun by Pascal before Mlle. de Roannez demanded his care. In 1656 he began the series of attacks on the Jesuits on which his literary fame chiefly rests. The outer history of the *Provincial Letters* belongs to the history of Port-Royal (see JANSENISM); we are concerned here only with Pascal's contribution to it.

On 14th Jan. 1656 Arnauld was condemned by a packed court of the Sorbonne for false doctrine on the point of sufficient as distinct from effectual grace. Port-Royal appealed to another court—the court of the public—and Pascal was chosen as their advocate. He was no theologian and had little taste for theological subtleties. On the other hand, he felt deeply the gravity of all that affected morality, and with a sure instinct he struck at the weak point in the armoury of the enemies of his Jansenist friends—the system of casuistry of the Jesuits. He wrote in the name of an imaginary man of position, Louis de Montalte, to a friend living in the country who was figured as desirous of knowing what was the meaning of the disputes going on in the Sorbonne. The first of these *Petites Lettres*, as they were commonly called, appeared on 23rd Jan. 1656, and the eighteenth and last is dated 24th March 1657. In the first three Letters he was content to stand on the defensive and discuss with his own peculiar irony the questions of sufficient and effectual grace and of proximate power. Thus he made play with the distinction between words and the ideas for which words stand, and inquired how grace could be sufficient and not effectual in fact. Was not this as good as saying that grace is at once sufficient and insufficient? Pascal illustrates the condition of the Church by comparing it to a man who is left half-dead by robbers, and sends for three physicians. The first, on seeing him, declares his wounds mortal and God alone able to cure him. The second flatters him and assures him that he has sufficient strength to get home. The third, after examining him, agrees with the second and combines with the second to chase away the first. On this the sufferer turns to the third doctor, who tells him that he has sufficient strength for the journey because he has legs, and legs are the instrument made for walking. 'But,' inquires the sick man, 'have I strength enough to use them?' 'Certainly not,' says the doctor, 'and you will not walk unless God gives you supernatural strength.' 'Then you are not of the same opinion as your colleague as to my real condition,' and the doctor admits that he is not. It would be difficult to put more concisely the hollowness of the league formed by the Dominicans and Jesuits against the Jansenists. Similarly, Pascal, in discussing the meaning of 'proximate power,' asks whether a man would have the proximate power of crossing a river if he had a boat and oars and whatever might be necessary, or whether a man with eyes had the proximate power of seeing in the dark. On being told that a man with the power of sight and in the daylight had this proximate power, he inquires whether the righteous have always the proximate power of keeping the Commandments of God, and is told that they have, but that they might not have effectual grace to enable them to pray to God for that purpose. It came to this, then, that the righteous have the proximate power when the phrase is abstracted from all meaning; that the phrase had no authority from the Scriptures, councils, or popes, but that, it being adopted by the majority of the court, Arnauld must adopt it also or be pronounced heretical.

In his fourth Letter, which opens like a Catiline

oration ('There is nothing like the Jesuits') Pascal turns his guns with a magnificent offensive on the Jesuits, but contents himself in this Letter with drawing on his Jesuit interlocutor the consequences of his assertion that 'an action cannot be considered sinful if God does not give us, before we commit it, knowledge of its evil and an inspiration which stirs us up to avoid it.'

In his fifth Letter Pascal addresses himself to an examination of what it was that the Jesuits actually taught, and attacks the basis of their system, which he finds in their underlying determination to substitute their own dominion for the dominion of God. From this followed as a practical corollary that, as the average man is incapable of a high degree of saintliness, religion must be made easy for him. And this the Jesuits carried out by their doctrine of probabilism. On this doctrine and the practical use made of the 'direction of the intention' Pascal pours out the vials of his scorn and derision in this and the next five Letters.

On the day when the fifth *Provincial* appeared (20th March 1656) the recluses of Port-Royal were obliged to disperse as a consequence of Arnauld's condemnation. Four days later occurred the miracle of the holy thorn—a matter of rejoicing to the Jansenists, of confusion to the Jesuits. Pascal in particular was rejoiced, for God had Himself plainly spoken. Moreover, the recluses were allowed to return to Port-Royal, and Pascal continued his assaults till 2nd Aug., when the tenth Letter appeared.

After this he drops the fiction of the provincial friend and addresses himself explicitly to the 'reverend Jesuit fathers,' in the eleventh onward to the eighteenth Letter. Nor was he to be turned from his purpose of attacking the moral maxims of the Society of Jesus by the appearance of Alexander VII.'s bull of 16th Oct. 1656, which condemned the famous five propositions alleged to be extracted from the *Augustinus* of Jansenius. This appeared a fortnight after the publication of the thirteenth Letter. The seventeenth and eighteenth Letters are addressed to François Annat (a Latinized form of his original name Canard), a provincial of his order, and for sixteen years confessor to Louis XIV. Pascal writes to him as the representative of the French Jesuits.

It is not surprising that in so heated a controversy as the *Provincial Letters* aroused Pascal should have been charged with heresy, inaccurate quotation, ridiculing sacred things, attributing to the Jesuit Society as a whole the eccentric opinions of obscure members, and appealing to pruriency. But the only charge which is even plausibly serious is that he spoke falsely when he declared that he was not of Port-Royal. In the seventeenth Letter he refers his opponents to his previous Letters, in which he had declared that 'he was alone' and that he was 'not of Port-Royal.' The passages to which he refers are in the twelfth and sixteenth Letters. In the former he is alluding to the impostures of the Jesuits, and he says:

'Indeed, fathers, you are more suspect in this matter than I; for it is not likely that being alone as I am, without power and without any human support against so powerful a body, being sustained only by truth and sincerity I should have exposed myself to lose all in exposing myself to be convicted of imposture.'

And in the sixteenth Letter, in rebutting the accusation of being a heretic of Port-Royal, he says:

'I know, fathers, the merit of those pious solitaries who have retired thither and how much the Church owes to their edifying and solid labours. I know their piety and their lights; for although I have never been admitted to their establishment (en établissement avec eux), as you would fain believe without knowing who I am, yet I have unbroken acquaintance with some of them, and I honour the virtue of them all.'

As a matter of fact, Port-Royal was a home of recluses, and Pascal was not one of them. Some of the *Provincials*, indeed, were written at the Roi David Inn, where Pascal frequently lodged under the name of M. de Mons, so that Pascal's assertions on this head are abundantly justified.

On the merits of the dispute it is enough to say that Pascal was a champion of the genuine morality of the gospel which is founded on a life that is indeterminate, and, therefore, not as such patient of formulation in treatises of casuistry. Love, while it remains love, meets each case as it arises and decides by its own intuitions. The weakness of the Jesuits' position lay in the very success of their logic. Having begun by legalizing, i.e. externalizing, the freedom which is at the heart of all morality, they were driven farther and farther from life into the intellectual analysis of propositions. Nor was it of any avail for them to plead that much of what they taught they had inherited, or that every man is forced from time to time to distinguish, qualify, or even explain away a precept of ethics. Their original sin was not that they invented, but that they perfected, a casuistry which was a substitute for life and love—not their living and ever-changing expression. Since Pascal's tremendous indictment of ecclesiastical ethics, that science has passed more and more into lay hands, and Pascal may be said to have done for morality what Luther did for religion—freed it from the perversities of experts and made it the business of everybody.

The Pensées.—In attacking the Jesuits Pascal conceived that he was attacking men inside the Church who were driving out Beelzebub to enthroned Lucifer. But he was also concerned with another set of free-thinkers who were outside the Church, and wielded a great influence, especially on the educated classes and on society. To bring these back to a saving knowledge of God through faith was his second principal desire as a Christian, and he determined to write a constructive plea against atheism. In preparation for this he studied diligently the Scriptures, the Fathers, and especially St. Augustine, and in particular an anti-Jewish polemic of the 13th cent., the *Pugio fidei* of Raimond Martin, which had been discovered by François Bousquet and reprinted in Paris in 1651 with notes by Joseph de Voisin. He also re-read and annotated Epictetus and Montaigne, especially the latter. Accordingly, he laid before some of his friends at Port-Royal about 1658, in a discourse lasting two or three hours, the aim and plan of his proposed treatise. They were delighted with what they heard, but Pascal's love of perfection caused delay in the elaboration of his thesis, and death supervened before he had set himself to the labour of writing his *Apologia* of the Christian religion. After his death a considerable body of rough notes was found, which were developed by different hands and in different forms into the famous *Pensées*. Some guidance in the arranging of these notes was derived from the recollections of Étienne Périer, Filleau de la Chaise, and Mme. Périer of Pascal's sketch of his *Apologia*.

Pascal died in 1662, and it was not till 1669 that Port-Royal put forth the first edition of his *Pensées*, with a preface by his nephew, Étienne Périer. Their text, however, was incomplete and was in some respects 'edited,' as to some extent was the edition of Condorcet in 1776, and of Bossuet in 1779. The subsequent editions of P. Fangère (1844), A. Molinier (1877), G. Michaut (1896-99), and L. Brunschwig (1897) have succeeded in elucidating the text. But no finality has been, or perhaps ever will be, reached in determining the order of the fragments. The Port-Royal editions were content to arrange them according to their

subject-matter. The result of this procedure was often to join discordant and to separate concordant notes. Molinier's plan was to group fragments which seemed determined by the line of the *Apologia* and to relegate the remainder to an appendix as illustrative notes. Michaut preferred to reproduce the MSS with critical notes by Brunschvicg. This method has the inestimable advantage of letting us into the mind of Pascal, and of allowing us to see him at work, jotting down his thoughts, erasing, adding, and giving alternative readings.

The thoroughness with which the *Apology* would have been treated appears clearly from the pains which Pascal took to lay down its appropriate method. He rejects for his purpose the 'geometrical' method as incompetent to touch the heart, and he insists that the eloquence of the heart is superior to rhetoric. It is the heart that has to be touched—the human heart which is at once infinite and empty. How then to escape from this ever-present sense of failure and discord? Justice, as we find it, is a matter determined by the boundaries of rivers and mountains; morality, whether in its Stoic or in its sceptical form, is uncertain. Reason argues well, but depends on principles beyond reason. Dogmatism and pyrrhonism are each unable to carry us more than a short way. Man, then, as a being conscious of great powers and needs which he can neither get rid of nor satisfy, must have recourse to something above himself. God alone can help him; religion must do what philosophy and science are unable to do.

From this Pascal goes on to survey the religions of the world, and ends by referring us to that religion which began with Judaism and is consummated in Jesus Christ. In Him the contradictions of human nature are reconciled, and with Him we are united by love, and then we are able to see things from the inside, instead of travelling on the outside by the way of reason through the ever-present contradictions of natural life.

'All the law is contained in Jesus Christ and Adam' (*Pensées*, no. 523 [ii. 418]). Therefore it is that 'the only religion which runs counter alike to nature, to common-sense and to pleasure is after all the only one which has always held its own' (*ib.* no. 604 [iii. 41]).

3. The psychology of Pascal.—So rich and complex a character as Pascal's was certain to draw on it, not only the hatred of those to whom his ideals were abhorrent, but also the misunderstanding which comes from the partial views taken by lesser intelligences. To the rationalism of the 18th cent. the claim to superiority made by Pascal for faith was particularly obnoxious. Leibniz regretted that Pascal's scientific genius was obscured by his prejudices for the Roman religion. To Voltaire he was a sublime madman born a century too soon, and his inspirations were but 'ægri somnia.' Condorcet, as a true Encyclopædist, regarded him as a tool of superstition, and a writer in 1846, L. F. Lélut, reached the highest point of absurdity in a work entitled *L'Amulette de Pascal, pour servir à l'histoire des hallucinations*. Even the story of the Pont de Neuilly, of which Voltaire (following Boileau) made so much, is of doubtful authenticity, and is not found in the accounts of Pascal's conversion given by Jacqueline and Mme. Périer.

Nor is there any good ground for Victor Cousin's theory (1830) of the scepticism of Pascal, according to which his faith was an unbelief only half-conquered. That in one sense Pascal was a sceptic is undoubted. He at one time found fault with the philosophy of Descartes as 'being useless, uncertain, and troublesome'—nay, as ridiculous' (*Pensées*, no. 79 [i. 98]). Yet he often quotes Montaigne and apparently identifies himself with

his cynical maxims. He writes that 'all men naturally hate one another,' and 'men are necessarily such fools that it would be folly of another kind not to be a fool' (*ib.* no. 414 [ii. 313]). But such intellectual or moral scepticism occupies only a corner of Pascal's ample mind, as is shown by such passages as the following:

'It is necessary to have three qualities, those of the pyrrhonist, of the geometrician and of the humble Christian. These unite with and attemper one another, so that we doubt when we should, we aim at certainty when we should, and we submit when we should' (*Œuvres*, iv. 53; cf. *Pensées*, no. 245 [ii. 170]).

Two excesses—to exclude reason, to admit reason alone' (*Pensées*, no. 253 [i. 186]).

'Faith tells us what the senses do not tell us, but not the contrary of what they see: it is above and not in opposition to them' (*ib.* no. 265 [ii. 195]).

He is quite ready to accept Montaigne's triumphant proof of the insufficiency of reason to explain the whole man, and is yet ready to maintain also that reason within its limits is trustworthy. But the certainty which neither the senses nor conscious thought supply is not unattainable by man if he will but submit himself to God and trust to the 'reasons of the heart' which are given by inspiration. Here he parts company with Montaigne, who would have had man acquiesce as an 'Epicuri de grege porcus' in his helplessness, whereas Pascal would bid him rise out of his rational helplessness into the higher region of faith.

Too much stress has been laid by his critics on Pascal's life-long ill-health as a proof of an unbalanced nature. The 'amulet' is quoted as proof that he suffered from hallucinations—he who two years afterwards began that series of powerful and solidly reasoned Letters which have made him immortal. In fact there is nothing to surprise our psychology in his famous vision. It bears every mark of being the natural climax of an acute mental struggle to find solid ground for belief in man's natural greatness on which to find refuge from his vileness and impotence. As is usual, the solution was given, and was accompanied by what is also customary after such effort, a state of super-excited feelings which may seem almost to certify to the subject the genuineness of the revelation. The only word in the whole 'memorial' which might perhaps cause doubt is the one which has a line all to itself, the word FIRE; and yet illumination as an accompaniment of conversion has been remarked on frequently from the case of St. Paul onwards. But Lélut, of the Salpêtrière, will have it that Pascal's autopsy showed softening of the brain, while P. Just-Navarre, of the Lyons Academy, pronounces for tuberculosis. It would seem, however, on the whole sounder to rely on what appears to be good medical testimony, according to which Pascal's sufferings were due to atony and disorders of the alimentary canal, affecting to some extent the whole nervous system, including the brain. There is nothing, however, to show that Pascal's brain was affected to a degree sufficient to cloud his mind or disable his judgment, unless, indeed, we are to declare all thoroughgoing asceticism, such as that of Suso and that of Pascal's iron barbed belt, to be marks of incipient insanity. His writings remain, and their testimony is incontestable to the soundness and unimpaired strength of his mind. As man, as scientist, and as Christian his place is among the heroes of mankind.

LITERATURE.—The *Provinciales* have been translated into every civilized language. A convenient ed. in French is that of John de Soyres, *The Provincial Letters of Pascal*, Cambridge, 1880. The *Pensées* also (as is noted in the text) have gone through many editions. Of those mentioned the *Pensées de Blaise Pascal* by Léon Brunschvicg, 3 vols., in the series of 'Les Grands Écrivains de la France', Paris, 1901, will supply a comprehensive study; the references in the text are to this edition. Of complete works the best ed. is in the same series, *Œuvres de Blaise Pascal*, 11 vols., do. 1904-14.

Other works which may be found useful are: E. Boutroux,

Pascal, Paris, 1900, tr. Ellen Margaret Creak, Manchester, 1902; F. Strowski, *Pascal et son temps*, 3 vols., Paris, 1907-08; R. F. A. Sully-Prudhomme, *La vraie Religion selon Pascal*, do. 1905; J. Tulloch, *Pascal*, in 'Foreign Classics for English Readers,' Edinburgh, 1898; E. Jovy, *Pascal inédit: Notes pathologiques sur Pascal et son entourage*, Vitry-le-François, 1912; C. A. Sainte-Beuve, *Port-Royal*, 5 vols., Paris, 1840-59, vols. iii. and iv.; art. in *Edinburgh Review*, lxxxv. [1847] 178 ff.; art. in *Quarterly Review*, ccvii. [1906] 526 ff.; H. F. Stewart, *The Holiness of Pascal*, Cambridge, 1916.

W. F. COBB.

PASSIBILITY AND IMPASSIBILITY.—

We may begin with a definition of passion from Baldwin's *DPHP*, s.v.:

'Generally passion is the condition of being acted upon, of being affected, receptive.'

In Christian theology the question of passibility and impassibility, or, in other words, according to the above definition, of the capacity or incapacity of being acted upon, comes up in the first place with regard to God Himself, and secondly with reference to the incarnate Christ. In so far as action is associated with change, the question referred to is closely connected with the other question of God's mutability or immutability.

The Biblical idea of God is religious, not philosophical, and as such is, especially in the OT, frankly anthropomorphic. Hence God is represented as both mutable and passible (Gn 6⁶, Is 63⁹, Hos 11⁸). Even in the NT, though a certain contact with the atmosphere of Hellenistic culture has led to the absence of the same vivid anthropomorphisms, we are yet far from a philosophic doctrine of God's immutability, not to say His impassibility. It is noteworthy that C. Hodge (*Systematic Theology*, London and Edinburgh, 1872, i. 390) takes only one proof text for the divine immutability from the NT, viz. Ja 1¹⁷. On the other hand, the fundamental NT doctrine of God's Fatherhood suggests the very reverse of His impassibility. We have, moreover, a fresh point of contact established between God and passibility in so far as the man Jesus Christ is regarded as the incarnation of God (He 1³, Jn 1¹⁸). That passibility is ascribed to Him needs no proof; the whole gospel story is evidence. Moreover, the largest part of it is concerned with His passion and death. It may, however, be observed that one of the books in the NT which go furthest in stating a metaphysical doctrine of Christ's divinity also lays peculiar stress on Christ's passible nature (He 2^{9, 14, 17, 41, 57}).

Such, then, was the original position of the Christian religion with regard to the passibility of God and Christ. Christianity, however, in passing into the world of Graeco-Roman culture, necessarily came into contact with the idea of God as elaborated by Greek philosophy. One of the chief features of this idea was the conception of the divine immutability and impassibility. The protest against the anthropomorphisms of religion goes back as far as Xenophanes. It is strongly developed by both Plato and Aristotle.

Plato explains that the gods 'are exalted above pleasure and pain, and are untouched of all evils: he opposes in moral indignation the opinion that they can be propitiated, or rather corrupted, by prayers and sacrifices' (E. Zeller, *Die Philosophie der Griechen*⁴, Leipzig, 1876-1909, ii. 1. 929).

Aristotle, the great Greek theist, is yet stronger in his inculcation of similar views.

'The Deity stands, according to Aristotle, in lonely self-contemplation outside the world: it is for man the object of admiration and reverence, the knowledge of it is the highest task for his intellect, in it lies the aim towards which he with all finite beings strives, whose perfection calls forth his love; but so little as he can expect love in return from it, so little does he experience also from it in general any operation, which is distinct from that of the order of nature, and his intellect is the only thing through which he stands in immediate contact with it' (ib. ii. 791; cf. Eng. tr., *Aristotle and the Earlier Peripatetics*, London, 1897, ii. 329 f.).

It is no wonder, consequently, that the contact of Christianity with the Greek philosophical tradition should have produced difficulties with regard

to the passibility or impassibility of God and Christ. Gnosticism, which Harnack has called the acute Hellenization of Christianity, was led to Docetic views of the Person of Christ. Either His humanity was regarded as merely apparitional (Satornil, the Valentinians), or else there was held to be no real union between the heavenly Christ and the man Jesus (Basilides). In opposition to such views, Ignatius, on the other hand, dwells on the paradox of the Incarnation. Christ is 'the Impassible, who was passible for our sakes' (*ad Polyc.* iii. 2). So also Irenæus says that in the Incarnation the impassible became passible (*adv. Hær.* iii. xvi. 6).

An attempt to carry through the religious idea of God, in opposition to all Greek philosophy, was the Patripassianism of the 2nd century. Noetus said that Christ Himself was the Father, and that the Father Himself was born and suffered. He maintained that there was only one God, impassible and invisible when He does not suffer and die, passible and visible when He suffers and dies (F. Loofs, *Dogmengeschichte*⁴, Halle, 1906, p. 185).

Tertullian, on the other hand, the great opponent of Patripassianism, was inclined to distribute impassibility and passibility between the Father on the one hand and the Logos on the other.

'Whatever attributes therefore you require as worthy of God, must be found in the Father, who is invisible and unapproachable, and placid, and (so to speak) the God of the philosophers; whereas those qualities which you censure as unworthy must be supposed to be in the Son, who has been seen, and heard, and encountered, the Witness and Servant of the Father, uniting in Himself man and God' (*adv. Marc.* ii. 27).

The concluding words of this quotation might lead us to suppose that Tertullian has in mind only the incarnate Logos, but the previous context shows that he is thinking of the pre-incarnate Logos also. To the same effect he says with regard to certain OT narratives (Gn 3⁸ 7¹⁶ 18⁸, Ex 3², etc.):

'These things would not have been believed of the Son of God, if they had not been written: perhaps they are not to be believed of the Father, even though written' (*adv. Prax.* 16).

It was a further development of the same idea when Arius taught that the Logos was by nature a creature, and as such *τρεπτός*. At Nicæa, however (A.D. 325), the doctrine that the Logos was created, or *τρεπτός*, or *ἀλλοιωτός*, was condemned. Henceforward the orthodox doctrine ascribed all passibility of every kind only to the human nature in Christ. The reality of Christ's human sufferings was a matter of faith inasmuch as redemption was connected with them. Nevertheless, as the sufferings of the Logos, they were held to have been voluntarily assumed, along with all other human conditions.

Thus Cyril of Alexandria 'considered that the Logos in becoming man by a voluntary act, gave to physical laws a certain dominion over Himself: took humanity, on the understanding that its laws, conditions, or measures, were to be respected. In this very act of voluntary self-subjection to the laws of humanity did the kenosis consist. By this principle Cyril explained the facts of birth, growth in stature, and experience of sinless infirmities, such as hunger, thirst, sleep, weariness, etc., in the earthly history of the Saviour' (A. P. Bruce, *The Humiliation of Christ*, Edinburgh, 1876 p. 70).

From this view it was only a short step back to Docetism, from which Cyril was by no means free, inasmuch as he held the kenosis to be real only in the physical, not in the intellectual and moral, spheres (ib. p. 71 f.). The Latin theologian, Hilary of Poitiers, had before Cyril gone even farther in the direction of Docetism, holding that the human nature of Christ can undergo work and pain of body only because Christ has subjected Himself to them; His human nature can suffer pains as little as air can be transpierced (*de Trin.* x. 23). It has been said that there is in the orthodox doctrine of the Person of Christ, inasmuch as it makes His humanity impersonal, an incorrigible tendency to Docetism; it must, however, be observed that this

tendency was not according to the intention of the doctrine.

We may fitly sum up this historical series by referring to the classical treatment by Thomas Aquinas of the divine impassibility and the passibility of Christ in His humanity. God Himself is absolutely impassible. There is in Him no potentiality; as Aristotle teaches, He is pure act.

'God, therefore, to whom potentiality does not belong, is immutable. It can also be concluded that God is immutable "as regards the several species of mutation, as, for instance, He cannot be increased or diminished, or altered, or generated, or corrupted. . . . Moreover, He cannot be conquered, or suffer violence," for these only belong to one who can be moved' (*Summa c. Gentiles*, ii. 25).

As regards Christ, Thomas teaches (*Summa Theol.* III. xiv. 1) that it was convenient that the body assumed by the Lord God should be subject to human infirmities and defects, for three reasons: (1) that Christ might be able to bear the penalty of sin, (2) that men might believe in the truth of the Incarnation, (3) that Christ might be an example to us in bearing bravely the passions and defects of human nature. Further, Thomas teaches (III. xv. 4) that Christ's soul also, as the 'form' of His body, suffered in His bodily sufferings; it also suffered in a way proper to itself, that being a mark of human nature.

Modern theology, beginning from the human Christ as the revealer of God, instead of from a philosophical conception of deity, has shown in some of its most distinguished representatives a tendency to return to the idea of the divine passibility. Thus A. M. Fairbairn finds a passibility in God to be implied in Christ's representation of Him as Father. He says:

'Theology has no false idea than that of the impassibility of God. If He is capable of sorrow, He is capable of suffering; and were He without the capacity for either, He would be without any feeling of the evil of sin or the misery of man. The very truth that came by Jesus Christ may be said to be summed up in the passibility of God. But to be passible is to be capable of sacrifice; and in the presence of sin the capability could not but become the reality. To confine the idea of sacrifice to the Son is to be unjust to His representation of the Father. There is a sense in which the Patripassian theory is right; the Father did suffer, though it was not as the Son that He suffered, but in modes distinct and different. . . . The humiliation of the Son involved the visible passion and death, but the surrender by the Father involved the sorrow that was the invisible sacrifice' (*The Place of Christ in Modern Theology*³, London, 1893, p. 483 f.).

It may finally be observed that philosophy itself has in modern times shown an important movement towards a doctrine of God which admits an element of passibility in His being. The beginning of this movement is associated above all with C. H. Weisse, who distinctly represents his philosophy as rising out of the heart of the Christian religion (*Philosophie des Christenthums*, Leipzig, 1855-62). The greatest modern representative of the tendency is, however, Weisse's disciple, H. Lotze, who teaches that God is not to be thought of simply as an eternal truth, not even a truth not merely valid, but conscious of itself.

'We have a direct feeling of the wide difference there is between this personification of a thought and living personality: not only do we find art fictions when it expects us to admire allegorical statues of Justice or of Love, but even speculation rouses our opposition forthwith, when it offers to us some self-conscious Principle of Identity, or some self-conscious Idea of God, as completely expressing personality. Either of these is obviously lacking in an essential condition of all true reality in the capacity of suffering' (*Microcosmus*, Eng. tr. 4, Edinburgh, 1894, ii. 632).

The Infinite Being must therefore be thought of as eternally possessing in its infinite life that which corresponds to the non-ego in a finite personality.

'When we characterize the inner life of the Personal God, the current of His thoughts, His feelings, and His will, as everlasting and without beginning, as having never known rest, and having never been roused to movement from some state of quiescence, we call upon imagination to perform a task no other and no greater than that which is required from it by every materialistic or pantheistic view' (*ib. ii.* 631 f.).

The ideas of this school of philosophy have not been without an echo in theology. K. Rothe, in

his *Theologische Ethik*² (Wittenberg, 1867-71), developed a doctrine of God very similar to that of Weisse, while A. Ritschl has definitely attached himself to the teaching of Lotze in order to justify the religious view of God derived from the revelation made in Christ (*The Christian Doctrine of Justification and Reconciliation*, iii., Eng. tr., Edinburgh, 1900, p. 228 ff.).

LITERATURE.—This has been sufficiently indicated throughout the article.

ROBERT S. FRANKS.

PASSIVE RESISTANCE.—See RESISTANCE.

PASSIVITY.—J. S. Mill has said:

'Christian morality (so-called) has all the characters of a reaction; it is, in great part, a protest against Paganism. Its ideal is negative rather than positive; passive rather than active; Innocence rather than Nobleness; Abstinence from Evil rather than energetic Pursuit of Good. . . . It is essentially a doctrine of passive obedience' (*On Liberty*, London, 1859, p. 29).

This passage is perhaps typical; it embodies a very common misconception touching the true genius of Christ's religion. The promised gift of Christ was 'life more abundantly' (Jn 10¹⁰), and the aim and scope of the gospel are the heightening of life—the lifting of human nature to nobler levels of thought and conduct than it could attain in its unassisted strength, the supplying of new motives and new springs of action. Thus Christianity brings an element of intensity into the ordinary pursuits and activities of men (Ro 12¹, Eph 6⁶, Col 3²³). It is essentially a religion of heroisms, of ventures of faith. Men of violence take the Kingdom by force (Mt 11¹²).

Yet the capacity of man to use his strength for the achievement of this moral and spiritual victory is a divine endowment and has its origin in a divine act. The life of union with God in Christ, which is the sole principle of moral fruitfulness and power, is regarded by the NT writers as a mystical or sacramental fact before it becomes a moral fact. In other words, it depends on the divine action, yet is realized in human nature through the persistent effort of the personal will. We have to 'work out' our own salvation, even while 'it is God which worketh in us both to will and to work, for his good pleasure' (Ph 2¹²⁻¹³).

As a mystical fact, redemption implies a mighty exertion of divine power, of which mankind is the passive subject. The heathen world lay in its helplessness and misery, 'dead in trespasses and sins' (Eph 2¹), tossed to and fro by every gust of wayward passion, carried away to 'dumb idols, howsoever it might be led' (1 Co 12²), when God Himself intervened and put forth the fullness of His redemptive might. This is the theme of such passages as Eph 2¹⁻¹⁰, Col 1⁸⁻²³. The same thought lies behind St. Paul's massive argument in Ro 5. It is implied in our Lord's teaching recorded in Mt 12²⁸ (= Lk 11²⁴).¹ The moral helplessness of man leaves him utterly dependent on the grace and power of God. As Chrysostom says (on μετασχησεν in Col 1¹³): τὸ μὲν γὰρ ὅλον τοῦ μεταθνήσκειν ἡμῶν, οὐ τοῦ μεταθνήσκειν. Redemption is in the first instance wholly and solely the act of God. And even the consummation of redemption—its completeness—implies the exertion of power by God Himself. He is all, the creature nothing. This is implied in the NT thought of the divine indwelling. To be united to God is to be possessed by God, indwelt by Him, sustained and securely upheld by Him (Jn 10²⁸⁻²⁹).

This, then, is one side or aspect of the life of union with God. In St. Paul, however, the pre-

¹ ἡμεῖς in this passage (Lk 11²⁷) may be taken to mean 'human souls,' as by Bernard, *de Error. Abailardi*, vi. 16: 'Utinam ego inveniar in his spoliis, quibus spoliatae sunt contrariae potestates, traductus et ipse in possessionem Domini!'; cf. Chrys. in *Matth.* hom. xli. 447 D.

sentation of this mystical side of theology is compatible with assertions, not less emphatic, of the moral aspect of the new life—its dependence on the persevering exertion of man's will, the cleaving of human personality to God. We look to God for all that is needed to sustain the life of the soul as of the body; we are wholly 'in the hand of God,' but, as Augustine says, 'ut permanens in manu artificis, bona voluntas facit' (in *Ps* 39 [40]²⁷). There are means of grace of which an energetic and persistent use is necessary if the life of union with God is to be sustained. So the gospel inculcates 'the religious view of the will.' It is the will to which Christ always appeals; the will is a man's self. It has been said that to Christ what is most valuable and vital is what the man does for himself (cf. H. Latham, *Pastor Pastorum*, Cambridge, 1890, p. 6). Nevertheless, the fact implied in the words of He 6¹, ἐπὶ τὴν τελειότητα φερώμεθα, remains fundamentally true. Progress in the life of grace depends upon a continuous self-surrender to a divine influence; the yielding up of self to be 'filled with all the fulness of God' (Eph 3¹⁹).

A question thus arises as to the true meaning and importance of passivity in man's spiritual life. The idea and, to some extent, the word play a prominent part in the writings of the Quietists. Molinos, Madame Guyon and Archbishop Fénelon in the 17th cent., lay much stress on the quietness or passivity needed to enable God to work His will freely in the soul of the Christian. The doctrine of Molinos (1640-97, see QUIETISM) was rapidly distorted by his immediate followers, and tended to encourage a dangerous and even immoral apathy. Since Christian perfection (*q.v.*) consisted in the utmost possible passivity of soul, all human co-operation in the work of salvation was futile and valueless. It was easy to draw the further inference that all things that might 'happen' to the body, even bodily sins, were indifferent and could not affect the state of the soul. Thus, the doctrine of moral responsibility and even the place of repentance in the Christian life were apt to be undermined. Fénelon (1651-1715) was fully aware of the tendencies of Molinism, and in the defence of his book, *The Maxims of the Saints*, he endeavours to reconcile the doctrine of passivity with the free action of the will.

'Tous les Chrétiens,' he says, 'sont appelés à la passivité, mais ils ne seront pas tous appelés à la contemplation passive. . . . Etre passif n'est autre chose que retrancher l'activité, c'est-à-dire les actes inquiets et empressés de l'intérêt propre.'¹

What Fénelon feared was anything like the intrusion of self-love into the religious life. The disinterested love of God, indifference to self and freedom from self-love—these would, he thought, be best secured by a 'passive obedience' to the impulses of divine grace. Fénelon is perhaps open to the criticism that he lays too little stress on the duties of active love and of personal co-operation with grace. There are passages of this type in his letters, insisting on the need of 'a will supple in God's hand, neither asking nor refusing anything; accepting all He sends unreservedly and never seeking what He refuses under any pretext whatever.'² But, on the whole, the state of soul which he commends is one of tranquil and serene submission to the leadings of grace—a state of dependence on God which excludes restless anxiety, scrupulousness, and self-love. He stops short of the extravagance of that type of mysticism of which the only prayer is 'Thy will be done,' and the only virtue an unbounded 'passivity' which is

virtually indistinguishable from complete spiritual 'indolence and nothingness'³ (see QUIETISM).

It is natural in this connexion to mention the leading principle of Quaker worship, viz. the duty of waiting patiently upon God and listening for the inward voice of the Holy Spirit. This duty of passivity follows from the doctrine of the inward light, and the consequent rejection of all symbols and external forms in worship.

'As to the outward signification [of worship] in prayers, praises and preaching, we ought not to do it where and when we will, but where and when we are moved thereunto by the secret inspiration of His Spirit in our hearts' (*Apology for the Quakers*, ed. 1869, prop. xv.).

On this point see further artt. QUIETISM, FRIENDS, SOCIETY OF.

In the life of practical religion the duty of passivity may be said to imply two things: (1) the duty of *submissiveness*, or passive endurance under the pressure of the hostility and hatred of the world. The virtues of patience and long-suffering (*q.q.v.*) are a constant theme of the NT writers. They are commended repeatedly as the Christian's way of sharing the experience and following the example of our Lord. Indeed, one of the cardinal virtues of the Christian character is a patience which is practically identical with fortitude (cf. Aug. *de Mor. Eccl.* 40-43, *de Patientia*, 2). But it is noticeable that 'patience' in the gospel is transfigured. It becomes itself the highest exhibition of victorious strength. The humiliation of Christ, *c.g.*, is a display not of weakness but of strength. It exhibits the triumph of an unswerving will under the utmost pressure of trial. He was 'crucified through weakness,' but His cross was the scene of a mighty victory over the powers of evil (Col 2¹⁴), of a redemptive work accomplished under circumstances of inconceivable difficulty and pain. Thus, Hilary maintains that even the sufferings of Christ were triumphs of love and power (*de Trin.* x. 48), and Chrysostom that the Passion was itself an action, 'for through His sufferings He wrought that mighty and wondrous work of bringing death to naught' (*Hom. in Act.* i. 3). In the same way the submission of Christians to the hostility of an evil world, the 'world-resisting' element in character viewed on its passive side, is in itself a display of supernatural might (Col 1¹¹). Passiveness is the spirit which recognizes that suffering is an indispensable law of the spiritual life, is that which must be—is God's agent in the heightening and purifying of character. At the same time we must be careful to guard the distinction between Christian quietude, which checks the instinct of revenge for a personal injury, and Christian resentment, which avenges wrong done to another or to the community. The Christian may renounce his own rights, but not his brother's; and the absence of moral resentment, in presence of oppression or lawless wrongdoing which tramples on the rights of others, is a sinful defect in character. In a larger sphere the law of Christian meekness (*q.v.*) is sometimes supposed to exclude the authoritative resistance of evil by law or by armed force (see Tolstoi, *The Kingdom of God is within you*, London, 1894); but St. Paul, who forbids private revenge (Ro 12¹⁹), also insists that the duty of rulers and States is to act as avengers 'to execute wrath upon him that doeth evil' (Ro 13⁴). In other words, the very end of organized government is resistance to evil. Mere passivity on the part of a nation whose just rights and liberties were imperilled would mean the abdication of its true place and function. According to the doctrine of the NT, the ruler is God's minister, and his office is exactly that of exercising retributive and coercive power (see

¹ Œuvres, ii. 365, quoted by Viscount St. Cyres, *François de Fénelon*, London, 1901, p. 112, note.

² Letter on 'Christian Perfection,' in Fénelon's *Spiritual Letters: to Men*, Eng. tr., London, 1880, p. 247.

³ The phrase 'holy indolence and nothingness' is used by Molinos (see St. Cyres, p. 100).

Martineau, *National Duties*, London, 1903, serm. v.).

(2) On the other hand, we may think of passivity as the attitude of *receptivity* which lies at the foundation of all growth in grace—that quiet expectancy of soul, that calm abiding in Christ which is the necessary condition of moral fruitfulness (Jn 15¹²). This receptiveness of spirit is akin to the teachableness of mind which Christ requires in His disciples, and which He commends by pointing to the little child as the true type of the inheritor of His Kingdom (Mt 18³). Entrance into the Kingdom means, before all else, the sense of insufficiency, trustful self-surrender, openness to divine influence and divine leading. From this point of view passivity is identical with meekness.

'To be a Christian is not merely to be a believer in Christian doctrine or a doer of Christian duty, but to adopt the receptive attitude of one who lives not by his own power, but by that of the grace or free gift of the Spirit of God . . . the receptive atti-

those who, but for effort, had it not. There is indeed Christian effort. And there is imitation of Christ. But these are rather the necessary outcome, than the producing cause, of the Spirit of Christ. It is by His initiation rather than ours, and by the acts of His power rather than ours, that we were first brought into relation with Him, and that His Spirit is progressively imparted to us. . . . Essentially we are throughout receivers, not workers. The Pentecostal Spirit is bestowed in grace, bestowed on faith, bestowed through sacraments, anyway bestowed, not earned' (R. O. Moberly, *Atonement and Personality*, London, 1901, p. 320 f.).

In religion, then, as in the study of nature, Wordsworth's maxim holds good,

'We can feed this mind of ours
In a wise passiveness'

(*Expostulation and Reply*, 23 f.).

For all progress in insight, all growth in character, a certain calmness, meditateness, and passivity of the soul are necessary; 'a heart,' in Wordsworth's phrase, 'that watches and receives.' Our human destiny is fulfilled, not merely by the putting forth of effort in sheer reliance on our own unaided strength. This was the delusion of Pelagianism. It is fulfilled as much by bearing as by doing; by being acted upon not less than by acting; by patience not less than by effort; by yielding ourselves to God not less than by seizing opportunities; in a word, by cultivating that temper of mind which, before it says, 'Lo, I come to do thy will,' breathes the petition, 'Be it unto me according to thy word' (see J. H. Skrine, *Saints and Worthies*, London, 1901, no. 10, 'Ancilla Domini').

LITERATURE.—H. Martensen, *Christian Ethics* (General), Edinburgh, 1873, §§ 85-88, 107-110: the works of F. de Fénelon, St. François de Sales, Mme. Guyon, Molinos, and other mystical writers may be consulted. See, further, literature at art. MYSTICISM.

R. L. OTTLEY.

PASSOVER.—See FESTIVALS AND FASTS (Hebrew).

PASTORAL PEOPLES.—I. Scope and definition of term; position of pastoral peoples in primitive economics.—A typical pastoral tribe, such as the patriarchal Israelites of the OT, is one whose mode of life is entirely dependent upon and conditioned by the possession of flocks and herds of domesticated animals—oxen, sheep, goats, and horses—or, in particular areas, of such specialized animals as the camel, reindeer, or yak. In such a tribe these are not only the principal means of subsistence; they are also the chief or only form of wealth; upon them the position and dignity of the individual depend; they provide him with food and clothing; their acquisition, care, and well-being are the occupation of his life; and they or their products are the medium of exchange by which he obtains from peoples of different culture

such commodities not produced by his own people as he may require.

Considered schematically, the pastoral life marks an advance both psychologically and socially in the history of man. By the acquisition of flocks and herds of domesticated animals the shepherd and the herdsman have advanced beyond the day-to-day existence of the huntsman. Notwithstanding the intellectual alertness and ingenuity required from the individual who depends upon his skill in capturing his prey, the possession of a permanent source of livelihood gives the pastoral tribe as a social unit the advantage in opportunities for development and for advancement in solidarity. On the other hand, the constant care of the cattle and the more or less impermanent character of pastoral settlements due to the constant search for pasture place pastoral peoples at a disadvantage relatively to the peoples of settled agricultural habits. The latter are also less exposed to disaster from excessive or exceptional meteorological variations. Consequently, tribes which are pastoral in the strict sense make comparatively slight advance in material culture. There is an absence of specialization in the production of the simple utensils and implements which meet their needs, and any extension of interest in material culture by contact with outside influences is met by barter rather than by internal adaptation of productive powers. It may be noted, however, that this applies only to strictly pastoral tribes, many agricultural tribes being also cattle-keepers on a large scale. On the other hand, a few pastoral peoples practise agriculture as a secondary occupation usually entrusted to the women, the needs of the herds still determining the nomad life of the tribe, while others have in subjection under them a population whose special function is an industry or agriculture—e.g., the Gallas, Somalis, Masai, and other pastoral peoples of E. Africa, among whom despised peoples act as agriculturists, hunters, and smiths.

2. The pastoral life and the influence of environment.—In few types of the human community is the influence of environment so susceptible of analysis as in that of the pastoral tribe. The needs of the animals being paramount, such a community can develop only in a district where climate and soil combine to produce ample food-stuffs at all seasons of the year without the necessity of too rapid transit from one feeding-ground to another. Exception to this rule is found in the case of the horse and the camel. The one by its speed, the other by its constitution, is able to overcome the difficulty of distance, and consequently pastoralists who depend upon these animals can occupy desert areas, migrating from one oasis to another. The Arab populations occupying the fringes of the Arabian desert and the W. Sahara are cases in point. Apart from these cases, however, what is practically a continuous pasturage is required. Such regions are to be found in the tropics, where the equatorial forest land gives place to the grass lands, as, e.g., in Africa north and south of the equatorial region, and on mountain plateaux like those of W. and C. Asia, on the higher lands of the mountain valleys, or of the river valleys at the edge of the plateaux where altitude makes the land unsuitable for agriculture, or on the steppes of the temperate, and the tundras of the colder, latitudes. In these areas the strictly seasonal character of the vegetation is responsible for the nomadic life of the inhabitants. In the tropics the advance of the season burns off the grass with the increasing heat, necessitating movement either north or south, according to the situation as regards the equator, or to relatively higher ground where springs and grass are to be found in rifts in

the hills. In mountainous regions the melting of the snows with the advancing season opens up the higher valleys with their rich grass, and the cattle and sheep follow the snow-line as it recedes. Owing to the seasonal character of the vegetation and the absence of water without more elaborate irrigation than is available, these lands are not suited to agriculture, at any rate on the primitive scale.

The absence of pastoral tribes from America, except where this mode of life was undoubtedly due to civilized influence through the introduction of European animals, shows that it is necessary that a region, even if, from geographical considerations, suitable for pastoral purposes, should provide animals adaptable to domestication, before pastoral tribes can develop their particular form of organization and culture.

3. Distribution.—In tracing the distribution of pastoral tribes on the lines suggested by the influence of geographical environment, two disturbing factors have to be taken into account. (1) Outside influence, especially the introduction of European civilization, has a modifying effect. In S. Africa both the Hottentots and the Bantu were at one time extensive breeders of cattle. The more or less constant migrations of the Bantu peoples before the advent of the European as settler and ruler were possibly due to pastoral habits, or an earlier mode of life, but, at present, notwithstanding the continued importance of cattle, economically and socially, as the chief form of wealth, the restriction of the natives of S. Africa to locations and the introduction of the mining industry have made them, with the possible exception of the Bechuana, sedentary cattle-keeping agriculturists. Further, the introduction of the ox-drawn plough, acting through the tabu on oxen for women, has tended to transfer agriculture from the women, in whose entire charge it formerly was, to the men, whose duties previously were confined to the care of the cattle. On the other hand, slow development may leave under pastoral conditions land suitable for agriculture. Much of the area in the Russian empire now under pasture may come under cultivation with the increase of the resources available for its development. In S. Africa the Boers remained in the main a pastoral people owing to lack of economic pressure to induce them to put their land to more profitable uses.

(2) In some cases disturbance in economic equilibrium by an epidemic among the cattle or persistent raiding by more powerful neighbours may produce an entire change in the mode of life. The Masai of the Laikipia plateau, whose cattle were visited by an epidemic about 1890, and who were themselves subject to constant attacks by the Masai of German E. Africa, were forced by their loss of stock—a loss from which they never recovered—to abandon pastoral life and to become agriculturists (see C. Eliot, *ap.* A. C. Hollis, *The Masai*, Oxford, 1905, p. xiv). In C. Asia there are traces of the reverse process, in the course of which agriculture gave place to the nomad. The evidence of abandoned settlements and of the irrigation works in the Turfan depression has been interpreted as an indication that a prosperous agricultural and industrial community in this district, owing to climatic changes and a consequent reduction in the amount of water available, was at some period overwhelmed by marauding tribes of pastoral Mongols from the neighbouring hills. Owing to the continued desiccation these were in turn forced to withdraw, leaving the land again open for agricultural settlement. At the present day no Mongol nomads live within 150 miles of this depression (E. Huntington, *The Pulse of Asia*, p. 312f.).

The pastoral mode of life might be described as being a marginal type for two reasons: (a) it is imposed upon the inhabitants of lands occupying a marginal position in relation to cultivability, whether these are found on the edge of agricultural land, on the fringes of a desert, or at the snow-line of a hill-country; and (b), as these areas are for the most part those of climatic extremes of heat or cold, sometimes of both, the conditions which make the pastoral life possible at all are so nicely balanced that any meteorological change to still greater extremes, whether of heat, cold, drought, or moisture, is liable to upset the equilibrium and to drive the people further afield or compel them to modify their mode of life fundamentally. Study of the climatic conditions of C. Asia shows that the great racial migrations and conquests which have originated in this region have depended ultimately upon more or less serious changes in precipitation leading to a decrease in the pasture-land available as a source of livelihood for nomad tribes.

Regions which offer such conditions extend over a fairly well defined area. Speaking broadly, they run in a belt stretching from N.W. Africa, across the north of that continent, except the lower Nile valley, down the E. African plateau into German E. Africa (about lat. 7° N.). In the Euro-Asiatic continent they lie along the steppe-lands of the Russian empire, the mountain valleys and highlands of the Balkans and Asia Minor, the elevated plateaux and basins of C. Asia, including, to the south, Afghanistan, Baluchistan, Tibet, and possibly at one time Kashmir, though, owing to slight changes in climatic conditions, it is now an agricultural country, and extending to the north-eastern edge of the Asiatic mainland.

The relative distribution of the pastoral peoples by whom these areas are occupied is broadly as follows. In Africa they fall into four main groups. (a) In the north-west and north, on the fringes of the Sahara desert, and in the highlands of the coastal region flanking the cultivable valleys of Mauretania and the Tripolitaine, where live agricultural and industrial Berber populations, Kabyles, and others, are nomad tribes. These are either Tuareg, Arabized Berbers who have become pastoral, and are grouped in confederacies such as the Beni M'zab, Askars, and others, or Arab tribes, more or less mixed in blood, descended from the invaders of the 11th century. (b) That part of the Sudan which lies west of the Nile, moderately fertile in the south, but decreasing in fertility towards the north till it shades off into the Bayuda steppe and the Libyan desert, is the home of the 'Sudanese Arabs,' negroid tribes containing varying and in some cases considerable admixture of Negro blood, but predominantly Arab in culture. It is a level country dotted with hills, in which the earlier Negro population has been able to maintain itself in the south but has been absorbed in the north. The most powerful tribes in the northern parts of this area are the Kababish and Kawahla, who, where the country is sufficiently fertile to support a sedentary population, use the lands of this population as their grazing ground. Further south the camel gives place to the ox in the country of the cattle-owning Baggara. The Fulah, who now range from Senegambia to Lake Chad and were at one time pastoral in the full sense, as a modified negroid type, probably had their origin in some part of the Sudan. (c) East of the Nile extending to the Red Sea are the Hamitic Beja tribes, of which the chief divisions are the Hadenodoa, the Bisharin, and the Beni Amer, the two first-named speaking a Hamitic, the last a Semitic language. (d) The fourth group of pastorals consists of the Nilotic tribes and those closely related

groups of peoples for whom the name of 'half-Hamitic' has been suggested. It includes the Shilluk, Nuer, Bari, and Dinkas, and such tribes as the Turkana, Suk, Nandi, Latuka, and Masai, the Bahima, and the Banyoro, some agricultural, some pastoral, who inhabit the plateau lands of E. Africa and Uganda and extend into German E. Africa as far as about lat. 7° N. The Nilotic tribes are sedentary and have a highly organized and centralized social system, and would perhaps be more correctly described as farmers owning large herds than as true pastoralists. The same applies to the Bantu, many of whom, like the Akamba and the Bantu tribes of S. Africa, are great breeders of cattle. But, notwithstanding the value and importance which they attach to the cattle, their mode of life now belongs to the agricultural rather than the pastoral type, although at the time of their migrations they may have conformed to the latter. The Hottentots, on the other hand, were a pastoral people when first they came into contact with Europeans. It is in Asia, however, especially on the central plateau, along the axial ridge, and at the edge of the northern plains where they begin to slope down from the highlands to the north, that conditions have been most conducive to the development of the pastoral life. The history of this region, so far as it has been possible to disentangle it from obscure and scanty records, has been one of almost constant tribal and racial migration, apparently brought about by climatic changes which by long-continued drought rendered the normal seasonal migrations from plains to hills inadequate to meet the requirements of flocks and herds. Evidence of these movements is to be seen in the incursions of Asiatic peoples into Europe, of which the present inhabitants of the Balkans, the Finns, and the Lapps are survivals, and in the Arab invasions of Africa. In Asia itself the extensions of Semitic influence, which so profoundly affected the history of W. Asia, and the Tatar and Mongol conquests were due to a similar cause.

The geographical distribution of pastoral peoples in Asia may perhaps best be considered in relation to their principal racial groups. The Mongols proper of the east fall into three groups: (1) the Kalmyks, (2) the Kazaks, and (3) the Buriats of Lake Baikal. In the N. Mongolic group are the Tunguses, who inhabit the Amur basin and most of E. Siberia. These peoples on the coastal area and in the river basin are hunters, fishers, and agriculturists, but in the Amur valley they follow pastoral occupations. The Turki or western division of the Mongolo-Tatars were at one time a widely-spread group of pastoralists, now represented by the Turks in Europe (no longer pastoralists), the Yuraks, and the Anatolian Turks in Asia Minor, and by the Yakuts of the Lena basin in S.W. Siberia, who, as is shown by their traditions, were at one time a horse-breeding people inhabiting wide, open plains (Keane, *The World's Peoples*, pp. 156 ff., 172 ff.). In the Turfan basin the Turki were followed by the Uigurs, and near them were the Ughuz, now represented by the Uzbeks of Russian Turkestan, the Turkomans of W. Turkestan, and the Osmanli in Asia Minor. In the Pamir region the Kara Kirghiz and the Kirghiz Kazaks (Cossacks), inhabiting the greater part of W. Siberia and extending from Lake Balkash to the Lower Volga, belong to the group, as do the W. Turkomans, who combined with their pastoral pursuits raids upon the Persian caravans. In Tibet, belonging to the Indo-Chinese group, are the Tanguts, a nomad predatory tribe of the north-east borderland, and

the Dru-pa, a peaceful pastoral semi-nomadic tribe of the central highlands. In S. India are the Todas, who inhabit the plateau of the Nilgiri hills. Another important group is that of the Ugro-Finns descended from proto-Finns who migrated from the Irish and Obi to the Urals, whence they dispersed to form the Samoyeds, Ostyaks, Votyaks, and Cheremiss tribes of W. Siberia and Russia, the Lapps of N. Scandinavia, and the Volga Finns, Bulgars, Avars, Magyars, Baltic Finns, Letts, and Livonians. The Semitic peoples, who spread over Arabia, Asia Minor, Syria, Palestine, and Mesopotamia, were pastoral nomads when first they appear in history. A trace of this is seen in the word *du* = 'city,' originally = 'tent' (Keane, p. 324). Many, as, e.g., the Jews, have long settled down to agriculture, but the modern representatives of the Ishmaelites, the Arabs proper of N. Arabia and the Sinaitic desert, still preserve much of their primitive pastoral habits, customs, and beliefs.

In the central area of the continent horses, oxen, goats, sheep (the fat-tailed variety), and camels are the means of subsistence of the pastoral peoples. In the north, on the tundras of Siberia, where grass gives way to reindeer-moss, they depend upon the reindeer. Among the reindeer peoples a distinction must be made, however, between those who are truly pastoral, such as the Lapps, Samoyeds, Votyaks, and others, among whom the reindeer is a domesticated animal, and those, like the Chukchis and Koryaks, who keep large herds of untamed reindeer, which they use for purposes of trade, and of which they eat the flesh but do not use the milk. A third class, which includes some of the Tungus tribes, owing to political restriction by the Russian Government, live in a much impoverished condition, and, their reindeer being insufficient in number to support them, they are compelled to eke out their existence by hunting, fishing, and trading.

4. Material culture.—The conditions imposed by the mode of life of nomadic pastoral tribes, which arise out of the necessity for more or less constant movement to provide food for their stock and to find a new site for the camp owing to the fouling of the ground in the pens and near the dwelling-places, have had a marked effect upon their material culture. In this respect the line of development has avoided anything fragile, such as pottery, and anything heavy and bulky, or at least not readily reducible to a size and weight suitable for transport. Further, the fact that wealth consists almost exclusively in cattle leaves little opportunity for ostentation, except in personal ornament, while the preoccupation of the men with their cattle and their attitude towards manual labour have precluded any substantial progress in the material arts.

(a) *Habitation*.—The dwelling is a striking example of the subordination of material and structure to the requirements of mobility. It must be of such a character as to be readily dismantled and packed to form a load for one or more of the beasts of burden, whether horse, camel, mule, donkey, or ox. The typical dwelling of a nomad pastoral people is the tent.

Among the Arabs its traditional form is rectangular; in C. Asia it is round and conical. It is usually built on a light framework, fastened by ropes of camel-hair, wool, or leather thongs, according to the material afforded by the stock, and its covering may be of linen, skins, felt, or woollen cloths, according to circumstances. The Kirghiz tent is very simple in form and has no partition. It is made of woollen cloths stretched on a light frame of willow poles, fastened together, as indicated, without the use of metal. Outside it is covered with large felts protected by a number of rush mats. In the centre of the top is a round hole for the egress of the smoke, protected against inclement weather by a felt cap manipulated by a string which hangs near the doorway (Huntington, p. 111). The Yuraks of Asia Minor use similar tents of black goat's hair. The tent in use among the Tatars is slightly more elaborate, having an

interior division providing two compartments, one of which is devoted to the women and their culinary operations (E. R. Huc, *Travels in Tartary, Thibet, and China*, Chicago, 1898, i. 47). The early Yakuts carried their tents with them, but left the frame-work for the next comer (W. G. Sumner, 'The Yakuts,' *JAI* xxxi. [1901] 70). The tents of the Si-Fan of Tibet were hexagonal, the black linen covering being stretched on a framework of ropes attached to poles some little distance from the tent proper. A more permanent character was given to them by the erection around each group of tents of a wall 4 to 5 ft. high. The tendency to permanence suggested by this practice was not strong; the tribes abandoned their settlements at the slightest provocation, taking the larger stones of the walls with them (Huc, ii. 48). The small group of huts which form the Toda village is also surrounded by a wall (W. H. R. Rivers, *The Todas*, London, 1906, p. 24).

In the Anglo-Egyptian Sudan among Bisharin, Hadendoa, and Beni Amer tribes, in which it is customary at certain seasons of the year for groups to split up in order that the men may drive the camels to suitable feeding-grounds, while the women and boys remain behind to pasture the cattle up and down the country, the character of the dwelling varies with the duration of the stay which it is proposed to make at any one place. If it is to be a few days only, the tent may consist of only three or four mats, or may be a mere shelter of dried euphorbia boughs set in a ring, with a domed roof, a shelter of similar character being provided for the young sheep and goats (C. G. Seligmann, 'Some Aspects of the Hamitic Problem in the Anglo-Egyptian Sudan,' *JRAI* xliii. [1913] 597). A shelter of boughs is also used at certain seasons by the Kurds and the Yuruks instead of their goat-skin tents. The Yuruk shelter has the peculiarity that the doorway is so low as only to permit entrance on hands and knees (Keane, p. 176). The Masai, though never staying very long in one place, also adapt their dwellings to the length of sojourn offered by the pasture. The more substantial form of dwelling is a long low structure of poles and grass containing several compartments; but, when in the course of its wanderings a tribe makes a stay at a pasturage which affords insufficient provision for any length of time, a temporary habitation of poles and skins is set up (Hollis, p. 292). The Suk, on the other hand, practically live in the open air. The young unmarried men sleep on the ground wrapped in skins, while the married men sleep under rude shelters consisting of a few sticks with a little grass kept down by a covering of cow-dung over which a skin is flung in wet weather (M. W. H. Beech, *The Suk: their Language and Folklore*, Oxford, 1911, p. 7).

The temporary character of the dwelling or its ready adaptation for transport is not, however, essential to mobility. Where the character of the land or its occupation by agricultural peoples restricts the area available for grazing, occupation of the various pastures becomes a more or less regular seasonal routine. Settlements may then be permanent, but only in occasional occupation at certain seasons of the year. The population migrates from one ground to another as the year advances.

Such is the procedure among many of the Kurdish tribes of the Armenian table-lands. They live in villages from October to February, migrate to higher ground and live in their tents from March to June, and in the hot season live in bowers of green wood, returning to their villages in the autumn (M. Sykes, 'The Kurdish Tribes of the Ottoman Empire,' *JRAI* xxxviii. [1908] 454). The Toda villages consist of permanent huts, half-barrel shaped structures of wood surrounded by a wall. These are dotted here and there on the plateaux of the Nilgiri hills. Each community, usually one family, has several villages to which the cattle and those concerned with them migrate in the course of the year, not all at once (p. 36 f.). The Dinkas, on the other hand, are an example of a cattle-keeping people which, possibly influenced by agricultural conditions, is sedentary and has dwellings of a permanent character. The family groups of huts are scattered over the country in farmsteads, but for grazing purposes the cattle of a whole district are herded together (G. Schweinfurth, *Heart of Africa*, Eng. tr., London, 1873-74, i. 2 159 f.).

(b) *Industrial arts.*—It has already been indicated that the conditions of pastoral life, coupled with the attitude of the male members of the community towards manual labour, are not conducive to progress in the industrial arts; they are left to the women, or their products are obtained by barter from neighbouring peoples.

Clothing naturally varies in quantity according to climate. Except when contact with European civilization has introduced other fabrics, the community depends upon the produce of its cattle or flocks. The heavy garments of C. Asia necessary to resist the cold are of skin, leather, or felt, and the scanty attire of the Masai and other tribes of E. Africa is entirely of leather or skin. In the raid which follows the election of a chief the Masai wear a cotton cloth called 'the vow.' Before the intro-

duction of American cotton fabrics this was made of skins (Hollis, p. 301). The Suk dress is mostly goat-skin, but the men's capes are sometimes of leopard's skin (Beech, p. 12). The making of these garments as well as the preparation of the material usually falls upon the women. Among the Kirghizes the women prepare the skin, leather, or felt, and cut out and sew the garments,¹ including the high skin boots and the typical conical black felt caps. They also make screens, boxes, bags, and other receptacles of leather, and weave gaily-coloured rugs and screens. The leather articles and the gorgeous robes and head-dresses of the women are also embroidered with considerable skill in bright colours, of which they are very fond (Huntington, p. 111). The Si-Fan weave a coarse linen used for clothing and tents. Among the Fur of the Sudan the chief industry of the men is the weaving of cotton cloth, which is used as currency (Keane, p. 104). These people, however, are stock-breeders and keepers rather than pastoralists, and the field operations are undertaken by women and slaves. The Baban Kurds are also expert weavers and tent-makers.

(c) *Utensils, etc.*—The domestic utensils of pastoral tribes are not numerous. Pottery is not made as a rule. The usual receptacles for liquids are gourds, calabashes, baskets (in Africa), and vessels of wood, such as the hollowed trunk of a tree, and of skin or leather.

Although the Masai women, possibly owing to outside influence, can make pots, as a rule pottery, if in use by pastoral peoples, is imported. The pastoral Suk obtain pottery from the agricultural Suk; the Todas, who use bamboo receptacles of native manufacture for their milking-vessels, obtain the earthenware vessels used for churns from the neighbouring Kotas. For cups and platters they use leaves (Rivers, p. 50 ff.). Among the Kirghizes the milking-vessels are of wood, but water is sometimes stored in earthen pots.

(d) *Weapons.*—The same disinclination to engage in industrial occupations is apparent even in such an important matter as the making of weapons.

None of the pastoral tribes of E. Africa make their own weapons. Among both Sonalis and Masai there are special tribes (Tumalods and El Kunono respectively) who do the smiths' work. These peoples are not allowed to internarry with the pastoralists, and no free Somali would enter a smithy of shake hands with a smith, while a Masai would not take a sword or other weapon from the hand of a smith without first wiping his band. The Todas have no weapons, although they retain the use of the bow and arrow and club for their ceremonies. Their only implements are axes and knives, which they obtain from the Kotas.

(e) *Food.*—The original diet of all pastoral tribes was no doubt derived entirely, or mainly, from their flocks and herds. This is in many instances still the case, and where modifications have taken place there are proofs of the earlier practice.

The Bedawib of the Sudan do not cultivate at all; they live on milk and flesh, and it is said that, if they were given grain, they would not eat it (Seligmann, p. 599). Among the O. Asiatic groups of peoples, who in this as in other matters show much uniformity, milk, curds, and cheese are the staple of diet, kermis (curdled milk, especially mares' milk) in particular being held in high esteem. Bread is very scarce, in most districts almost unknown (Huntington, p. 117 f.). The fat-tailed sheep, of which the tail is esteemed the greatest delicacy, oxen, and the yak are also eaten. The Kirghizes consider a young colt a great delicacy, and Yakut tradition clearly indicates that the horse was eaten at the time when it was their chief stock animal (Sumner, p. 68). In E. Africa cattle disease has greatly reduced the size of the Masai herds, and it is not now possible for the tribes to eat the meat of their cattle to any great extent. They live on what they significantly call 'savage food'—maize, bananas, rice, etc. Meat is eaten, though usually under restriction. Women, children, and old men (whose usual diet is milk) are allowed to eat meat only when a beast dies or a sacrifice has been made at a funeral or other ceremonial. The warriors are allowed to slaughter cattle for food, but not in the kraal. At least once in two months cattle are driven into the wood and slaughtered and eaten there. The Masai never eat the flesh of a wild animal or bird (Hollis, p. 317 f.). The Suk, on the other hand, eat any kind of wild animal except beasts of prey and the flesh of a certain kind of wild pig. Their staple diet, however, is a porridge of millet; but that this is an innovation on their original custom is suggested by the fact that any one who chews raw millet cannot drink milk for seven days (Beech, p. 9). All the tribes of their region are very fond of raw blood, which they draw in a peculiar manner from the neck of the living animal and mix with milk. This fondness for blood is also found among the Asiatic peoples. It is probably to be attributed to the desire for salt in the diet. The diet of the Todas consists of milk, butter-milk, ghee, grains, rice, and sugar, but there is a tradition among them that at one time they lived on roots, herbs, fruits and honey (Rivers, p. 550). The pastoralists of Tibet are nomads.

¹ The principal outer garment of the Kirghizes is a long quilted cotton gown with long sleeves serving the purpose of gloves, of which the material is, of course, imported (see Huntington, p. 114).

nally Buddhists, but all supplement the diet of milk, butter, barley-meal, and fruit imposed by their religion by the flesh of game, yak, and mutton. They are also very fond of blood, and the children are fed on a diet of cheese, butter, and blood (Keane, p. 180).

(f) *Agriculture*.—As has been stated, pastoral tribes do not invariably subsist on the produce of their flocks and herds alone, and among many a large amount of cereals is consumed. Nomadic pastorals do not take readily to agriculture even when they have the opportunity. The Arab proverb, 'The ploughshare and shame entered hand in hand into the family,' is typical of their attitude (Keane, p. 321 f.). Among the Kurds, it is true, some tribes have settled down to a semi-sedentary life, part of which is given up to the care of crops, while others—e.g., the Baban Kurds, who are extensive agriculturists and wine-growers—employ outside labour. This has commended itself to other and more primitive peoples, and it is usual to find living in the midst of the pastorals of E. Africa not only the smiths and craftsmen already mentioned but also agriculturists, either of a different race or a branch of the same race much impoverished. The Masai of the Laikipia plateau are an example of a people who have taken to agriculture since the loss of their cattle. The Suk, on the other hand, regard themselves as being a prosperous offshoot of the agricultural Suk, whose aim is to prosper sufficiently to secure cattle and join their more highly esteemed pastoral neighbors. The Todas, who are not flesh-eaters, obtain the grain which forms a large part of their diet from the Badagas, whom they regard as a subject race (Rivers, p. 580). The influence of civilization is, however, perceptible in some cases. Around Suakim and in the neighbourhood of Sinkat the strongest and most advanced divisions of the Amara and Hadendwa, who have long been subject to foreign influence, practise cultivation (Seligmann, p. 599).

5. *Psychology*.—In their mental characters pastoral tribes present considerable uniformity, which is reflected both in moral qualities and in their social institutions. Their normal attitude towards manual labour, which is sometimes, possibly with justice, attributed to laziness, is in many cases only one side of an aristocratic temper which finds expression in their relations with neighbouring tribes whose mode of life may differ from their own. Not only is there a sharp line of cleavage between the African pastoral tribes and the adjacent agricultural and industrial populations, but the former arrogate to themselves the position of a superior people. The Bahima of Enkole regard the Bahera, by whom all the agricultural and industrial work of the community is performed, as their serfs. To call a man a Dorobo, a member of the people among whom they live by hunting, is, among the Masai, a term of grave reproach, while they hold that in the beginning of the world they were given the right over all cattle (Hollis, pp. 317, 269). The nomad Arab of Mauretania despises the Kabyle and other tribes engaged in agriculture or other forms of industry (Keane, p. 321 f.), and among the Asiatic peoples the same attitude prevails—e.g., in the pastoral Kurds towards the sedentary agricultural tribes. 'To be a nomad is considered noble' (Sykes, p. 455). The Zeibeks of the Misoghli highlands, like the Masai, believe that all the cattle in the world are theirs by right (Keane, p. 176). This attitude, together with the intrepidity, spirit of freedom, enterprise, and self-reliance of the pastorals, has endowed them with an aggressive character which, among the more primitive, has found expression in constant raids and intertribal wars. Before their subjection to British rule the Masai were constantly engaged in raiding and cattle-lifting. Where greater mobility was secured by the use of the horse, in the management of which

the horse-keeping pastorals excel, the more aggressive tribes were able to extend the radius of their operations and conduct them in an organized manner. The great trade-routes of Asia were infested by brigands—Kurds, Turkomans, Tatars, and Mongols—who swooped down on and plundered the caravans and then retired to their mountain fastnesses with their booty. This restless spirit not only resulted in the great racial migrations of the early ages, but, where exploited and utilized by leaders of ability and ambition, found its full expression in the great Tatar, Mongol, and Turki conquests which extended over Asia, and of which the effects were and are still felt in Europe. On the other hand, to the individual the pastoral generally shows an upright, courteous, and kindly disposition; Arab hospitality is proverbial, but not singular, and even a Masai, notwithstanding the doubtful reputation of the people, was bound under penalty of being cursed by members of the tribe of like age with himself to receive and entertain a stranger of his own class (Hollis, p. 288). The duty of hospitality was laid upon the pastoral peoples to some extent by self-interest, the scattered population and the necessity for distant travel, whether in search of strayed stock or for other reasons, making it desirable that shelter and food should be offered to all comers in hope of a return in kind. In E. Asia this assistance was extended to providing fresh beasts for the continuation of a journey (Huntington, p. 122).

Nomadic life and the primitive plan of the dwelling have also had their effect in other directions, notably in the modification of the Muhammadan attitude towards women. Among the Yurks of Asia Minor the women go unveiled and salute the wayfarer on the road (Keane, p. 176). Where the tent has no dividing partition, as among the Kirghizes, it is obviously impossible to keep up the custom of seclusion; and frequent absences of the men with their flocks not only lay greater responsibility on the women left behind to look after the homestead, but also give them a strong voice in the affairs of the community and greater freedom in the duty of entertaining any travelling stranger (Huntington, p. 128 f.). In other cases, especially in E. Africa, the inferior position of women among pastorals is as general as it is among neighbouring agricultural tribes.

Not only are animals prized and consequently reared for as a source of wealth, but considerable affection is shown to them. The African pastorals especially are extremely fond of their cattle. They give them pet names and sometimes go into mourning for them, and cases have occurred in which a man has committed suicide through grief at the death of a favourite beast. The preoccupation of the Suk with their cattle is indicated by the fact that the whole of their language revolves round them; when an adjective is used without a substantive, 'cow' is naturally understood; and they have a special name for every variety of cow, expressing colour, shape, type, special malformations of horns, and the like (Beech, p. 8).

6. *Sociology*.—Among pastoral tribes the social unit is, as a rule, small and consists of the family group, over which the head is absolute ruler. Several groups may be combined to form a tribal unit. The Kurdish tribes sometimes consist of as many as 2000 families, but for economic purposes the unit is the family. The more plentiful and accessible the cattle-feed, the smaller and more elastic will be the organization. In N. Kordeistan, where conditions of life are difficult owing to the scarcity of water and the seasonal character of the vegetation, the unit is comparatively large, social organization is more rigid, and migration takes place in a strictly regulated manner towards a

definite objective. Where pasture and water are plentiful, as in the provinces between the Nile and the Red Sea, the units are smaller, consisting at most of three or four tents, and migration takes the form of a more or less haphazard wandering in search of pasture wherever it may be found (Seligmann, pp. 597, 627). In the case of the Yakuts, now a much impoverished people, the unit consists of four or five people, who require as a minimum fifteen head of cattle for their subsistence. It has been conjectured, however, from the custom which admits as a matter of right all neighbours to partake of the food at any ceremonial family feast, that at one time, when the Yakuts in their earlier home were horse-breeders, the social unit consisted of a larger number, large enough, in fact, to eat a horse at one sitting. This would make for superior mobility by obviating the necessity for carrying the unconsumed portions of the carcass. The conditions of horse-herding must also have required a larger unit (Sumner, p. 68). Among the Suk, at a feast held as a means of preventing the approach of an epidemic, the bullock which is sacrificed must be consumed at one sitting (Beech, p. 9). Among the Todas each village is the property of one family, and the Dinka village is supposed to consist of one family. In the latter case, should the numbers be too small, several families may combine, but then each family has its separate quarters (H. O'Sullivan, 'Dinka Laws and Customs,' *JRAI* xl. [1910] 177). Among the Suk several adjacent villages may enter into a loose form of allegiance to a village headman of wealth, influence, or wisdom, who is known as an 'adviser' (Beech, p. 6). The Suk have no chiefs, nor are they under the control of medicine-men as are the Masai, Turkana, and other allied tribes of this region, among whom this functionary virtually usurps the power of chief. The institution of the 'adviser,' however, is a step towards attaining a position corresponding to that of the 'elder' in these tribes. But even in these cases, notwithstanding their advisory functions, the elders and chiefs have little real power, which for practical purposes rests with the warrior class and the medicine-men. This predominance of the younger men in a pastoral tribe may be paralleled among the Yakuts, where a man or woman past the prime is neglected and loses all influence and respect (Sumner, p. 76).

Not only does the pastoral mode of life act directly on the size of the group, but it determines the character of its internal organization. A mode of life which is based upon more or less continual movement demands a more systematic control than either hunting, in which co-ordination of action is intermittent, or a sedentary occupation such as agriculture or industry in its primitive forms. Consequently pastoral tribes are usually organized upon a strict patriarchal and patrilineal basis, although in many cases, as among the Nilotic and Hamitic groups, they show evidence of having at one time been matrilineal. The head of the family is the absolute ruler, the supreme judge, and the owner of the stock and other possessions of the group. The value of the individual member is recognized in the exaction of the bride-price, and in some cases in the practice of Labanism. Among the Hadendoa, Amara, and related tribes the husband must reside with the bride's people for a time and the first child must be born among them (Seligmann, p. 650). The bride-price takes the form of stock, and among the Masai father-in-law and mother-in-law are known as the 'receiver of a bullock' and the 'receiver of a sheep' respectively, from the custom of presenting these animals to them during the betrothal and marriage ceremonies. Relatives of the Masai bridegroom present a beast

to the bride, and henceforth giver and receiver address one another invariably by the name of the beast with the prefix *pa-*. Blood-brotherhood is contracted by the ceremonial eating of bullock's flesh dipped in the blood of the parties concerned (Hollis, pp. 302 f., 322; see also his 'Note on the Masai System of Relationship,' *JRAI* xl. 477 f.). Cattle are an important element in the judicial system, fines or compensation for murder and other crimes taking this form. Any one guilty of assault among the Suk must provide the injured party with sheep for food until he recovers (Beech, p. 30). The Masai may disregard a small theft, but never the theft of cattle. At the making of peace the sides exchange a cow (Hollis, pp. 310, 322). Among the Fur all contracts are carried out in cattle, although the usual currency is cotton cloth (Keane, p. 104).

Pastoral tribes, with few exceptions, are polygamous, and this custom is closely connected with cattle-keeping in more than one way. Not only is it affected by the bride-price, the number of wives depending upon a man's ability to provide the requisite cattle for the bride-price, as well as upon his means of supporting his wives, but the care of the cattle may demand a plurality of homesteads. Among the Yakuts, *e.g.*, a wealthy man may have his cattle in scattered herds, and, before monogamy was introduced under the influence of Christianity, it was customary for each herd to be under the care of one wife (Sumner, p. 94). The Chukchis also herd their reindeer in divisions, over each of which a wife presides.

Private property in cattle is fully recognized, and it is usual for each group, in some cases each individual, to brand his cattle. The Kordofan tribes have an elaborate system of brands for their camels, and among E. African tribes the oxen, cows, and goats all have their ears clipped in a distinctive fashion, indicating both tribal and individual ownership (Hollis, p. 290). The Bahima of Ankole, however, do not recognize absolute private ownership of cattle. All the cattle belong to the king; the chiefs are responsible for the well-being of the cattle in their respective districts; the individual owner may eat a limited number of his cattle, may use them for the bride-price, or may exercise a certain freedom in selling or exchanging them within the nation, but he may not sell to any one outside; cattle taken in war also belong to the king (J. Roscoe, 'The Bahima . . . of Enkole,' *JRAI* xxxvii. [1907] 95).

Land is usually common property, but, as a rule, each group has its recognized limits for grazing. In the more fertile parts of the Sūdān these tend to be ignored, but in more barren regions trespass is a frequent cause of tribal fights. Among the Yakuts private property hardly exists, and even the house tends to be regarded as common property (Sumner, p. 70).

7. Religious beliefs.—Among the pastorals of both Africa and Asia Islām and Buddhism have to a great extent overwhelmed primitive beliefs. These survive, however, in the form of superstitions and practices to propitiate evil spirits. The Tuaregs, *e.g.*, believe in *jins* who live under the desert and cause camels to sink in the soft sand by pulling down their feet (Keane, p. 323). In N. and C. Asia, the home of shamanism, Muhammadanism, Buddhism, and Christianity have had little more than a superficial effect, and shamans and shamanistic beliefs continue to exert considerable influence. The pastorals of E. Africa for the most part agree in recognizing a supreme deity whose home is the sky, and it has been suggested that this belief represents a survival of a religious system in which the rain-god, a deity of obvious importance to both pastoral and agricultural

peoples, was the chief element (Seligmann, p. 664f.). It follows that, the religious practices and beliefs which are more specifically characteristic of pastoral peoples are, as a rule, of a subsidiary character. It may be noted, however, that among the Todas the conception of the gods is vague and shadowy, and their religion has become almost completely absorbed in the ritual of the dairy. There is, however, no indication of the worship of the sacred cattle.

The object of the religious and magical practices peculiar to pastoral peoples is to secure the health, fertility, and productive power of herds and flocks. Their character suggests that some degree of sanctity is generally recognized both in the stock and in its products, and that any breach of this sanctity by the performance of forbidden actions would react on the animals to their detriment.

A significant instance is the attitude of the Masai, and to some extent of the Suk, to grass. 'Cattle feed on grass, and the Masai love grass on this account.' The women fasten grass on their clothes when they pray for rain. If a warrior beats a boy on the grazing-ground, he must stop if the boy tears up a handful of grass. Grass held in the hand is a sign of a desire for peace. When warriors return from a raid, girls sprinkle milk from a small gourd covered with grass over those who have killed an enemy. When they move from one kraal to another, grass is tied on their gourds (Hollis, p. 289 f.). If the Suk, on a hostile raid, meet a man with grass on his head, he must not be killed, and, if when they enter a kraal a woman succeeds in sprinkling milk on them, no one in that kraal can be killed (Beech, p. 25).

Among the En-Jemusi, a tribe more or less closely associated with the Suk, if there is a dispute as to stolen property, the parties to the quarrel drink the blood of a goat (drawn from the neck) mixed with milk. The one who swears falsely will die. The same penalty for false witness follows if the dispute concerns cattle. Blood is drawn from the cattle in question and thrown at accuser and accused (Beech, p. 28 f.).

The highly elaborate ritual of the Toda dairy, with its grades of priests strictly segregated from the people and its regulations for milking, collecting, and dealing with the milk, is undoubtedly based on a belief in the sacred character of milk and desire to preserve it from pollution by the profane. The Todas are not alone in regarding milk as of special sanctity. Both in E. Africa and in the Sūdān many precautions are observed in dealing with it.

It is usual for milk to be milked only into certain kinds of vessels, commonly gourds, basket vessels, sometimes vessels of skin, never pots of clay or the modern tin vessel. The milker should not himself taste the milk first, but should give some, if only a few drops, to a bystander or to all the bystanders. Among the Bahima a boy who has been set aside to drink the milk of a dedicated cow may not drink or eat anything else

of some antiquity. Special regulations must affect the milker. Among the Dinkas cows are milked by a boy or girl before puberty; a man may not touch a cow, but this is not desirable. The cooking vessels, but leave them to be licked by their dogs. If they washed them, the cows would run dry (Keane, p. 138). The Suk drive their cattle to salt licks once a month, but the cows would run dry if this were done at a time when the moon was not visible (Beech, p. 9). Most African tribes avoid bringing milk and meat as food into contact—an interval of 24 hours at least should elapse; a Suk who chews raw millet must abstain from milk for seven days, while a Nandi who eats a forbidden animal must abstain from milk for four months. The Bahima are more strict and will not eat even vegetables and milk together. Great care is taken that women who approach or touch the cattle should be ceremonially pure. No menstruous woman must milk or even touch the cattle. The Bedawib say that, if a woman in this condition drank milk, both she and the cow from which the milk was drawn would become sterile (Seligmann, p. 655). These regulations do not appear to extend to pregnancy (for detailed references to regulations affecting milk among the pastoralists of Africa and the Sūdān see Seligmann, p. 654 ff.).

Among some Bantu peoples women are not allowed to touch cattle at all, and it may be that this was the original attitude of all pastoral

peoples and has only been gradually relaxed, in some cases possibly owing to lack of adequate labour. The Artega, Ashraf, and Hasa allow only men to milk camels and sheep and despise the Arab Zebediya, recent immigrants from Arabia, because they allow their women to milk. These tribes have few cattle. Generally in the S. Beja country cattle are not held in much esteem. No Artega man would milk a cow. It is probable, therefore, that cattle have been only recently introduced (ib. p. 655). Among the Asiatic tribes there is little evidence of any great disability of women in connexion with stock. Among the Khalkas, a horse-keeping people of the Sharras, not only milking but the care of the stock at foaling time devolved upon the women. The Todas, however, are stringent in regulating the contact of women with cattle. The paths over which the sacred herds pass are tabu to women; women are allowed to approach the dairy only by a certain path and at a stated hour when they come to fetch butter-milk. The floor of the Toda hut is divided into two parts marked by the hole in which rice is pounded. In the front part the churning is done, and with this part of the house women have nothing to do. Further, the characteristic women's implements—the broom and rice-pounders and sifters—have to be removed from the village when the priest (*wursol*) sleeps there, and the women take these implements with them when they leave the village at the time when the sacred herds pass through (Rivers, pp. 27, 29, 585).

Reference has already been made to the sacrifice and eating, after a death, of cattle and sheep belonging to the deceased. Among the Yakuts a beast was killed in order to accompany the soul of its former owner after death. The Bahima, after the death of a king or queen, continued to pay them a tribute of cattle.

The body of the dead king, after being washed in milk, was wrapped in the skin of a cow which had been killed by having its neck twisted. It was then taken to Ussanzi, and after a certain number of days was said to have become pregnant and brought forth a lion cub. This incarnation of the king was kept by the priests and then turned into the forest, cattle being provided for it from time to time. The lions of this forest were never killed. A similar custom obtained in the case of queens, but they became leopards, while princes and princesses became snakes (Roscoe, p. 101 f.).

Among the Suk a very special relationship exists between men and cattle.

Every warrior must have a *kamar*, an ox with one horn pointing backward and one forward, or he is made the subject of taunts. When the warriors start on a raiding expedition, the *kamar* are brought together, bedecked with feathers, and sent to the river where warriors collect. The warriors dance around, clap their hands, and shout the war-cry to excite the faint-hearted. A captured *kamar* is a great prize, and is slaughtered and eaten at once (Beech, p. 8).

E. N. FALLAIZE.

PATAGONIANS.—I. General description.—The Patagonians inhabit the extreme south of S. America, between the Atlantic Ocean and the advanced foot-hills on the east side of the Andes, from 41° or 42° S. lat. to the Strait of Magellan; a section of them have even spread beyond the Strait, and, under the name of Ona or Aona, occupy the eastern part of the large island of Tierra del Fuego. The real name of the Patagonians—the one most frequently used by themselves—is Aoniken, which is very like the word Aona. The name Patagonians was given them by Magellan, the first European who saw the natives at Port San Julian. According to some etymologies,

this word comes from the Spanish *patagones* ('large feet'); but modern explorers, like Spegazzini and Ramon Lista, think that it is a combination of two words: *patak* ('hundred')—a name given to the Patagonians by their former Quichua rulers—and a native word *Aoniken*. The Patak-Aoniken, contracted to Patagons, would therefore mean a hundred (an administrative division imposed by the Quichua) of the natives (who call themselves Aoniken). The name Tehuelches, by which the Patagonians are also known, comes from the Araucanians, their eastern neighbours. Some writers call them Tshon or Tsoneka (derived from Aoniken?).

Scattered over an immense area, including the provinces of Santa Cruz and Chubut, half or three-quarters of the province of Rio Negro in the Argentine Republic, and some territories in the south of Chile, the Patagonians were at one time very numerous. About 1828 d'Orbigny estimates them at 8000 or 10,000; but in 1869-70 Musters reckons only 1500. In 1892 Ramon Lista calculates that they are scarcely 500 (not counting the Ona), distributed among the four following localities: in the province of Santa Cruz, the valley of Coy Inlet and at Karpenk-aiki on the Rio Chico; in the province of Chubut, on the banks of the river Senguerr; and near the Laguna Blanca lake, to the north of Punta Arenas, on Chilean territory. More recently, in 1900, H. H. Prichard speaks of five encampments including altogether 'a few hundreds of individuals.' But it must not be imagined that so many Patagonians have completely disappeared: a great many of them (especially in the province of Rio Negro) live among their neighbours—Araucanians on the west, and Puelches and Whites (colonists and Gauchos) on the north; they bear the names of those ethnic groups, which are, as a rule, more civilized than they. Mixtures of these races—e.g., between Patagonians and Argentine colonists, all speaking Spanish—are also very numerous.

The first travellers who explored Patagonia gave most exaggerated reports of the stature of the natives, describing them as positively gigantic. Later estimates and some measurements—unfortunately very few—enable us to state that, although the Patagonians were very tall (average probably about 6 ft.), they were no more so than several other races of the world—e.g., Scots, Serbs, Nilotic Negroes, the Sara of the Shari-Chad district. They are, as a rule, very robust and muscular; they have long faces, straight or aquiline noses, reddish-yellow skin, and smooth, straight hair. They are hospitable, very good to their children, of a calm disposition, and rather inclined to sadness. They are very taciturn and seldom laugh. Under the influence of alcohol, however, they become irritable and quarrelsome, and many of their feasts, which are accompanied by libations, end in sanguinary battles.

The language of the Patagonians and the Ona, like that of almost all the natives of America, is agglutinative in structure and polysynthetic; phonetically it is characterized by the abundance of its guttural sounds. In contrast with what is found in the majority of S. American races, the Patagonians have a highly developed system of numeration: they count up to 100 and even 1000. But this system has been borrowed from the Quichua, for the Ona, who have never been in contact with the Quichua, cannot count beyond three.

As a rule, the Ona represent at the present time what the Patagonians were before the introduction of the horse among them, i.e. before the first half of the 17th century. They are nomad hunters, armed with slings and bows and arrows. Clothed

in guanaco-skins, they move from place to place in search of game; their only shelters are huts of branches, and sometimes they simply lie down on the ground, squeezed close together, and covered on the wind side with some guanaco skins. Since the introduction of the horse the Patagonians have improved their material life, although they have remained nomad hunters; they have given up the bow and arrow, and have adopted the *bollas* as their chief weapon.

The *bollas* consists of three round stones attached to three strings, which are knotted together at the other end. They swing these *bollas* round their heads and then throw them, while pursuing the hunted animal on horseback. The animal—generally the guanaco or the ostrich—is strangled by one of the strings of the *bollas* winding round its neck.

The Patagonians live in large tents (*kau*), composed of three rows of posts, diminishing in height from front to rear, and covered with guanaco-skins. They have learned from the Araucanians how to make ornaments of silver and to weave cloth. In place of the primitive tinder-box (two pieces of pyrites, which were struck against each other), still in use among the Ona, the Patagonians have for a long time used the European tinder-box and matches. They even have a musical instrument—the *koolo*; it is a small bow, one end of which is held in the mouth and the other in the left hand, while with the right hand the player strikes the string with a bone (the humerus of the condor) in which there are several holes. The sound of this instrument is weak; it imitates the wind or the gallop of horses. The tambourine is a Spanish importation; it is used to accompany their only dance, called the 'ostrich dance,' in which the men imitate the movements of that bird, while the women, seated in a circle round the dancers, make music and beat time with their hands.

The Patagonians are skilled in the preparation of guanaco-skins, which they sell to the Argentine traders. They also manufacture the saddles and harness for their horses; these are ornamented with silver and are often their most valuable possession. The dress of the men is almost the same as that of the women: a long mantle of guanaco-hide, a band of leather or wool confining their hair like a crown, and sometimes boots made from the skin of any animal. The Patagonians paint their bodies with red, black, or white according to circumstances, and practise tattooing, with very simple figures—parallel lines, triangles, circles, etc.

2. God and spirits.—Our information regarding the religion of the Patagonians is neither abundant nor very accurate. According to the evidence of Viedma, who wrote about 1781, the Patagonians of that time believed in two supernatural entities, the one good, who governs the celestial regions and has no power over men, the other sometimes good, sometimes wicked, who takes an active interest in human actions. Further, each family-group had its patron, its tutelary god, with whom men came into contact through the intermediation of a kind of shaman. Outès, one of the best ethnologists of the Argentine, suggested the idea that this was a survival of the clan-totemism which prevailed among the primitive Patagonians. He bases the idea on the evidence of Falkner, a contemporary of Viedma, who says that each family-group of the Patagonians regarded itself as belonging to a species of animal—ostrich, puma, guanaco, etc. He also sees the confirmation of these ideas in certain myths, which tell, e.g., of the war between two clans in consequence of the fact that the members of one of the clans had eaten the flesh of the ostrich (a totemic animal); but this may have been simply a dispute concerning an encroachment on a hunting-ground. Moreover, even towards the end of the 18th cent. the Patagonians

believed in the existence of zoomorphic beings, who dwelt in caverns near lakes and hills, and who created men, gave them weapons—slings, bows and arrows—and taught them how to use them.

A century later, about 1885, Ramon Lista gives a description of the religious ideas of the Patagonians which shows some resemblance to the foregoing. The supreme being is called El-lal; he is a strong spirit, clever, and kind; he is the creator of the world and of the Patagonians. After having cleared the world of the wild animals which infested it, he taught men the secrets of obtaining fire and of building a shelter for themselves. The myths relating to El-lal were still well known to the old men of the end of the 19th century. The following is a résumé of them:

El-lal came into the world in a strange way. His father Nosthej (a kind of Saturn), wishing to devour him, had snatched him from his mother's womb. He owed his rescue to the intervention of the *terguerr*, a rodent animal, which carried him away to its cave; this his father tried in vain to enter. From the mother's horrible wound, inflicted by her husband, sprang a river of crystal-clear water, which still exists in the neighbourhood of Teckel, near the sources of the river Senguer. After having learned from the famous rodent the properties of different plants and the directions of the mountain-paths, El-lal himself invented the bow and arrow, and with these weapons began the struggle against the wild animals—puma, fox, condor—and conquered them all. But the father returned. Forgetting the past, El-lal taught him how to manipulate the bow and the sling, and joyfully showed him the trophies of the chase—tortoise shells, condors' wings, etc. Nosthej took up his abode in the cave and soon acted as master of it. Faithful to his fierce instincts, he wanted to kill his son; he followed him across the Andes, hut, when on the point of reaching him, he saw a dense forest arise between him and his son. El-lal was saved; he descended to the plain, which meanwhile had become peopled with men. Among them was a giant, Goshy-e, who devoured children; El-lal tried to fight him, but he was invulnerable; the arrows broke against his body. Then El-lal transformed himself into a gad-fly, entered the giant's stomach, and wounded him fatally with his sting. It was not until he had accomplished all those feats, and had proved himself a clever huntsman, that El-lal thought of marrying. He asked the hand of the daughter of the sun, but she did not think him worthy of her and escaped from him by a subterfuge. Disenchanted, El-lal decided to leave the earth, where, he considered, his mission was at an end, since men, who had in the meantime appeared in the plain and in the mountain-valleys, had learned from him the use of fire, weapons, etc. Borne on the wings of a swan across the ocean towards the east, he found eternal rest in the verdant islands which rose among the waves at the places where the arrows shot by him had fallen on the surface of the waters.

The myth of El-lal shows the condition of the Patagonians in pre-historic times and their struggles with their conquerors, and gives a glimpse into religious thought in evolution.

Alongside of this superior creative being, who, as soon as his work was accomplished, went to rest and had no more to do with human affairs, the Patagonians believe in the spirit of good who protects men, especially in cases of illness; and in the spirit of evil, represented by several invisible beings gifted with supernatural powers. One of these is Maïpe, always associated with the darkness of night, the violent wind of the desert, and other phenomena that trouble the minds of primitive men; another is Keron-kenken, a monster who devours newly-born children and drinks the tears of their broken-hearted mothers. The name *kere*n is often given to all wicked spirits. The word *wallishen* or *qualicho*, which we find used by certain writers to denote an evil spirit, is of Araucanian origin.

3. Sacrifices, witchcraft, and disease.—As was said above, each Patagonian family used to have a special shaman, who had charge of the religious ceremonies, and who went for this purpose to the summit of a hill near the encampment. At the end of the 18th and the beginning of the 19th cent. these ceremonies took place in the shaman's tent. At the present day they seem to be abandoned,

¹ This is the case with the young Patagonians to the present day.

but the shamans still exist. Their special duty is to cure the sick.

After having exhausted the meagre resources of his medical art—*e.g.*, lotions of cold water, blood-letting, and massage—the shaman has recourse to the great methods: he sings incantations beside the invalid, then proceeds to suck the part of the body through which he intends to extract the spirit who is causing the illness. He then shows the relatives who surround the patient this spirit in the form of an arrow, an insect, etc. The sacrifice of an animal, usually a mare, is also practised to cure invalids. All the relatives and friends of the sick man meet near the camp, to which the youths and boys lead the mare to be sacrificed. Some men of the clan fall upon it, and the most skilled of them strikes the fatal blow in the chest with a very sharp knife; he then extracts the heart, and, holding it in his hand, walks several times round the animal, which dies in convulsions. Its flesh is then divided among those present and consumed on the spot. The head and hoofs are fixed to a pole painted with yellow ochre, which is planted on the top of a neighbouring hill by a group of horsemen.

The profession of shaman is hereditary, and may be exercised by either men or women. Female shamans are even more numerous than male. It is a profession in which certain risks are run, for, if the patient treated by the shaman dies, the shaman himself is often put to death.

Shamans are also sorcerers. Usually they are taciturn, suspicious persons, who keep aloof from the rest of the people. Their magic power resides in some small rough perforated stones, which are handed from father or mother to son and are jealously guarded, for their loss entails the loss of the shamans' magic power. The Patagonians believe that the smallest particle detached from the body—nails, hair, and even the rugs of their clothes—may become transformed into an evil spirit, possessing magical power; they therefore burn these things as quickly as possible. Sorcery is called *shoik'n*, and every man can practise it, though to a less degree than the shaman. Thus they sometimes try to cure an illness without the help of the shaman; the whole family gather round the invalid and shout and yell fiercely; then some of the men go out on horseback and pursue to a great distance the spirit which has left the body. Sometimes they send the invalid out on horseback quite naked, in intense cold, for, according to the Patagonians, the best remedy for all ills is great noise and great cold (Prichard, *Through the Heart of Patagonia*, n. 86 f.).

continues to live after the man's death and prowls about the abode of his relatives. The fear inspired by these ghosts is so great that the Patagonians must not pronounce the name of the dead man, lest they should attract the attention of the 'double.' This is sometimes the cause of changes in the Tehuelche language; e.g., not long ago fat was called *ham* in that language, but, when a Patagonian who had this word as a proper name was on the point of death, his relatives and friends replaced the name by *golosjku*; nowadays *ham* is forgotten. The dead are usually buried under a heap of stones, sometimes painted red (*tchenke*). At the present time the bones are exhumed after a certain period (a custom borrowed from the Araucanians) to be painted red.

5. Marriage customs.—Marriage is endogamous; but even at the end of the 18th cent. chiefs had to take their wives from another tribe (Viedma). This was probably a survival of primitive exogamy. Marriage does not require any religious ceremony. In early times, however, the shaman recited some invocations and gave advice to the newly-wedded pair. The basis of marriage is the purchase of the woman from her parents. Perhaps the scarcity of women explains the long maintenance of this custom. It is said that there are three men for every woman among the Patagonians, probably on account of the hard conditions of life for the woman, on whom devolves a number of laborious tasks—the setting up and taking down of the tents, the gathering of berries and roots, preparation of food, weaving, etc. A marriage takes place as follows:

After acquiring renown as a skilled huntsman, the young man goes to the tent of his future wife's parents and makes his proposal, mentioning the number of horses or pieces of silver that he offers for her. Usually he offers two horses to each of the future wife's brothers. If the parents accept this 'gift,' the matter is settled; they then give presents to the suitor in exchange. Next day the newly-wedded couple take up their abode in a tent which they build with the relatives on both sides, and there they receive and entertain their friends. The whole affair ends in a great feast, with dancing and immoderate use of *llama* (brandy). On that day dogs are not allowed to touch food—not even the leavings of the feast.

Polygamy is allowed, but seldom practised. In former times chiefs had as many as twelve wives. After the death of the husband, when the period of mourning is over, the wife, especially if she is no longer young, may cohabit with any man of her tribe for any length of time. We must not conclude from this that the morals of Patagonian women are loose, for young girls are virtuous as a rule, and adultery is rare among the married.

The birth of a child is celebrated with feasting and dancing. It is also accompanied by the following ceremony:

The child is placed for a moment in the inside of an animal which has just been sacrificed by being slit from head to tail and having its entrails removed. They believe that by means of this operation the child will become a good horseman (Prichard, p. 96). The child is then measured, and on the following day the whole encampment knows how many *horres* (a native measure equal to the length of the hand) he is in height.

6. Social organization.—The immediate members of a family all live in the same tent (*kaw*); but each couple is separated from the others in the tent by curtains of skins. They have food in common. Property is individual, and is transmitted from father to son. If there is no son, the inheritance goes to the nearest relatives—first to the women, then to the men. Consanguinity is recognized to the fourth generation.

The Patagonians have no chiefs of the ordinary kind, although they recognize the superiority of certain men who are richer, more eloquent, or more skilful huntsmen than the others. The powers of the chiefs in former times were more extensive: they conducted warlike expeditions, and acted as supreme judges in disputes between people of the

same encampment. Nowadays they act as intermediaries between the Whites and their compatriots on various occasions; they also conduct collective hunts—battues organized by several bands of hunters accompanied by their half-wild dogs.

The Patagonians possess slaves, usually women, whom they have captured, after victorious battles, as a result of incursions on neighbouring territories. Hence we come across Fuegian slaves in their tents (Spegazzini, *Anales de la sociedad científica Argentina*, xvii. 236).

PATALIPUTRA.—See PATNA.

PATAÑJALI.—Patañjali is regarded in India as the founder of the Yoga system. Since, however, Patañjali, who is celebrated also as a grammarian, lived in the 2nd cent. B.C., and the doctrines of the Yoga, both theoretical and practical, can be shown to have existed in India several hundreds of years earlier, this tradition must be understood to imply merely that Patañjali in the *Yogasūtras* for the first time gave literary form to the Yoga doctrines. The scanty information that we possess on the life of Patañjali is full of legends and contradictions.

R. GARBE.

PATARINI (also Paterini, Patrini, Pathariste, Patarelli).—This is the name by which the Cathari, or Albigenses (*q.v.*), were frequently designated in the 13th and 14th centuries, but, after that time, it was more vaguely employed to denote heretics in general. The etymology of the term has been much disputed (see C. Schmidt, *Histoire et doctrine des Cathares*, Paris, 1848-49, ii. 278-279). Its earliest use, as applied to the Cathari, is perhaps that in a canon of the Lateran Council of 1178, where it occurs, along with Publicani (*q.v.*), as an alternative designation for Cathari (C. de Vic and J. Vaissette, *Hist. générale de Languedoc*, Paris, 1872-90, vi.² 86; see also 222). The best authenticated etymology associates the term with the Pataria in Milan, a democratic party in that city, in the 11th cent., whom their aristocratic rivals contemptuously designated as Paterini, or 'ragamuffins'; 'eisque paupertatem impropertantes Paterinos, id est pannosos vocabant' (Bonizo, in *PL* cl. 825); cf. 'les Gueux' in the Low Countries in the 16th century. The Paterins largely followed the teaching of Ariald, the fanatical denouncer of a married clergy in the 11th century. As the Cathari also decried marriage on the part of ecclesiastics, and, partly on account of their poverty and still more, perhaps, from their desire to escape observation in their assemblies for worship, also sought out obscure localities, their defamers naturally availed themselves of these features to transfer to them the epithet which had formerly been applied to the followers of Ariald, while the quarter in which they resided also became known as Pataria, and in more recent times as Contrada de' Patari.

PATETS.—See CREEDS AND ARTICLES (Parsi), EXPIATION AND ATONEMENT (Parsi).

PATH (of the gods or of the soul).—The word 'path' and its synonyms, it is obvious, lend themselves readily to specifically religious and ethical applications; but the most highly developed technical employment of this nature is found in the literatures of India and of Persia.

1. India.—In the *Rigveda* and the *Atharvaveda* the word 'path' (Skr. *panthā*-, *pathi*-, *path*-, *adhvan*-, *gātu*-, and derivatives) has the usual literal meanings as applied to ways on earth and to the courses of the heavenly bodies either as such or as deities, and figurative meanings such as the way unto sleep and the path of man's life. In addition, it has two main religious significations: (a) the path of the gods, and (b) the path of the fathers.

(a) *The path of the gods* is the way between the world of the gods and the world of men; it was created and is kept in repair by the fire-sacrifice with the drinking of the *soma*-juice, and by the devout thought or meditation of the pious worshippers. Even more definitely, this path or these paths (for there is no consistency in the number) are said to have been first made by Atharvan, the mythical first fire-priest, through his institution and practice of the fire-sacrifice, though at other times other ancient seers, and the gods Bṛhaspati, Agni, Indra, and Soma, are severally called 'path-makers.' Agni, the fire, both as physical fire and as god of the fire, is termed the 'knower of the ways,' for by them he comes down to earth to the sacrifice and kindles the holy fuel, and by them he hastens back to heaven to invite the gods to come down to earth to the sacrifice, where they may sit on the *kūśa*-grass round the holy fire. With or without this formal invitation of Agni, the gods (Indra, Varuṇa, Aryaman, Savitr, Pūṣan, Aramati, the *āsvins*, the *maruts*, the *ṛbhus*, etc., are mentioned in this connexion) come down by these paths to the sacrifice, where they vicariously, through the priest, enjoy the drinking of the *soma*. Elsewhere Agni is spoken of as bringing to the gods by the paths the viands and the *soma*-drink, or other offerings; by them either the *āsvins* or the eagle conveys to Indra the *soma*; by them, before the sacrifice, the prayers ascend to Agni and Indra; the *soma* is appealed to, to put them into fit condition for the ascent of a new song of praise and petition. This is the path of *amṛta*, or immortality, by which the *ṛbhus*, after drinking the *soma*, were able to attain places among the gods; it was by songs, however, that the *angirases* built their way to immortality. But death is warned to keep away from this path that the gods tread. At other times as well as at the time of the sacrifice the gods come to the earth by these paths, which extend from the seat of the highest god, far beyond the vision of man; yet man is thought of as wandering along the path of the gods, during the sacrifice, though arrival at the abode of the gods is felt to be beyond attainment. These paths are characterized as bathed in light, straight, ancient, dustless, easy to go, thornless, god-trodden.

(b) *The path of the fathers*, or *pitṛs* (the spirits of the ancestors), is the path leading from the world of the living to the world of the dead. It was originally discovered by Yama, the first of men to die, and hence is called 'the path of Yama.' Others followed in his path, and made their way to the abode of the dead, so that it is occasionally called 'the path of the ancient ones.' This path is dark, fearful, frightful, forward-going, descending; Agni, in his manifestation as the fire which consumes the corpse, is directed to go this way and

not upon the god-trodden path. As the soul of the dead man makes his way to his new abode, he must pass the 'two dogs of Saramā,' the sun and the moon, which are represented now as guarding the path and driving away the wolf, and now as dangerous obstacles to the passage of the soul. Pūṣan is implored to protect this road. Those who have gone this path cannot come back—a Vedic idea, uttered before the origin of the belief in metempsychosis; but, though they cannot return to resume life in this world, still the *pitṛs* may return by this path for a brief space to partake of the offerings at the sacrifices which are made to the souls of the dead.

The path of the *pitṛs* is not infrequently confused with the path of the gods, and is described as made by the ancient seers or by the *pitṛs*, and extending to heaven or to the lofty sky, bringing us into association with day and light, with sun and moon.

In the *Upaniṣads* there are four different ways or paths for the soul after death: (1) the soul arrives at its new home at once after death, without intervening travel or experiences; (2) the soul returns into the universe; (3) the soul travels on the way of the fathers, through muck and night, in the days of the waning moon, to the moon as the place of the dead; (4) the soul goes by the path of the gods to the regions of light, whence there is no return; this last is for those who have earned their final release from the trammels of the fleshly body, and go to the sun as final abode, nevermore to be reincarnated.

Certain other specialized uses of the word 'path' in the Vedic texts deserve mention.

(c) *The path of the soma-juice*.—When the plant *soma* is pressed for the extraction of the juice to be used in the ritual, the juice is spoken of as flowing through the sieve into the pail by a splendid path, or by straightest paths, which it makes for itself, dustless, hundredfold or thousandfold; it flows, trickles, hastens, or rushes roaring along them; the streams of the juice cover the path as by a wagon. The mode of expression is the effect of the exaggerated Hindu imagery, tending here as elsewhere to predicate the most exalted attributes for that which is being glorified.

(d) *The path of ṛta, or righteousness*, is a term which may be applied to any path, literal or figurative, which is not inconsistent with good morality. While at times used almost as we may use 'the path of right conduct,' it is both a vaguer and a more inclusive term, sometimes synonymous with the path of the gods, sometimes with the conduct of the sacrifice, sometimes with proper behaviour, and is used even of the course of the waters which Indra released (see below (f)). By following the path of *ṛta* man passes unscathed through evil or through sorrow and suffering.

The *aryāṣṭāṅgamārga* (Pāli, *ariyō aṭṭhaṅgikō maggō*), or 'noble eightfold path,' of Buddhism is a somewhat similar idea to this, and is the way pointed out by Buddha for escape from the misery of existence, consisting of right views, right thoughts, right words, right actions, right living, right exertion, right recollection, right meditations.

(e) *The path to fortune, to welfare, to power, to the winning of riches, etc.*, is constantly mentioned in the Vedas; and Indra, Viṣṇu, Agni, Soma, Pūṣan, Bhaga, the dawn, the *āsvins*, the *maruts*, the *ṛbhus*, etc., are implored to prepare it for men, or to lead men to it. This path is not sharply distinguished from the path of *ṛta*, nor from the path of the gods, but at times they merge into one another.

(f) *The path of the waters*.—Indra is said to have slain the dragon or demon which restrained the

waters, and then, by bursting open the clouds, or the mountains, in which the waters were confined, to have set them free to run in their paths over the earth. Less often it is Varuna who builds the paths by which the waters flow to the sea. The myth is, of course, derived from the phenomenon of seasonal droughts and rains in India.

2. Persia.—In the religion of Zoroaster the word 'path' (Avestan *pantay-, path-, patha-*) has much the same development as in the Veda. In the oldest Zoroastrian texts, the *Gāthās* of the Avesta, we find the path of *asha* (identical etymologically with Skr. *ṛta*), or righteousness, which is straight, profitable, and easily traversable, and leads the faithful follower of the religion to paradise (*garō demāna*, 'the home of song'). This path is revealed to the pious by Ahura Mazdāh and his archangels; it is spoken of also as the 'path of Vohu Manah' ('good thought', one of the Avestan archangels), founded by Ahura Mazdāh and Asha (personified as an archangel), and taught by Asha; it is the path to Asha; it is the path of the religion, or of the right teaching.

The picture of the journey of the soul upon this path is given in some detail in the later writings of the religion.

For three days after death the soul hovers near the body, but on the morning of the fourth day flies away, wafted by a fragrant breeze or suffocated by a stinking wind, according to his deserts. Presently he is met by a beautiful maiden or by a frightful hag, who also typify his previous life and religion. He arrives finally at the tribunal of the judges, Mithra, Sraosha, and Rashnu, and his good deeds are weighed against his bad deeds. If the good deeds prevail, he sets out across the bridge of the Chinvat, or 'divider,' which passes across the abyss of hell to heaven, and he finds the bridge broad and easy to ascend, until he arrives in paradise. But the soul whose evil deeds outweigh his good deeds finds the bridge growing narrower and narrower and more difficult to mount, until he plunges off and down into hell for his everlasting punishment.

3. General.—In other lands there is hardly the same definite use of specific words in these specialized meanings, though every religion naturally has its own version or versions of the way traversed by the soul after death; among the American Indians, e.g., the soul is generally represented as travelling to the westward, supplied with provisions, and as reaching the land of his spirit-ancestors after passing successfully some obstacle.

LITERATURE.—1. The passages of the *Rigveda* and *Atharvaveda* may be traced by H. Grassmann's *Wörterbuch zum Rig-Veda*, Leipzig, 1873, and W. D. Whitney's 'Index Verborum to the Atharva-Veda,' in *JAOS* xli. [1881] (both of which are complete word-concordances), under the appropriate words. See also R. G. Kent, 'The Vedic Path of the Gods and the Roman Pontifex,' in *Classical Philology*, viii. [1913] 318-326; and esp. H. Oldenberg, *Die Lehre der Upanishaden und die Anfänge des Buddhismus*, Göttingen, 1915, pp. 106 f., 145, 344 f. On the 'two dogs of Sarana' see M. Bloomfield, *Cerberus the Dog of Hades*, Chicago and London, 1905.

2. The Gāthica passages are *Yasna*, xxxi. 9, xxxiii. 5, xxxiv. 12, xliii. 3, xlv. 4, 1, 4, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

PATĤĀNS.—See AFGHANISTAN.

PATICCA-SAMUPPĀDA.—Paticca-samup-pāda ('causally continuous' or 'collective up-rising') is the name of a central doctrine in early Buddhism and in all Theravāda Buddhism. It is also called the Nidāna ('basis' or 'ground,' i.e. cause) doctrine, or the Paccayākāra ('related conditions'), and is referred to in the Pāli *Suttas* as Ariya-Nāya ('the noble [or Ariyan=Buddhist] method or system'). The first, second, and fourth

names are canonical, but the third occurs only as a (late) title in the third and more recent section, the *Abhidhamma-Piṭaka*. European Indianists call the doctrine 'causal genesis,' 'dependent origination,' or 'theory of the twelve causes.'

The doctrine so designated is a formulated series of terms (1) expressing the interrelated or mutually dependent order obtaining throughout the sphere of sentient phenomena in the life of creatures, (2) considered from the point of view of sentience. In other words, it states that the salient features of sentient life reveal an order of mutually dependent occurrences, throwing off, as they evolve, an ever-recurring outcrop of painful feeling.

This is the burden of the formula stated and applied in detail. But there is also a concise and abstract version of the formula, in which the application to sentient phenomena is eliminated, and which is therefore nothing less than a formula of causation in general. Sometimes this universal statement is prefixed to the fuller formula; sometimes it represents it in brief; once or twice it is used independently. It runs: 'This being present, that becomes (or happens); from the arising of this, that arises. This being absent, that does not become; from the cessation of this, that ceases.'

In the Pāli only one and the same demonstrative adjective, 'this' (*idam*), is used, and not the pair 'this, that' (*idam, asu*). But this should not lead the reader to see in the formula a set of merely identical propositions. Pāli diction does not distinguish between two terms in our way; but the context invariably shows that there are two terms and not one.

This abstract version does not occur in either the *Sutta* or the *Vinaya* Buddha-legend; nevertheless in certain *Suttas* the Buddha is represented as teaching it, and also as calling it *Dhamma*, and Ariyan method (*Majjhima*, ii. 32; *Samyutta*, v. 388; *Anguttara*, v. 184). It is used in discussions with persons of education, lay and religious, but is obviously not suited to the theme of a saviour of his fellow-men wrestling in thought how to find a way of escape for the world, nor to the language of deep religious emotion and romance in which that theme is embodied, and through which the *Mahāpadāna*, or 'sublime legend,' appealed so widely and powerfully to all sorts and conditions of men.

The applied and expanded formula is also termed *Dhamma* and identified with it (*Majjhima*, i. 191). It constitutes, in fact, an expansion of the second and third of the so-called 'four Ariyan truths or facts' put forward in the Buddha's first sermon, and considered as the nucleus of his teaching, viz. the truth as to the genesis or cause of ill, and the truth as to the cessation or suspension of the cause of ill. As expressing a cosmic truth, it was considered as valid eternally and from eternity, independently of the advent of a Tathāgata (or Buddha), not to mention any action by a deity. As a truth that became buried and forgotten for ages at a time, under mythologies and theologies, the function of a Buddha was to re-discover and revive it.

'Whether Tathāgatas arise or not, this elemental datum (*dhatu*) stands as the establishing of things as effects . . . as the cause of this and that. Concerning this . . . a Tathāgata becomes enlightened and penetrates it . . . and he declares . . . makes it manifest, and behold! he saith! (here follows the formula in detail). Thus these stable, constant, immutable elements are each called a causal term (*paticca-samuppāda*)' (*Samyutta*, ii. 25, 3; cf. *Kathāvatthu*, vi. 2, tr. in *Points of Controversy*, London, 1915, pp. 187, 337).

Hence this re-discovery plays a great part in the Buddha-legend—the creed as to the process by which each Buddha in turn grasps the principle governing the series of terms as a fundamental truth of sentient life.

The oldest account of the re-discovery of the causal order in its application to the facts of sentient life is probably that contained in the *Mahā-*

dāna of the *Digha-Nikāya* (ii. 1; tr. T. W. and A. F. Rhys Davids, *Dialogues of the Buddha*, 1). The scene is the shade beneath a tree famed ereafter as the Bodhi- (or Bo-) tree ('tree of enlightenment'). Hither, after years of unsatisfying study under teachers, and of independent self-inflicted austerities, equally sterile (*Majjhima*, 163-167, 242-249), the Buddha-about-to-be comes, fat and emaciated, but in restored health, to apple, not with systems or abstractions, but with the order and tendency of sentient facts as they appear to him. The fact of ageing, or decay and disease, the fact of death insurmountable by any sentient being whatever in earth or heaven—cause inseparable from the essence of life itself—induced a passionate pity for all sentient life in helpless subjugation to their sway still hold his thoughts: "And for this suffering no one knows of any way of escape, even from decay and death. O, when shall a way of escape from this suffering be made known? . . . Then to him it occurred: "What now being present, is decay-and-dying also present? Conditioned by what is decay-and-dying? Then to him thinking as to means arose penetration of insight: "Where birth is present, decay-and-dying must be; decay-and-dying are conditioned by birth" (*Dialogues*, ii. 231.).

The thinker is now started on the method of his argument, and the exposition of how, by conditioned sequence, sentient life proceeds on its doomed career from one birth to another is given in the same terms. The formula for each linked stage gives more concise expression than the fuller text of the legend. It is couched, not in propositions, but in a string of qualified terms, as follows:

'Conditioned-by-birth, decay-death (with its accompaniment of pain and sorrow). Conditioned-by-becoming, birth. Conditioned-by-attachment, becoming. Conditioned-by-natural desires (or cravings), attachment. Conditioned-by-feeling, natural desires. Conditioned-by-contact, feeling. Conditioned-by-sense, contact. Conditioned-by-composite organism, sense. Conditioned-by-consciousness, the composite organism.'

(This is the formula of ten 'bases' only, and in backward order, for the order of re-discovery, as given in this ancient legend or creed, the thinker pushing his way from consequent to antecedent.)

"Then to the Bodhisat this occurred: "Consciousness turns back from the composite organism; it goes not beyond it." (In other words, we encounter, in *sentience*, no new fact to adduce. As a man's composite organism—mind and body—dissolves at death, the resultant consciousness of his last mental force springs up in a new embryo, human, bestial, infernal, or celestial. And the result of that embryo so informed is a composite organism, or *nāma-rūpa*. Hence the mutual conditioning of these two terms, as in the case of seed-fruit, seed, egg-hen-egg.)

"Only thus can one be born, grow old, die, fall (from one sphere), spring up (in another), namely, conditioned-by-composite organism, consciousness. Conditioned-by-consciousness, composite organism. Conditioned-by-composite organism, sense. Conditioned-by-sense, contact. Conditioned-by-contact, feeling. Conditioned-by-feeling, natural desire. Conditioned-by-natural-desire, attachment. Conditioned-by-attachment, becoming. Conditioned-by-becoming, birth. Conditioned-by-birth, decay-and-dying, with sorrow and suffering. Such is the coming to be of this entire body of ill."

"Coming to be! coming to be! (*samudayo*)"—at that thought there arose to the Bodhisat a vision into things not called before to mind, and knowledge arose, and insight and wisdom and light. Then to him it occurred: "What now being absent, is decay-and-dying also absent; by the ceasing of what does decay-and-dying also cease?" Then to him thinking as to means arose penetration of insight: "Where birth is absent, decay-and-dying is absent; when birth ceases, decay-and-dying ceases. . . . Where becoming, etc., . . . [and so on to] consciousness ceases." Then to him this occurred: "Lo! I have won to this, the intuition-way to enlightenment, namely, that from the composite organism ceasing, consciousness ceases, and conversely; that from the composite organism ceasing, sense ceases. . . . Such is the ceasing of this entire body of ill. Ceasing! Ceasing!" At that thought there arose to him a vision into things not called before to mind, and knowledge arose, and insight and wisdom and light. And thereafter he dwelt in the discernment of the rising and passing away of the five attachment groups (of the composite organism). Such is the material group, such the mental groups, such is their coming to be, such is their ceasing. And for him, abiding in that discernment, not long was it before his heart, void of attachment, was set free from the intoxicants (of sense-desires, of renewed life, of wrong views, of ignorance).

This is the version of the legend giving the fullest context. But it lacks the eleventh and

twelfth links, or, taking the formula in its usual or forward or time-order, the first and second links. These two complete the traditional or doctrinaire presentment of the formula, and appear also in the other canonical versions of the legend. These occur in the *Samyutta-Nikāya*, ii. 5 (or fourth *Sutta* of the *Nidāna-Samyutta*), where the narrative is also generalized as experience of all Buddhas, and in the *Vinaya*, *Mahāvagga*, 1st section (cf. *Vinaya Texts* [SBE xiii. (1881)], i. 73 f.). In the latter account the exposition of the doctrine is given, not as being re-discovered, but as being meditated upon after enlightenment was won, and as constituting, so to speak, the spoils of victory. The account as compared with the other two is referred to Gotama Buddha only, and is relatively curt, as if, when the rules of the order were being completely 'edited,' this doctrinally important portion was inserted with the other legends prefacing the books of rules, as a memorandum. Internal evidence is thus rather against its being the oldest version.

The two links in question, taking the order of re-discovery as in the *Samyutta* narrative, are: 'Conditioned-by-consciousness, actions. Conditioned-by-actions, ignorance.' These may or may not be an addendum for the sake of completeness. Theravāda exegesis sees in them a linking up with the previous life or lives of the sentient subject, just as, at the other end, the next life is outlined by the other two extremes. We thus get:

Previous life.	{ ignorance . . . actions (transmitting results).	Present life.	{ consciousness . . . to . . . becoming.	Future life.	{ birth (in earth or heavens, etc.) decay-and-dying.
----------------	---	---------------	--	--------------	--

Thus enlarged and envisaged, the scheme becomes more interesting in perspective than if the past and future of the three lives had been represented as groups of terms identical with those of the present life. It was open to the compilers so to represent it. But the table as compiled shows a greater pre-occupation with the working of causation than if there had been offered mere repetition. In the central group we have the working out of the process of *sentience*, culminating in the central links—sense, feeling, desire—and representing a fresh ebullition, a new source of causal force reaching on into the next birth. There its resultant is renewed *sentience*, eventually again to be darkened by the inevitable disease-decay-death. But the present is also itself a resultant—a centre of effects in *sentience* due to causes in the past. Simplifying that past, the compilers presented it in abstract as causal only. The causes are generalized as two: the limited and imperfect knowledge which is called ignorance (*a-vijjā*)—ignorance of how the life of sense-desires makes in the long run for *dukkha*, 'ill'; and activities of deed, word, and thought, conditioned by that ignorance, and constituting the *karma*-forces which result in the sentient effects of the next (*i.e.* the present) life.

It is very necessary for the reader to keep in mind this view of the two past-life terms as a simplified, abstract aspect. Western critics, ignoring the Theravāda tradition, have speculated on how 'ignorance' (*i.e.* knowledge of a sort, just as cold is, scientifically, heat of a sort) can be the primal source (!) of these sentient phenomena.

'Ignorance,' wrote Buddhaghosa, 'is here chosen only as a starting-point for the exposition, not because it is itself causeless' (*Visuddhi-Magga*, xvii.).

Another difficulty, met by the commentators, is the distinction between 'becoming' (*bhava*) and 'birth.' They explain 'becoming' under two aspects: (a) when it conditions birth, the fruition or results of past actions is meant (*kammabhava*); (b) in the phrase, 'becoming is conditioned by

attachment,' the general result in future life is meant (*upapatti-bhava*) (cf. Aung, *Compendium of Philosophy*, p. 262). Thus 'grasping leads to becoming,' i.e. (b) to renewed life (a) through the working of action's results.

The Theravāda tradition has, unlike the Mahāyānist schools, consistently kept the Paṭicca-samuppāda to the fore in its teaching, and has held as authoritative, in exegesis of the doctrine, the dissertation contained in Buddhaghosa's *Visuddhi-Magga*, xvii. Hence a few notes from that dissertation are here added.

Buddhaghosa, whose erudition was built upon the traditional culture of his age, often refers to the doctrine by the post-canonical name *bhava-chakka*, 'wheel of becoming.' He is throughout emphatic as to the formula being no mere enumeration of a series, but a doctrine of certain states conditioning the one the other—in other words, a scientific doctrine of causation in sentient phenomena. There were views current that the formula was only a list of happenings (*uppādamattam*), and he insists at length on the full significance of the old *Sutta*-title, *paṭicca*, 'because of,' 'on account of,' and *samuppādo*, as well as on the word *paccayo*, rendered above 'conditioned by.' These terms expressed a procedure (*pavatta*) of conditions up-rising, contrasting with the views of those who denied causation, who advocated chance or irregular causation (*visama-hetu*) (on these cf. the *Adhicca-samuppannikā's* [= *akāraṇa-samuppannikā*, 'believers in things arisen without a cause'] of *Digha-Nikāya*, i. 30) or who believed in over-ruling disposers. *Paccayo*, 'condition,' he defines, after the fashion of mediæval commentators, as '*paṭicca etasmā etī ti paccayo*.' Condition means 'on account of, from that, it makes go' (*pacc-* is *paṭi* before *ay*, the causative of *i*, 'to go'). Now, he goes on:

'The essential feature in "condition" is furtherance [or 'aid,' *upa-kāraka*].¹ Thus: is there anything the persistence, or the arising of which is a furtherance, that thing is a condition of what is aided. Condition, cause [*hetu*], reason [*kāraṇa*, lit. 'causing-to-make'], basis, ground [*nidāna*], and such terms are one in meaning, diverse in form.'

The shortened abstract form he does not take into account in this chapter, but in his commentaries on it, when it occurs, both with and without the fuller formula, in the *Majjhima* and *Samyutta-Nikāyas*, he refers to it as the *Paccayākāra*, or method of conditions, namely, that 'given the condition, the fruit (consequent) comes to pass.'

Whether the formula in its detailed form and the doctrine of causation applied to sentient phenomena were entirely and originally Buddhist or were annexed from pre-existing systems is a matter of controversy. The difficulty in deciding lies largely in the uncertainty as to which systems, as expounded in the earliest records preserved of them, are pre-Buddhist. There are fragments of the linked form of exposition, used in the formula, surviving in the aphorisms known as *Yoga* and *Sāṅkhya sūtras*, but, whereas these *sūtras* are reputed to be ancient, the compilation of them in commentarial works is, as regards the Buddhist canon, relatively quite modern. No originality, however, is claimed either by Buddhists or by European exponents for the *method*—a method which may have its roots away back in the primitive folk-lore of our race. In the *sūtras* the emphasis on the natural law of cause and effect in sentient phenomena remains practically sterile; it was the work of Buddhism, whether it anticipated or annexed, to render insight into natural laws a fruitful religious doctrine. Theories of first causes and *primum mobile* reach back, in Indian Vedas, far beyond the date of Thales of the Levant. But, if we compare the primitive notions

¹ See art. RELATION (Buddhist).

of cause itself, anthropomorphically conceived as akin to a fiat of will, or to a manual effort, with the earliest Buddhist resolution of cause into necessary antecedent conditions, each ancillary to a 'fruit,' or consequent coming to be, if we remember that this conception of causation was substituted, in the process bringing about sentience, for chance or divine fiat, and viewed as natural law which man might modify by adapting his actions thereto, it may then be that the force of the words, 'arose a vision into things not called before to mind,' may cause to arise for the historian of human ideas a vision not less interesting.

LITERATURE.—*Dialogues of the Buddha*, tr. T. W. and C. A. F. Rhys Davids, London, 1910, ii. 23-61; H. C. Warren, *Buddhism in Translations*, Cambridge, Mass., 1900, pp. 163-179; C. A. F. Rhys Davids, *Buddhism*, London, 1912, ch. iv.; H. Oldenberg, *Buddha*, Stuttgart, 1914, div. ii. ch. ii., where references to controversial literature are given; L. de la Vallée Poussin, *Théorie des douze causes*, Ghent, 1913, giving Sanskrit and Tibetan literature on the subject; P. Oltramare, *La Formule bouddhique des douze causes*, Geneva, 1909; P. Masson-Oursel, 'Théorie bouddhique des douze conditions,' *RHR* lxxi. [1915] 30 ff. The two last named do not give the view of the Theravāda tradition, followed in this article. That view is best set out by S. Z. Aung, in *A Compendium of Philosophy*, London, 1910, pp. 259-264, note on *Paccaya* and *Paṭicca-Samuppāda*. C. A. F. RHYS DAVIDS.

PATIENCE.—Patience, the *ῥασιλις τῶν ἀρετῶν*, as Chrysostom calls it, is a distinctly Christian virtue. In each of the great religious systems of history we find that which is related more or less closely to it, and a study of these reveals that contribution to the religious thought of the world which must be assigned to Christianity. In the East patience is near akin to the *ἀπάθεια* which played so prominent a part in the Stoic conception of life. It consists of complete indifference to circumstance induced by mental discipline; it ignores both pleasure and pain. Later expositions of this virtue approximate to that power to endure which is indicated in the Latin word *patientia*, and which is prominent in popular and superficial ideas of patience. The Yoga system of Patañjali finds its modern exponents in the *ṣaḍgirs* who endure privations and self-inflicted torture sometimes of quite revolting forms. This, it is evident, is mere passivity (*q.v.*), and, when accepted in order to acquire merit, so far from creating nobility of character, it has a distinctly selfish and degrading relation. The Greek idea seems rather inclined to the side of courage. In the *Theaetetus* (177 B) Plato speaks of *ἀνδρικός ὑπομεῖναι* ('patience' = *ὑπομονή*) as the true antithesis to *ἀνδρὸς φεύγειν*. This is a great advance upon both the *ἀπάθεια* of the Stoic and the passivity of the Indian Yogi. But it is not until we come to Christian teaching that we see how patience can be a positive and ennobling force in human life and character. In turning to Christian teachers we are met at once with the definition given by Clement of Alexandria (*Strom.* ii. 18), *ἐπιστήμη ἐμμενέων καὶ οὐκ ἐμμενέων*, 'the knowledge of the things which we may bear, and of the things which we may not bear.' Coccoineus, on Ja 1¹², quoted by Trench (*Synonyms of the NT*, London, 1876, p. 190 f.), comes nearer still to the true Christian conception of the word. He says:

'ὑπομονή versatur in contentu bonorum hujus mundi, et in cum gratiarum actione; imprimis caritatis, ut neutro modo quassari . . . it impediri quominus opus suum et

It is in this 'constantia fidei et caritatis' that we come upon the germinal truth which has so developed in the thought of the Christian Church as to result in that fuller connotation of patience which is our heritage. There are two ideas which go to make up the complete conception, and, most markedly, they are both shown in the beautiful Greek name for the virtue. *ὑπομονή* suggests in its two component parts the submission which

accepts the will of God and the waiting which rests upon both faith and hope. As against the indifference of the Stoics, the NT lays stress upon hope (g.v.) as the quality of true patience. St. Paul speaks of a patience which through the medium of 'experience' or 'probation' (δοκιμή) issues in hope (Ro 5⁴ ἡ δὲ ὑπομονὴ δοκιμῇ, ἡ δὲ δοκιμὴ ἐλπίδα). But perhaps the most striking passage in this connexion is that which we find in 1 Th 1², where St. Paul speaks of hope as the characteristic quality (for this is the true interpretation of the genitive) of patience, *μνημονεύοντες τῆς ὑπομονῆς τῆς ἐλπίδος*. As against the mere passivity of the Hindu, on the other hand, St. Paul places 'steady persistence in a life-work of good' (Sanday and Headlam, on καθ' ὑπομονὴν ἔργου ἀγαθοῦ, Ro 2⁷ [*The Epistle to the Romans*], ICC, Edinburgh, 1902, p. 53)), and the element of hope or expectation is supplied in *δόξαν καὶ τιμὴν καὶ ἀφθαρσίαν ᾧτινός* of the same passage. For endurance may be dogged, peevish, or cynical; it will in such case fail to be formative of Christian character. It even becomes destructive by the familiar law which says 'corruptio optimi pessima.' But Christian patience is both positive and effective of good in character, for it is by patience that man wins his life (Lk 21¹⁹).

There is no true patience apart from that submission of spirit which gladly accepts the will of God, and which waits on in sure and certain hope that life 'means intensely and means good.'

It is a travesty of Patience that describes her as 'sitting on a monument smiling at grief.' She is found in no selfish isolation; there is no artificiality of joy upon her face. She comes down into all the pain and sorrow of life; she looks with steadfast eyes at all the hideousness of evil; but she is strong, for she rests upon the unfailing love of a divine Person. It is when the love of God comes into human courage and endurance that His life becomes a part of our human experience, and human pain becomes illumined and beautified as it throws into relief the 'far more exceeding and eternal weight of glory.' The type of such patience was found in our Lord Himself (2 Th 3³), and it is through such patience that man is 'made perfect by the things which he suffers.'

LITERATURE.—There is no special work on the subject, but references abound in homiletical literature, such as John Smith, *Select Discourses*, Cambridge, 1859, p. 420f.; J. T. Jacob, *Christ the Indweller*, London, 1902, ch. xi. See also J. McCosh, *The Emotions*, London, 1880, p. 131; and H. F. Amiel, *Journal*, Eng. tr., do. 1889, p. 116.

W. W. HOLDSWORTH.

PĀTIMOKKHA.—This is the name for a collection of 227 rules to be observed by members of the Buddhist order of mendicants. A few of them relate to matters that may, in a sense, be called ethical. But the rules themselves are not at all ethical. They determine only what steps are to be taken in each case by the order; and the cases are matters of the restrictions as to dress, food, clothing, medicine, etiquette, manners, and so on, to be observed by the members. In four cases out of the 227 the punishment, if it can be called punishment, is exclusion from the order. In all the other cases it is merely suspension for a period of time.

There had been other orders before the Buddhist order was founded, and no doubt some of the rules were based upon rules already existing in those. There is nothing exclusively Buddhist about any one of them. On the other hand, each of the different orders had, no doubt, some rules which the others had not. It would be very interesting if we could ascertain whether any, and if so which, of the 227 rules were followed by the Buddhist order alone. But this is not yet possible. The Jain order is older; but the rules observed in it before the Buddha's time, even if they are still extant,

are not published. We have also a few rules laid down in the priestly law-books as obligatory on Brāhman mendicants (*bhikkhus*). These are, however, extant only in law-books centuries later than the period in question. And, though the rules were probably in force before the date of the law books, it is not possible to say whether or not they were valid in the Buddha's time. Such evidence as is available tends to show that they were not.¹ And it is most probable that the particular rules in question were meant to be supplied to individuals as such, not to members of an order or community. The very fact of the small number of rules that it was considered advisable to record shows how slight was the importance attached by the compilers of these law manuals to the matter of the organization of a religious order.

In the absence of detailed knowledge of the rules of other previously existing Indian orders, European writers have so far assumed a similarity between the Buddhist order and the European orders more familiar to them that they have applied to the Buddhist community the technical terms in use in Europe. These organizations are really very different—as different, in fact, as any two such orders could possibly be. To give a few instances only: the Buddhist order in India had no monasteries, no establishments hidden behind walls and inaccessible to the public, presided over by an abbot or superior; there was no hierarchy at all, no authority to which the members of the order had to submit, no power in any one member of the order over any other member, and no vow of obedience; at meetings of the chapter the senior member present, reckoning not by age but by the date on which he had been admitted into the order, took the chair; the decisions were by vote of the majority, and the votes of all members, whatever their seniority, were equal; no member of the order was a priest who could in any way intervene between any god and any man, or offer any sacrifice, or declare any forgiveness of sin, or give absolution; no one of the 227 rules inculcates any creed or dogma or demands any sort of belief; any member of the order could give up his association with it whenever he liked; there is a special set of rules regulating the manner in which he could do so,² but he could also leave the order, without any formality, simply by putting on a layman's dress;³ this was no empty form of words, it was (and is) constantly done. To translate the word *bhikkhu* by 'priest' or 'monk' is therefore a *suggestio falsi* in respect of one or more of these matters, all of them of the first importance. The word means, literally, mendicant, but not mendicant in our sense of the word. With us the word is associated with the false pretences, the lies, and the trickery habitually used by mendicants to trade upon the sentimentality of the kind-hearted. And, while there doubtless have been periods when some members of the order may have laid themselves open to some such imputation, yet to charge all the members, at all times, with mendicancy is neither fair nor correct. Quite a number of the rules of the *Pātimokkha* are especially designed to prevent even the very appearance of evil in this respect.

A further misconception should here be noticed. The rules of the *Pātimokkha* are not a list of sins. No such conception as that of the European notion of sin enters even remotely into the Buddhist view of life. The rules of the *Pātimokkha* are mainly economic; they regulate the behaviour of members of an order to one another in respect of clothes, dwellings, furniture, etc., held in common. They

¹ The evidence is collected in Rhys Davids, *Dialogues of the Buddha*, I. 212-220.

² *Sutta Vibhanga* (Vin. III.), I. 8. 2 ff.

³ E.g., *Vinaya Texts*, I. 275.

were originally established in accordance with the customs of the time. As the customs changed, or as convenience dictated, the rules were changed. A number of such changes even in the very earliest time have been pointed out in the introductions to H. Oldenberg's edition of the *Vinaya*, and to his and the present writer's translation of the *Vinaya Texts*. These changes have also gone on in later times, until to-day a large majority of the rules have become obsolete. Notwithstanding this, the 227 rules have been recited every fortnight by the followers of the ancient tradition from the Buddha's time until to-day. The institution of this ceremony is recorded in the *Sutta Vibhanga*.¹

There had been observed from ancient times a festival on new and full moon days. The orders older than the rise of Buddhism had kept up this observance, utilizing the recurring sacred days for the exposition of their doctrines. The early Buddhists followed this precedent; and once in every fortnight on the sacred day, called the *uposatha* day, the order met in its various districts in chapter, and all the rules were recited. There has been considerable difference of opinion as to the exact date of the month on which this ceremony should be held. The Buddhists have disputed on the point as frequently (though without violence) as Christians have on the date of Easter. And they still differ. There is, indeed, a certain ambiguity in the oldest wording of the rule on the point;² and we know too little about the actual practice as followed in India in the early days of Buddhism to be able to reach a conclusion as to which of the later schools was right in its contention.

The word *pātimokkha* occurs in one of the rules—the 73rd *pācittiya*—and also in the introductory phrase to be used at the monthly recitation of the rules.³ It would seem, therefore, to be older than the rules themselves. The manner in which the word is used in the old passage first enjoining the recitation of it upon the *bhikkhus*⁴ confirms this supposition. We need not, therefore, be surprised to find that the early Buddhists ascribed the institution, not of the *uposatha* ceremony, but of the *Pātimokkha* itself, to a date long antecedent to that of the Buddha.⁵ If that be correct, the word *pātimokkha* must have been current in Kosala when Buddhism arose, and, to be more exact, no doubt among the members of the previous orders. What it means exactly and what is its derivation are both uncertain. The Old Commentary (on which see below) explains it as follows:

Pātimokkham. This is the beginning, it is the face (*mukham*), it is the principal (*pamukham*) of good qualities. Therefore it is called *Pātimokkham*.

This as a piece of edifying exegesis is to the point, and it has the advantage of that sort of pun fashionable in ancient folklore and exegesis. India can claim no monopoly in this department of primitive literary art. Some fine specimens of it might be culled from the classic and sacred books most admired in Europe. It was supremely indifferent to accuracy. And to take it *au grand sérieux* as scientific etymology is not only to miss the point, but to forget the somewhat important fact that scientific etymology was not yet born. When the Buddhists, centuries afterwards, began to write in Sanskrit, they (evidently not understanding the word) Sanskritized it by *prātimokṣa*,⁶ apparently supposing that it had something to do with *mokṣa* (*q.v.*). This is of course impossible. To have complied with the economic regulations of an order is a

very different thing from having attained to the mental state deemed, in that order, to be ideal. *Mokṣa* would mean from the Buddhist point of view the latter, not the former. In Buddhism at least, though it did not use the technical term *mokṣa*, the regulations of the *Pātimokkha* were quite subsidiary. A man might have observed them all his life, and yet not have even entered upon the first stage of the path towards *arahant*-ship or *nirvāṇa* (the Buddhist *mokṣa*).¹ In some one of the pre-Buddhist orders *pātimokkha* may possibly have had some such sense—'disburdenment,' *e.g.*, or 'repudiation,'² or 'obligation.'³ In the Buddhist canon *pātimokkha* is used, quite frankly and simply, in the sense of 'code'—code of rules for members of their order; thus in the constantly repeated phrase *Pātimokkha-samvara-samvuto*, 'restrained according to the restraint of the code';⁴ or, again, in *ubhayāni Pātimokkhāni*, 'both the codes' (the one for men, the other for women).⁵

The *Pātimokkha* is not one of the books in the Buddhist canon. This is not because it is later, but because it is older, than the canon. And every word of it, though not as a continuous book, is contained in the canon, in the book entitled *Sutta Vibhanga*, 'Exposition of the Suttas' (the word 'Suttas' meaning, in this title, the 227 rules above referred to). First there was the code itself, handed down by memory. Then there arose a word-for-word commentary on each of the 227 rules; we call this the Old Commentary. Then both these were encased in a new commentary with supplementary chapters. It is this third edition, so to speak, that we have in the extant canon.⁶

It is in the supplementary chapters that we find evidence of those changes referred to above. One is of especial importance for the question of the *Pātimokkha*. The rules are arranged in seven sections corresponding very roughly to the degree of weight attached to their observance. At the end of each section, on the *uposatha* day, at the time of recitation, the reciter goes on:

'Venerable sirs, the ninety-two rules [here comes the name of the rules in the particular section] have been recited. In respect of them I ask the venerable ones, "Are you pure in this matter?" A second time I ask, "Are you pure in this matter?" A third time I ask, "Are you pure in this matter?"' [There follows an interval of time.]

'The venerable ones are pure herein. Therefore do they keep silence. Thus I understand.'⁷

It is evident that the original intention was that any brother who had been guilty of a breach of any of the regulations laid down in the section recited—*e.g.*, that the legs of his chair or bed had exceeded eight inches in height (*pācittiya* 87), or that he had left his chair or stool lying about in a hut occupied in common (*pācittiya* 15)—should then and there acknowledge that he had broken the regulation in that respect.

But in one of the supplementary chapters (the *Khandakas*)⁸ it is expressly laid down that this shall not be done. The brother who feels himself guilty shall acknowledge the fact beforehand. And, if he recollects only on the *uposatha* day itself that he has broken a rule, still he is to go (we are informed in another chapter, the *Upasatha Khandaka*)⁹ to a fellow-member and say: 'I have committed, friend, such and such an offence; I confess that offence.' Let the other say: 'Do you

see it?' 'Yes, I see it.' 'Refrain from it in future.'¹

The members discovered, no doubt, that any such interruption of the proceedings as was involved in a confession at the meeting was inconvenient; that it distracted the attention of the other members from the main object of the recitation; and that it might lead, if several such cases arose, to a very serious prolongation of the formal meeting of the chapter. So the practice was changed. The offending member had to 'disburden' his conscience before the ceremony took place. And in any case the recitation of the *Pātimokkha* was never interrupted in any way. This is still the case in Ceylon and Burma. But the old formula, appealing to the members present to speak, is still part of the recitation.

The subsequent history of the *Pātimokkha* in India is very obscure. It is probable that it was preserved and recited regularly by all the differing early schools of Buddhism. Afterwards, when, some six or seven centuries after the birth of the Buddha, there arose Buddhists who abandoned the use of Pāli, and adopted Sanskrit, it is probable that they abandoned also the use of the *Pātimokkha*. But we do not really know. It is not used, so far as we have any evidence, by any of the numerous sects in China or Japan who follow the doctrines of one or the other of these later Indian schools. The fragmentary remarks of Burnouf² are sufficient only to point out the lines on which a future investigation of this problem may be made.

PATNA (PĀTALIPUTRA).—Patna is the capital of the modern province of Bihār, the ancient Magadha (*q.v.*), in Gangetic India, and stands on the right bank of the Ganges in lat. 25° 26' N., long. 85° 21' E. It owes its historical and religious importance chiefly to the fact that it was the capital of Aśoka, the first emperor of India, and the great propagator of Buddhism in 273-232 B.C. (see AŚOKA). It was at that time known as Pātaliputta, the source of the Greek corrupt form Pali-bothra, as it was named in the records of Megasthenes, the Greek ambassador of Alexander's successor, Seleucus Nikator, to the court of Aśoka's grandfather Chandragupta, the Sandrakottos of the Greeks.³ It was only in process of being built in the last year of Buddha's life (c. 482 B.C.), according to an incidental reference in the itinerary of Buddha's last journey in the Buddhist canon. The city continued to be the capital under the same name during the greater part of the reign of the imperial Gupta dynasty from the 4th to the 6th century A.D.

The traditional etymology of the name from the Aśokan period onwards is the rather fanciful one of 'the son of the *pātali*-tree,' i.e. 'the trumpet-flower tree' (*Dignonia suaveolens*); and a legend

therewith states that there was on the site a tree of that species sacred to a goddess. No special sacred character now attaches to this shrub. In the opinion of the present writer, the name probably meant 'son of Patala,' a famous ancient seaport near the mouth of the Indus from which the bulk of Alexander's troops sailed on their return journey from India. This presumes that a colony of Aryans from Patala settled in this part of Gangetic India and transferred to their new port the cherished name of the far-distant old one. There is considerable evidence in support of this conjecture which cannot be detailed here. It was also called 'the city of flowers' (Kusum-puri and Pushpa). The modern name Patna is the English form of the vernacular Patana, 'a city,' in the sense of 'the city,' or capital.

So magnificent were the buildings of the ancient city in cyclopean carved stones that the early traditions ascribed its erection to giants. These traditions are recorded by the Chinese Buddhist pilgrims, Fa-Hian and Hiuen Tsiang, who visited the city and its monuments in the 5th and 7th centuries A.D.⁴ The city was also known in the 1st cent. B.C., for Diodorus Siculus says:

'Hercules was the founder of no small number of cities, the most renowned and greatest of which he called Palibothra' (*Hist.* ii. 39).

But after the 7th cent. A.D. the site of this famous city was so completely forgotten that, when, towards the end of the 18th cent., European inquirers began to try to unearth the past history of India, none of the learned Brāhmins could give any clue to its whereabouts. The geographical details in the accounts of the Chinese pilgrims' routes clearly showed that the lost city must have been situated at or near the modern Patna. When the staff of the Government Archaeological Survey were deputed to search for it, they reported:

'Modern Patna consequently does not stand on the site of old Pataliputra, but very close to it, the old city having occupied what is now the bed of the Ganges. . . . All or almost all traces of the ancient city must long since have been swept away by the Ganges.'⁵

This continued to be the opinion of local British officials at Patna until 1892. In that year the present writer, impressed with the importance of recovering the lost site for early Indian history and especially for Buddhism, of which this city was the greatest stronghold, took advantage of a short visit to Patna to explore that neighbourhood, with the Chinese pilgrims' narratives in hand as a guide. As a result he found that not only was the ancient site not washed away, but most of the leading landmarks of Aśoka's palaces, monasteries, and other monuments remained so obvious that they could be located without much difficulty, and several pieces of Aśokan sculptures were found on the surface. Exploratory incisions then revealed the presence of several of the well-known Aśokan monoliths, and also one of the huge sculptured stones which had excited the admiration of the Greeks and early Chinese visitors, in the form of a colossal capital in quasi-Persepolitan style, which proved to be one of the earliest sculptures yet found in India.⁶ But this and the other remains were so deeply overlaid by the alluvial deposits of the Ganges valley that they were all buried to the extent of 14 ft. or more beneath the surface, rendering excavation impossible on the

³ A 'Persian' or Persepolitan influence was remarked over half a century ago by James Fergusson, by A. Grünwedel in 1893 (*Buddhistische Kunst in Indien*, Berlin, 1893, pp. 14-17), and by James Kennedy in 1893 (*J.R.A.S.*, 1893, p. 284 f.), as noticeable in the details of the capitals of the Aśokan pillars and in small pilasters of the same age found in several parts of India. Another fine Persepolitan capital was found at Benares in 1914.

¹ He is to squat on his heels over against the *bhikkhu* to whom he is confessing. Now, 'in front of,' 'over against' would in post-Buddhist Sanskrit be *pāti-mukha*. If this word could be traced in pre-Buddhist times, it would be possible to suggest a derivation of *pātimokkha* (from this practice) in the sense of 'confession,' viz. that which pertains to crouching in front of another *bhikkhu* (cf. *upanigada*, that which pertains to sitting down towards, hence 'a secret doctrine').

² *Introduction*, p. 300 ff.

³ The identity of Sandrakottos with Chandragupta was first shown by W. Jones (*Asiatic Researches*, iv. [1795] 11); and Wilford noticed that the form used by Athenæus was even closer, namely Sandrakoptus (*ib. v.* [1793] 262). The Androkottus of Plutarch is the same person.

score of expense. Through the enlightened liberality of Mr. Tata, a Parsi merchant, the Indian Government has been able to undertake during the past three years systematic excavation of the sites thus indicated, and D. B. Spooner of the Archaeological Survey has already recovered structural remains of stone buildings on a vast scale. One of these is a replica of the throne-room of Darius Hystaspes, the celebrated 'Hall of a Hundred Columns' at Persepolis.

The discovery of the existence of such intimate Persian art-influence at the heart of Aśoka's empire, confirming the evidence of the colossal capital cited above, is of great importance, as indicating unsuspected sources for Indian civilization and to some extent for Buddhism. For Aśoka was the greatest propagator of Buddhism, without whose active patronage that religion probably would not have survived. Before Aśoka's time there is no independent evidence for the existence of Buddhism. Adopting that faith himself, he made it the State religion of his empire, and he zealously lavished all the resources and wealth of his vast empire in building and endowing monasteries and covering the countries with monuments to mark sites alleged to have been visited by Buddha, or containing relics; these visible traces of Śākya-muni were distributed by Aśoka over India within great towers. Pāṭaliputra was the centre of all Aśoka's active religious propaganda; here was held the so-called 'Third Buddhist Council' during Aśoka's reign, and from here that ardent emperor sent swarms of Buddhist missionaries all over India and beyond its frontiers to propagate the new faith of his adoption. There is a presumption that Aśoka's Buddhism was more developed than that of Buddha's day, while it differs in many important essentials from that of the Buddhist Pāli canon, the earliest book of which was not compiled, as the present writer has shown, before the 2nd cent. B.C.¹ It is significant, therefore, to find the presence of Persian influence at Aśoka's headquarters in such unsuspected strength.

On the strength of that great building of Aśokan age which is virtually a replica of the famous Persepolitan palace-hall, Spooner propounds the theory that the authors, who were presumably of Aśoka's dynasty, were really Persian or Parsi in nationality and Zoroastrian in religion; and he proposes to call the era of the Mauryas (Aśoka's dynastic title) the 'Zoroastrian' period of Indian history. In support of this hypothesis he recalls the conjecture of Bühler that, although no monumental evidence has been found to substantiate the claim of Darius Hystaspes to suzerainty over India, it is not impossible that the northern script used by Aśoka in his northern edicts was introduced by the Syrian clerks of that Achæmenian conqueror. F. W. Thomas has also shown that the Mathura lion-sculpture requires for its interpretation a reference to the façade on Darius's tomb. J. Marshall, the present director of the Indian Archaeological Survey, finds from the excavations at Benares that Aśoka presumably employed Greco-Persian masons there. And Darius made use of rocks and pillars for ethico-religious inscriptions some centuries before Aśoka. Spooner disbelieves in any Greek influence having contributed to the Indian civilization of the early Mauryan period; for, had it been operative in Chandragupta's reign, it would doubtless have been referred to, he thinks, by Megasthenes the ambassador, who described the customs at Patna as if they had nothing in common with the Grecian. For Chandragupta the evidence, he thinks, points to Persia only. It will require, however, further new and more positive material-proofs before this theory can be definitely accepted;

and doubtless fresh evidence and inscriptions will be forthcoming from the excavations now in progress. Darius's claim to the possession of 'India' as a 'province' has never been regarded as implying more than the temporary possession probably of the Indus valley only, of which even there is no inscriptional evidence.

Pāṭaliputra was also a Jain centre in the days of Aśoka, who is claimed by the Jains as one of their patrons. While Buddhism has been extinct there for over six centuries, Jainism is still active, and in one of the picturesque many-turreted white-washed temples of that cult the inscription dated in the year corresponding to 1848 of our era was discovered by the present writer in which was preserved the ancient name in the form of Pāṭalipura, 'the city of Pāṭali.'

PATRIOTISM.—Patriotism is the sentiment in which consciousness of nationality normally expresses itself. The qualification of the word 'normally' is required; it sometimes happens that a person is conscious of himself as belonging to a nation against his will. This is shown by the absence of any desire in him either to identify himself with the life of his countrymen or to bring their life into accordance with his ideals. Patriotism may be shown in either of these desires. A man may complain much of his people, but show his unity with them by labouring to improve them; it is never, indeed, so much by indiscriminate admiration as by unfailing attachment that the genuine patriot may be known. Persons, however, who are unwilling to be nationally what they know they are, who have a clear consciousness of nationality without a set of the will to develop it further, who may, indeed, be called anti-patriots, are obviously abnormal. They are abnormal, because the development of national consciousness takes place by means of just that set of the will to identify self with the national life the absence of which is the mark of the anti-patriot. It may happen that there are, or have been in the nation's history, circumstances favourable to the development of this self-contradictory type. It goes with the cultivation of the servile will in the weaker members of a subjugated or struggling nation. One of its most repulsive manifestations is the attitude of snobbery, as towards the race-type of the dominant foreign State, with which every class of such a nation may become infected. Anti-patriotism thus defined must, of course, be distinguished from the mere absence of national sentiment in undeveloped members of the nation, and still more from opposition to it in alien persons associated with the community politically or otherwise. Every nation, whether prosperous or the reverse, has many of the two last types within its borders.

Patriotism, then, may be precisely defined as consciousness of nationality together with the will to realize such nationality further. It is essentially an active force in a man's mind, whether it spends itself on the development of thoughts, feelings, or deeds. Each man's individuality in this respect colours his character as patriot. Moreover, the racial type of each nation colours the prevailing type of patriotism in her children. All patriots are idealists, imaginative, sentimental, and practical more or less, but many are characterized by one or other of these qualities in dominance over the other two. Racial character with its average tendencies is here involved. The Latin races are

¹ *Asiatic Review*, new ser., vii. [1916] 339 f.

more imaginative, the German more sentimental; and perhaps the truest thing to say about that mixed European race, often erroneously called Anglo-Saxon, which attains to its maximum of mixture in the United States, is that, not being conspicuously imaginative or conspicuously sentimental in its patriotism, it is extraordinarily successful in realizing its type and extending its borders as a matter of fact. It may be that the strongest kind of capacity for acting together is apt to be developed as a national quality side by side with a habit of subordinating individual imagination and sentiment to executive needs so energetically as to check the growth of romantic patriotism. The very practical man pretends to himself—at least in quiet prosperous times—that it is absurd. This pose, however, used to be more common than it is to-day.

Since patriotism is the normal expression of nationality, its analysis is, for the most part, contained in the analysis of nationality already set forth (above, p. 191 ff.). A nation is a community of persons profoundly conscious of organic unity and bent on the preservation of that unity. It becomes a self-conscious nation—a nation in the more perfect sense—when it is also bent on the preservation and development of its own type. Throughout, but especially in the later stage, the association of the race with the land plays a large part in the consciousness of nationality. Attachment to the home-land and attachment to the home-race are a twin birth and grow together, however they may differ in strength. The beauty of the home-land, its sweet familiarity, its historic associations, its glamour and indefinable charm, supply natural images in which the opening mind enshrines its vague generalized instincts of racial attachment. The home-land is the concrete thing chosen in the natural course as symbol of that dimly conceived ideal, the home-race, a nation. So patriotic songs are sung and patriotic speeches made to the father-land or mother-land as fancy chooses, or—tenderest of all, and with deeper truth, as in the passionate love-song of Irish penal times—to the dear young girl, oppressed it may be but ever fair, the immortal sweetheart of the race. It is an interesting point, worthy of some note, that, whereas all lands have something of this influence upon their people, in some it has played a much larger part than in others. Probably the most favourable combination is a land of soft and varied natural beauty, in which an early settlement has been made by a race of accurate observation, lively imagination, and literary gift. Such a land, so inhabited, becomes clothed over and over with story and legend at every point; historical tradition clings with the persistence of truth and good memory to different places; the race is aware of itself and of its history localized in detail. All new settlers who come after inherit the tradition; it has them in a solution out of which crystallizes a nation passionately attached to its land.

Three grades of national life have been distinguished (see NATIONALITY), and each is reflected in the kind of patriotism corresponding to it. The complexity of a modern society is heightened by the co-existence in it of patriots in every grade. The national life as a whole may be lived by those in the highest grade, consciously set on the realization of their own ideals in the minds and characters of all its members; yet there will be found among these members many whose national sense is of the crudest primitive type. Thus we have, in the first place, the quiet, patient, unreflective worker, who takes his world as he finds it, 'is no politician,' but clings to his own people and his own country as against all foreigners and the allurements of other climes. The force of this instinctive adhe-

sion to our own is, in almost all of us, tremendous; it is perhaps the chief element in the patriotism of most. Next to the mere instinctive, we have the crude political patriot: he is conscious of his nation chiefly as a political State among other States, each State being conceived as a group of persons bound to stand loyally by one another in case of dispute. 'My country right or wrong' suffices to him for the patriot's creed. He has little idea of a national character to be maintained or an inner national life to be developed. In his worst form he is a hard competitive nationalist with a lively conception of the national life as a continual getting the better of other nations. He appears, however, more normally in several less developed and more humane forms—e.g., as the responsible militant patriot of the warrior class and as the irresponsible war-promoter who takes no risk himself. In questions of international commerce he tends to be anti-foreign, even more than pro-native, in his sympathies. These antipathies run away with him altogether, of course, in case of a war in which the national enemy is engaged, even if not the native country itself.

The higher patriotism in any person may or may not be free from association with instincts of hostility to other races; but it is characterized by such a centring of interest in the spiritual life of the nation as must tend to make these instincts inoperative, at least in times of peace. In times of national danger, no doubt, the primitive instincts would assert themselves in force. At other times they are submerged beneath peaceful manifestations of the civic spirit at home and reasonable humanitarian sentiment towards the foreigner. The patriot of the developed type is, however, something more than a public-spirited citizen. An alien who feels himself to be an alien can, nevertheless, be a pattern of civic virtue by the exercise of the human qualities which bind him to his fellow-men. A good patriot at home will probably be a good citizen in any foreign community to which he attaches himself, because the moral nature required in both cases is the same and the practice which flows from it not dissimilar. But the patriot in the home community has, in his consciousness of organic unity with his people, a source of happiness, energy, and understanding which is of surpassing value both to him and to it. The national history, the national literature, the national institutions, the language, customs, manners—all are his own; he helps to make them, he has been made by them, attachment to the type of them is deep in his nature, and his desire for their perfection has the passion of personal love. There is always, therefore, a certain waste of human energy when the services of a good citizen are transferred from the home to the foreign sphere. As regards persons of mediocre or deficient public spirit, it is obvious that the special stimulus of national sentiment is almost necessary to make them realize their citizenship sufficiently.

The centre of consciousness in the higher patriotism is awareness of, affection for, and determination to cherish the national type, guarding it from decay within even more anxiously than from attack without. In a nation threatened with political extinction there will be a jealous zeal for the national language, literature, and traditions, with anxiety as to the education of the young accordingly. In a prosperous nation, on the other hand, high patriotism will direct itself rather to the development of intellectual and spiritual life in all forms, to the neutralization of luxury, the redress of excessive inequalities, and the whole vast work of internal reform in the complex body politic. For, it should be noted, increase of prosperity goes with increase of complexity, and,

apart from counteraction on the part of the reformer, this carries increase of luxury, poverty, and desperate helplessness in its train. In either case there is no lack of matter for the labour and interest of the patriot in home affairs. The real political distinction in this respect is between the patriot, on the one hand, and the seekers after self or class interest, on the other.

In foreign affairs the higher patriot is concerned to maintain the honour of his nation in the sense in which he realizes it as having a national character to maintain. His ideas of policy will, therefore, vary according to his ideal of national character as between nations. This involves the whole question of international morality, but to the ordinary citizen it does not seem very complex. Courage is the primitive element in national honour. Good faith is almost, if not quite, as primitive, but in actual weight of estimation has too often lagged a long way behind; it is also a virtue the possession or non-possession of which admits of a good deal of argument either way. The advance is great and difficult from an ideal based on much courage and some good faith to one in which justice is conceived as an essential of international virtue. Nevertheless, there has always been something corresponding to it in the ideas of fair play between tribes or nations of which there is evidence at a very early stage. The developed conception is, however, much more than this. It is the product of personal reason and personal sympathy as applied to other national communities. In so far as the human race is making moral progress at all, there is, from generation to generation, an increase in ability to see and be moved by things as the others most nearly concerned in them see and are moved. No human need or sentiment can be excluded from its operation, nor can any limit be placed to keep outside of it the races distant from us in type, habit, and blood. The Golden Rule that men should do unto others as they would that others, in like case, should do unto them is no rule of external discipline imposed on a humanity alien to it, but springs out of the depths of human nature itself. The more a man is man, the more certainly is he an organ of reason and sympathy, and so, the more men as a whole, and the leading races especially, become man-like, the more firmly does the Christian ideal of justice dominate them in all things, including their sense of what is due from the members of one nation to those of another. Hence for the patriot, intent on the maintenance of the national character as the expression of what his nation unanimously ought to be, the honour of his country means that her conduct among the nations shall be free from taint of aggressive greed, inordinate love of power, disregard of nationality in others, as well as from sins of individual cruelty, bad faith, and cowardice.

Thus there are patriots and patriots in every advanced political community; and, under democratic government, settled distinctions of party and of sections within parties are accordingly apt to arise, though disguised, confused, and, to some extent, counteracted by the historical causes out of which the original distinctions of party sprang. The two chief grounds of patriotic variety to be borne in mind are (1) the development of the idea of internal reform as the healthy life of the nation within itself, and (2) the transformation of the ideal of national honour with the growth of reason and sympathy in relation to it.

The higher patriotism, as has been pointed out, is not dependent on the political condition called national independence. A nation, if it has reached the stage of national determination to preserve itself, may exist as a nation scattered through a

number of alien political communities. The most striking example is that of the Jews with their marvellous vitality of race and type. Their early history is in this respect even more remarkable than that of Christian times. Empire after empire rose and fell. Of the conquering races hardly a trace is left. The Hebrew people, subject in turn to Egypt, Assyria, Babylon, Persia, Greece, and Rome, has survived them all, and has, moreover, maintained for hundreds of years a deep national unity with no loss of type in the face of a hostile dominant Christendom. The means has been simple enough—steady persistence in religion, customs, literature, and language, the things which pertain to the innermost manifestations of the common life. The binding force of a great literature should be specially noticed. The founders of the literary movement in Hezekiah's time and the leaders of the literary renaissance among the exiles in Babylon undoubtedly did more for the preservation of a nation—apart from higher aims and subtler problems—than has ever been achieved by States and armaments. It is, of course, another question whether it is a good thing that a strong nation should remain permanently without a national country and a political State.

Another familiar example is interesting. The individuality preserved by the three smaller nations within the United Kingdom turns upon a sense of national distinctness in history, literature, traditional ideals, and racial ways of thought. Round all these a sentiment grows up which may be the minor or the major or the exclusive patriotism as compared with the sentiment towards the United Kingdom as a whole. The Irish demand for Home Rule within the Kingdom is the expression of this sentiment on its political side. The remarkable movement, however, of the Gaelic League in Ireland, Great Britain, and the United States is essentially national in the non-political sense. Its aim is to maintain and develop the national consciousness through knowledge of Irish history, literature, music, and art, and by study of the Irish language with the valuable literature which it contains. The practical claim advanced by it is, as in the similar case of Wales, that the humanities used in the education of Irish persons should be, in the first place, though by no means exclusively, Irish. The genuinely non-political character of the movement is shown by the adherence to it of many who take the anti-popular view in politics. In the United States, moreover, there is no question of Irish national existence except in the more subtle inner sense.

In all movements for the revival or development of national literature as national we see the patriotic sentiment asserting itself in this subtle sense. Such movements occur in the history of all nations. They are of the same nature psychologically as the individual's claim to that sincerity of self-expression in his work which, as Carlyle says, is the merit of originality. A group of young poets or artists thus stirred by a common national sense inspiring them, and in the presence of an established literature which does not express the native spirit, will, either of purpose or without it, create a literary revival on national lines. Great outbursts of fresh literary genius are apt to occur in this way.

LITERATURE.—See Literature at art. NATIONALITY.

S. BRYANT.

PATRIPASSIANISM.—See MONARCHIANISM.

PAUL.—I. Sources.—This account of Paul proceeds on sources of two kinds: (1) his own letters, nine of which may now be regarded as genuine, viz. 1 and 2 Thessalonians, Galatians,

1 and 2 Corinthians, Romans, Philippians, Colossians, Philemon (Ephesians and the Pastoral Epistles contain much that Paul might say, but mixed with elements certainly later); and (2) the Acts of the Apostles. This perplexing work was written partly from good sources, but cannot be used without thorough criticism. The speeches in it are the work of the editor and represent what might be heard in various quarters in his day, and various theories which must be accounted for are spread over the work.

The 'We'-pieces (16¹⁰⁻¹⁷ 20⁵⁻¹⁸ 21¹⁻¹⁸ 27¹⁻²⁸¹⁶) and the narrative of Paul's arrest, appeal to Cæsar, and journey to Rome are in the main to be relied on. The book as a whole belongs to the end of the 1st century. The uncertainty resting on the subject, from the frequent and serious disagreement of the letters with the history of Paul himself as related by his biographer, is now yielding to a large extent to the light shed by the study of ancient religions: he is not so nebulous that he and all his works must be pronounced unreal, as the 'modern' Dutch school, with its followers in other countries, declared; it is possible to put together a fairly adequate account of Paul, his writings, and his teaching.

2. Outlook and early training.—Paul is made to declare himself (Ac 21³⁹) to be a Jew of Tarsus in Cilicia; that explains in this passage his being able to speak Greek. His phrase (Ph 3⁵), 'a Hebrew of the Hebrews,' need not imply that his parents spoke Aramaic, though that may have been the case; Paul himself uses Aramaic words, and is said (Ac 21⁴⁰) to have addressed his audience at Jerusalem in that tongue. He belonged at any rate to the Diaspora, and we may now point out what that implied in his religious experience.

The Jews living in Greek cities had a different outlook on the world from those in Palestine; they were not oppressed, but held for the most part a good position; the Gentiles around them respected them on account of their pure religion, and many of them frequented the synagogue and strengthened it by their wealth and character. The Jews in such towns were in a manner missionaries to the Gentiles, and all the considerations that are still weighed in missionary circles as to the attraction of the true religion for those outside, and as to the hindrances which kept them from joining it, would be discussed among them and made familiar to the sharp wits among their children. Paul could not fail to learn at Tarsus what Gentile religion was, how much of natural goodness lived in heathen minds, how they were led (1 Co 12²) to follow dumb idols which could not satisfy them, and, more, how Jewish practices hindered the spread of Jewish religion, what an incubus the Law was to missionary effort, how the demand of circumcision was a special barrier.

Paul was not of the class of operatives; the two franchises which he possessed show this sufficiently. His citizenship of Tarsus implies that his father (to go no farther back) was enrolled in the tribe, or *φυλῆς*, of Jews in that city and had some part at least in the public affairs of the town; his Roman citizenship, which he had from his birth (Ac 22²⁸) and which entitled him to carry his case to the emperor (25¹¹ 26³²), proves that his father, perhaps his grandfather, held that rank, being recognized by one Roman potentate or another as loyal and trustworthy. As Roman citizen Paul would have a Roman name, and in the family a Jewish one; hence 'Saul who is also called Paul' of Ac 13⁹. There can be no doubt that he was educated first at home in Tarsus, and that, if he proceeded to Jerusalem to sit at the feet of Gamaliel, it was later, when the language had been learned and all the life of a Greek town made thoroughly familiar to the boy.

The language of the Epistles is the ordinary Greek then spoken throughout the empire; the Scripture quoted is, with one or two exceptions, the Septuagint, which was read in the Greek synagogue; the method of composition is not that of the rabbis of Palestine but that of the preachers and savers of souls of Stoicism and Cynicism. Paul does not call himself a rabbi; he calls himself a preacher, a steward of the word, a father of his churches.

His expressions in Ph 3⁴⁻⁶ show him to have been the child of a very strict Jewish home. He would be well exercised in the Greek Bible; he would be taken to the synagogue when he was old enough and made acquainted with the history and the hopes and destiny of Israel; he would see Gentiles sitting beside Jews at the religious exercises and would learn to regard them with a liberal eye, while still remembering that his own people were called out of the Gentiles and in many ways distinguished from them. He would hear Stoic and Cynic doctrine preached at the street corners and would pick up their tricks of rhetoric. There was also a university at Tarsus—not on the scale of Athens or Alexandria, yet a notable seat of Stoic doctrine—in which men of world-wide reputation maintained a blend of physics and ethics. He would not attend the university; for him there was a different learning from that taught there; but he would pick up a tincture of what was taught and valued there and pervaded the whole spirit of the city. He would take note of the religious rites of heathenism, not only the stated official worship of the city, but also the irregular sporadic outbursts of a more popular religion which drew people in processions out to the country and kept them there until their god, who had died, rose again and changed their mood from sorrow to joy. The principal god of Tarsus, Sandan, was a figure of this type of dying and reviving deity. In his native city also Paul might learn to distinguish deities of two kinds or ranks—the deity who dwelt aloft and, without being very active, ruled all things, and the more familiar being, the working god, who gave himself for those who believed in him and to whom they addressed their prayers (cf. 1 Co 8⁴). There are many traces of the Gentile atmosphere in which Paul's early days were spent. Of a Jewish training at Jerusalem it is harder to find traces in his works. The national pride and consciousness of superiority which mark them strongly were to be found in the Jews of the Dispersion as well as at Jerusalem, and of rabbinic method there is little trace in Paul. Did he go to Jerusalem to be under a famous teacher? In his own works he does not speak of it; he could 'advance in Judaism beyond many contemporaries, and surpass them in zeal for the traditions of the fathers' (Gal 1¹⁴) at Tarsus as well as at Jerusalem; his persecuting of the Church, too, might be done in either region.

3. Persecution of Christians.—Whether or not he sat at the feet of Gamaliel, Paul left Tarsus early in life and gave himself with his whole energy to the work of persecuting the sect of Christians which was spreading in Syria (Gal 1^{12, 23}, 1 Co 15⁹). He turned his back on the career which Tarsus no doubt offered him, that he should tread in the footsteps of his father and become a leader of the Jews in his native city, in order to persecute the Christians. How he was brought to take up this work we do not know. The evidence of the Epistles forbids us to believe that he had any personal acquaintance with Jesus. 2 Co 5¹⁶ speaks of unworthy views of the Messiah which Paul might or might not have held, but which he now refuses to entertain. And the knowledge which the Epistles show of Jesus is too scanty to serve as evidence that Paul knew Jesus or was in

Jerusalem at the time of the Crucifixion. On the other hand, the spread of the belief in Jesus might well appear dangerous to one passionately devoted to the Law and regarding it as the one heaven-appointed means of salvation. If a Messiah established His authority, that of the Law must come to an end. In Ro 10⁴ Paul declares that this has happened; it may be believed that at an earlier time he saw that it might happen, and felt the great bulwark of his faith, the foundation of all Jewish religion, to be in danger. This was true of any Messiah; and a crucified Messiah was an offence which a true Jew could not get over; he says so later (1 Co 1²³), and he knew it from his own experience. No wonder that, being what he was, in earnest about religion with his whole soul, he threw himself with the utmost energy into the task of persecuting the followers of Jesus. If he was at Jerusalem at the time of the death of Stephen, his convictions which would lead him to taking a hand in that murder might be accounted for.

The high-priest had no power to order the arrest and the bringing to Jerusalem of people in distant towns; and this part of the story in Acts cannot be accepted. But we have Paul's own authority for it (Gal 1⁷) that he came to Damascus as a persecutor and left it as a Christian; and we may take it that those whom he came there to molest were not of the Hebrew, but of the Greek part of the Church who had fled from Jerusalem at the persecution which arose about Stephen. He must have proceeded against them in the regular way, laying information against them before the synagogue and asking for their punishment. He had no vote to give against them either at Jerusalem or at Damascus. In his persecutions, which may have been carried on not only at Damascus but elsewhere, he would certainly come to know something about Jesus, and would learn some of His words and the general story of His life, as these followers knew it, and His resurrection and expected coming to judgment, as they believed in these articles of their faith.

4. Conversion.—With regard to the conversion of Paul, the three narratives of the event in Ac 9, 22, and 26 contradict each other in details, as is to be expected in the versions of a narrative orally transmitted, but the variations are not in the interest of any tendency, and the three versions of the story may be traceable to one which Paul himself may have communicated to friends, with whom he could not but talk on the subject. Other intimations are found in the Epistles. It pleased God to reveal His Son in him (Gal 1¹⁶), i.e. to make him know Jesus in His true nature as God's Son, not only as the preacher and wonder-worker of Galilee, and not only as the Jewish Messiah, but as a Divine Being, in whom God pleased to make Himself known to man, as one of the same nature with Himself, and carrying out in an intimate way His purpose for mankind. From the context of this passage, 'that I might preach him among the Gentiles' (1¹⁶), it appears that this revelation had a universal scope; the Person revealed to Paul was of interest not to the Jews only, but to the Gentiles as well. In other passages it is intimated that Paul considered the Lord Jesus to have appeared to him as a risen and a glorious Being. In 1 Co 15⁸⁻⁹ he places his vision of Christ in the same line with those that the older apostles had had; it was the last vision of the kind to take place, but it was not different from the rest. 1 Co 9¹, 'Am I not an apostle? have I not seen Jesus the Lord?' is to the same effect. In 2 Co 4⁶ he describes the experience through which he came, evidently that of the same event, as the sudden and irresistible shining within him of a bright light comparable to the first shining of light on the

world, and flashing upon him the knowledge of the glory of God in the face of Jesus Christ. The irresistibility of the communication appears also in the phrases in Ph 3¹³, where he speaks of having been 'laid hold of' by Jesus Christ. In this passage too he speaks of all the advantages that he had at a former period, and how he cast them all away, 'like dung,' in order to win Christ and be found in Him. Taking together all these passages from the Epistles, we have a picture not unlike that of the stories in Acts, of an instantaneous and utter change brought about by a luminous appearance which was held to be Christ Himself. Considering Paul's lifelong susceptibility to visions and ecstasies (Gal 2², 2 Co 12¹⁻⁹ 5¹³, Ac 16⁹⁻¹⁰), it seems vain to speculate as to what actually took place outside of Damascus. That there was suggestion of what he held that he saw is plain; those whom he had persecuted based their belief in the risen Christ on the visions of their fellow-believers; Paul too had beliefs as to the form of heavenly beings—their luminous quality, their spiritual substance—which prepared him for what was coming. A touch, and all things passed away with him and all things were made new.

Some great scholars have constructed out of this vision of Paul the whole of his beliefs as set before us in the great Epistles. Here it will be sufficient briefly to indicate the beliefs which his vision at once fixed for him, whatever additions might be made to them afterwards. He saw Christ as a Divine Being, radiant, all-powerful, with full knowledge of the secrets of the heart, not merely as a Jewish Messiah. This implied that God had raised Him from the dead, so that the Cross was no longer a stumbling-block, since God had taken the part of the Crucified One and exalted Him beyond the reach of death and accident to dwell with Himself and share His power and glory. He was therefore a Being who concerned not only the Jews as their Messiah, but all men; He was a deity; He was the Son of God, and all could be called to know and worship Him. And His crucifixion was not only an incident of His past career, but an attribute of His person for ever; He was always and for all men Christ crucified and Christ raised from the dead. And Christ, thus conceived, was singularly fitted to be an object of faith to the Gentiles. The living and effective cults which Paul knew from his boyhood at Tarsus were much occupied with divine beings who had died and had risen again, who were, in fact, for ever dying, for ever rising again, to the joy of their worshippers. The faith which Paul's vision enabled him to preach was in form one more cult of this nature, though in its ethical contents it infinitely transcended all the others, carrying with it, as it did, all the strict morals and all the glorious faith and hope of Jewish theism.

Paul was therefore warranted in regarding the revelation of the Son of God which had been given to him as being at the same time a call to him to preach Christ to the Gentiles (Gal 1¹⁰). Perhaps he was not the first to preach Christ to them; there was, about the same time as Paul was at Damascus, preaching to the Hellenists (Ac 11²⁰; RV 'to the Greeks'; but the reading 'Grecians' is better supported, and, standing as it does in opposition to Jews, it must mean uncircumcised persons; see Westcott and Hort, *The NT in Greek*, Camb. and London, 1881, note), and the mixed church at Antioch (the first of which we read) was not founded by Paul. We cannot tell what views were held of the nature and position of Christ by those other preachers of Him to the Gentiles, but in the case of Paul this all lies clear before us. It was his new knowledge of Jesus as Son of God that qualified him to call the Gentiles to the Christian fold. He called them to believe in a Divine Being who not only had died, but had died for them, to effect their deliverance from the ills that oppressed them (Gal 1⁴), who had left His heavenly glory, and in the counsel of the Father had come down to the earth in order to bear the trials that weighed on them, that they through His suffering might be saved and made free. It may not be correct to see the whole of Paul's doctrine present in nuce at a later time; especially as it belongs to the conflict of which the Galatian Epistle tells us. But his doctrine of the person of Christ and the object of His sufferings is explained to us only by his vision, and Paul must be considered to have received it in the revelation of the Son of God which was then made to him. It was his warrant for preaching to the Gentiles, and this implies that he did so at once and constantly afterwards.

5. Sojourn in Arabia.—The next part of the narrative must be taken from Gal 1. The story of this period in Acts places Paul in a different light from that of his own Epistle and shows him as an obedient and willing subordinate of the Jerusalem leaders. Paul's own account is directed to prove how little he came in contact with them

or was indebted to them for any teaching or doctrine. After his vision, Paul tells us, he did not act in what might be thought the natural way for a new convert bent on being a teacher of the faith; he did not go at once to the centre of Christian teaching to get himself instructed and directed to the part of the field that he was to occupy. The phrase, 'I conferred not with flesh and blood' (v.¹⁶), must not be taken too absolutely. Some one must have baptized him and introduced him to the brethren, and the story of Ananias may be accepted in the main. Acts, however, does not mention Arabia, where Paul says (v.¹⁷) he was for three years, and, the foregoing verse compels us to suppose, as a missionary to the Arabs. At Damascus he could not at once preach; even when he came back after such an interval, it was an impossible place for him. In Acts it is the Jews, in 2 Co 11³² it is the representative of Aretas, by whom his safety was threatened, so that he had to make a precipitate retreat.

A date is here found for the history of Paul, as the imperial coinage ceases at Damascus in A.D. 33-34, so that Paul's escape from the ethnarch of Aretas would not occur before that date, and his conversion would be three years earlier. His visit to Jerusalem is attributed by Loisy to the unsuccessful nature of his mission to the Arabs, and to the desire to connect himself with the mother church, so that he might not run in vain. This is merely a conjecture. The visit was a private one, to make acquaintance with Peter, whom he recognizes as the principal person in the Jerusalem community. Besides Peter, he saw James, the brother of the Lord, who joined the community in its earliest days and naturally had great influence in it. He is called an 'apostle'—a title which was not confined to the Twelve. He represented the most Jewish position within the Church, and could not be expected to favour the mission to the Gentiles. He is not said to have objected to it at this time, but the two heads made little of Paul; he belonged to Stephen's way of thinking, of which the persecution had rid the Church some years before. He was not publicly introduced to the church, and was so much in the background that he could say that the members of the church did not know him by sight. His visit, he seems to indicate, was too short to admit of a course of instruction, and he made no application to the apostles to define his duties or assign to him a sphere. His apostleship was not in these respects 'of man or by man.' His field obviously was not to be at Jerusalem, where Peter and James were at the head; but, on the other hand, nothing of an unfriendly nature occurred, and he was free to carry on a mission elsewhere.

Of the story in Ac 9²⁶⁻³⁰ it will be true that Barnabas was his friend at Jerusalem, and Acts and Galatians agree that from there he went to Syria and Cilicia—Syria the district where Barnabas had influence, and Cilicia his own province—and in these regions he worked as a missionary of Christ (Gal 1²¹, Ae 15²³⁻²⁵) in touch, more or less, with Barnabas. In that part of the world he remained for a decennium.

6. Visits to Jerusalem.—The question of Paul's visits to Jerusalem has here to be faced. There are three statements in the NT that he visited Jerusalem in company with Barnabas, starting from Syria. In Gal 2 and in Ae 15 the purpose of the visit is to get the question settled as to how much of the Jewish Law was to be binding on Gentile members of the Church. It is impossible to think that they went to Jerusalem twice to get this question settled; and, if the two stories relate to the same event, then Paul's account of it is manifestly to be preferred to that of Acts, even if

there be in the latter certain elements which belong to history. As to the date of the journey, the two accounts agree that it was made when Paul had been carrying on missionary work for some time in Syria and Cilicia, and before he engaged in such work in other provinces (cf. Gal 1²¹ with 2¹⁴, and Ae 15^{23, 30, 35}). The journey, then, is to be placed before the travels in Pisidia and Lyconia, which are detailed in Ae 13 and 14; and these two chapters are to be regarded as misplaced. They come after the report of a journey of Paul and Barnabas from Antioch to Jerusalem (11²⁷⁻³⁰), which is just in the right place for a journey about Jewish observances, though the object of it is otherwise stated. The result, then, is that the three accounts of a journey to Jerusalem all refer to the same historical event.

There is another datum, bearing on the story of Ae 12 and involving important consequences for the history of Paul, which may be best spoken of here. If the statement reported by Philip of Side in the 5th cent. to have been made by Papias in the second book of his *Exposition of the Oracles of the Lord* is accepted (Georgios the Monk in the 9th cent. tells us the same, and the statement of Papias is strongly confirmed by Syrian Church Calendars), that John the Divine and James his brother were slain by Jews, James and John must be believed to have suffered martyrdom together, as Mark suggests that they did (10³⁹), and as the Syrian Calendars assume as fact. The martyrdom of James is reported in Acts, and that of John will have taken place at the same time and not been mentioned, for reasons into which we need not here inquire.

But Paul met John at Jerusalem on his visit (Gal 2⁹); the visit therefore was before John's death, which took place shortly before the death of Herod, who is known to have died in A.D. 44. Paul's dating of it agrees with this; he says that it was after the lapse of fourteen years, and we know that the date of that event was A.D. 30. Ae 11 places it quite in the right position.

There are few facts to fill up the space of ten years between the two visits to Jerusalem. If the statement of Acts about the period stood alone, we should be led to think that Paul was sent straight to Tarsus after his first visit (9³⁰), and stayed there till Barnabas brought him to Antioch a year or so before the second. But in Gal 1²¹ he speaks of himself in this period as preaching in Syria and Cilicia, which would imply free movement; and in Ro 15¹⁹ he speaks as having had a career as a preacher which began at Jerusalem and extended to Illyria. He would be at this time in the current of the mission to the Hellenists, which is spoken of (Ac 11¹⁹.) and with which Barnabas was fully in sympathy. He would be one of the juniors among the missionaries; Ae 13¹ gives a list of the prophets and teachers at Antioch, in which Barnabas has the first place and Paul the last. Views would be opening at this time as to the new lands which might be visited; the work to which Barnabas and Paul were called may have been already present to their minds.

The second visit to Jerusalem was occasioned, Paul says, by a revelation—to whom he does not say. Certain persons of less liberal views had been visiting Antioch, spying on the liberty which prevailed there, which Peter liked at first, till he felt upon him the eye of those who came from James. Paul went with Barnabas, who was the head of the party, and took with him Titus, an uncircumcised Christian; Titus was not compelled to be circumcised; the demand made previously at Antioch, and now again (if Acts is to be believed) at Jerusalem, was not approved of by the church at Jerusalem.

Jerusalem at the time of the Crucifixion. On the other hand, the spread of the belief in Jesus might well appear dangerous to one passionately devoted to the Law and regarding it as the one heaven-appointed means of salvation. If a Messiah established His authority, that of the Law must come to an end. In Ro 10⁴ Paul declares that this has happened; it may be believed that at an earlier time he saw that it might happen, and felt the great bulwark of his faith, the foundation of all Jewish religion, to be in danger. This was true of any Messiah; and a crucified Messiah was an offence which a true Jew could not get over; he says so later (1 Co 1²³), and he knew it from his own experience. No wonder that, being what he was, in earnest about religion with his whole soul, he threw himself with the utmost energy into the task of persecuting the followers of Jesus. If he was at Jerusalem at the time of the death of Stephen, his convictions which would lead him to taking a hand in that murder might be accounted for.

The high-priest had no power to order the arrest and the bringing to Jerusalem of people in distant towns; and this part of the story in Acts cannot be accepted. But we have Paul's own authority for it (Gal 1¹⁷) that he came to Damascus as a persecutor and left it as a Christian; and we may take it that those whom he came there to molest were not of the Hebrew, but of the Greek part of the Church who had fled from Jerusalem at the persecution which arose about Stephen. He must have proceeded against them in the regular way, laying information against them before the synagogue and asking for their punishment. He had no vote to give against them either at Jerusalem or at Damascus. In his persecutions, which may have been carried on not only at Damascus but elsewhere, he would certainly come to know something about Jesus, and would learn some of His words and the general story of His life, as these followers knew it, and His resurrection and expected coming to judgment, as they believed in these articles of their faith.

4. Conversion.—With regard to the conversion of Paul, the three narratives of the event in Ac 9, 22, and 26 contradict each other in details, as is to be expected in the versions of a narrative orally transmitted, but the variations are not in the interest of any tendency, and the three versions of the story may be traceable to one which Paul himself may have communicated to friends, with whom he could not but talk on the subject. Other intimations are found in the Epistles. It pleased God to reveal His Son in him (Gal 1^{15a}), i.e. to make him know Jesus in His true nature as God's Son, not only as the preacher and wonder-worker of Galilee, and not only as the Jewish Messiah, but as a Divine Being, in whom God pleased to make Himself known to man, as one of the same nature with Himself, and carrying out in an intimate way His purpose for mankind. From the context of this passage, 'that I might preach him among the Gentiles' (1^{15b}), it appears that this revelation had a universal scope; the Person revealed to Paul was of interest not to the Jews only, but to the Gentiles as well. In other passages it is intimated that Paul considered the Lord Jesus to have appeared to him as a risen and a glorious Being. In 1 Co 15⁸⁻⁹ he places his vision of Christ in the same line with those that the older apostles had had; it was the last vision of the kind to take place, but it was not different from the rest. 1 Co 9¹, 'Am I not an apostle? have I not seen Jesus the Lord?' is to the same effect. In 2 Co 4⁶ he describes the experience through which he came, evidently that of the same event, as the sudden and irresistible shining within him of a bright light comparable to the first shining of light on the

world, and flashing upon him the knowledge of the glory of God in the face of Jesus Christ. The irresistibility of the communication appears also in the phrases in Ph 3¹³, where he speaks of having been 'laid hold of' by Jesus Christ. In this passage too he speaks of all the advantages that he had at a former period, and how he cast them all away, 'like dung,' in order to win Christ and be found in Him. Taking together all these passages from the Epistles, we have a picture not unlike that of the stories in Acts, of an instantaneous and utter change brought about by a luminous appearance which was held to be Christ Himself. Considering Paul's lifelong susceptibility to visions and ecstasies (Gal 2¹, 2 Co 12¹⁻⁹ 5¹³, Ac 16^{9c}), it seems vain to speculate as to what actually took place outside of Damascus. That there was suggestion of what he held that he saw is plain; those whom he had persecuted based their belief in the risen Christ on the visions of their fellow-believers; Paul too had beliefs as to the form of heavenly beings—their luminous quality, their spiritual substance—which prepared him for what was coming. A touch, and all things passed away with him and all things were made new.

Some great scholars have constructed out of this vision of Paul the whole of his beliefs as set before us in the great Epistles. Here it will be sufficient briefly to indicate the beliefs which his vision at once fixed for him, whatever additions might be made to them afterwards. He saw Christ as a Divine Being, radiant, all-powerful, with 'full knowledge of the secrets of the heart, not merely as a Jewish Messiah. This implied that God had raised Him from the dead, so that the Cross was no longer a stumbling-block, since God had taken the part of the Crucified One and exalted Him beyond the reach of death and accident to dwell with Himself and share His power and glory. He was therefore a Being who concerned not only the Jews as their Messiah, but all men; He was a deity; He was the Son of God, and all could be called to know and worship Him. And His crucifixion was not only an incident of His past career, but an attribute of His person for ever; He was always and for all men Christ crucified and Christ raised from the dead. And Christ, thus conceived, was singularly fitted to be an object of faith to the Gentiles. The living and effective cults which Paul knew from his boyhood at Tarsus were much occupied with divine beings who had died and had risen again, who were, in fact, for ever dying, for ever rising again, to the joy of their worshippers. The faith which Paul's vision enabled him to preach was in form one more cult of this nature, though in its ethical contents it infinitely transcended all the others, carrying with it, as it did, all the strict morals and all the glorious faith and hope of Jewish theism.

Paul was therefore warranted in regarding the revelation of the Son of God which had been given to him as being at the same time a call to him to preach Christ to the Gentiles (Gal 1^{15b}). Perhaps he was not the first to preach Christ to them; there was, about the same time as Paul was at Damascus, preaching to the Hellenists (Ac 11²⁰; RV 'to the Greeks'; but the reading 'Grecians' is better supported, and, standing as it does in opposition to Jews, it must mean uncircumcised persons; see Westcott and Hort, *The NT in Greek*, Camb. and London, 1881, note), and the mixed church at Antioch (the first of which we read) was not founded by Paul. We cannot tell what views were held of the nature and position of Christ by those other preachers of Him to the Gentiles, but in the case of Paul this all lies clear before us. It was his new knowledge of Jesus as Son of God that qualified him to call the Gentiles to the Christian fold. He called them to believe in a Divine Being who not only had died, but had died for them, to effect their deliverance from the ills that oppressed them (Gal 1⁴), who had left His heavenly glory, and in the counsel of the Father had come down to the earth in order to bear the trials that weighed on them, that they through His suffering might be saved and made free. It may not be correct to see the whole of Paul's doctrine in this vision; but it is clear that it was the basis of his teaching, especially his teaching about the Law. But his doctrine of which the Galatian Epistle tells us. But his doctrine of the person of Christ and the object of His sufferings is explained to us only by his vision, and Paul must be considered to have received it in the revelation of the Son of God which was then made to him. It was his warrant for preaching to the Gentiles, and this implies that he did so at once and constantly afterwards.

5. Sojourn in Arabia.—The next part of the narrative must be taken from Gal 1. The story of this period in Acts places Paul in a different light from that of his own Epistle and shows him as an obedient and willing subordinate of the Jerusalem leaders. Paul's own account is directed to prove how little he came in contact with them

or was indebted to them for any teaching or doctrine. After his vision, Paul tells us, he did not act in what might be thought the natural way for a new convert bent on being a teacher of the faith; he did not go at once to the centre of Christian teaching to get himself instructed and directed to the part of the field that he was to occupy. His visit, he seems to indicate, was too short to admit of a course of instruction, and he made no application to the apostles to define his duties or assign to him a sphere. His apostleship was not in these respects 'of man or by man.' His field obviously was not to be at Jerusalem, where Peter and James were at the head; but, on the other hand, nothing of an unfriendly nature occurred, and he was free to carry on a mission elsewhere.

Of the story in Ac 9²⁶⁻³⁰ it will be true that Barnabas was his friend at Jerusalem, and Acts and Galatians agree that from there he went to Syria and Cilicia—Syria the district where Barnabas had influence, and Cilicia his own province—and in these regions he worked as a missionary of Christ (Gal 1²¹, Ac 15²³⁻²⁵) in touch, more or less, with Barnabas. In that part of the world he remained for a decennium.

6. Visits to Jerusalem.—The question of Paul's visits to Jerusalem has here to be faced. There are three statements in the NT that he visited Jerusalem in company with Barnabas, starting from Syria. In Gal 2 and in Ac 15 the purpose of the visit is to get the question settled as to how much of the Jewish Law was to be binding on Gentile members of the Church. It is impossible to think that they went to Jerusalem twice to get this question settled; and, if the two stories relate to the same event, then Paul's account of it is manifestly to be preferred to that of Acts, even if

there be in the latter certain elements which belong to history. As to the date of the journey, the two accounts agree that it was made when Paul had been carrying on missionary work for some time in Syria and Cilicia, and before he engaged in such work in other provinces (cf. Gal 1²¹ with 2¹⁴, and Ac 15^{23, 20, 25}). The journey, then, is to be placed before the travels in Pisidia and Lycaonia, which are detailed in Ac 13 and 14; and these two chapters are to be regarded as misplaced. They come after the report of a journey of Paul and Barnabas from Antioch to Jerusalem (11²⁷⁻³⁰), which is just in the right place for a journey about Jewish observances, though the object of it is otherwise stated. The result, then, is that the three accounts of a journey to Jerusalem all refer to the same historical event.

There is another datum, bearing on the story of Ac 12 and involving important consequences for the history of Paul, which may be best spoken of here. If the statement reported by Philip of Side in the 5th cent. to have been made by Papias in the second book of his *Exposition of the Oracles of the Lord* is accepted (Georgios the Monk in the 9th cent. tells us the same, and the statement of Papias is strongly confirmed by Syriac Church Calendars), that John the Divine and James his brother were slain by Jews, James and John must be believed to have suffered martyrdom together, as Mark suggests that they did (10³⁹), and as the Syrian Calendars assume as fact. The martyrdom of James is reported in Acts, and that of John will have taken place at the same time and not been mentioned, for reasons into which we need not here inquire.

But Paul met John at Jerusalem on his visit (Gal 2⁹); the visit therefore was before John's death, which took place shortly before the death of Herod, who is known to have died in A.D. 44. Paul's dating of it agrees with this; he says that it was after the lapse of fourteen years, and we know that the date of that event was A.D. 30. Ac 11 places it quite in the right position.

There are few facts to fill up the space of ten years between the two visits to Jerusalem. If the statement of Acts about the period stood alone, we should be led to think that Paul was sent straight to Tarsus after his first visit (9³⁰), and stayed there till Barnabas brought him to Antioch a year or so before the second. But in Gal 1²¹ he speaks of himself in this period as preaching in Syria and Cilicia, which would imply free movement; and in Ro 15¹⁹ he speaks as having had a career as a preacher which began at Jerusalem and extended to Illyria. He would be at this time in the current of the mission to the Hellenists, which is spoken of (Ac 11^{19c}) and with which Barnabas was fully in sympathy. He would be one of the juniors among the missionaries; Ac 13¹ gives a list of the prophets and teachers at Antioch, in which Barnabas has the first place and Paul the last. Views would be opening at this time as to the new lands which might be visited; the work to which Barnabas and Paul were called may have been already present to their minds.

The second visit to Jerusalem was occasioned, Paul says, by a revelation—to whom he does not say. Certain persons of less liberal views had been visiting Antioch, spying on the liberty which prevailed there, which Peter liked at first, till he felt upon him the eye of those who came from James. Paul went with Barnabas, who was the head of the party, and took with him Titus, an uncircumcised Christian; Titus was not compelled to be circumcised; the demand made previously at Antioch, and now again (if Acts is to be believed) at Jerusalem, was not approved of by the church at Jerusalem.

No objection was raised to the gospel that Paul preached among the Gentiles, though based on such different experiences; if there was anything wrong about it, they were to tell him; no new limitations were laid on him or, he might have said, on Barnabas; but, when Galatians was written, Paul was already separated from Barnabas, and so speaks of himself alone. In spite of the differences, in both teaching and practice, between the churches of Syria and Cilicia and the church at Jerusalem, each was recognized as essential to the Church, and no schism took place. It was agreed that, as Judaism had its scattered members throughout the cities of the empire, many of them Gentiles, all recognizing Jerusalem as the centre, and all contributing to keep up the Temple and the sacrifices, so it should be also with the new Israel. This was what the new agreement came to. The success of Paul and his friends in Gentile lands could not be denied; the great church of the uncircumcised was a plain fact and had to be recognized; but the financial link was to remain, as in the case of the Jewish religion and its Temple; the Gentile churches were to assist the finances of the brethren at Jerusalem. Paul says nothing of what is so prominent in Acts—the regulations laid down at Jerusalem as to the extent of observance of the Jewish Law on the part of the Gentile Christians. And he not only does not mention here any such feature of his visit to Jerusalem; he mentions it nowhere in his Epistles, not even in discussing with the Corinthians the use by Christians of meat offered to idols, and we are driven to conclude that no such conditions as Acts speaks of were laid down for Paul's acceptance. They were very likely laid down on another occasion, for some particular church or set of churches; the wide-ranging controversy which has recently sprung up about them does not concern the history of Paul.

Thus we see that a new combination had so early come to pass, and was accepted by the old apostles of Jewish and Gentile believers, who agreed to regard what had formerly separated them as of no moment compared with the faith of Christ which united them. It had come about quietly, and the result which the Jewish mission to the Gentiles had arrived at, but failed to secure, stood accomplished. The signs and watchwords of this union ring through the Epistles. Paul was not the first nor the only agent in bringing this change about, but he, more than any one else, realized the principles on which it was based, and the conflict to secure and establish it fell mainly to him.

Those on the Jewish side had a good deal to suffer from the change; we have a good example of this in Peter. A generous man, but easily frightened in dangerous circumstances, he gave his full approval to the continuance of the Gentile churches as they were, Jew and Gentile sitting at the same table and eating the Eucharist together; and he showed his approval by himself sitting at such a table. But he was not strong enough to shake off the influence of James, brought to bear on him through his emissaries, and he withdrew from the common table, taking his fellow-Jews and even Barnabas with him. Thus they did what they could to make the Gentile members think that the new communion of Jew and Gentile in Christ was a mistake and should be given up, and that the Jewish standard of living should still be upheld. The speech of Paul which follows is meant for the Galatians rather than for Peter. It may be doubted whether Paul had so thoroughly matured his doctrine of justification by faith at the time of the Antioch incident as he here makes it appear, or whether Peter had then arrived at the conviction, with which he is credited, of the total insufficiency of the Law for salvation. The doctrine of the Thessalonian Epistles, written a few years before Galatians, is much less developed on this point, and it is probable that Paul's teaching at this part of his career was not yet so angular. The Jewish attack on him had not yet taken place, and we must think that, with Barnabas and other missionaries with whom he was associated, he preached at this time as he did at Thessalonica, without arguments from the OT or attacks on the Jewish Law, warning the Gentiles of the coming judgment and pointing to Christ as the Saviour from its terrors, dwelling on the requirements of the Christian life in various relations, and seeking to build up out of the Gentiles whom he had awakened a people who should be ready to meet the Lord at His appearing.

7. First missionary journey.—We come now to the detailed history of the missions in which Paul was engaged. The next fixed date in his history, the coming of Gallio to the province of Achaia, will

be discussed when we deal with that part of the narrative. Gallio arrived in A.D. 51, and Paul had been there eighteen months before that; he came to Corinth therefore in the early part of the year 50. This gives a space of six years after the Jerusalem meeting, which we saw was in A.D. 44. In this period we have the incident with Peter at Antioch; then a space of time, which is undefined, at Antioch before Barnabas and Paul set out on their missionary tour in the interior of Asia Minor; then, after that tour, another period, also undetermined, at Antioch; and then the second journey, with Silas, over the same ground across the Aegean to Macedonia and as far as Corinth. Broadly speaking, the chronology is satisfactory. The detail is well worked out by C. H. Turner, *HDB*, s.v. 'Chronology.'

A point lying at the threshold of the history of Paul's missionary work is his relations to the Jewish synagogue, and the position given to him in Acts, of turning his back on the synagogue to devote himself to the Gentiles. If he felt himself, as he often declares, to be the apostle of the Gentiles, and if the Jerusalem apostles, as he tells us, recognized him in that character, then why should he address himself to the Jews at all; and, if he went to them, is it possible that he turned his back on them, as is repeatedly stated in Acts (13⁴⁶, 18⁶ 28²³⁻²⁵), with the declaration that it is owing to their obstinate unbelief that he does so?

Two facts are to be noted as bearing on this question.

(1) Paul probably did not create the missionary procedure that he followed, but inherited it. Barnabas was an older missionary than he, and so were others of whom it is told us (Ac 11²⁰) that at Antioch they carried on a mission to Hellenists (this is a better supported reading than 'Greeks' [see above, § 4]). Paul was initiated at Antioch into the procedure of a mission that he did not found, and his first journey was in company with Barnabas. The Hellenists, or Greek-speaking Jews, who were sought at Antioch were to be found in the synagogues there, and could, if necessary, be called out of the synagogue to meet by themselves elsewhere, as by Paul at Corinth (Ac 18⁷) and at Ephesus (19⁹). The missionaries were all Jews, full of the new light which in Christ shone on the Jewish hope, and they naturally carried the tidings of it first to the synagogue in the hope that their fellow-Jews would open their hearts to it. This was the natural procedure, and Paul kept it.

(2) The synagogue did, as a fact of history, turn away from the gospel, Paul himself seeing on many occasions the evidences of this separation, which was to him most grievous. He never gave up the hope that Israel would accept the gospel, and, though he does not call himself debtor to the Jews, as he is to Greeks and barbarians (Ro 1¹⁴), he no doubt did for them all that he could, even though he felt himself less and less a Jew as life went on.

The author of Acts looks on the question of the Jews and their rejection of the gospel from another point of view. That rejection is, when he writes, an accomplished fact, and he gives an account of how it came about and how Paul was unable to prevent it. The explanation that he gives may be compared with that given, not by Luke indeed, but by Mark and Matthew, in connexion with the teaching of Christ in parables. The passing of the gospel from the Jews to the Gentiles is according to a divine decree, and is announced in OT prophecy. And Paul is made to declare on several occasions that it is so. Paul's own view of the situation was very different; he believed that Israel turned away from the gospel in order that the Gentiles might accept it, and that, when the

fullness of the Gentiles had come in, Israel would come in too (Ro 11).

We see, then, that Paul's procedure in going first to the synagogue in every new place to which he came arose naturally out of the circumstances, and that the speeches put in his mouth in Acts, explaining his turning from the Jews to the Gentiles with his message, belong to the editor of Acts, not to Paul, whose thoughts on the subject were very different. When we come to the narrative of Paul's missions in Ac 13^f, it contributes little to our knowledge of his person. Barnabas is often named before Paul, and this has led to the hypothesis of a Barnabas-source, which the editor here used. One does not look for much originality in a young missionary travelling with an older one. On the other hand, if Barnabas is the Zeus of the party, Paul is the Hermes—the chief speaker; it is he who is tried at Lystra. His change of name is explained; instead of Saul he is henceforth called Paul; that also was his name before (see § 2). That his name is first mentioned in connexion with the interview with the pro-consul of Cyprus, Sergius Paulus, may not have much significance; the missionary, now a traveller, not in the East but in lands more immediately connected with Rome, has a Roman name.

Paul takes the lead in dealing with the magician Barjesus or Elymas or Elolmas, who has attached himself to the pro-consul, and he shows himself not inferior to Peter in dealing with such a character (cf. Ac 8¹⁴⁻²⁴), inflicting on him a temporary blindness, like that from which he had himself suffered before Damascus (Ac 9^{8f}). Such were the signs and portents expected of an apostle (Ac 6¹⁻¹¹, 1 Co 5⁵⁻⁶; cf. 2 Co 12¹² etc.).

It cannot be said that the speeches placed in Paul's mouth in these two chapters reveal much of his character. The first is delivered in the synagogue at Antioch in Pisidia, in a scene which exhibits well the nature of the audience to be found in such a building and, according to Acts, the normal course of the missions in such circumstances. The audience is a twofold one; Paul addresses first (Ac 13¹⁶) the men of Israel, i.e. the born Jews who formed the backbone of the synagogue, and then 'those who feared God,' i.e. the Gentile adherents. Paul knew from his youth the situation that had to be faced. But the sermon is wanting in anything distinctively Pauline, and closely resembles in its arguments that of Peter in Ac 2, being mainly a proof of the resurrection of Jesus from the experience of those who accompanied Him from Galilee to Jerusalem and who saw the visions of Him after the Crucifixion. The Pauline touch attempted (13^{38f}) is not very happy; the Jews and the Gentile adherents are assured that he who believes in Jesus is justified from all from which they could not be justified by the Law of Moses, which implies that the Law of Moses did possess some power to justify, but that it required to be supplemented by faith in Christ—a doctrine radically different from Paul's, who to the Galatians (Gal 3) and the Corinthians (2 Co 2) held up the crucified Christ as the Being in whom they should believe and to whom alone they were to look for justification. (On this representation of Paul as turning his back on the Jews and making their unbelief his excuse for devoting himself to the Gentiles see above.)

The sermon at Lystra is for heathens, and forms a prelude to the speech at Athens (Ac 17^{22f}). Such theistic arguments must have been common in Jewish missions to Gentiles, and in Christian polemics they occur frequently; here, however, we have rather the lesson from God's kindness in making the world so suitable for man's needs; in Ro 1 Paul argues God's power and divinity and worthiness to be served and worshipped.

The whole narrative of this journey produces an impression of reality, and the elders who are elected in each city need not be premature; something of the kind was needed if churches were to continue. The geographical and political details are correct (see W. M. Ramsay, *St. Paul the Traveller*, London, 1895, and *The Cities of St. Paul*, do. 1907). The apostles act with great courage and determination; driven from one city, they go straight to another and go through the same processes; their message has to be carried everywhere, and nothing can stop them. Many of the hardships and dangers which Paul enumerates in 2 Co 11^{32f} may have been met with at this time. Persecution proceeds mainly from the Jews, who follow him from one city to another, as Paul himself had formerly followed the Christians; they work on Greek women and on the Gentile population generally; and sometimes the magistrates are induced to lend a hand in the work of persecuting. The result is that a number of churches of the new kind are founded, and that Paul and Barnabas return to Antioch with a good account of the blessing which has rested on their labours (Ac 14^{27f}).

8. Second missionary journey.—Omitting in this place the account of the Jerusalem meeting which is in the wrong place in Acts and is full of difficulty and unreality, we come to another story at Antioch

(15³⁶) which appears to be taken from a different source; Paul invites Barnabas to revisit the brethren in every city where they have preached, they agree to do so, but disagree about their travelling companions, Barnabas wishing to take Mark, and Paul declaring that he will take any one rather than that person who deserted them on their former journey. Paul chooses Silas as his adjutant—a man of consideration in the mother church, but evidently with liberal sentiments. Barnabas takes the former route through Cyprus with Mark, while Paul goes through Syria and Cilicia, his old mission-field, and is said to have arrived at Derbe and Lystra also, as if he had not intended to visit these towns. Nor is anything said of his former stay in them. Evidently another hand furnished the account of the journey. It is a marked feature of the narrative that nothing is said of Peter's visit to Antioch, and that the breach with Barnabas appears to be a personal matter and not a difference of principle, as in Gal 2.

In his journey with Silas Paul acts with more freedom; his companion is a Jew, but Paul is distinctly the leading mind of the party. His first recorded action at this point, however, appears at first sight reactionary. He finds Timothy at Lystra, a young believer, his mother being a Christian Jewess and his father a Greek, who had an excellent reputation both at Lystra and at Iconium. Paul wishes to have him as his companion along with Silas, and with that view thinks it necessary to have him circumcised. Is Timothy introduced as a foil to Titus, who, Paul tells us (Gal 2³), was not compelled to be circumcised? And was Paul's act inconsistent with his principles as stated to the Galatians (Gal 5²⁵)? It is not necessary to think either of these things. Paul is feeling his way to his later position, but in the meantime he has a Jew as his associate and he looks forward to standing in many a synagogue. This he could not do with a man in his company who was known to be the son of a heathen father and himself uncircumcised. This would have scandalized the Jews wherever he went (cf. the incident of Trophimus [Ac 21^{29f}]), and Paul could not afford to do so.

As we saw it to be unlikely that Paul ever was a party to such an agreement with the Jerusalem pillars as Ac 15 speaks of, we must regard it as equally unlikely that he carried the decrees with him and handed them to the believers in each town that he visited.

The following verses (16^{6f}) are important for their bearing on the Galatians question, and also for what they reveal to us of the plans of travel with which Paul set out on this journey. As for the first point, we have the statement that, after visiting Lystra and Derbe (and also Iconium), the party traversed the Phrygian and Galatic land. This at once makes it impossible to regard the churches of these cities as belonging in the geography of the writer of Acts to the Galatic land. W. M. Ramsay has expended a great deal of learning and ingenuity in the attempt to prove the S. Galatian theory, that these are the churches addressed in the Epistle. But the verdict of antiquity is against his contention, as are the words of the text before us, which says that it was after touching at the cities of Lycaonia and Pisidia that Paul entered Galatia. The Galatians proper, the descendants of the Gauls who entered Asia Minor in 280 B.C., dwelt farther to the north, and after visiting these cities one had to pass through Phrygia to reach them. It is true that the towns of N. Galatia were less considerable than those of Lycaonia; still there were towns. And Acts recognizes that Paul did visit parts of Asia Minor of which little is known. After leaving Antioch for Ephesus (15⁴²), he is again said to have visited the Galatic land and Phrygia (confirming all the disciples in these regions), in a different order this time, and (19¹) he is said to have passed through the 'upper parts' before he came to Ephesus. There is accordingly room in the narrative, and room in the chronology, for visits to the N. Galatians.

Ac 16⁷ gives the reason why Paul visited Galatia on the journey with Silas. It was not his original intention to do so; he wished after Derbe and Lystra and Iconium to go to 'Asia,' i.e. the region in which Ephesus was, on the shores of the Aegean. This plan might appear to him, when he first conceived it, to be a bold one; the number of Jews at Ephesus was

very large, and the town was in communication by road and by sea with every part of the world. But the missionaries were prevented by the Holy Ghost from preaching the word in Asia. In which of the party the will of the Holy Ghost declared itself we are not told, nor whether the divine voice coincided with any positive obstacle. The route was changed and the party went northwards as far as the latitude of Mysia, their idea being now to enter Bithynia on the southern shore of the Euxine. But this plan also was disapproved of by the Spirit, which clearly declared itself and could not be disobeyed (v. 7). The only thing left was to make for the coast, not as at Ephesus, where one was still among a multitude of Jews, but at a point where Europe was close at hand and everything spoke of a purely Gentile mission. This part of the journey is reported in a very different way from that which comes afterwards in Europe, and, we must presume, by one who did not make it along with Paul; but what we seem to apprehend in the enigmatic sentences is a desire on Paul's part, which he identified with the principle inspiring him, to press forward to see what could be done in new lands. The conviction was no doubt already stirring within him to which in his Epistles he gives such forcible expression, that the world of the Gentiles was his province, and the desire to traverse the whole of it before the Master should descend from the skies. He must not build on another man's foundation. He tells the Corinthians that he feels bound to spread the gospel even beyond Corinth (2 Co 10:14-16). He tells the Romans that he has often proposed to come to them, but has always been prevented (Ro 1:13), that the desire has been with him for many years to come to them, when he travels to Spain (Ro 15:23^c). This desire may have been in his mind, at least in germ, since he left Antioch, no longer as a junior missionary travelling with a senior, but as the leader of a party and free to choose his own route, debtor now not to the Jews, but to Greeks and barbarians (Ro 1:14).

9. The gospel in Europe.—From the point of the crossing into Europe we feel that we are on more solid historical ground. Here we come to a piece of the journal that one of his companions kept, and of which four fragments are preserved in Acts. It happened to the author of Acts, as to other historians of antiquity, that he found his work made easier by a document drawn up at the time by a companion of his hero, which gave a bare sketch of the marked features of the hero's career to be filled in afterwards. This document, which announces itself where the narrative is in the first person plural, and may also underlie other portions of Acts, was for the most part a bald précis of routes and dates, but sometimes tells an interesting story of the journey, or even broadens out into a connected narrative. The writer shows little perception of Paul's great character or of the features of his thought which were to work so powerfully in the world in after times, and he seems to have known nothing of any of the Epistles or of the attacks and persecutions that called them forth. His name is hidden from us; there are fewer difficulties about Luke than about any other of Paul's companions, but about him too there are difficulties. The author of Acts uses this work as he used the Gospel of Mark for the Third Gospel, with the utmost skill, bringing it into his own style and his own vocabulary (see J. C. Hawkins, *Horæ Synopticae*, Oxford, 1909, and A. Harnack, *Luke the Physician*, Eng. tr., London, 1907, for the proof of this). For the skeleton which he provided of Paul's route, chronology, and work, from the time of his entering Europe, no thanks are too great.

The party had a fair wind to carry them over to Europe, and were only one night on board their vessel. In Europe their programme is the same as in Asia. A party of Jews, they announce themselves in every town where they arrive to the Jewish synagogue, if there is one; and in several of the Macedonian towns they are warmly received and succeed in founding a church with which Paul remains long afterwards on terms of intimacy and affection. He desires to visit them again (1 Th 2:17^a); he does visit them again (Ac 20:1-6); he sends trusted friends to encourage them and to bring him reports of them; they on their side take a warm interest in him, send contributions to help him with his expenses (Ph 4:15-18), and back him up with material aid and by sending delegates to help in his charitable schemes (2 Co 8:1).

The letters which he wrote to the Macedonian churches are more charming than any others; these churches were not torn by controversy or scandal, nor did they ask a multitude of questions; they were happy in their attachment to Christ and His apostle, and willing to be led in the path of duty. These Macedonian Gentile Christians (they were nearly all Gentiles) were the right material to make Christian churches—free from intellectual conceit, earnest, simple-minded, yet capable of great enthusiasm and ready for practical sacrifices. From the time of his arrival in Europe light is shed on the Apostle's history from his own Epistles as well as from the Acts; we hear from himself what he preached in this and that place, how his message was received, what he had to congratulate himself on about his converts, and what obstacles he met.

Acts gives a satisfactory account of the journey. Paul followed the great

way from Asia to Rome, and we may conjecture that Rome was already in his eye. In Ro 1:13 he tells us that he had often, before he wrote that great Epistle, cherished the intention of going there, and been prevented from doing so. His going to Athens and Corinth may have been outside of his original plan. He stayed at Philippi and at Thessalonica, where there were colonies of Jews; at Amphipolis and Apollonia he did not linger; they may have had no synagogue. At Philippi there seems to have been only a small number of Jews, and the Jews were not popular; Paul had to suffer for the unpopularity of his countrymen. The only person named of those who adhered to him is Lydia, a lady with a business in expensive goods and occupying a large house, a Gentile adherent of the humble Jewish community which held its meetings at the riverside. The Jews do not appear to have made any trouble; and Lydia pressed the whole party of the missionaries to stay in her house. The trouble which arose at Philippi was due to Paul's interference with an industry connected with heathenism. A girl who believed herself to be possessed by a spirit (and was perhaps a ventriloquist) which enabled her to answer inquiries made to her noticed Paul coming and going between the town and the place of prayer, and had a glimmer of the meaning of the movement that he carried on; and, in the exercise of her calling, took to shouting it out after the party. A Gentile could speak of the most high God and of the way of salvation as well as a Jew. Paul treated her as possessed and pronounced the Christian exorcism on the spirit that haunted her, and she immediately lost faith in herself (Ramsay, *St. Paul the Traveller*, p. 216) and ceased to utter any more oracles. Her enraged owners at once brought the missionaries before the magistrates, accusing them of preaching an illicit doctrine. They were Jews and the accusers were Romans; a strange religious practice thus charged against the at Thessalonica (Ac 17:1) in competition with the emperor—a charge often brought against the Christians afterwards when they refused to burn incense to the image of the emperor as Lord, and said that they had another Lord, Jesus Christ (see G. A. Deissmann, *Light from the Ancient East*, pp. 353-363). The magistrates acted at once and ordered a beating and imprisonment. The story of the escape from prison is to a large extent credible (cf. Ramsay, *St. Paul the Traveller*, p. 220^f); the jailer's question is just what he would ask if he believed what the possessed girl said about the apostles. Codex D ascribes the sudden resolution of the magistrates in the morning to release Paul and Silas to their having heard about the earthquake. But they might feel that they had acted hastily. They had not heard the accused in their own defence, and had made no proper inquiry as to their status. Paul, always master of his situation, showed them how wrong they had been, but could not refuse to leave the town. For the impression that the ill-treatment made on his mind see 1 Th 2:15. But a work had been done at Philippi from which he was to have much satisfaction; a church of Gentiles had been founded, which never forgot him.

10. Paul's earliest Epistle.—At Thessalonica there was also a synagogue, and Paul is said to have preached there for three weeks. The first Epistle suggests a longer stay.

We follow Acts in the narrative of the external facts of the mission in this place now, in a new way, so famous. Paul was here to find persecution at the hands of Jews, already so well known to him in Asia Minor. His work in the synagogue met at first with some success; a limited number of Jews were converted, a larger number of Greek 'God-fearers,' and many of the leading women of the place. Of the Gentiles who came straight from heathenism to Christianity (1 Th 1:9) there is no mention in Acts. The flourishing work ended

abruptly. The Jews, enraged at the acceptance by so many leading Gentile supporters of a doctrine that they profoundly distrusted, collected a number of idlers in the street and stirred up a tumult as they well knew how. As they could not lay hold of the missionaries to place them before the town meeting (Thessalonica was a Greek town with its own magistrates), they seized Jason (the name is Greek, but was borne by many Jews), their host, and some other believers (cf. Ro 16²¹) and took them to the magistrates, to whom they represented the Christian movement as a political crime, a disorderly treason against the emperor, which had been engineered, they said, all over the world, and was now brought to Thessalonica. The magistrates took up the charge, but refused to help the work of persecution; all that they did was to take bail of Jason and the other persons accused. But the apostles could not remain in the place; their converts sent them away by night to Berea, which was not on the Egnatian road. Paul's route may have been deflected by this adventure. At Berea the apostles were well received in the synagogue, the members of which were set on a course of study of the books of the OT to satisfy themselves that the message brought them had a foundation in these venerable writings. There were Jews who believed and 'not a few Greek women of distinction and men.' But the persecution of Thessalonica came after them to Berea, using the same procedure and making it impossible for Paul at least to remain there. Silas and Timothy stayed, but Paul was conducted by some of his converts as far as Athens, whether by sea or by land is doubtful, the conveying party taking back a message to Silas and Timothy to follow him as soon as possible.

The First Epistle to the Thessalonians (the earliest Christian writing) was written in the name of Paul and Silas and Timothy, united again at Corinth after various journeyings (1 Th 3¹⁻⁶, Ae 18⁵). Timothy had joined Paul at Athens, but had been dispatched again to Thessalonica before the reunion of the party at Corinth. The Thessalonian church was composed as a whole of Gentiles who came straight from the service of idols to the gospel (1 Th 1⁹). These Gentiles felt Paul's summons irresistible and threw themselves with enthusiasm into the service of the living God, arrested by the tidings that the Divine Judgment was on the point of taking place, and by the hope that those who believed in Jesus Christ would find Him a Saviour from the judgment and the destruction of that awful hour. Christ was to descend from heaven; His coming would be sudden, and those who sought to be saved by Him must keep themselves prepared, since all depended on their being ready for Him when He came. The Spirit which had come to them must be diligently fostered and obeyed; they must be full of faith, of hope, and of active clarity. They must be prepared for persecution, of which they had already had some experience; they must aim at the strictest purity and the most irreproachable conduct. Only in that way could they make sure of the bright prospect that shone on them and enable the Apostle to look forward to presenting them as his glory and joy to the Saviour when He came. At Thessalonica for the first time we make acquaintance with Paul as a craftsman, refusing to take advantage of the convention according to which the apostles of the Christian community were entitled to be supported by the churches. The rule is broken in favour of the Philippians (Ph 4¹⁰), who send him help. . . . lee, but with this exception it is . . . 117-10). No one is to charge either . . . g with-out a sound financial basis. He seems to have sat at his bench or at his loom (it is impossible to say which) talking to all who came, and urging them individually to keep themselves ready for the coming of the Saviour and free from all reproach in the eyes of a hostile world. He was a nurse to the converts, encouraging and comforting them and guiding their halting steps in the practices of the Christian life; he was a pattern to them of all that they had to do, and he finds much good to say of their enthusiasm and constancy.

II. The speech at Athens. — Timothy did at last join Paul at Athens, and was sent by him back to Thessalonica (1 Th 3¹⁻⁶), where he himself was forbidden to appear (3¹¹). Silas also joined him before 1 Thessalonians was dispatched (1¹); according to Ae 18⁵, they both rejoined him at Corinth. The letter, written when Paul was no longer at Athens, is in the name of all the three. It is when both his associates are absent that he encounters the philosophers at Athens, and before the Arco-

pagus, the highest court and one specially attending to the affairs of religion, delivers the famous speech of Ae 17, which it is our duty to examine. According to E. Norden, whose most interesting book, *Agnostos Theos* (Leipzig, 1913), places every feature of the story and the speech in a clear light as to its relation to the general religious movement of that age, there is little that can be regarded as belonging authentically to Paul either in the situation or in the speech. The inscription of an altar is often used in Greek antiquity as the text of a philosophical or religious discussion or address. Athens is praised for its religiousness by Apollonius (Philostratus, vi. 3) as by Paul, and for a similar reason, that altars are erected there to unknown gods. This striking similarity of expression is taken by Norden to establish a literary relation between Apollonius and Acts; Apollonius is a travelling missionary whose aim it is to draw men away from idolatry and fix their thoughts on the true God; he also visited Athens; though the date of his visit cannot be fixed, it would certainly fall before the writing of Acts. The type of the speech bears analogies also with other religious utterances of that day. It is in line with other appeals to the heathen to open their minds to the true knowledge of God and to forsake idolatry. Norden places before us a speech from Poinandres to this effect, an *Ode of Solomon*, a piece of the *Preaching of Peter*, and a piece of the *Preaching of Barnabas*, and contends that the speech to the Areopagus is an address placed in Paul's mouth such as was customary in that age in the mouth of the missionary of monotheism, whether Jew, Greek, or Christian. In all these appeals Stoical notions appear—that God is not in need of anything, that God is not to be worshipped in the way of sacrifice, that God's goodness and care of man are evident in the works of creation, in the provision made to supply the wants of His creatures, and in His creation of man with such a nature that he should feel constrained to seek after his Maker. The blending of Jewish with Stoic thought was singularly effective in this whole argument, and meets us in all the philosophical and religious thought of the period (cf. Ro 1, Ae 14). But what of the inscription that Paul is said to have seen at Athens, 'to the Unknown God'? Philostratus speaks of altars at Athens to 'unknown gods' in the plural. Pausanias attests a similar inscription in the neighbourhood of Athens, and Jerome thinks that the inscription to which Paul refers was not in the words that he gives, but 'to the gods of Asia and Europe and Africa, gods unknown and foreign.' The inscription in the singular is found only in this passage in Acts. The unknown God spoken of is not simply the God of Judaism. That being was spoken of in the Greek and Roman philosophical circles not as unknown, but as mysterious, unrepresented, ἀσπλῆς. In Gnostic writings the unknown God is frequently addressed as the highest being of the various systems. The term was well-known in the time of Paul, though it did not appear as the inscription of an altar.

If Norden is right in this, the writer of Acts supplied the inscription as a text for Paul's address, which consists largely of the sentiments of Stoicism and is furnished with a quotation from a Stoic poet. The idea of a trial is not very closely adhered to, though a charge is mentioned, similar to that brought against Socrates, that he introduced new deities. These are Jesus and Resurrection, which in Acts is Paul's main doctrine. Paul does not mention any charge, but delivers himself, as other missionaries did, of a discourse against idolatry, and ends with a Christian conclusion on the Judgment and the Messiah. The speech is kept admirably in the required tone and setting,

as are all the speeches in Acts. Yet only a small success is claimed for Paul in this city of dilettantes and idlers. Only a few converts were made, and the Apostle went, after an unsatisfactory visit, to a very different scene of labour—the busy harbour town of Corinth, where also (this may have been in his thoughts) there was abundant opportunity of travelling to Rome, and the call of the metropolis grew in insistence.

12. Hostility of the Jews.—We have come to the point at which Paul's own letters begin to shed abundant light on his history. Those to Thessalonica were written from Corinth in his early days there, and afford important suggestions as to what he felt his position to be at this time. As we saw above, 1 Thessalonians gives a satisfactory account of his missionary aims and practice; but it also affords hints as to his inner history which are not to be neglected. Up to this time he had stayed only a short time in any one place, and the reason was that the hostility of the Jews everywhere broke out against him and compelled his removal. In the following part of his career he spent years instead of weeks with a newly-founded church, detaching himself early from the synagogue and devoting himself in some other building to his work in a community composed chiefly of Gentiles. The reason of this change is not far to seek. In 1 Th 2¹⁴⁻¹⁶, a passage which many scholars have regarded with suspicion as being alien to Paul's temper and probably an interpolation, but which can be amply justified on historical grounds, Paul considers the inveterate hostility with which the Jews regard and treat him. The Jews, who killed the Lord Jesus and the prophets, have also persecuted him and forced him away from what he was trying to do for the Gentiles. They do not wish him to preach to the Gentiles; they do not wish the Gentiles to be saved. It all proves the contrariness of their nature; they are contrary to all men. It proves that they are filling up their cup, and that the day of vengeance must soon come for them, since they set themselves to oppose the clear will of God for the salvation of the Gentiles.

The hatred of the Jews for Paul was one of the most powerful, external, determining causes bearing on his history. It had already deflected his journey and made it impossible for him to go back, at least meanwhile, to Thessalonica, though Silas and Timothy were still free to go there; and, as Acts shows, it was to pursue him to the end. What was the cause of their secking in him their arch-enemy? The accusations which they brought against him to the magistrates at Thessalonica and Corinth do not make this clear. It was not as an insurrectionary against the Roman power that they hated him, though that charge was made against him, as it had been against Christ. Nor was it that he preached Jesus as the Messiah; his fellow-missionaries did that too. Nor was it in the first place that he drew away from them the rich and influential adherents of their synagogues, though that was no doubt a bitter experience for them. They bore him a special personal hatred; and the reason why they did so is revealed to us afterwards when we come to his last visit to Jerusalem. They saw in him the enemy of their Law, who was seeking to draw the Jews away from their national observances, bidding them give up circumcising their children and abjure the religious practices of Judaism (Ac 21²¹, 23 24¹⁴ 25⁸). This is what underlies the charge (Ac 17^{6a}) in which Paul already bears the character, reported about him from synagogue to synagogue, of a deliberately subversive and dangerous teacher. We do not now inquire how much of this was true; the consequences to Paul of its being made were very serious and made it difficult for him to carry on his mission

as before. He began his work both at Corinth and at Ephesus in the Jewish synagogue, but he was inevitably thrust more and more into the arms of the Gentiles, who heard him readily and with whom he felt himself at home. He was confirmed in his apostleship to them; his absences from the East grew longer. As his own nation thrust him away from them, and his work among the Gentiles was full of interest, he must have felt himself less and less a Jew. When he counts up in Ro 1¹⁴ his obligations to his fellowmen, it is of the Gentiles that he thinks; he is debtor to Gentiles of every class, but he does not say that he is debtor to the Jews.

13. Order of the Epistles.—We may here say a word as to the order of the Epistles which are chiefly to direct us in the rest of this article. 1 Corinthians was written from Ephesus in the spring of the year 54, after Paul had been there nearly two years and three months, besides making a journey to the East and very likely other journeys.

Now, 1 Corinthians has a subject in common with Galatians, 2 Corinthians, and Romans—a practical subject which it appears unlikely that Paul would leave in suspense for a number of years, viz. the collection that he instituted in Galatia, Macedonia, and Greece on behalf of the poor saints at Jerusalem. In Galatians he intimates that he is bound to do something of this kind. He does not in that Epistle suggest the practical steps that the Galatians are to take in that direction, but in 1 Corinthians he tells us that he has made the suggestion in Galatia which he now makes at Corinth. In 2 Corinthians there is much more on the subject, and Romans is written when he is just about to start for Jerusalem, carrying the money with him. Galatians appears to have been written before 2 Corinthians. In both the Apostle deals with attacks made on him and with designs made on his church in his absence; of these attacks there is little evidence in 1 Corinthians, and it seems reasonable to think that Galatians was written between the two Corinthian Epistles; the doctrine of all three is closely similar. In Romans that doctrine is set forth in a more developed and calmer statement. We go on to look at the history as set before us in these Epistles and in the relevant statements in Acts.

14. The Corinthian Epistles.—Acts 18 shows us Paul at Corinth, with its predominantly Greek population, its tendency to talk, its love of poetry, its quick-witted application of principles even to extremes, its susceptibility to religious impressions. He lives with a Jewish family who follow the same trade as he does, and he goes, as he scarcely could do otherwise, to the synagogue to make a beginning. He has some success at first, but on the arrival of Silas and Timothy he comes to closer quarters with the Jews, and a breach soon takes place, Paul forsaking the synagogue as his place for preaching, and opening another locale close to it in the house of Titus Justus, a 'God-fearer.' His preaching goes on for eighteen months, till a new proconsul arrives at Corinth, before whom the Jews accuse him of preaching an illicit religion. Gallio sees that no crime is charged against Paul, that the dispute is entirely one of the Jewish religion, and declines to interfere, considering the matter, quite rightly, outside his jurisdiction.

The First Epistle to the Corinthians was written four years after the foundation of the church and gives few details of its outward circumstances, being entirely occupied with questions which had newly arisen. A few facts of the early days of the foundation do, however, appear. Paul came to Corinth somewhat depressed, but with a definite idea in his mind of what he had to preach to such a community and of the standards that he had to put before them. Among the first things that he stated to them were the great facts about Christ

(1 Co 15): that He died for our sins according to the Scriptures, that He was buried, and that He was raised up on the third day, according to the Scriptures. This shows Paul's method; he took his stand on the books of the Old Covenant, and brought forward the texts which showed the death of Christ for our sins, and His resurrection, to have been foretold in these old writings. The faith of Christ is not a thing of yesterday; it is the continuation and the culminating point of the dealings of God with man which began in Abraham and were continued in the prophets. So far is the faith of Christ from being merely a mystery-religion—one in which the suggestive acts done were everything—that it was from the first a religion of a book, based on the promises of God, to be found in its main features in the prophets. This is the secret of what appears at first sight to be Paul's immense self-confidence. It is the momentum of the OT religion that carries him forward; it is the system of God's promises, of the prophetic declarations that he administers, in a career that nothing can withstand. If the Apostle is asked what is his principal doctrine, his answer is ready; he came to Corinth determined 'to know nothing but Jesus Christ and him crucified' (2^o)—to preach Jesus as the Messiah, as all the apostles did, but a Messiah crucified, who, by a supreme act of love, gives Himself up for the salvation of men and now calls on them to take advantage of the surrender made for them. This is the way of salvation that Paul placed before the Corinthians, knowing well that it had no philosophy to recommend it, and that Jews must regard it with prompt aversion. God, however, had chosen this way to save men, and it had virtue in it; the divine purpose was accomplished in it in spite of every objection and of the absence of rhetoric on the part of the preacher. No show of wisdom or ornament of words was wanted when this weapon was employed. It was a power of God, a miracle, and the use of it was promptly followed by miraculous effects on the hearers; the Spirit at once came to them, with His gifts.

Paul no doubt appeared to those who heard him at Corinth as one of the company of those who at this time were bringing Eastern religions to the West, and proclaiming not only a Supreme Deity but a Deity of the second rank as well, a being who had died and risen again. The Apostle's preaching, however, was immediately successful. Once separated from the numbing influence of the synagogue, and placed on its own independent basis, the church quickly realized itself and became conscious of its powers. It numbered few persons of distinction; but among the few names preserved of the first believers are those of people in good station. Aquila and Priscilla are especially to be mentioned; Crispus had been a head of the synagogue and was baptized by Paul's own hands (11⁴) along with his family (Ac 18³), as also were Gaius, a prominent Christian (Ro 16²³), and Stephanas, whose house was the firstfruits of Achaia (1 Co 16¹⁵). Erastus, the town-chamberlain, may be added (Ro 16²³). Most of the members were of the class of shop-keepers and artisans, whose income varied from week to week. Paul, it is true, says that more might be expected of them financially than of the brethren of Macedonia (2 Co 8¹). Most were Greeks, but there were also Jews among them, and slaves too in their number. And, as the church was composed of very different elements, it developed what appear to us to be strange freaks of opinion and conduct. Of any settled constitution there is little trace. Baptism is into the name of Christ; any one apparently could administer it. The Lord's Supper, as the Corinthians at first took it, was equally formless. It resembled the common meal of a Greek club, each member bringing to it his own provisions. It is held, indeed, by O. F. G. Heinrici¹ that the Greek club provided the form on which the Greek churches were at first constituted, and it seems very natural that a body that was a revolt from the synagogue should avail itself of the easy and flexible arrangements usual in the country. Office-bearers do not appear in the Corinthian Epistles. The nearest approach to them is in the case of Stephanas and his household, whose services to the church are held up by the Apostle as entitling them to consideration and influence in it (1 Co 16¹⁵). The church is a pure democracy with the Apostle, its father, founder, planter, above it and connecting it in an informal way with other churches. When any serious question arises, it is to him that they turn, there being no constituted authority short of him. Every matter is brought to him; when absent, he is still watching them and informed about them by many a chance comer or messenger, writing to them and receiving letters from them. (For the occasion that called forth the Second Epistle see § 18.)

15. Third missionary journey.—Paul remained at Corinth for some time after the attack on him before Gallio and then set sail for Syria, in the company of Aquila and Priscilla; we are not told on what errand this journey was undertaken. Ephesus, where he landed, was the capital of that Asia where he had formerly desired to preach (Ac 16⁵). This time the desire was gratified, but nothing is told us except that in the synagogue, where he began his work, he was asked to return and said he would do so. Of the further journey to Syria also little is heard. Jerusalem is not spoken of, though it may be inferred from the phrase 'he went up' (Ac 18²²), nor is any object for going

there; and Codex D says at 19¹ that he wished to go to Jerusalem but was specially prevented by the Spirit from doing so. He landed at Cæsarea and stayed, after a visit to Jerusalem (if there was one), some time at Antioch, from which city he set out, probably in spring, on the return journey, passing through the Galatian country and Phrygia, which are mentioned in a different order from that in ch. 16, where the same journey was made before. He is also said (19¹) to have traversed 'the upper regions' before arriving at Ephesus again. The writer of Acts has not much information about this journey; there is room for the surmise of those who hold the N. Galatian theory, that it may have included the second visit to the churches of Galatia (Gal 4¹³).

After Paul's return to Ephesus from the East he went to the synagogue again and continued preaching there for three months (Ac 19⁸). The accustomed Jewish hostility was longer in breaking out here than in other places, but break forth it did; 'the way'—the new plan of cultivating the Gentiles without asking them to live as Jews—aroused here also bitter animosity, which was expressed even to the heathen crowds in the street. Paul therefore 'separated the disciples,' as he had done at Corinth, and gave daily lectures in the school of Tyrannus (Cod. D adds, 'from the fifth to the tenth hour,' i.e. after the hours of business). The anecdotes of Ephesus which follow in Acts need not detain us; Paul claims (2 Co 12¹²) that the signs of an apostle are not wanting in his ministry, and there is humour in the overthrow of the heathen exorcists who try to use the name of Christ as an instrument, and in the ruin of Ephesian magic and the burning of the magical books that takes place in the great stronghold of magic in contact with the gospel (Ac 19¹²⁻¹⁷).

When the soul-shaking experiences at Ephesus took place, to which reference is made in both the Corinthian Epistles, cannot be made out. Paul 'fought with beasts at Ephesus' (1 Co 15³²). Were this to be taken literally, he could scarcely have been alive afterwards to speak of it. In 2 Co 1⁸⁻¹¹ he speaks of a situation in which he despaired of life and was compelled to set his trust in God who raises the dead. Acts contains nothing to justify these phrases. In the story of the tumult about the silver images of Diana (19²³⁻⁴¹) Paul is dissuaded by his friends, the Asiarchs, from going to the theatre and facing the mob; and the end of 1 Cor. is written in a calm atmosphere, and by one who is able to determine his movements a long way ahead. Timothy is to be sent back to him at Ephesus. And the perilous passage of which he speaks must have been behind him when he wrote 1 Cor., which was written at the same time as the dispatch of Timothy, but was not carried by him, for it gives instructions as to his reception.

16. New Judaizing opposition.—The dispatch of the first Epistle did not make an end of the troubles in the Corinthian church, but the new troubles were different from the old. From Ephesus Paul paid a second visit to Corinth (2 Co 13¹⁰), which did not end happily; it was followed by another letter, described in 2 Co 2 and 7, and said to have been written with tears. Trouble sprang up for the Apostle at this period in another part of his missionary field. It was a trouble that was bound to come; the false brethren, of whom Paul speaks in connexion with the Jerusalem meeting, found their opportunity in the mixed churches; of these there were now more, and the desire to make mischief in them had not ceased. The Apostle now came to be confronted with adversaries who were not Jews but Christian believers; but they believed in Christ as the Messiah of the Jews, who had been a Jew, and

¹ Erklärung der Korintherbriefe, Berlin, 1880-87.

they wished the Law to continue in honour. They desired the promises to be confined to Abraham's children, and one was not in their eyes fully a child of Abraham without circumcision and observance of the religious customs of the Jews; they would not eat with Gentiles; they required that the Gentile who became a Christian should become a Jew at the same time. On these terms the Christian mission would have been condemned, like the Jewish mission which preceded it, to perpetual sterility. They went great lengths in their controversy; at Ephesus we read of their denouncing Paul to the Gentiles, as if it were better not to be a Christian at all than to be a Christian on his terms.

In Ac 17⁶¹, 18¹³ we have the character represented to us that Paul had in the eyes of the Jews, in Ac 21²¹ the character that he bore in the eyes of the Jewish Christians a year or two later. The persecution which he had to endure from the Jewish Christians was as hard to bear as that of the Jews, and has left a distinct trace on his writings. They could not beat him or stone him, but they had access to his churches and could poison the minds of his converts against him and could urge them to desert him. As a fact, they did belittle his authority, his work, his preaching—both the style and the substance of it—his personal appearance, his motives. They denied his apostleship, which, it is true, rested on no formal nomination by other apostles; they said that he set himself up as an apostle and had no right to do so. They did not directly controvert his teaching, not even his Christology, so much as place in competition with it their own simpler doctrine, which had no Cross in it and called for practical obedience to an ancient system rather than a mere faith and receptiveness.

This aversion to Paul must have been growing since the time of his mission at Antioch, and it broke out in serious attempts in two of his churches about the same time. A number of indications combine to lead us to regard the Galatian and the second Corinthian Epistles as written almost at the same time. In both the collection is urged; Gal 6^{9, 10} urges liberality to Christian teachers, but goes on to urge liberality to all one's fellow-Christians. And, if Gal 4¹³ is to be taken in its natural sense, 'I preached to you the former time,' i.e. on the earlier of two occasions of his preaching to them, and not, as Kirsopp Lake proposes, on only one former occasion, then the Epistle must come after the visit to Galatia of Ac 18²³, and belong to the residence at Ephesus. In both Epistles we hear of 'another gospel' which is preached by intruders; in both the two Covenants are contrasted with each other, one making for freedom, the other (evidently that favoured by the intruders) for servitude. Of the agents of this invasion the Corinthian Epistle gives the clearer picture. The intruders at Corinth are men who pride themselves, as Paul himself does, on their pure Jewish lineage; yet they are good speakers to a Greek audience. They belong therefore, it seems probable, like Paul himself, to the Diaspora, and have laid themselves out, as he has, for a mission to the Greeks. There is no reason to think that they came from Jerusalem or were countenanced by the apostles there. There is plenty of evidence that the Jews of the Diaspora were as narrow and bigoted as those of Palestine, and the Diaspora Christians could show on occasion the same character.

17. The Epistle to the Galatians.—The beginning of the Epistle to the Galatians is austere. Paul's apostleship is impugned and he writes himself down in his opening words as apostle by special divine arrangement, 'not of man nor through man but by revelation of Jesus Christ.' The writer then goes into a historical statement to show how independent he is of any human authority. It was not man that instructed him, but God that revealed His Son in him; he kept away from Jerusalem for three years after his conversion; neither the apostles nor the churches of Judea were much concerned with him at that time.² His visit to Jerusalem after fourteen years

(this must be dating from his conversion) made no important change in his methods or his position. He appeared there to plead for the freedom of the Gentile churches, and his plea was successful. No objection was made to Paul's doctrine when he stated it, and no additional burden or observances were imposed upon him. Each side recognized the other as borne forward by God in its mission, and the right hand of fellowship was exchanged on the understanding that the work should go on as before, James, Peter, and John going to the Jews, Paul to the Gentiles, with the link between the two provinces of the Church, that the Gentiles should do something for the poor at Jerusalem, as the Diaspora had always sent gifts to the Temple. Paul's independence of the older apostles was also signally shown on the occasion of Peter's visit to Antioch, when he withdrew from the common meals where Jew and Gentile sat together, not because he thought them wrong, but in order to stand well with the people at Jerusalem. The speech which Paul says he addressed to Peter before all the members at Antioch, broadening out into a moving statement of his own personal ground of hope, is very difficult if we attempt connexion of each verse with that preceding it; in this Epistle in general the expression is far from adequate to the rushing fullness of thought.

The Apostle reminds the Galatians that their Christian life began with Christ crucified, whom Paul in his preaching held up clear before them (31). It was from that exhibition that the Spirit came to them, and now they are on the point of turning from the Spirit to the flesh, to trifling observances, to the keeping of a code of laws, to seeking their salvation in them! The Law had no power to give life; it was a constraint imposed on sinful mankind until the day should come when the promise should be given to those who believed. In baptism the Galatians have 'put on Christ,' who has made them free from the Law, made them God's children and heirs, placed them in a region where the difference between Jew and Gentile disappears; and they are all one, the true seed of Abraham, in actual possession of the promise made to them.

From a masterly appeal on the ground of the history of religion the Apostle passes to a moving personal appeal on the ground of what he remembers of the Galatians and they of him. How kind was their treatment of him at his first visit! How they treated the illness which then overtook him (what it was we know not), not with disgust, but with the most affectionate solicitude to find something that would help him! They cannot feel for those who are now courting them as they did for him; they are aiming at nothing but a personal triumph; he wishes to win them wholly for Christ, that the form of Christ may be fully produced in them. Seeing that Christ has freed us for freedom, what have the Galatians to do? No summary of this passage is possible; it is a passionate outburst taking up one feature after another of the situation and dealing with each in trenchant words. It was scarcely true that circumcision obliged one to keep the whole Law. Paul himself, it is true, had felt the whole weight of the obligation. Nor was it quite true that to be justified by the Law was to fall away from grace. The Pauline Christian did look for the hope of righteousness, in the spirit and from faith, without any thought of contributing to it by any performance of his own. Freedom from the Law did not imply, as opponents said, that . . . he liked. The Spirit must be the . . . individual has power to make it s . . . feel the pressure of the Law. With 611 the Apostle begins to bring the letter to a close. He contrasts the motives of their new leaders, should they prove so, with his own. The new leaders will be able to point to this person and to that and say, 'A Gentile, circumcised, and he owes it to me!' Paul's boast is different. He looks not to small personal triumphs, but to the great world-triumph of the Cross in which he too is taken up into his right position. Looking to it, he forgets the great debate of circumcision, and thinks only of the new creation that the Cross has brought. This is his canon, his great rule, enunciated thrice in his Epistles—Gal 6¹⁵, and 1 Co 7¹⁹. Those who think thus are to him the true Israel. The 'marks of the Lord Jesus,' to which Paul appeals in conclusion to guard himself against further troubles, might be spoken of in analogy to the marks of a god borne by his votaries, or of a master by his slave; but the phrase is intelligible without this.

18. Troubles at Corinth.—Of the Galatians we hear no more in the NT, and what was the effect of the letter to them we can only surmise. Paul's thoughts at Ephesus were in another direction. He was proposing a journey to Macedonia and Greece, then to Jerusalem, and then to Rome, and was in correspondence with Corinth on this subject (Ac

¹ *The Earlier Epistles of St. Paul*, p. 2631.

² A. Loisy suggests (*L'Épître aux Galates*) that the three years in Arabia were spent in preaching to the Arabs, and that the mission was not successful; we know nothing about that period of his life.

19²¹, 2 Co 1⁶⁵). He thought now of the sea-route to Greece, then of the land; the Corinthians thought that he changed his mind too easily. He ultimately chose the northern route through Macedonia; but something had to be done before he could present himself. He had paid a visit to Corinth which had turned out very unpleasant for him; he had been grossly insulted or injured by a member of the church there (2 Co 2³⁻¹¹). He could not go to Corinth till the church made some expression of regret for the treatment which he had suffered and had dealt with the offender. To secure this, Titus was sent with a letter which Paul says he wrote with tears. Can this refer to 1 Corinthians? It evidently was not composed in a tearful mood. Or can 2 Co 10-13 be meant? It also is scarcely in such a key. It is the opinion of most scholars that the letter written with tears is lost. Titus was to present this letter and to return to Paul with the account of its reception, so that Paul might know with what confidence he could present himself at Corinth, and he was to hurry on the financial business as to the collection (2 Co 1²⁷⁻¹⁶ 8⁶).

To judge from 2 Cor., Paul set out for Greece weighed down by anxiety about Corinth. Acts gives a different impression, connecting the departure from Ephesus with the trade disturbances engineered by Demetrius. Paul was face to face with death at Ephesus, but some time earlier, in fact before writing 1 Cor.; and in the Demetrius story Paul's life is not in danger. The story in 2 Cor. places us on firm ground when it tells us that his anxiety about Corinth was banished only when he met Titus and received his favourable report. The letter had been well received; the Corinthians were loyal (2 Co 7¹⁶). On this follows the great burst of praise and exultation for the triumphs of the gospel which God brings about through him, and the alternation of mood from humiliation and depression to the highest triumph and joy returns again and again in the Epistle and may be regarded as its characteristic movement.

The principal question that criticism has to consider about 2 Cor. is whether there are two Epistles in it, or three, or only one. The theory no is that chs. 10-13 are to be taken as has lost its beginning, and that chs. Epistle, the end of which is wanting. In Germany, the birthplace of this theory, it is all but extinct, while in Britain some of the arguments by which it was at first supported are no longer relied on. The transition at 10¹ is certainly abrupt, but there are in Paul other such transitions which are not held to warrant the conclusion that we are passing to a different work of the Apostle (cf. Ph 3¹). The passage 6^{14-7¹} is also taken by many commentators to be a late addition to the Epistle, but here too the reasons for that opinion are in course of fading away; the plea certainly interrupts the sense of the passage, but the Apostle is likely to have put it there himself; a later hand would have been more careful. The Epistle can be fairly well understood as it stands, as Marcon read it, and as all the ancient authorities have it; there is no MS evidence whatever to the contrary. Thus read, the Epistle opens on a theme which is pursued to the end, viz. an approaching visit of the Apostle to Corinth. The questions of his credentials and of the forthcoming collections having been dealt with, Paul makes an attack upon the intruding preachers who deal in another gospel than the true one, which is his; their claims are set formally over against his own; he has been weak, but will now, though it is a foolish thing to do, draw up the account on both sides. In point of pure Jewish lineage he is on a level with them. Yet they give a better address in Greek than he (11⁶), which shows where they come from. Their afflictions for the gospel are not to be compared with his, which he sets forth in full detail, ending with all the cares that he has to bear for his various churches; he feels with every weak brother in them all; his heart is set on fire with every offence with which they meet. His visions and revelations have been of a distinguished order; he has been carried to paradise and has heard unspeakable words; but along with this he has had very painful experiences which keep him from boasting of his spiritual distinctions—the thorn in the flesh, the messenger of Satan to buffet him, lest he should grow too great in his own eyes. That he was not an epileptic is clearly shown by A. Seeligmüller, *War Paulus Epileptiker?*, Leipzig, 1910 (see also Ramsay, *The Teaching of Paul*, p. 306 ff.). This experience was the crowning expression of the conviction which we find so often in his writings, that strength always comes to

him from a higher source out of his many humiliations and depressions—'When I am weak, then am I strong.' The Epistle ends with words of hearty encouragement and affectionate greeting, and the writer appends the salutation, or it may be called the benediction, invoking on his converts the grace or kindness of Christ, the love of God, the communion of the Holy Spirit, which are the sum of all his teaching.

19. Epistle to the Philippians.—The Epistle to the Philippians, though generally treated as belonging to the captivity of Paul at Rome, is thought to have its place and time fixed by 1¹³, where the 'palace' (παλατίον) is taken to be the barracks of the imperial praetorian guard at Rome, and by 4²², where 'Caesar's household' is also taken to imply the neighbourhood of the imperial family. In Lightfoot's commentary the arguments for these positions are fully stated. The great accumulation of inscriptions in recent times has seriously weakened these arguments; any building is called 'praetorian' in which an official might dwell even for a short time, the term being applied even to private houses; or the term might designate the persons connected with a court of justice, 'a judicial authority with its assistants and subalterns.' 'Caesar's household,' again, was a term used of any collection of slaves of the emperor, and these were to be found anywhere in the empire. Neither term limits us at all to Rome. The Apostle often suffered imprisonment, as he tells us in 2 Co 11²³. There are substantial reasons in the contents of the Epistle why we should think of some other captivity than that at Rome. To place it in the Roman captivity would bring it close to the Colossian Epistle, which deals in doctrine of quite a different stamp. It has been suggested that the captivity was at Ephesus, and the many journeys and messages spoken of would agree with this.

The Epistle to the Philippians is very affectionate and gentle, and doctrine is introduced only for purposes of edification. It is called for by a simple incident: the Philippians have sent Paul a present by the hands of Epaphroditus, who fell ill beside Paul and was now sent back to his friends at Philippi (4¹⁸ 2²⁵⁻²⁷). The first part of the Epistle is about Paul's position in his imprisonment. He is looking death in the face and taking the view that it will at once unite him to Christ, not, as in 1 Th 4 or 1 Co 15, that the union with Christ will take place only at the Parousia. He no doubt had a way of reconciling the two views in his own mind (cf. 2 Co 5¹⁻⁹). In the great Christological passage, Ph 2³⁻¹¹, his view of the history of Christ's person appears more clearly than anywhere else, and he seems to be contrasted with other great spiritual beings, one of whom did 'think equality with God a thing to grasp at,' and who had great names, which His great name, Jesus Christ Lord, given Him by God after His earthly career, cast into the shade. There are adversaries, both without the church, Jews, the thought of whom leads the Apostle to restate his claims (3¹⁻¹¹), and within (3¹⁷⁻²¹). The grateful acknowledgment of the Philippians' present concludes the Epistle: he does not need it; he has learned to be without wants, yet is thankful for it, as for former attentions at Thessalonica and at Corinth (see also § 22).

There is no direct information as to the effect produced by 2 Cor.; in that the Epistle is not singular. Acts tells us (20²) that the journey there spoken of through Macedonia was accomplished, and that Paul stayed three months in Greece; but nothing is said of his thoughts or of his correspondence. It passes over the time when, if all indications do not deceive us, Paul wrote his great Epistle to the Romans, without mentioning that Epistle or that church, and goes on to tell of his journey to the East.

20. Epistle to the Romans.—There is almost complete historical certainty that Romans was written, as we have it, during the three months' stay in Greece mentioned in Ac 20². The critical difficulties in the way are not very serious. They are the omission of ἐν Ῥώμῃ in some early MSS at 17¹³; the various conclusions which the piece appears to have after 14²³ and at the end of the work; and the alleged likelihood that ch. 16 was addressed to Ephesus rather than to Rome. To this may be added the disjointed arrangement of certain chapters which look like old essays on this and that topic, loosely put together.

The omission of ἐν Πώμῃ in ch. 1 was known to Origen, and suggests that the Epistle existed early in a form from which the geographical indications had been removed, making the Epistle a general one like Ephesians. As for the various conclusions, there is a good deal of evidence that Marcion cut out the last two chapters, and this procedure may have led, in the transmission of the text, to the insertion of the conclusion after 14²³. But 15 is certainly continuous with 14, and contains nothing that Paul may not have written.

Ch. 16, which Renan considers to have been addressed to Ephesus rather than to Rome, has been ably defended, from a study of the names that it contains, by Lightfoot and other Bible scholars as possibly addressed to Rome. The whole question of the integrity of the Epistle is thoroughly discussed in the introduction of W. Sanday and A. C. Headlam's great commentary on *Romans*⁵ (ICC, Edinburgh, 1902).

In Romans we find the Apostle writing to a church that he himself had not founded; in 18¹⁵ and 15²²⁻³² he describes his position towards that church. He regards it as in his sphere of missionary labour, has thought of it much, and has often wished to visit it, though he has been often prevented. Now he sees a near prospect of carrying out his wish. He is on the point of travelling to Jerusalem, to carry there what has been collected for the poor saints. The Romans are to pray that he may be delivered from the dangers which he clearly sees will threaten him there; and after that duty is discharged he will come with joy to profit by their sympathy, perhaps to do something for them. He is to go to Spain, and will see them on the way. This explains to some extent the difference between Romans and the Epistles that we already have had from him. These were all to churches that he knew, and were occupied with questions which arose in them, with advice, encouragement, often with painful controversy. That controversy is now past, and he is not intimately acquainted with the domestic matters of the Roman church. The discussions in this Epistle are therefore impersonal and general; he can discuss the great matters which interest all Christians alike; he is now at liberty to do so. His tone is serene and open; we gain the impression that he has reached 'a season of calm weather,' that he feels his position assured and can forget asperities and set forth the truths of the gospel which he has attained through many a struggle, as if there were no doubt about them now. He wishes the Christians at Rome to understand clearly where he stands, and we have the same arguments as in Gal. and Cor., varied with new arguments and with new quotations from the Jewish books, and rising at times to great power and eloquence. We have the same historical proof that God's new mode of saving men is by faith, not by works; the same definition of the place of the Law in God's dealings with man, only that in Romans we have "I, 7, that the Law does so act as to schoolmaster for Adam all died, so in Christ shall all be made alive," swells in Romans to a massive section, chs. 5 and 6 showing how much more to be expected it is that grace and forgiveness should increase than that sin and condemnation should; and the action of the Spirit in the inner Christian life, touched on in all the earlier Epistles, is the main theme of Ro 8. The blessedness of the Christian salvation is movingly set forth, both in ch. 6 and in ch. 8, each of which forms the climax of a profound ascending argument; and the triumph of the Christian over all the unseen powers which rule over this world and threaten to crush them sums up all that the earlier letters contain as to those shadowy foes of human welfare.

With ch. 9 the Apostle enters on a theme comparatively new, how the unbelief of the Jews in the Christian gospel is to be accounted for and reconciled with the divine promises. Various solutions are propounded to this dark riddle, the obvious one that the believing Gentiles are now to be regarded as the seed of Abraham, whom God has preferred to the Jews, and the harsh one that God is entitled to have mercy on whom He will, as the potter has power over the clay. The Apostle's argument is that the unbelief of Israel is brought about by an act of God and has a definite intention—viz. that, while the Jews thus hold back, the fullness of the Gentiles may enter. When this has happened, then the salvation of Israel will take place. The object of their being shut up into unbelief is that God may have mercy on all, and the whole discussion closes with a great doxology to God for His unsearchable wisdom. Chs. 12-14 are the practical working out of the principles stated in ch. 6, that the Christian is not to continue in sin, but to yield his members instruments of righteousness for sanctification. A fuller catalogue of Christian duties is given than Paul has hitherto attempted; the duty to the State is not forgotten, nor the proper limits to be placed on social enjoyment, while the rules for the use of indifferent things and as to the regard to be paid to the weak brother in one's attitude towards them, are to the same effect as in 1 Co 8. The last chapters of Romans have already been spoken of.

21. Arrest and imprisonment.—The rest of the

story of Paul, after the writing of Romans, is to be found in Ac 20³⁻²⁸. The plot on the part of the Jews which made Paul alter the route of his journey eastward was probably to have him assassinated on a vessel carrying pilgrims for Jerusalem, or on another ship on which he was likely to travel. The route through Macedonia avoided that danger; the party appear to have chartered a vessel for themselves for the coasting voyage to Patara or Myra. The narrative appears trustworthy for its facts, to the end of the book. The speeches are skilfully conceived for the various situations; the views of the writer appear in the repeated assertion of the Apostle that his preaching the Resurrection was the cause of his persecution by the Jews (23⁶ 26⁷), which does not agree with 21²¹. The Gentiles who were his fellow-travellers no doubt wondered to see him defray the considerable expense of a sacrifice for the four men with a vow, which both showed him now to be in easy circumstances and proved him still a Jew in spite of all that he had said against the Law, and minded to do more rather than less than the Law required of the faithful child of Abraham. The charitable mission which brought him to Jerusalem is mentioned only once in a late speech (24¹⁷); it did nothing to placate the Jews, as he had prayed that it might (Ro 15³¹); they plotted again and again to kill him, and forced him to regard the Roman magistrates with whom he came in contact as his true defenders and the powerful guarantee of the growth of the infant religion. The account of the trials before Felix and Festus is said by Mommson to be, in spite of editorial touches, quite in accordance with Roman legal form, and he says that in this report alone is a case of appeal to the emperor placed before us in living reality. In the story of the voyage and shipwreck the Apostle appears as a skilled navigator and a man of sufficient courage to continue to hope for himself in a desperate predicament, and to sustain the spirits of the whole ship's company. When he reaches Italy, the brethren are ready to welcome him, though we hear nothing of the great Epistle of three years before; and the fact of his imprisonment is stated. But, before the statement on this subject is concluded, Paul's attitude towards the Jews, as it has been repeatedly declared in Acts, is finally made plain. Two interviews take place with the leading Jews at Rome, the soldier to whom he was chained standing by Paul's side; and the negotiations are summed up by him in the words of Isaiah (6⁹), in which the hardening and the rejection of Israel are prophesied. The gospel is for the Gentiles; they will hear it. Acts concludes with the statement, which may be implicitly believed, that Paul remained two complete years in his own lodging or inn, and that all had free access to him. The editor sums up the subject of the preaching of this period in his own way (cf. 1³ 19³ 20²⁵). What happened at the end of these two years we are not told. The persecution of Nero was in A.D. 64, and Paul may have fallen a victim to it. Those who ascribe to Paul some of the later and shorter Epistles know what he was doing in this period, and see him at a later time escaped from Rome and carrying on a renewed missionary activity. It seems certain at least that the author of Acts knew no sequel to the statement with which he closes his book.

22. Genuineness of remaining Epistles.—In the silence of Acts as to the subsequent fortunes of Paul we are left to gather what we can from the remaining Epistles which bear his name, viz. Philippians, Colossians, Ephesians, Philemon, 1 and 2 Timothy, and Titus. But, before they can be used as evidence, the preliminary question of their genuineness has to be settled. It is outside

the scope of this article to discuss in detail the critical questions involved; but it may be said in general that a place can be found in the known life of the Apostle for the first four. They are all Epistles of the Captivity, and, while it is possible to assign them to the Cæsarean imprisonment, during which Paul cannot be supposed to have been altogether idle with his pen, they may with greater probability be referred to the two years' imprisonment at Rome (Ac 28^{30f.}). Of these, Philippians and Philemon are all but universally accepted; Colossians by a considerable number; Ephesians by fewer. The Pastoral Epistles to Timothy and Titus are in a different category; they fall outside the period covered by Acts; they presuppose Paul's release from the Roman imprisonment, and, at least in their present form, are to be regarded as having least claim to be the work of the Apostle.¹

23. *Epistles of the Captivity.*—The situation implied in these Epistles is consistent with that described in Ac 28^{30f.}. Paul is a prisoner, but not entirely cut off from intercourse with the outside world. His friends have liberty of access to him; they can visit him; they bring reports and early letters. Names already known to us from Acts recur in the salutations (Aristarchus, who is a 'fellow-prisoner,' Luke, Mark, Timothy, Tychicus); others are new (Jesus Justus, Demas, Onesimus). Paul in prison has still the care of the churches; his authority is recognized even in places that he has not visited.

(a) *The Epistle to the Philippians* is included in the former part of this article (§ 19), where the reasons are given for placing it in the earlier imprisonment at Cæsarea. The reasons, however, are not conclusive. Granting that doctrinally Philippians stands nearer to Romans than to Colossians, it does not follow that the three Epistles stand to each other in the same relative position as regards date of composition. The circumstances of Colosse were peculiar; the heresy which made its appearance there did not touch Philippi; the two churches were far apart, and the absence of doctrinal similarity need occasion no difficulty. The references in Ph 1¹³ 4²² are most naturally understood of Rome. Philippians is written in a tranquil spirit. The Apostle is already reconciled to the irksome interruption of his missionary activity and recognizes that there are compensations (1¹²⁻¹⁸). He has not given up hope of being released, but he is prepared for death (1²⁰⁻²⁵).

(b) *Epistles to Philemon and Colossians.*—The Epistles to Philemon and to the Colossians are very closely connected. The situation is the same; the greetings are from the same persons; and the two Epistles are linked together by the statement in Col 4⁹ that Onesimus, who is the subject of the letter to Philemon, is being sent to Colosse in the company of Tychicus, who is the bearer of the Colossian Epistle.

Philemon is a charming little private letter to a Christian at Colosse, pleading with him to receive kindly his slave Onesimus, who, after running away from his master, had in some way come under Paul's influence at Rome and had embraced the Christian faith. The Epistle contains no specific statement of doctrine; its value lies in the sidelight which it casts on the Apostle's personality and the bearing of Christianity on the social conditions of the time. Slavery is not condemned; Onesimus is sent back to his master; but the new spirit of Christian brotherhood (v. 16) has already

gone far to change the relationship of master and slave, and to prepare the way at least for a social order in which slavery will be impossible (v. 21). As in Philippians, Paul expresses a hope that he will be released (v. 22).

The Epistle to the Colossians, like that to the Romans, is addressed to a church that was not founded by Paul, though individuals in it may have owed their conversion to him. He knows the Colossian church only by report (1⁴), but he is greatly interested in it; he has friends with him in his captivity belonging to that part of Asia, of whom Epaphras is one (4¹²); and he has friends there to whom he can send greetings. He also knows of the church at Laodicea, and has written a letter to it which he wishes the Colossians to read in exchange for the one he is sending to them.¹ The occasion of his writing to the church at Colosse is the appearance there of a new form of teaching which Paul recognizes to be subversive of the sovereignty of Christ and His sufficiency as Saviour. It is not defined, but seems to have been of a semi-Gnostic character, having its roots in the popular religions of Phrygia, but exhibiting Jewish elements also (2^{11, 16}). At an earlier period Paul appears to have had a presentiment of the danger to which the churches in Asia were exposed from this quarter (Ac 20¹⁷⁻²³), and recent report has confirmed his fears. The worst feature of the new doctrine is the worship of the *στοιχία τοῦ κόσμου*, best understood as cosmic angels, occupying the position of intermediaries between the supreme deity and humanity, and presented in a mystery. Paul's way of dealing with this heresy is to exalt Christ to the utmost, above all 'thrones, dominions, principalities and powers' (Col 1^{16f.} 2^{10, 15}), as the Head of creation, containing in Himself the whole fullness of God and all the treasures of wisdom and knowledge, and as having by His Cross brought a sufficient and universal reconciliation of all things in heaven and in earth. To the mystery into which the false teachers would initiate the Colossian Christians by their philosophy and ascetic practices Paul opposes the true mystery of Christ (1^{26f.}), into union with whom they have been brought, in whom they are already complete, and by whom they are delivered from moral evil. Throughout the Epistle characteristically Pauline doctrine is repeated. Christ has made peace through the blood of His Cross (1²⁰ 2¹⁴); Christians are buried with Him in baptism, and also rise with Him, and will appear with Him in glory (2¹² 3^{1, 3f.}); the true circumcision is that not made with hands (2¹¹); and there is neither Greek nor Jew in Him (3¹¹).

(c) *Epistle to the Ephesians.*—When the genuineness of Colossians is accepted, it becomes difficult not to accept that of the kindred Epistle to the Ephesians. The two are connected by the identity of much of the matter. The order of presentation is not the same, but most of the phrases used in Colossians are to be found also in the other Epistle, and the phenomena of likeness and difference can be accounted for on the supposition that the two Epistles were written about the same time, when the Apostle's mind was full of the same ideas. Ephesians does not, however, reflect so clear a situation as Colossians; there is less to lay hold of; and the name of Tychicus is the only one mentioned alongside that of Paul. It is certainly a difficulty that, in writing to a church with which Paul had so long and so familiar intercourse, there should be an entire absence of reminiscence and personal greetings, and that the whole Epistle should be written in a manner so impersonal and detached. The expressions, 'I heard of your

¹ The Pauline authorship of the Epistle to the Hebrews, disputed from early times, is now for the most part abandoned. It has been ascribed in turn to each of the great figures associated in Acts with Paul or Timothy (He 13²³), to Luke, Barnabas, Silas, Apollos, and Priscilla; but the truth of the question still remains where Origen left it, as being known to God alone.

¹ The Laodicean letter has not been preserved; the so-called 'ad Laodiceenses' is a later forgery.

faith' (1¹⁵), 'if ye have heard of the dispensation given unto me' (3²), sound strange on the lips of one who has spent such a long time at Ephesus. This difficulty is lessened if the supposition is accepted that Ephesians is a general Epistle intended to be circulated among a number of churches of which Ephesus was one—a supposition supported by the omission of the words ἐν Ἐφέσῳ by the best textual authorities. Was the Epistle to the Laodiceans (Col 4¹⁶) another copy of the same letter? The theory of a circular letter does not remove all the objections based on the style; and the references to 'the holy apostles and prophets' (3⁵; cf. 2²⁰) look like the 'water-marks of a later age' (J. Moffatt, *Introd. to Lit. of NT*, p. 386). Ephesians, unlike Colossians, does not directly combat false teaching; but stress is laid on the exaltation of Christ and His superiority to all other spiritual beings. The great theme is the union in Christ of Jew and Gentile (1¹⁰, 24-25, 32-12).

24. The Pastoral Epistles.—While it is possible to find a place for the Epistles of the Captivity within the two years of the Roman imprisonment (Ac 28³⁰), it is otherwise in the case of the Pastoral Epistles. They form a closely connected group, marked off from all the rest by differences of language, aim, and historical situation. It is impossible to believe that they were composed during the time that Paul was writing the other Epistles; they must at least be later than all the rest, and, if genuine, they presuppose Paul's release and subsequent missionary activity. 1 Tim. implies that Paul has been at Ephesus, where he has left Timothy, himself proceeding to Macedonia (1³), and he has hopes of returning to Ephesus (3¹⁴ 4¹³). According to 2 Tim., Paul has been at Troas, Corinth, and Miletus (4¹³ 20). At present he is a prisoner (1¹⁶ 18), and apparently at Rome (1¹⁷). He has made a 'first defence' (4¹⁶). He has none of his friends beside him save Luke (4¹¹), though others are associated with him in sending greetings (4²¹). Some have forsaken him (1¹⁵ 4¹¹), others have been sent by him on various missions (4¹⁰ 12). Timothy is urged to come to him before winter and to bring Mark (4⁹ 11, 21). The Epistle to Titus implies that Paul has been in Crete and has left Titus there to regulate church affairs. The letter is carried apparently by Zenas and Apollos, who are travelling to Crete and beyond (3¹³); and Paul asks Titus to meet him at Nicopolis, where he intends to pass the winter, as soon as he can send either Artemas or Tychicus to relieve him. Attempts have been made to fit these historical notices into the known life of Paul, but unsuccessfully, and this quite apart from the difficulties connected with the marked divergencies of language and doctrine exhibited by the Pastorals as compared with the earlier Epistles. Accordingly, the defenders of the Pauline authorship are obliged to postulate for the Apostle a period of freedom after the Roman imprisonment, during which he visited Ephesus, Macedonia, Epirus, and Crete, followed by a second imprisonment and martyrdom. The evidence for this, apart from that of the Pastorals such as it is, is very scanty. Clement of Rome, in a highly rhetorical passage, after saying that Paul suffered bonds seven times, says that, "having taught the whole world righteousness, and having gone to the limit of the West (ἐπὶ τὸ τέλος τῆς οὐσῶς), and having borne witness before rulers (μαρτυρήσας ἐπὶ τῶν ἡγουμένων), thus was he released from the world and went to the holy place."¹ The 'limit of the West' may mean either Rome or Spain, according to the standpoint of the speaker; but the way in which the arrival in the West and the μαρτυρία are connected with his release from the world suggests one locality for all

three events, viz. Rome. The Muratorian Canon speaks of Paul 'setting out from the city to Spain'; but there is nowhere else any mention of such a journey, or any evidence that the hope expressed in Ro 15²⁴ was ever fulfilled. To the statements of the romancing *Acts of Peter and Paul* no importance can be attached.

25. The martyrdom of Paul.—It has been urged that the abrupt ending of the book of Acts implies that Paul was released at the end of the two years. But, if that was the case, it is strange that the writer did not, even in a few sentences, add what would have been a fine climax for his book and a strong apology for Christianity in the Roman empire, viz. Paul's triumph over his adversaries in Rome. If Luke knew of Paul's further activity, his silence remains a mystery. There is no reason to believe that he meant to write a third book for Theophilus.

The close of Paul's life, therefore, like its beginning, is enveloped in obscurity. That he suffered martyrdom at Rome there can be no doubt. That it was by beheading, and that the place of execution was three miles outside the city on the Ostian Way, is the consistent tradition of the Roman Church. The date will lie between A.D. 64 and 67, most probably nearer the former than the latter limit.

LITERATURE.—Full bibliographies are given in *HDB*, *DCG*, *DAC*, *EBI*, *PRE³*, and other Biblical dictionaries and encyclopaedias. The following is a selection from earlier works that are still worth consulting, with a somewhat fuller list of more recent books (see also the bibliographies in the NT Introductions and in the commentaries on the separate Epistles):

i. *LIFE AND WORK*.—A. Neander, *Hist. of the Planting and Training of the Church*, Eng. tr., 2 vols., London, 1851; F. C. Baur, *Paulus*, 2 vols., Leipzig, 1866-67, Eng. tr., London, 1873-75; M. Krenkel, *Paulus der Apostel der Heiden*, Leipzig, 1869; E. Renan, *Saint Paul* (forming vol. iii. of *Hist. des origines du Christianisme*), Paris, 1869, Eng. tr., London, 1869; T. Lewin, *The Life and Epistles of St. Paul*, 2 vols., London, 1890; W. J. Conybeare and J. S. Howson, *Life and Epistles of St. Paul*, 2 vols., new ed., do. 1877; F. W. ALLAN MENZIES.

WILLIAM EDIE.

PAULICIANS.—The Paulicians, of whom Gibbon says that they shook the East and enlightened the West,¹ were an anti-Catholic sect which originated in the 7th cent. (possibly earlier), experienced many alternations of imperial favour and ruthless persecution, remained influential till the 12th cent., and is not without descendants in Eastern Europe to-day. Making its appearance first on the eastern borders of the empire, and having its natural home in Armenia, Mesopotamia, and N. Syria, it spread, partly through propaganda and partly through the transplantation of its votaries, westwards through Asia Minor, then into Eastern Europe to establish new centres in the Balkan Peninsula. The specific opinions which have been ascribed to it include a dualistic conception of the world, if not of the origin, of the Person of Christ, a vehement and stubborn rejection of Mariolatry and the worship of saints and images, a similar rejection of sacramental symbolism, and a special emphasis on adult baptism as the only valid form. The basis of these opinions is found in a concentration on Scripture as the sole and sufficient authority to the exclusion of tradition and the 'teaching of the Church.' In view of these commonly accepted characteristics of Paulicianism, both its history and its tenets have naturally been subjects of heated controversy. The Paulicians have been celebrated uncritically as early Protestants against 'Catholic' abuses, or they have been condemned unheard as deadly heretics. A just and critical estimate will be arrived at only when all such presuppositions have been laid aside, and when to the Greek sources, on which alone until lately historians have relied, have been added the Armenian, and, further, when the literary relations between the Greek sources have been thoroughly sifted and established.

i. **Sources.**—It cannot be said that this task has yet been accomplished, but it is plain that considerable caution must be used in handling those sources from which most information as to the early history of the sect has hitherto been drawn. These are Photius, in his four books *Against the Manichæans*, and what purports to be his contemporary, Petrus Siculus, *History of*

the Manichæans. As to the first, C. Krumbacher¹ notes that his work presents a problem not yet fully solved. The second book of this work, in which Manichæan and Paulician doctrines are controverted, does not correspond to what the close of the first book would lead us to expect, and the two parts of the first book itself have no constructive relation to one another (1-9, 10-27), while they contain much repetition and not a little mutual divergence. As to Petrus Siculus, who reproduces the contents of Photius almost verbatim, Mikrttschian has shown that he is dependent upon Photius, and also that the personal narrative of a sojourn in Tephrike, which provides a setting for the argument, presents a tissue of improbabilities. 'Petrus Siculus' is, in fact, a tract against Paulicians, written at a time when they were already active in Bulgaria, thrown into the form of a pseudo-historical writing—a fact which is not obscurely suggested in the opening words.² But Photius is not itself original, for it is pretty clear that the document bearing the name of Petrus Hegumenus, which was edited by Gieseler in 1849, is not, as Gieseler supposed, a copy from Photius or Siculus, but, as Mikrttschian has shown (p. 9 f.), the source from which both Photius and Siculus and also Georgius Monachus have drawn their information. The situation was further complicated, or possibly simplified, through the publication in 1896 of a document which is incorporated in the MS of Georgius Monachus in the Library of the Escorial, and probably represents the earliest source of the material common to all the foregoing; it adds to the common material one important paragraph, and also a fully detailed method of confuting the Paulicians which throws further light upon their views. This document (*Codex Scorialensis*), with the valuable commentary of its editor, J. Friedrich, must in future take the first place among the Greek authorities.

The Armenian sources, with one possible exception, proceed, as do the Greek, from hostile writers who are more anxious to overwhelm their Paulician opponents than to give an account either of their opinions or of their history. The possible exception is *The Key of Truth*, which was discovered by F. C. Conybeare, translated from the Armenian, and edited by him in 1898, with an exhaustive introduction and valuable appendices.³

The Key of Truth, now preserved in the archives of the Holy Synod at Eichmadsin, was found in 1897 in the possession of a group of 'Paulician' or 'new Manichæan' families in the Russian Caucasus. It bears a subscription to the effect that it was 'written' in 1782, meaning, according to Conybeare, that it was copied then, the work itself being of much older date, belonging indeed (apart from the catechism at the end, which is later) to the 10th cent., and probably incorporating material that is considerably older still. It is a manual of 'Thondrakian' or Paulician teaching and practice, mutilated unfortunately by the removal of almost a quarter of its leaves, and these among the most important, as they must have contained the Paulician criticism of Catholic doctrine and practice, and probably also an exposition of Paulician Christology. Conybeare, in his introduction, exhibits 'the detailed agreement of *The Key of Truth* on the one hand with the Armenian writers of the tenth and eleventh centuries, and on the other hand with the Greek notices of an earlier date,' and he concludes that this is 'proof enough that in it we have recovered an early and authoritative exposition of Paulician tenets' (p. xlv). It is no valid objection to this position (though one of Conybeare's critics has called it 'the clearest sign' of a late date) that the writer shows 'entire dependence upon the New Testament both for his doctrines and for his representation of what he calls the Universal and Apostolic Church.'⁴ For it is plain from the Greek authori-

2970, 2971, 2972, 2973, 2974, 2975, 2976, 2977, 2978, 2979, 2980, 2981, 2982, 2983, 2984, 2985, 2986, 2987, 2988, 2989, 2990, 2991, 2992, 2993, 2994, 2995, 2996, 2997, 2998, 2999, 3000, 3001, 3002, 3003, 3004, 3005, 3006, 3007, 3008, 3009, 3010, 3011, 3012, 3013, 3014, 3015, 3016, 3017, 3018, 3019, 3020, 3021, 3022, 3023, 3024, 3025, 3026, 3027, 3028, 3029, 3030, 3031, 3032, 3033, 3034, 3035, 3036, 3037, 3038, 3039, 3040, 3041, 3042, 3043, 3044, 3045, 3046, 3047, 3048, 3049, 3050, 3051, 3052, 3053, 3054, 3055, 3056, 3057, 3058, 3059, 3060, 3061, 3062, 3063, 3064, 3065, 3066, 3067, 3068, 3069, 3070, 3071, 3072, 3073, 3074, 3075, 3076, 3077, 3078, 3079, 3080, 3081, 3082, 3083, 3084, 3085, 3086, 3087, 3088, 3089, 3090, 3091, 3092, 3093, 3094, 3095, 3096, 3097, 3098, 3099, 3100, 3101, 3102, 3103, 3104, 3105, 3106, 3107, 3108, 3109, 3110, 3111, 3112, 3113, 3114, 3115, 3116, 3117, 3118, 3119, 3120, 3121, 3122, 3123, 3124, 3125, 3126, 3127, 3128, 3129, 3130, 3131, 3132, 3133, 3134, 3135, 3136, 3137, 3138, 3139, 3140, 3141, 3142, 3143, 3144, 3145, 3146, 3147, 3148, 3149, 3150, 3151, 3152, 3153, 3154, 3155, 3156, 3157, 3158, 3159, 3160, 3161, 3162, 3163, 3164, 3165, 3166, 3167, 3168, 3169, 3170, 3171, 3172, 3173, 3174, 3175, 3176, 3177, 3178, 3179, 3180, 3181, 3182, 3183, 3184, 3185, 3186, 3187, 3188, 3189, 3190, 3191, 3192, 3193, 3194, 3195, 3196, 3197, 3198, 3199, 3200, 3201, 3202, 3203, 3204, 3205, 3206, 3207, 3208, 3209, 3210, 3211, 3212, 3213, 3214, 3215, 3216, 3217, 3218, 3219, 3220, 3221, 3222, 3223, 3224, 3225, 3226, 3227, 3228, 3229, 3230, 3231, 3232, 3233, 3234, 3235, 3236, 3237, 3238, 3239, 3240, 3241, 3242, 3243, 3244, 3245, 3246, 3247, 3248, 3249, 3250, 3251, 3252, 3253, 3254, 3255, 3256, 3257, 3258, 3259, 3260, 3261, 3262, 3263, 3264, 3265, 3266, 3267, 3268, 3269, 3270, 3271, 3272, 3273, 3274, 3275, 3276, 3277, 3278, 3279, 3280, 3281, 3282, 3283, 3284, 3285, 3286, 3287, 3288, 3289, 3290, 3291, 3292, 3293, 3294, 3295, 3296, 3297, 3298, 3299, 3300, 3301, 3302, 3303, 3304, 3305, 3306, 3307, 3308, 3309, 3310, 3311, 3312, 3313, 3314, 3315, 3316, 3317, 3318, 3319, 3320, 3321, 3322, 3323, 3324, 3325, 3326, 3327, 3328, 3329, 3330, 3331, 3332, 3333, 3334, 3335, 3336, 3337, 3338, 3339, 3340, 3341, 3342, 3343, 3344, 3345, 3346, 3347, 3348, 3349, 3350, 3351, 3352, 3353, 3354, 3355, 3356, 3357, 3358, 3359, 3360, 3361, 3362, 3363, 3364, 3365, 3366, 3367, 3368, 3369, 3370, 3371, 3372, 3373, 3374, 3375, 3376, 3377, 3378, 3379, 3380, 3381, 3382, 3383, 3384, 3385, 3386, 3387, 3388, 3389, 3390, 3391, 3392, 3393, 3394, 3395, 3396, 3397, 3398, 3399, 3400, 3401, 3402, 3403, 3404, 3405, 3406, 3407, 3408, 3409, 3410, 3411, 3412, 3413, 3414, 3415, 3416, 3417, 3418, 3419, 3420, 3421, 3422, 3423, 3424, 3425, 3426, 3427, 3428, 3429, 3430, 3431, 3432, 3433, 3434, 3435, 3436, 3437, 3438, 3439, 3440, 3441, 3442, 3443, 3444, 3445, 3446, 3447, 3448, 3449, 3450, 3451, 3452, 3453, 3454, 3455, 3456, 3457, 3458, 3459,

ties¹ that precisely this sole dependence on the NT was recognized as a characteristic of the Paulicians. Conybeare conjectures that the author may have been Smbat (i.e. Sindbad) Bagratuni, the founder of one of the Armenian dynasties and one of the creative forces of the Paulician Church.

2. Doctrine.—The Greek authorities from *Cod. Scor.* downwards are practically unanimous in classifying the Paulicians as 'Manichæans,' and the description has generally been accepted by historians. It is, however, very doubtful whether the classification is not at least misleading. Controversialists of the 7th and following centuries were only too ready to use the term 'Manichæan,' quite uncritically as an opprobrious description of almost any sect which deviated from orthodoxy. Photius, e.g., charges the Western Church with practical surrender to Manichæism because of its doctrine of the double procession of the Spirit, and the Bulgarian bishop Clement on the same ground charges the Westerns roundly with the same heresy.² There is no doubt that the term was loosely applied to cover various gradations of dualistic theory ranging from a dualism which is absolute and non-Christian to that which is found within the NT itself. And the Paulicians themselves neither claimed nor admitted any connexion with Mani and his teaching. On the contrary, it is plainly stated in the Greek sources that they anathematized Manes, and also 'Paul and John,' sons of a Manichæan woman, in whom the Greeks see the founders of the sect. This is confirmed by Gregory Magistros, the chief Armenian authority (in *The Key of Truth*, pp. 142, 147). The latest investigators (Mkrtschian, Friedrich, Conybeare) are disposed to set aside the elaborations of the charge of Manichæism as the natural development of a mistaken classification, and connect the Paulicians with either the Marcionites (Mkrtschian) or the Adoptianists (Conybeare), or with no well-marked earlier form of heretical teaching (Friedrich).

The presence and importance of an Adoptianist element in the Paulician system have been forcibly maintained by Conybeare on the evidence of *The Key*. But it does not depend on that alone. In that part of *Cod. Scor.* which has not been excerpted by the subsequent chroniclers (ed. Friedrich, xix.-xxii.) the Paulician view of the Incarnation is clearly indicated. According to *Scor.* xix., God out of love to men commanded an angel to go down to earth and be born of a woman, and on this angel He bestowed the title of Son. The same assertion is repeated and expanded in the instructions for controverting the heresy which follow.³ With this accords the teaching of *The Key*, where the Baptism is definitely marked as the beginning of the Sonship:

'It was then he became chief of beings heavenly and earthly, then he became the light of the world, . . . then he was filled with the Godhead' (p. 75).

Everything of importance that is authoritatively reported by the Paulicians grows naturally out of this Christology, the rejection of the worship of the Virgin with the denial that she was θεοτόκος (*Scor.* vii. 15), the keeping of a feast of the Baptism, followed by a forty days' fast, the insistence on adult baptism as the only valid form of the rite ('church and church ordinances they utterly reject—its baptism,' etc. [Aristaces, *ap.* Conybeare, p. 140]), and the equating of the 'elect' with Christ according to the formula of the Spanish Adoptianists, 'Et ille Christus et nos Christi.' They were further said to 'blaspheme both the Eucharist and the Cross,' but it would appear that they gave a spiritual interpretation to both, finding the

Eucharist in the words of Christ and the Cross in Christ Himself (*Scor.* viii. 1). This is consistent with the general principle that the function of Christ was to save men by instructing them, while the charge on which the Greek authorities dwell with horror, that the leaders of the Paulicians offered themselves for adoration as Christs, probably arose from a misunderstood exaggeration of the sanctity of the πνευματικοί as members of the Body of Christ. They rejected the Catholic priesthood and hierarchy, and with special emphasis image-worship and the monastic life. Their own clergy were known as συνέκδημοι (cf. *Ac* 19²⁹), and there was no distinction in dress or in habits between them and the rest of the sect (*Scor.* xiv.).

In all these matters they made their appeal exclusively to Scripture, which they were in the habit of describing as τὸ εὐαγγέλιον καὶ ὁ ἀπόστολος. Interpreting this to refer to the Gospel of Luke and the Epistles of Paul alone, Mkrtschian (taking up a suggestion made by Gibbon and by Ncander) finds in it a proof that the Paulicians derived from the Marcionites. But Friedrich has shown (pp. 93-98) that there is no good ground for so limiting the Paulician canon (though they probably rejected the Epistles of Peter¹ and the Acts of the Apostles), and that Paulicianism has nothing in common with Marcionism beyond a general emphasis on dualism. With all these material divergences from orthodox faith and practice, the Paulicians claimed to be the true Catholic Church, 'holy, universal and apostolic,' emphasizing therein the internal quality against institutional continuity.²

3. History.—The earliest extant reference to the Paulicians by name occurs in A.D. 719, when John of Oztun, catholicos of Armenia, warns the orthodox against mixing with the sect 'of obscene men who are called Paulicians' (Conybeare, p. 152; Mkrtschian, p. 62). The name itself is commonly understood to point to some connexion, real or alleged, between the sect and some Paul, who was influential either in its founding or in its reformation. And this eponymous Paul has been variously identified with the apostle Paul (so pseudo-Photius, *PG* cii. 109), with an unknown Paul, belonging to Samosata, brother of John, who, according to the first paragraph of *Cod. Scor.*, learnt the Manichæan heresy from his mother Callinike, and propagated it in Armenia, and finally with Paul of Samosata himself, as was asserted by Gregory Magistros:

'Here then you see the Paulicians, who got their poison from Paul of Samosata.'

The last is the filiation which has commanded itself to Conybeare (*Key*, p. cv). But the report of the Paulician view itself given in *Cod. Scor.* ii. is probably to be preferred to the theory advanced in section i., viz. that the founder of the sect was Constantine Silvanus.³ The form of the word 'Paulician,' as Mkrtschian has pointed out (p. 63), indicates a name not claimed by the sect but imposed upon them by their opponents, the suffix -ic or -ik in Armenian having the force of a depreciatory diminutive. It is probable that, in the absence of any specific name, this was bestowed upon them either because of an assumed connexion between their teaching and that of Paul of Samosata or because, as *Cod. Scor.* infers, the name of the apostle was constantly on their lips.⁴ The same authority states definitely that they repudi-

¹ On the question of the Paulician attitude to Peter there is discrepancy between *Cod. Scor.* (ed. Friedrich, p. 78: ὁ σοὶ τὴ μαρτὶ ἀποτρίβεις Πέτρος) and *The Key* (pp. 92, 93; cf. cxxx).

² *The Key*, pp. 73, 80, 87, etc.; Greg. Mag., *ap.* Conybeare, p. 147; cf. Verses (c. 1160) (ib. p. 155): 'dicentes, Ecclesia non est illa, quae ab hominibus aedificata est, sed nos tantum.'

³ *Cod. Scor.* ii.: τοῦτον οὖν ἔχουσιν ἀρχηγὸν τῶν διδασκάλων αὐτῶν, οὐχὶ τὸν Παῦλον. οὗτος γὰρ αὐτοῖς παρέδωκε τὰς αἰρέσεις αὐτοῦ.

⁴ *Id.* xx.: ὁ ἀπόστολος Παῦλος ὃν ἐπὶ στόματος φέρεις.

¹ E.g., *Cod. Scor.* ii.: μὴ δεῖν ἑτέραν βίβλον τὴν οἰανοῦν ἀναγνώσκειν εἰ μὴ τὸ εὐαγγέλιον καὶ τὸν ἀπόστολον.

² Photius, *de S. Spir.* *Mystagogia* (p. 92); Clement, ed. F. Miklosich, p. 13, *ap.* Friedrich, p. 92.

³ *Cod. Scor.*, ed. Friedrich, p. 76: εἶτα φῆς ὡς ἐπὶ τοῦ Ὀκταβίου Καίσαρος . . . γενέσθαι χάριτι ἢ ἀμοιβῇ τῶν πόρων καὶ τοῦ τελέσαι τὴν ἐντολὴν τὸν Χριστὸν υἱὸν τοῦ θεοῦ.

ated Paul, the son of Callinike, together with John his brother and Manes (iii.).

This Constantine, for whom a probable date is c. 640 (though Friedrich, p. 111, puts it two centuries earlier), left no writings of his own, but sought to concentrate attention on 'the gospel and the apostle,' maintaining that men ought not to read any other book whatever besides these (*Cod. Scor.* ii.). His propaganda met with success among 'the Armenians' (*ib.* i.), where the township of Phanarea-Episparris became the headquarters of the sect. The Greek authorities record the names of six leaders who succeeded him, each of whom adopted the name of one of St. Paul's companions, and also the names of the centres where they established churches (Cibossa, Mananalis, Argæum, Mopsuestia, and Cynochoritzæ), to each of which they gave the name of a Pauline field of labour. The outline which is given by the Escorial document may be supplemented from such later writers as pseudo-Photius and Petrus Siculus. According to these, Constantine Silvannus, after twenty-seven years of leadership, was stoned to death by order of an envoy sent by the emperor Constantine Pogonatus (668-685). The like fate, however, befell the persecutor, who, having been converted, succeeded his victim in the leadership of the sect. The sons of Paul, who followed, strove for the succession, and one of them, Gegnesius, summoned to Constantinople, was able to give an account of his views that satisfied the patriarch. Under Baanes the sect suffered through a lowering of the moral standard, but it was restored under Sergius Tycheus, whose labours, extending over thirty years, qualified him to be regarded as the reformer or even second founder of the Paulicians. Quotations from his Epistles are found in Petrus Siculus.

'I have run from East to West, and from North to South, preaching the Gospel of Christ until my knees were weary' (p. 36).

The charge specially levelled against Sergius is that of inordinate exaltation of himself, as 'the porter, and the good shepherd and the leader of the body of Christ, and the light of the house of God,' to the point of identifying himself with the Holy Spirit and offering himself to be worshipped. But even his opponents admitted the purity of his character and the sincerity of his beneficence (*ib.* p. 44), and the charge, like others of a similar character, may have grown out of a misunderstanding of an emphasized doctrine of the Church as the Body of Christ.

Probably under the influence of Sergius, the Paulicians increased greatly in numbers and importance. They were found chiefly among the hardy mountain peoples of the Taurus, and, alike as defenders of the empire and as objects of imperial persecution, they showed the greatest stubbornness and courage. By one emperor (Constantine Copronymus [741-775], himself probably a Paulician) they were protected and invited to settle in Thrace; by Nicephorus (802-811) they were employed in the protection of the empire on its eastern frontier; by Michael and Leo v. they were ruthlessly persecuted. But the Paulicians were too numerous, too warlike, and too well-organized to be dragged into orthodoxy. They resisted, revolted, and even retaliated by raiding Asia Minor from their mountain fastnesses. After twenty years of comparative tranquillity they were exposed to still more violent persecution under Theodora (842-857), which under Basil developed into a war of extermination (see Krumpholtz, p. 1075). The Paulicians were driven into the arms of the Saracens, and with some assistance from them, under the leadership of an able ruler Chrysocheir, they not only successfully resisted the imperial forces, but forced them back and pillaged Asia Minor up to its western shores.

Their success, however, was shortlived. Chrysocheir was defeated and murdered; his chief stronghold, Tephrike, was taken and destroyed; his followers were decimated and dispersed.

Though their political organization thus came to an end, the Paulicians continued to exist in scattered communities in Armenia, in Asia Minor, and especially in the Balkan Peninsula, to which considerable bodies of them had been transplanted. In Armenia they again experienced revival and expansion under Smbat (middle of 9th cent.), who, according to Conybeare, may have been the author of *The Key of Truth*. From the town of Thondrak, where he had his headquarters, his followers received the name of 'Thondrakians.' Another branch from the same root is probably to be found in the sect known as 'Athingani' referred to by Theophanes (*Chronographia*, 413), and yet another in the 'Selikians.' The biographer of the patriarch Methodius claims for him the credit of having converted to orthodoxy one Selix and his followers, who held 'Manichean' opinions—opinions which in detail correspond with those charged against the Paulicians in *Cod. Scor.*¹

A second deportation of Paulicians on a large scale from Armenia to Thrace was carried out by John Tzimiskes (970), and, while the Latin writers found the sect in Syria in the 11th cent., Lady Mary Wortley Montagu found them in the neighbourhood of Philippopolis in the 18th. In Europe they developed into or amalgamated with the Bogomils (*q.v.*), and their views and influence were propagated throughout the Middle Ages by various anti-Catholic sects—*e.g.*, Cathari, Albigenses—whose filiation with the Paulicians is probable though difficult to trace. Their name, like 'Manichean,' became in turn a generic description for any of these movements which opposed the dogmas of Catholic hierarchy and doctrine. This makes it impossible to decide whether the 'Pipiles,' the 'Piphles' of Flanders, or the 'Pipiles' who were condemned and branded at Oxford in 1160 (because 'they detested Holy Baptism, the Eucharist and marriage')² were directly descended from the Paulicians or bore their name as a term of reproach.

The Paulicians are best understood as a section in that continuous stream of anti-Catholic and anti-hierarchical thought and life which runs parallel with the stream of 'orthodox' doctrine and organization of the Church.³

sisted on three sacraments and three only, viz. repentance, baptism, and the Body and Blood of Christ; declared infant baptism invalid, laying great stress on the necessity of following the example of Christ in being baptized at the age of thirty; denied the perpetual virginity of Mary; and rejected the doctrines of Purgatory and the intercession of saints, and the use of pictures, crosses, and incense. In the obscure and singular teaching about the Eucharist which we find in the catechism (Conybeare, p. 124) there is probably an underlying survival of the early (? primitive) conception of the actual oneness of the Church with Christ, in consequence of which the self-offering of the Church is the equivalent or the re-presentation of the offering of Christ. They incurred the danger to which all such movements are exposed in cutting themselves off from creed and learning as well as from tradition, laying themselves open to the infection of non-Christian ideas in the atmosphere around them. The spread and the tenacity of the Paulician system were due in the first place to the racial characteristics of those who formed the nucleus of its adherents, and, further, to elements of simplicity in its teaching combined with directness in the moral demand which it made which have always made a strong appeal to the popular mind.

LITERATURE.—i. **GREEK SOURCES.**—The Escorial MS of the *Chronicon* of Georgius Monachus, fol. 164 ff., ed. J. Friedrich, in *SMA*, 1896, pp. 70-81; Photius, *adv. C. A. SCOTT.

PAUPERISM.—See POVERTY.

PAWNEE.—Strictly speaking, the Pawnee were not a single tribe but a confederacy of four minor tribes, held together by two forces: (1) belief in a common cult, and (2) a governing council in which all the minor tribes were officially represented.

1. **Name.**—The term 'Pawnee' belongs to the nickname class. It is probably derived from *pariki*, 'horn,' and referred to the manner in which the people adjusted the scalp-lock; the braid of hair was stiffened with a mixture of paint and fat so that it could be made to stand erect and be curved like a horn.

2. **Language.**—The Pawnee language belongs to the Caddoan linguistic stock, and the people call themselves *Charhiks-i-charhiks*, 'men of men.'

3. **History and organization.**—The first recorded meeting of the Pawnee with the white race was during Coronado's expedition of 1541, when it was joined by a native, who, it is now thought, was probably a Pawnee. The Spaniards jestingly named this man 'Turk.' It was he who induced the expedition to follow him out on the plains of W. Kansas in a search for gold. At that time the Pawnee were living in the vicinity of the river Platte in the present State of Nebraska. They remained in

that region until 1876, when they ceded their right of occupancy on the land to the United States Government and moved to a reservation in the northern part of the present State of Oklahoma. Later, under the Severalty Act of 1887, every Pawnee man, woman, and child was allotted an individual portion of land within the reservation, given a trust-patent, and made subject to the laws of the State. At the present time, through the influence of missionary work and changed environments, the ancient customs, vocations, and religious rites of the Pawnee are rapidly disappearing, and they will soon be forgotten.

The minor tribes of the Pawnee confederacy were organized similarly to the confederacy itself. Each tribe was made up of a number of kinship groups, or villages, each village being officially represented in the tribal council. Each village had its shrine and attendant rites in charge of a hereditary keeper.

4. Cosmological beliefs; rites and ceremonies.

—The Pawnee shared the common belief of the Plains Indians of the United States concerning nature and its relation to man, as well as the general anthropomorphic view of the dual forces of sky and earth (see PLAINS INDIANS). Among the Pawnee the latter aspect was elaborated in a peculiar manner and exercised a controlling influence on their religious beliefs expressed in their rites, vocations, and social organization.

The Skidi, one of the four minor tribes of the Pawnee confederacy, seem to have held to their ancient rites more tenaciously than the others, and to have offered greater resistance to the influence of the white race; we may use them, therefore, to show an ancient Pawnee type.

The Skidi tribe was composed of thirteen villages, each having its portable shrine ('bundle') with ceremonies consisting of ritualistic movements, recitations, and songs that referred to the sacred symbolic articles within the shrine. The shrine, it was believed, had been bestowed upon the village by a particular star, which gave its name to the shrine and became the name of the village. If the village received another name, it referred to some incident connected with the shrine or was descriptive of the place where the village was located. The villages of the Skidi were placed in a certain order: four villages formed a central group, as if placed at the corners of a great square; at the western end of an imaginary line running through the centre of the square was the village that had the shrine of the star of the west, or evening star; at the opposite end of this imaginary line was the village that had the shrine of the star of the east, or morning star. Round the six villages thus grouped were placed the other seven villages of the Skidi, each one in a position corresponding to that occupied by the star that gave the shrine to the village; consequently, to the Skidi their villages on the earth reflected the picture of their stars in the heavens.

The order and the teachings of the ceremonies connected with these shrines predicate a duality throughout nature. The heavens were divided; the east was regarded as male, the west as female, and the stars partook of the sex attributed to the region where they were. Again, the stars of the six leading villages were in pairs; the masculine star at the north-east corner of the great central square was mate to the feminine star at the south-west corner; the masculine star at the south-east corner was mate to the feminine star at the north-west corner; the feminine evening star, in the west, was the mysterious mate of the masculine morning star, in the east. Detailed explanation of this singular interlacing of the parts of the heavens and the influence thus exerted upon tribal welfare

is not necessary here. Speaking generally, the shrines and ceremonies of the four central villages pertained to tribal vocations—hunting, planting, harvesting, the installation of war-leaders, the conferring of honours on warriors. The shrine and ceremonies of the evening star and the shrine of the morning star had nothing to do with secular affairs, unless the people fell into sudden and dire distress; they dealt with cosmic forces, with man's dependence upon the supernatural for life, food, and happiness.

The ceremonies of the various shrines took place in a yearly sequence and followed a definite order, with certain changes, so that a full circuit was made every four years. The general movement of the yearly sequence was from west to east. The ceremonies of the shrine of the star of the west always led, and a part of this rite was repeated so as to form the opening of all the other ceremonies, making them, as was explained, branches of that shrine. The rites of the shrine of the star of the west were long and elaborate; in them was recounted the advent of the human race, together with the assignment of vocations; to the man belonged the duty of being the provider and the protector of the family; to the woman was shown a vision of a garden, where life-giving plants grew—"the corn was there"—this vision and its song forecasting the woman's duty to be the conservator of the life of the family. To this teaching of the obligations laid upon the sexes was added the inauguration of rites by which the people were to be continually reminded of their dependence upon Tirawa.

The time for the beginning of the yearly sequence of ceremonies was determined by a natural phenomenon. As soon as the sound of rolling thunder was heard after the 'silent sleep of winter,' the keepers of the shrines of the different villages rushed to the keeper of the shrine of the star of the west to tell him that the people were alert and ready to respond to the summons of Tirawa and to begin their ceremonial appeal to that power for protection and for the gifts of life. The rites began with the ceremonies of the shrine of the star of the west, and culminated in the ceremonies of the shrine of the star of the east, which included a human sacrifice, typifying the conjunction of the west and the east, the above and the below, thus ensuring the productivity and the perpetuation of all forms of life.

This ceremony affords the only instance of human sacrifice among the native tribes living within the limits of the United States. It bears a resemblance, in some of its details, to the sacrificial rites of the Aztecs, and it may be a trace of a former influence exercised upon the Pawnee when living in their earlier, southern home.

The victim was a captive. After being set apart for sacrifice, she was well fed and cared for, given a name, meaning 'belonging to the morning star,' and treated as sacred. Her fate was kept secret from her. At the ceremony she was led to a sort of short ladder and, while her feet rested on a rung, her ankles were tied to the upright posts by consecrated thongs, and her arms extended above her head and tied at the wrists to the posts in the same manner as her ankles. At the appointed time a priest shot the fatal arrow and the heart was cut out of the body and burned. All weapons and implements were passed through the consecrating smoke, and the ashes strewn on the fields. Thus were success and abundance secured to the people and the conservation of life everywhere.

If the other tribes of the Pawnee confederacy ever practised this rite, it had been lost as the tribes moved northward and came under other influences. The Chaui, one of the four Pawnee tribes, protested against its practice, but without avail.

In 1817 a Comanche girl was taken captive by the Skidi and dedicated to the morning star. A young Chaui warrior, named Pitalesharu, conceived the daring plan of rescuing the victim. He dashed into the midst of the assembled throng, cut the con-

secrated thongs from the hands and feet of the girl, mounted with her on his fleet horse, rode to where another horse was awaiting him, and hurried with her to her father's tribe. The Skidi were dumbfounded by the act; but, when Pitalesharu returned to his home soon after, no one challenged his deed.

The recounting of this brave action led to other attempts at rescue, not all of which were successful, but the rite has been obsolete for over eighty years.

The Pawnee sequence of ceremonies reveals how the native mind tried to explain to itself the means necessary to the perpetuation of living forms and man's duty in assuring their stability. The modern mind has become so accustomed to regard all phenomena as controlled by natural laws that the Pawnee explanation seems far-fetched and inconclusive. A thoughtful study of these ceremonies shows the working of the native mind, and opens up a broad vista in the mental history of the human race, revealing how abstract ideas struggled for expression through symbolism, and that among these efforts was the personification of those unseen forces that are ever bringing about new life and growth, with its incident changes. Our own and all other languages bear witness to this early form of expression. Following similar lines, a supposed truth was promulgated and taught through its dramatization. The realistic Pawnee drama representing the joining of the two potent forces supposed to be dominant in the west and in the east should not conceal from us the earnest and even reverent teaching, hidden beneath the repellent act of human sacrifice, that man cannot be exempt from co-operating with the order established for the benefit of all the people by Tirawa.

The Pawnee shared with other tribes living within the drainage of the Mississippi River in the observance of a religious and intertribal ceremony having for its purpose the establishment of peaceful relations between unrelated groups of people. Fragments of objects belonging to this ceremony have been found in the caves of Kentucky and in ancient burial sites, bearing witness to the antiquity of the rite and to its observance over a wide area and among tribes belonging to different linguistic stocks. J. Marquette witnessed the ceremony among an Algonquian tribe, and, when about to descend the Mississippi in 1672, he was given one of the peculiarly decorated pipes belonging to this rite by a friendly tribe, and the reverent respect shown this sacred object enabled him to journey in safety down the unknown river.

During the latter part of last century the present writer was fortunate enough to secure a complete version of this rite from an old priest of the Chaui tribe of the Pawnee confederacy, which has been published under the title 'The Hako.' The ceremony, being intertribal, was not the exclusive property of any one tribe. The writer has witnessed it among four tribes, not all of one linguistic stock. Its ritualistic songs and teaching are of a high order and touch the most advanced thought of the native race.

The rites of the Pawnee are replete with symbolism and contain much that is poetic in character and ethical in teaching. Quite distinct from these rites were the practices of the secret societies, which were concerned with occult powers, charms, and devices to work one's will on others. Some of these societies were noted for their skill in tricks by sleight of hand, performed apparently without any means for concealment.

5. Medicine.—The Pawnee were noted for their successful treatment of wounds; instances of their skill have been recorded by various travellers when passing through their country. Disease was frequently treated by herbs and other simple remedies, although the appeal to occult powers was not uncommon.

6. Ethics.—The general ethics of the Pawnee are those common to the other tribes of the Plains. Hospitality was enjoined as something never to be avoided. Literal truthfulness was inculcated and was very generally observed. Honesty was demanded and practised. Murder was severely punished. The duty of the chiefs was to preserve social order, adjust grievances, effect restitutions if property was disturbed, and secure tranquillity within the tribe. A family was accountable for the action of any of its members, and had to pay the penalty of wrongdoing and defend in case of attack. A sense of justice was observable in the tribal government and family life. Warfare was regulated according to tribal custom, and honours were won only through personal bravery; the men were apt to fight to the finish and not ask or give quarter. They were capable of friendship and generosity and practised both, but they were high-spirited and brooked no insult. The Pawnee have never been at war with the United States, and have faithfully and courageously served the United States army as scouts during periods of Indian hostilities.

ALICE C. FLETCHER.

PEACE.—In proclaiming peace as the highest good and as an actual present possibility for man, the gospel at once transcends the limits of ancient thought and fulfils the visions of the OT. For that which is a dream, a promise, an aspiration in the OT is a gift and actual possession in the religion of the NT. The ancients indulged in sentimental dreams of an age of universal peace, a *pacatus orbis*, which seemed to be brought within reach by the establishment of the empire. The *Pax Romana* was not, indeed, merely a dream of enthusiasts. It represented an ideal; it was an element in the settled policy of the imperial government, and it became a factor in the extension of Christianity. The prophets of Israel, again, had spoken of peace as a characteristic blessing of the Messianic age; but it was the gospel that first set peace before men as a blessing to be 'sought and ensued' (1 P 3¹=Ps 34⁴), and made the peaceful temper an essential feature in the Christlike character (Mt 5⁹, Mk 9⁵⁰). The 'blessing of peace' is implied in the very name of the city, 'new Jerusalem,' the establishment of which is the end of the ways of God:

'Nam et ipsius civitatis [Dei] mysticum nomen, id est Hierusalem, . . . visio pacis interpretatur' (Aug. *de Civ. Dei*, xix. 11).

The work wrought by Christ for man's redemption is summed up in the single phrase, 'He is our peace' (Eph 2¹⁴); His gospel was a 'gospel of peace' (Eph 6¹⁵); His parting gift to His disciples was peace (Jn 14²⁷); the God whom He revealed bears in the NT the characteristic title 'the God of peace' (Ro 15³³ etc.). The ultimate blessing which Christianity promises is peace (He 4⁹).¹

1. The nature of the peace proclaimed and promised by Christ.—(1) This peace is *bound up with Jesus Christ* and with the issues of His redemptive work (Jn 16³³). It is the outcome of all that He wrought and suffered for man's salvation; it is bound up with the mystery of His passion and with the glory that followed. The peace of the Christian arises from the conscious-

¹ Aquinas, *Summa*, ii. i. qu. c. art. 5. ad 2: 'Inter omnia futura beneficia . . . praeceptum et finale erat quies mentis in Deo, vel in praesenti per gratiam, vel in futuro per gloriam; quae etiam figurabatur per observantiam sabbati.'

ness that Christ has won a victory over the world and over all that mars or hinders the spiritual well-being of man (Ro 5¹).

(2) This peace is also *the gift of God* (Ro 15¹³, 2 Th 3¹⁶) and is attainable in this life ('in via,' as Aquinas says). We must, however, distinguish between that perfect peace which consists in the unhindered fruition of the chief good—the vision of God hereafter—and that imperfect state of peace which is possible in this life, i.e. a relative freedom from outward hindrances and disturbances—a relative freedom from the importunity of conflicting impulses and desires. In any case, however, the statement of Aquinas is true:

'Sine gratia gratum faciente non potest esse vera pax' (*Summa*, ii. ii. qu. xxix. art. 3).¹

(3) Peace regarded as a personal endowment, a blessing vouchsafed to the individual soul, implies a *condition of inward wholeness*, soundness, or well-being² which depends upon the acceptance of the gospel, regarded as a law of life and an explanation of the universe. A petition in the Liturgy of St. James implies that peace is synonymous with salvation:

Ἦνερ τῆς ἀνθρώπων εἰρήνης καὶ τῆς σωτηρίας τῶν ψυχῶν ἡμῶν τοῦ Κυρίου δεηθῶμεν (F. E. Brightman, *Liturgies Eastern and Western*, Oxford, 1896, p. 36).

This blessing of peace includes such elements as the following: (a) freedom from personal anxiety, care, and foreboding in respect of the future. The truth of the nearness and providence of God was set by Jesus in the very forefront of His message (Mt 6²⁵⁻³⁴, Lk 12²²⁻³²; cf. Ph 4⁶, 1 P 5⁷). In Christ the love of God was made manifest, His discriminating tenderness and watchful care for the individual, His power to control or overrule all things in furtherance of His purpose of grace (Ro 8²⁸⁻³⁵). Care is, indeed, represented by Christ as one of the great enemies of the soul, as a conspicuous sign of faithlessness, and even a cause of ruin to the soul (cf. A. Harnack, *What is Christianity?*, Eng. tr.³, 1904, p. 87 f.). (b) Deliverance from perplexity of mind—intellectual repose, the temper which St. Paul describes by the phrase 'peace in believing' (Ro 15¹³). In the light of the cross and the empty tomb of Christ the enigmas of life no longer seem insoluble, the anomalies no longer inexplicable. Christ's victory over sin and death, and the exaltation of human nature in Him to the throne of God, are a pledge that the promised destiny of man will ultimately be fulfilled (He 2¹⁶); the sorrows of humanity are not vain and purposeless; the apparent victory of evil and the failure of good causes are not final and irreversible. There is hope of redemption for the creation which 'groans and travails in pain together until now' (Ro 8²²; cf. B. F. Westcott, *Christus Consummator*, London, 1886, no. ii.). (c) The satisfaction of affection. In every age the changes and chances of human life and the instability of human affection drive man to echo Augustine's cry:

'Inquietum est cor nostrum, donec requiescat in te' (*Conf.* i. 1).

¹ 'Peace,' says Aquinas, 'implies two things: first, that we should not be disturbed by external things; second, that our desires should find rest in One' (*Summa*, ii. i. qu. lxx. art. 3).

For peace is the perfection of joy, and the supreme joy is the fruition of God. It is in this respect that the Christian conception of peace stands farthest removed from the 'tranquillity' commended by the Stoic. For peace implies, not the mere negative absence of disturbing desires and passions nor even merely the masterful control of them, but chiefly the right direction of them. The Stoic ideal was ἀραξία or ἀράθεια, a soul emptied

¹ Cf. Hor. *Ep.* i. xviii. 111 f.:

'Sed satis est orare Jovem, quae donat et aufert:
Det vitam, det opes, aequum mihi animum ipse parabo.'

² See the Lexicons, s.v. *נָחַם*.

of passion and desire.¹ The Christian peace is a positive principle; it is the effect and reward of a love which has found its only true and enduring object, and has so 'overcome all inner unrest' (cf. Gal 5¹⁷) because it rests in God. So Augustine bears witness:

'Sero te amavi, pulchritudo tam antiqua et tam nova! sero te amavi! . . . Gustavi, et esurio, et sitio. Tectigisti me, et exarsi in pacem tuam. Cum inhaesero tibi ex omni me, nusquam erit mihi dolor et labor; et viva erit vita mea, tota plena te' (Conf. x. 27.1.).

(d) The restfulness of a surrendered will. The misery of the heathen world was largely the consequence of that aimlessness which the Bible calls 'vanity.' The Gentiles walked *ἐν παραθρηνη τοῦ νοῦς αὐτῶν* (Eph 4¹⁷)—no faultily being directed aright, no unifying principle controlling the life of thought, action, or desire. We may contrast this restless state of mind with that which Dante describes:

'Frate, la nostra volontà quieta
Virtù di carità, che fa volerne
Sol quel ch'avemo, e d'altro non ci asseta.

E la sua volontà è nostra pace;
Ella è quel inare al qual tutto si move
Ch'è ella creata, e che natura face'

(Parad. iii. 70-72, 85-87).

In the same spirit Irenæus has written: 'Subjectio Dei requietio est aeterna' (Hær. iv. xxxix. 4); and T. Wilson's book, *Maxims of Piety and Morality* (Oxford, 1870), opens with the words 'In Deo quies' (cf. maxim 615). (e) The chief ingredient, however, in that 'peace with God' (Ro 5¹) which is also the 'peace of God' is a quiet conscience—pardoned, cleansed, and reconciled to God. When the complaint, 'There is no rest in my bones by reason of my sin' (Ps 38³), yields to the certainty of forgiveness through the blood of Christ (Eph 1⁷, 1 Jn 1⁷), the soul is at peace and 'turns again' to its rest (cf. Jerome, on Ps 116).

The peace, then, that the gospel promises is a blessing which Christ has won through His sufferings and Himself imparts to man. It is the fruit of redemption. It is synonymous with the Kingdom of Heaven within us. So Augustine says of the peacemakers:

'Pacifisci autem in semetipsis sunt, qui omnes animi sui motus componentes et subicientes rationi, id est menti et spiritui, carnalesque concupiscentias habentes edomitas, sunt regnum Dei' (de Serm. Dom. in monte, l. 2 (9)).

Peace is no negative absence of disturbance.

Rather 'it is the highest and most strenuous action of the soul, but an entirely harmonious action, in which all our powers and affections are blended in a beautiful proportion, and sustain and perfect one another. It is more than silence after storms. It is as the concord of all melodious sounds. . . . It is a conscious harmony with God and the creation [cf. Job 52³], an alliance of love with all beings, a sympathy with all that is pure and happy, a surrender of every separate will and interest, a participation of the spirit and life of the universe, an entire concord of purpose with its Infinite Original. This is peace, and the true happiness of man' (W. E. Channing, 'Remarks on the Character and Writings of Fénelon,' in *Works*, London, 1884, p. 416f.).

Further, 'the fruit of the Spirit is . . . peace' (Gal 5²²). It follows that peace in the heart of the individual Christian issues directly in peacefulness of temper—that habit of self-restraint which is the safeguard of peace between a man and his neighbour. This peaceful temper is in fact enjoined as a duty (Mk 9⁵⁰, Ro 14¹⁹, Ph 2¹³, 2 Ti 2²², He 12¹⁴). It is the spirit of love working for the well-being of the community—reconciling opposites, inspiring forbearance, making due allowance for inevitable contrarieties of temperament and conflicts of

¹ Cf. Cic. *Tusc. Quest.* iv. 17: 'Ergo is, quisquis est, qui moderatione et constantia quietus animo est, sibi que ipse placatus, ut nec tabescat molestiis, nec frangatur timore, nec sitienter quid expetens ardeat desiderio, nec alacritate futili gestiens deliquescat, is est sapiens, quem quaerimus, is est beatus . . . Illis [perturbationibus] vacuus animus perfecte atque absolute beatus efficit.' Cf. Aquinas, *Summa*, ii. l. qu. v. art. 2, ad 3: 'Nulli beato deest aliquod bonum desiderandum, cum habeat ipsum bonum infinitum, quod est bonum omnis boni.'

opinion,¹ overcoming evil with good. The teaching of our Lord Himself and of St. Paul (Ro 12¹⁸) implies that other virtues besides those of peace find a scope in the life of any human community. There are occasions when conflict and resistance to evil are inevitable, not only in international relationships, but also in ordinary social intercourse and even in matters of faith and religion. The peaceful temper, however, is that which is ever on the watch against the personal or national vanities and jealousies which endanger peace; against the spirit of faction (*ἐπιθετία*), inordinate notions of personal importance, the implacable temper, the absence of the sense of humour and of the sense of proportion, which usually engender and perpetuate strife (see Gal 5²⁰⁻²⁵, Ph 2³⁻⁴, Eph 4³¹, Col 3¹⁸⁻¹⁵, Ja 4¹). And in the seventh Beatitude (Mt 5⁹) our Lord pronounces a benediction on the self-restraint which makes for peace. Cf. Bernard, *Serm. de Divers.* xvi. 3 (*Opera*, i. 2350 D):

'Quia sociale animal sumus, ex his quae in nobis sunt, ad ea quae circa nos sunt transeamus; ut, si fieri potest, quod ex nobis est, pacem habeamus cum omnibus hominibus. Haec enim est lex naturalis societatis, ut omnia quaecumque nobis fieri volumus, aliis non faciamus. . . . Sicut ergo debemus sanitatem corpori, puritatem cordi; sic et fratri pacem.'

2. Peace between nations. — This is not the place for any discussion of the principles involved in the Christian sanction of war (see J. B. Mozley, *Univ. Sermons*, London, 1876, no. 5; J. Martineau, *National Duties*, do. 1903, serm. 5 and 6); but we may usefully recall the observation of Augustine that, even when they wage war, men are aiming at peace (*de Civ. Dei*, xix. 12), and, while war itself in the modern world has been more and more completely brought under the control of international law, it has also yielded in a measure to the practice of arbitration. In this region also the Christian spirit is a force that makes for international unity and concord.

'We can check in ourselves and in others every temper which makes for war, all ungenerous judgments, all presumptuous claims, all promptings of self-assertion, the noxious growths of isolation and arrogance and passion' (Westcott on 'International Concord,' in *Lessons from Work*, p. 838; cf. Church, *The Message of Peace*, p. 21 f.).

See, further, artt. ARBITRATION, WAR.

Mayor, *The Epistle of St. Jude and the Second Epistle of St. Peter*, do. 1907, pp. 183-187; W. P. Du Bose, *The Gospel in the Gospels*, New York and London, 1906, pp. 114-117.

R. L. OTTLEY.

PECULIAR PEOPLE.—1. The term.—The Latin word *peculium* (from *pecus*, 'cattle') meant a person's private purse, what was especially or exclusively one's own. Jerome used this word and its adjective *peculiaris* to translate many, though not all, of the Biblical passages which refer in the OT to Israel as a chosen people (Heb. *'am segullāh*) and in the NT to the Church for Christ as God's new Israel (see especially Ex 19⁵, Dt 7⁶ 14² 26¹⁸, Ps 135⁴, Tit 2¹⁴, 1 P 2⁹). Tindale, in his translation of the NT in 1526, put into current use the English phrase 'a peculiar people,' which has ever since been a familiar term. The Revisers changed the phrase 'a peculiar people,' in Tit 2¹⁴ and 1 P 2⁹, into the words 'a people for his own possession.' The English Revisers of the OT inclined towards the retention of 'a peculiar people' ('a peculiar treasure' in Ex 19⁵), while the American Revisers

¹ *Summa*, ii. ii. qu. xxix. art. 3, ad 2: 'Nihil prohibet aliquos charitatem habentes in opinionibus dissentire. Nec hoc repugnat paci,' etc.

used the phrases 'a people for his own possession' and 'mine own possession.' The word 'peculiar' in present-day popular usage refers to something distinctive in character, uncommon, singular, odd, or strange, and for that reason the American Revisers avoided it.

2. The Hebrew ideal.—The original idea in the mind of the OT writers was that the Lord had chosen Israel out of all the peoples of the earth to be His very own possession, His precious treasure, and to be, in a special exalted sense, the instrument of His inscrutable purposes. Israel was, in the Deuteronomic passages, 'peculiar' only in the sense that it belonged to God as His possession in a way unparalleled by any other nation. But after the return from the Exile the Deuteronomic ideal steadily grew into a fixed idea that the Jewish nation was to be 'peculiar' in a double sense—(1) God's elect, and (2) a people distinctly marked off and separated from all other peoples by special badges and special tokens of favour. The efforts of the spiritual leaders of the nation to resist the encroachments of Hellenic culture after the conquests of Alexander did much to give this national ideal its special content, and in its most highly developed form we have the Pharisaic ideal of 'a peculiar people.' This ideal embodied the following distinct points of belief: (1) the true Israel was God's one treasure in the whole world, His precious jewel, the apple of His eye; for their sake all other peoples existed; (2) those who constituted this 'true Israel' alone were heirs of salvation and alone would inherit the Kingdom of Heaven; (3) in order to ensure the consummation of this divine event, God in His ineffable mercy had given them His holy word, His law, to be their sure guide; this was the supreme mark of His favour to them, for apart from it as the instrument of grace no one could be saved, *i.e.* could inherit the Kingdom; (4) special badges or tokens of their peculiar relation to God and of their separation from the rest of the world had been divinely conferred upon them. Foremost among these badges was the mark of circumcision. The holy sabbath was another mysterious mark of their peculiar relation to God. The sacred temple, with its holy of holies and its divinely ordained priests, was another, and eventually in their minds the possession of the holy land of Palestine was thought of as another badge of special favour.

3. Greek and Gnostic societies.—It was, however, not only among the Hebrews in pre-Christian times that the idea of 'a peculiar people' found place. The Pythagorean society, originally founded in Magna Græcia by Pythagoras (born c. 575 B.C.), was also a heroic attempt to prepare 'a peculiar people.' It was a religious fraternity which cultivated asceticism for the moral life and mathematics for the mental, which believed itself to be in possession of special divine secrets, leading to the deliverance of the soul, and which had an elaborate system of sacred badges separating it from the common world. The 'Orphic circles' were other attempts among many that might be mentioned to prepare 'a peculiar people,' possessed of a special way of deliverance from the evils of this world. The Gnostic sects in the 2nd and 3rd centuries were again all possessed of the idea that they were 'peculiar peoples.'

4. Primitive Church usage.—The early Christians felt themselves, even more emphatically than had the inner circle of the Jewish nation, to be 'a peculiar people.' Two NT writers explicitly adopted the Jewish ideal as the ideal for the Church of Christ, who, the Epistle to Titus (2¹⁴) says, 'gave himself for us, that he might redeem us from all iniquity, and purify unto himself a peculiar people' (RV 'a people for his own posses-

sion'). And the First Epistle of Peter takes over *en bloc* the ancient Jewish claim and transfers it to the new Church (1 P 2⁴⁻⁷). But it is not only in sporadic texts that this idea of 'a peculiar people' appears. It is embedded in the very structure of the primitive Church. Its members, its 'saints,' are 'chosen' out of the world; they are given special 'gifts'; they only know 'the way of life,' and are the 'saved'; they are God's people; they live a 'new' life; they possess an access to God which others do not have; and they have their special marks and badges which make them separate from the world and in the modern sense 'peculiar.' As the Roman Catholic Church came into being, with the slow unfolding of history, it again put forward, in the most emphatic fashion, the claim to contain in its fold God's own exclusive people. Out of all the world it was *elect*. It possessed, and it alone, the miraculous means of grace. It had the only true and efficacious priesthood. It alone held the key to the invisible Kingdom of the future, and only through its mediation could any soul be saved. All and more than all that any pious Jew had claimed for his holy nation the Roman Catholic believer claimed for his peculiarly divine Church—'extra ecclesiam nulla salus.'

5. Pre-Reformation sects.—Each of the pre-Reformation sects which showed an anti-ecclesiastical bias took over to itself the claim, which the Church made, to be God's own special instrument. In one age the Montanists, with their immediate possession of the Holy Spirit, were 'the peculiar people.' In another age the Waldenses, by their stricter moral life and by their assumption of unbroken connexion with apostolic Christianity, claimed to be 'the peculiar people' of the Lord, as did later also 'the spiritual Franciscans.' The mystics, too, of the 14th cent., though not explicitly separatists, believed intensely that they were God's 'peculiar people,' and that they by the secret 'inner way' had found an absolute union with Him denied to all others.

6. Post-Reformation sects.—With the Reformation the idea of 'the peculiar people' remained a dominating concept. All the reformed State, or established, churches were built round the absolute idea that this particular church was the Church, exclusively God's own and the only means of salvation. Its dogma constituted the truth; its sacraments were alone efficacious; its ministry was the only authoritative ministry. So, too, all the dissenting sects came forward with a similar claim. Every Protestant denomination has claimed at least in its beginning to have possession of a special means of grace, and has believed itself to be in a peculiar way an instrument of the Lord for ministering salvation to men. No other modern denomination has perhaps made its claim to be 'a peculiar people' so explicit as did the Society of Friends in the 18th and early 19th centuries. Friends, from their first origin in the mid-17th cent., believed that they were divinely chosen, inspired, enlightened, equipped, and guided to be 'the restorers of apostolic Christianity.' They expected that the inward light which they had re-discovered as the basis of religion would in time be accepted as the principle of authority of world Christianity (see Thomas Hancock, *The Peculium*, London, 1859). As this hope faded, the Quaker leaders of the 18th cent. set themselves to the task of perfecting the Society of Friends as 'a holy Zion of the Lord,' a faithful 'remnant' in the midst of the world, 'a peculiar people,' apart not only from the world but also from all other forms of Christianity as well, and *elect* especially to be God's people in a crooked and perverse generation. They believed that they alone were

'apostolic' and that a special mission had been given to them. Like the members of the Jewish model nation, they made much of their distinguishing marks: a special garb, a special form of address (the 'thee' and 'thou'), a special group of 'testimonies,' refusal to pay tithes, refusal to fight or take life for any reason, refusal to take an oath, refusal to remove the hat before a magistrate or in a public place, the maintenance of free gospel ministry and of a special form of marriage. The faithful Friend of this period gloried in these badges of a peculiar faith, not for their own sake, but because he believed that through separation from all other peoples and through 'testimonies' which cost suffering and sacrifice God could best form and perfect the people of His own possession, which, in His wisdom, they were to be. The *Quaker Journals* of the hundred years from 1750 to 1850 are full of interesting concrete material for an appreciation of what this strange ideal of 'a peculiar people' once vividly meant.

7. Other uses of the name.—The word 'Peculiar' was often used in the early period of the Oxford Movement as a nickname for the members of the 'Evangelical' party. E. S. Purcell, in his *Life of Cardinal Manning* (London, 1895), refers to 'Puseyites and Peculiar,' and London is said, in H. P. Liddon's *Life of E. B. Pusey* (London, 1893), to be overrun with 'peculiarism.'

A small sect which appeared in London in 1838 was called 'Plumstead Peculiar.' The members of this sect refused to use medical aid for the relief or cure of disease, and put their entire trust in the divine power and in prayer. They were called indiscriminately 'Faith Healers' or 'Peculiar.'

LITERATURE.—There are no special works on the subject. Cf. *HDB*, s.v. 'Peculiar'; *EBI*, s.v. 'Peculiar Treasure, Peculiar People'; *JE*, s.v. 'Chosen People.'

RUFUS M. JONES.

PEEVISHNESS.—There are two forms of excess in that emotional tendency which, whether as a natural disposition or as an acquired habit, is variously spoken of as irascibility, irritability, temper, anger, etc. One form is commonly described as 'quick temper,' that is, a tendency to sudden explosions of angry passion, which for the most part suddenly subside. The other, known as 'peevishness' or 'fretfulness,' is a chronic irritability which may not in general burst into violent expression, but is readily provoked by any trivial annoyance. On its physical side peevishness may often be traced to hyperæsthesia, a morbid excess of sensibility which makes every nervous stimulation, even the most ordinary sensible impression, exceed the limit of healthy agreeable excitement. In such cases moral culture calls for a physical culture which may reinstate the sensibility in normal vigour. But, from whatever cause peevishness may arise, moral neglect may leave the natural excess of sensibility free play to develop into a tyrannous habit of the moral life. Then it creates the common illusion of irritable temperament. Instead of charging himself with the fault of his irritation, the irritated man throws the blame of it upon any other who may be associated with it in the most incidental way. It is thus that peevishness often becomes a formidable impediment to the growth of sympathy and the gentler virtues, while it offers a fruitful soil for all types of malice. See, further, art. **ANGER**.

LITERATURE.—All the great works on psychology give more or less adequate analyses of the various forms of anger, but an unusually exhaustive treatment of the subject is given in A. Bain, *The Emotions and the Will*, London, 1880. On the ethical as well as the psychological aspect of the subject a prominent place has always been assigned to Seneca's monograph, *de Ira*, in ancient literature, and, in modern, to J. Butler's sermons 'Upon Resentment' and 'Upon Forgiveness of Injuries,' Works, ed. W. E. Gladstone, Oxford, 1896, ff. 126-167.

J. CLARK MURRAY.

PELAGIANISM AND SEMI-PELAGIANISM.—I. Introductory.—(a) *Its fundamental interest.*—Few of the controversies which distracted the early Church are so full of perennial interest as that which raged round the teaching of the British monk Pelagius. The principles at issue were of more than purely Christian interest, for they were concerned with the very elements of human character and raised fundamental problems as to the nature of man's ethical and religious relation to the divine which are of lasting and world-wide significance. The controversy did not itself create the two great types of thought which in its course were ranged in sharp antithesis; rather it was the occasion of the first open clash within the Christian Church of two irreconcilable tendencies, which had not only long existed side by side both within and without Christendom, but are destined to reassert themselves periodically throughout the subsequent development of moral and religious theory. For at bottom the controversy was concerned with the age-long problem of free will and determinism, and its dramatic interest consists in the opposition which always asserts itself between an essentially rational and naturalistic morality and the profoundest convictions of a vital and first-hand religious experience. In the study of no other controversy can we learn so much about the connexion and the distinction between morality and religion.

(b) *Its place in the development of dogma.*—As was but natural in the development of a religion which had its origin and centre in a definite historical personality, Christianity in its effort to realize and define the contents of its tradition was concerned first with the objective side of its doctrine, the nature of God and of the person of Jesus Christ. So long as men's thoughts were primarily exercised by theological and Christological problems, questions concerning the more subjective and anthropological side of Christian teaching remained in the background. Concerning human nature and its relation to God the Church had instinctively maintained from the first that man had free will and was accountable for his actions, that human nature was corrupted and in a fallen and evil state, and that for its restoration and salvation the assistance of God, afforded through Jesus Christ and the Holy Spirit, was an absolute necessity. But, while none of these propositions had been seriously called in question, no attempt to weld them into a coherent system of doctrine had as yet received formal authorization from the Church, and teachers and schools of thought differed considerably as to the stress which they laid upon them; on the whole it may be said that Eastern theologians had been chiefly interested in affirming the freedom of the will, while those of the West had emphasized the necessity for divine assistance, or 'grace.' As to the sinfulness of human nature as it actually existed, there was little room for doubt, but various theories had been propounded by teachers of repute as to the origin and working of this general corruption and its connexion with what Scripture related concerning the 'fall' of Adam.

(c) *Its relation to Nestorianism.*—Such was the general condition of Christian thought on these matters towards the close of the 4th cent.; the Arian controversy had worked itself out; the dogma of the Holy Trinity had just been reaffirmed at the Council of Constantinople (381), which had also marked the first stage of the Christological controversies by condemning Apollinarianism. The completeness of the human nature of the Incarnate having thus been asserted, its relation to the divine Logos was already engaging the interest of the theologians, and notably of the famous Antiochene

expositor, Theodore of Mopsuestia. It is obvious that theories concerning the relation of the humanity of Christ to His divinity must have an intimate bearing on theories concerning the relation of humanity in general to God; and it is here that we find the ground of the close connexion between Nestorianism, of which Theodore was undoubtedly the father, and Pelagianism, which has also been derived from his paternity.¹ If 'the thought that Christ possessed a free will was the lode-star' of Antiochene theology,² the thought that every man possessed a free will was the lode-star of the Pelagian. The progress of the controversies revealed so many affinities between the two systems that they may well be regarded as constituting together a great consistent scheme of thought, of which the Eastern (Nestorian) expression was mainly speculative and theological, and the Western (Pelagian) mainly practical and moral. It has been justly said that 'the Nestorian Christ is the fitting saviour of the Pelagian man,' and it was no accident that the Church condemned both systems together at the Council of Ephesus in 431.³

The Pelagian controversy proper was fought out between the years 411 and 418, the Council of Ephesus merely giving official sanction to a judgment which had been for all practical purposes complete and final thirteen years earlier. But difficult problems arising out of the condemnation of Pelagianism remained unsolved, and these constituted the subject of the long-drawn-out Semi-Pelagian controversies, which found an ecclesiastical settlement only at the Council of Orange in 529. Though the whole process of thought from 411 to 529 is closely connected, it will be best to trace separately the history of the Pelagian controversy and to appreciate the issues involved, before passing on to give an account of Semi-Pelagianism.

2. The course of the Pelagian controversy.—(a) *Pelagianism in Rome (c. 400-409).*—At some time in the episcopate of Anastasius (398-402), if not earlier, there had arrived in Rome a British monk of mature age named Pelagius. Of his former life we know little: his character shows no signs of having passed through any serious moral crisis in its development. We have it on the authority of his bitterest opponent, Orosius, that he was of too humble origin to have had a liberal education; we have no evidence that he had ever studied in the East;⁴ but before he became famous as a heretic he had shown himself possessed of sufficient ability and learning to write three books of unquestioned orthodoxy upon the Trinity, which were recognized as useful text-books for students. He was a layman and never sought orders. Among his friends he numbered Paulinus of Nola,⁵ and also one Rufinus, a Syrian,⁶ who first introduced him, so Mercator informs us, to the characteristic tenets of Antiochene theology.

Appalled by the lax morality of the great mass of nominal Christians in Rome, he set himself to rouse them to a sense of their responsibility to God for their actions. He was already held in great honour in Rome for his rigorous and ascetic life,⁷ but he used his influence cautiously and quietly, avoiding public controversy, from which he was averse. He prepared a book of *Eulogia*, or ex-

tracts from Scripture selected to emphasize the strength and freedom of the will, and especially set himself to counteract what he considered the enervating effects of Augustine's *Confessions*, which, written about 400, were soon after widely read in Rome. Augustine's famous prayer, 'Da quod jubes, et jube quod vis,' particularly aroused his anger, as conducing to a passive and listless frame of mind.¹ Pelagius preached the need of moral effort and the sufficiency of man's natural free will to achieve its duty without relying on supernatural grace; from this he was led on to call in question any idea of inherited sinfulness which might serve as an excuse for moral slackness. He circulated privately a commentary on St. Paul's Epistles, in which, in the guise of objections raised by critics of current teaching, he indirectly set forth his own chief tenets.

Associated with him was another layman, Coelestius, a keen-witted dialectician, who had practised at the Roman bar, but under the influence of Pelagius had given up his worldly career to become a monk. In character this outspoken young man was a great contrast to his elderly and cautious master: an agitator 'incredibili loquacitate,' as Augustine tells us, his method was 'fortiter scandalizare'; he quickly attracted attention and was regarded by many as the real leader of the movement.²

(b) *In Africa (411-412).*—Alaric's invasion led the two friends to leave Rome in 409 and to travel by way of Sicily to Africa, where they arrived in 411. Pelagius did not come into personal contact with Augustine,³ though the latter, busied as he then was with the settlement of the Donatist schism, remembers that he was disturbed by rumours of his teaching about the baptism of infants. Pelagius, however, soon after set out for Palestine. But Coelestius stayed behind and applied for ordination as a presbyter at Carthage; his candidature was opposed in 412 by Paulinus, a deacon of Milan, on the ground of false doctrine, at a synod presided over by Bishop Aurelius. The *libellus*, or formal indictment, attributed to Coelestius seven heretical propositions:

(1) Adam was created mortal and would have died whether he had sinned or not; (2) Adam's sin injured himself only, and not the human race; (3) children at birth are in that state in which Adam was before his sin; (4) the whole human race does not die through Adam's death and transgression, nor does the whole human race rise through Christ's resurrection; (5) the law sends men to the Kingdom of Heaven just as the gospel does; (6) even before Christ's coming there were men without sin; (7) man can be without sin, and keep God's commandments easily if he will.

Coelestius refused to condemn these propositions: he claimed that he had heard Catholic presbyters deny the transmission of sin, which ought to be treated as an open question; moreover, since he did not deny that infants need baptism to be redeemed, he was no heretic. The synod nevertheless excommunicated him. He thereupon wrote his *Libellus brevissimus*, explaining that in his view infants were in no wise baptized for any remission of sin, but received actual benefit through baptism and a share in Christ's redemption; unbaptized infants forfeited 'eternal life,' but were admitted into 'the Kingdom of Heaven.' This tract occasioned Augustine's first anti-Pelagian treatise, *de Peccatorum meritis et remissione* (412), notable as containing the first use of *original peccatum*, that 'infelicitous phrase' which was to play so prominent a part in the controversy. Coelestius left for Ephesus, where he was ordained presbyter, and thence proceeded to Constantinople.

² Harnack, *Hist. of Dogma*, iv. 165; cf. v. 170, note.

³ Yet there was a marked contrast between the Pelagian conception of grace and Theodore's; the latter came closer to Augustine, in so far as he regarded it as an inward inspiration.

⁴ Chronology forbids us to identify him with a Pelagius mentioned by Chrysostom (*Ep.* 4).

⁵ Aug. *Ep.* 186.

⁶ To be distinguished from Rufinus of Aquileia.

⁷ He spent 'a very long time there' (Aug. *de Pecc. Orig.* 24; cf. *de Gest. Pelag.* 40).

(c) *In Palestine (411-415).*—Meanwhile Pelagius had settled quietly in Palestine. But his friendship with Bishop John of Jerusalem, combined with reports of his teaching, attracted the unfavourable notice of Jerome, who wrote against him his letter to Ctesiphon¹ and his *Dialogus adversus Pelagianos*, styled by Harnack² 'a model of irrational polemics.' Pelagius replied with his *de Natura*, but his cause was considerably damaged by the circulation of Cœlestius's rash *Libellus*. The arrival in Palestine in 415 of a devoted disciple of Augustine, the hot-headed Spanish priest Orosius, brought matters to a climax. He brought a letter from Augustine to Jerome, and was invited to attend a synod of Jerusalem clergy convened by Bishop John to consider the Pelagian difficulty. He there related what the Carthaginian synod had done with Cœlestius, and read aloud a letter from Augustine to the Sicilian Hilarius on the possibility of human sinlessness and the need of divine grace. Pelagius was thereupon introduced to the meeting; he evaded the charges brought against him, and, when pressed, cried 'Anathema to him who teaches that man can become sinless without God's aid'; but the crucial question, as to whether by 'God's aid' Pelagius meant merely the example and teaching of Christ accepted by man's natural free will or a direct inward working of God on the spirit 'transcending both natural capacities and opportunities of moral instruction,'³ was not discussed. John knew no Latin and Pelagius no Greek, and the synod, failing to grasp the true significance of the dispute, agreed to the suggestion of Orosius that the matter, being of Western origin, should be referred to Bishop Innocent of Rome.

(d) *The Synod of Diospolis (415).*—Before the end of the year, however, Pelagius found himself once more face to face with Western accusers before an Eastern court. Two Gallic bishops, Heros of Arles and Lazarus of Aix, expelled from their own sees for obscure reasons and sojourning in Palestine, brought a formal accusation against Pelagius and Cœlestius before a synod of fourteen bishops which met at Diospolis (Lydda) in Dec. 415 under the metropolitan of Palestine, Eulogius of Caesarea. Illness prevented the accusers from appearing in person, and Pelagius made skilful use of his opportunity: the *Libellus*, drawn up in Latin, was translated by sections; Pelagius ingeniously contrived satisfactory explanations of most of the phrases complained of, and disowned the rest; he denied responsibility for certain opinions attributed to Cœlestius, and professed himself ready to condemn them 'according to the judgment of the Holy Church' and to anathematize every one who held or had held them, though he protested that the dispute did not concern matters of dogma.⁴ The synod not unnaturally declared him innocent; but it is clear that he 'stole his acquittal' by prevarications as faithless to his friend as they were dishonourable to himself; and, however cunningly he may have subsequently explained away his denial of other Pelagian tenets, he cannot escape from the fact that he denied a proposition which both previously and subsequently was cardinal for his system—'that God's grace is given in proportion to our deserts, to such as are worthy.'⁵ Jerome was furious at the decision of the 'miserable synod,'⁶ but Augustine judged it more fairly when he explained it as acquitting not the heresy but the man who denied the heresy. Nevertheless, the Synod of Diospolis proved clearly

that 'the Eastern church had not embraced in its entirety the doctrine of grace as formulated by Augustine in the West, and that, provided free will and grace were recognized as joint factors in the production of human goodness, it was not anxious to define by precise distinctions the exact limits of each agency.'¹ The Easterns also probably sympathized with Pelagius's own unwillingness to extend the sphere of authoritative dogma.²

(e) *In the West (415-418).*—Pelagius and his friends immediately made all possible use of their success. News of the acquittal was promptly spread abroad, especially in the West, whither carefully edited accounts of the synod were dispatched. Pelagius answered Jerome with four books, *de Libero Arbitrio*, showing clearly that by 'grace' he still meant the natural influence of Christ's teaching, helping men 'more easily' to obey the divine commands, and that he still held that 'we are precreated as without virtue, so without vice'—which shows the value that was to be set on his protestations at Diospolis.³

Augustine realized that its ecclesiastical triumph was the moral defeat of the Pelagian cause.⁴ The African bishops, nothing daunted, reaffirmed most emphatically their previous condemnation at two largely-attended synods which met in Carthage and Milan in 416. Both synods sent letters to Pope Innocent, desiring to secure the support of the Apostolic See to reinforce their own decisions. Augustine, Aurelius, and three other bishops further wrote to the pope a personal letter urging him to examine carefully Pelagius's teaching. All these letters⁵ contain careful explanations of the issues at stake, which are represented as essential to the entire Christian position as the Church had received it: it was not only that Pelagian teaching made the practice of infant baptism superfluous, but it made the whole redemptive work of the Saviour Himself unnecessary; if human nature be indeed what the Pelagians say it is, it must be capable of working out its own salvation unassisted, depending solely on 'the results of its original creation'; no need therefore for any divine deliverer, to afford supernatural assistance to men's inward wills, no need for any grace or means of grace. The letters were accompanied by an earlier treatise of Pelagius (?), *de Natura*, together with Augustine's reply, *de Natura et Gratia*, composed in 415.

Innocent consulted his clergy and replied in Jan. 417,⁶ in a sense wholly favourable to the Africans, asserting man's continual dependence on God's inward grace not only at baptism but throughout life; in Pelagius's treatise he found nothing that pleased him, but he refrained from commenting on the action of the Synod of Diospolis until he should receive an authentic account of its proceedings. A few weeks afterwards he died. His successor was a Greek, Zosimus, and hardly had he been installed when Cœlestius, recently expelled from Constantinople, appeared in Rome, to appeal against both this recent indignity and his earlier condemnation in Carthage. Zosimus's interests were Eastern, and he had probably but little understanding of the real issues of this Western controversy. Cœlestius secured a hearing, at which it was evident that he still continued to deny 'transmitted' or 'original' sin; but he avoided either condemning his own tenets or hearing them condemned. Zosimus wrote to the Africans, asserting that Cœlestius had abundantly indicated the soundness of his faith, and that those who still desired to impugn it must appear in Rome

within two months or else give up all doubts on the subject. Shortly afterwards he received under cover of a letter of commendation from Praxylus, the new bishop of Jerusalem, a statement of faith from Pelagius. This is a treatise of 'luminous orthodoxy' as regards the doctrines of the Trinity and the Incarnation, but on the real points at issue artfully vague: all men had free will, all had need of help from God,¹ but as to the nature of this help nothing was said; the statement concluded deferentially: Pelagius was ready to receive correction from him 'who held the faith and see of Peter.' Zosimus rehearsed it to his admiring ecclesiastics and wrote once more to the African bishops, declaring that the statement of Pelagius had cleared him of all suspicion, and sternly rebuking them for their hasty and uncharitable credulity in admitting unfounded charges against men of 'perfect orthodoxy' ('absolutae fidei').

Meanwhile Augustine had received the official minutes of the Synod of Diospolis, and immediately wrote his *de Gestis Pelagii*, comparing them with Pelagius's misrepresentations of what had taken place. Upon the reception of Zosimus's letters the African bishops, assembled in a great synod of over 200 members, indignantly determined to stand by their condemnation of both Pelagius and Coelestius, and to uphold Pope Innocent's sentence against them, until they should explicitly acknowledge that 'God's grace aids us through Jesus Christ, not only to know but to do what is right, in every single act, so that without grace we cannot have, think, speak or do anything that pertains to true and holy religion.'

This firm and diplomatic action aroused Zosimus to the need of caution; with much grandiloquence as to the prerogatives of Peter he replied (21st March, 418) that he had not come to a final decision or given entire credence to Coelestius; the case stood where it was when he last wrote. But the cause was decided both in Italy and in Africa without further consideration for Zosimus: the emperor Honorius on 30th April issued an edict to Palladius, the praetorian prefect, denouncing Pelagius's opinions as contrary to the Catholic law, exiling the two leaders of his heresy, and permitting the persecution of their followers; and on 1st May (two days after Zosimus's pitiable letter reached Africa) a great council of the African Church in Carthage, without reference to any doctrinal pronouncements of Roman bishops, anathematized Pelagianism in a series of nine uncompromising canons.² No direct connexion between these practically simultaneous imperial and ecclesiastical actions can be proved; the former was possibly due to Italian opposition to Pelagianism emanating from Milan;³ Augustine, however, expressed his hearty approval.

Zosimus effected a complete change of front; there is some ambiguity as to dates, and it remains doubtful whether he contrived his *volte face* before or after the promulgation of the imperial edict, which in any case shows no signs of having been affected by the remarkable *Epistula Tractoria* issued by the pope. In this memorable document Zosimus condemns Pelagius, Coelestius, and their opinions, and affirms the doctrines for which the Africans contended, with an explicitness equalled only by that with which he had but a few months previously acquitted the heretics and rebuked their accusers. The incident has more than a merely

historical interest, in view of the claims of his successors in the see to infallibility. Zosimus acted throughout in his official capacity, and the matter was doctrinally of the greatest importance.

The subsequent history of the controversy may be briefly stated: Zosimus required subscription to his letter as a test of orthodoxy; eighteen Italian bishops refused, of whom one, Julian, the youthful prelate of Eclanum, was to prove himself the ablest advocate of a cause already lost; Pelagius himself disappeared from view; Coelestius was banished from Italy; Julian, with a group of sympathizers, betook himself to Theodore of Mopsuestia, and later joined Coelestius in Constantinople, when in 429 the patriarch Nestorius interceded for them with Pope Coelestine, to his own hurt no less than theirs, for Rome thought the worse of Nestorius for consorting with Pelagians, and the East thought the worse of the Pelagians for consorting with Nestorius; and so it came about that at the third general council at Ephesus in 431 the 'Pelagians and Coelestians' as well as the Nestorians were finally condemned.⁴

3. Appreciation of the principles at issue.—(a) *Julian and Augustine*.—The real theologian of Pelagianism was Julian of Eclanum, who, conscious though he was that he was the champion of a lost cause, continued systematically to work out his principles with admirable completeness. Pelagius and Coelestius had been primarily concerned to arouse men's wills to worthier moral effort; they were missionaries rather than theologians, with a practical object in view, to induce men to practise monastic asceticism. But Julian was no ascetic; his ideal of conduct was essentially naturalistic; as a man of the world he frankly admired the moderate and reasonable self-control inculcated by philosophers, and above all desired clear and rational thinking about God and morality. Harnack fitly describes him as 'the first, and up to the sixteenth century, the unsurpassed, unabashed representative of a self-satisfied Christianity.'⁵ His theology adds nothing in principle to that of Pelagius and Coelestius, but he expresses with greater force and lucidity their chief contentions. He maintained a vigorous and voluminous controversy with Augustine, who always treated him with respect, and often answered him sentence by sentence. It is possible, therefore, to reconstruct his system fairly accurately from Augustine's works. The two men were diametrically opposed both as to the form and as to the matter of their theology. As to form, Julian was a rationalist, Augustine an authoritarian; Julian denied that authority could strengthen what reason proves: 'we ought to weigh and not count opinions';⁶ Augustine, as a result of the experiences which led up to his conversion, was profoundly conscious that he had received the very gospel itself on the authority of the Church,⁷ after reason had led him through countless aberrations. Julian claimed to have the philosophic few on his side, and despised as a blind rabble the majority which he could not deny sided with Augustine. And the content of his theology was as essentially the gospel of free will as that of Augustine was the gospel of irresistible grace.

(b) *The Pelagian system summarized*.—The Pelagian system as presented by him may be summarized as follows:⁸

(1) God is above all just; therefore everything that He creates is essentially good, and cannot be in its nature convertible;

¹ 'Liberum sic confitemur arbitrium, ut dicamus nos indigere dei semper auxilio' (Pelagius's Confession of Faith, given in full in Hahn, *Bibliothek der Symbole und Glaubensregeln*, p. 233).

² Cf. Harnack, v. 185. The canons anathematize those, among others, who derive death from natural necessity, who deny the presence of original sin in children, who assign any form of salvation to infants dying unbaptized, and who do not see in grace the indispensable condition of virtue.

³ So Harnack suggests (v. 185, note 7).

⁴ Cf. the synodal letter of Pope Coelestine, confirming their condemnation by Rome (C. J. von Hefele, *Hist. of the Church Councils*, Eng. tr., 5 vols., Edinburgh, 1894-96, iii. 60; G. D. Mansi, *Sacrorum Conciliorum nova et amplissima Collectio*, Florence, 1759, iv. 1830-1838).

⁵ v. 171.

⁶ C. *Epist. Manich.* 5.

⁷ Aug. c. *Julian.* II. 35.

⁸ Cf. Harnack, v. 191-203.

consequently human nature remains indestructibly good, and so there can be no such thing as a sinful nature, or 'natural' (i.e. 'original') sin.

(2) The chief glories of man's constitution are his reason and his free will; the latter is an absolute and indefectible freedom of choice ('mera capacitas [possibilitas] utriusque'), which momentarily determines itself and remains unimpaired by previous choices. Sin is choosing that which is contrary to what reason tells us is righteous; every man is at every moment of his career perfectly free to avoid choosing it ('Liberum arbitrium et post peccata tam plenum est quam fuit ante peccata'). By virtue of this free will man is rendered independent of God.³

(3) The desires of the flesh are not as such evil, seeing they are part of God's creation; therefore sin consists not in desire (*libido*) itself as such, but in its excess, which is due solely to the free choice of each individual will. Marriage is not *per se* in any way sinful.

(4) Every man created by birth is in precisely the same condition morally as Adam was before he sinned, i.e. endowed inalienably by divine grace (*gratia*) with 'natural holiness' (=reason and free will). These are sufficient to enable men to remain sinless; hence there can be (and Pelagius asserted that there had been) sinless men.

(5) Adam sinned through free will; his descendants also sin through free will; neither in his case nor in theirs is physical death a consequence of sin, but spiritual death (damnation) is; this is in no sense inherited from Adam, but is acquired by each man through his own sins.

(6) The idea of inherited sin (*tradux peccati, peccatum originis*) and of inherited guilt is both unthinkable and blasphemous, for not only is it inconsistent with the notion of sin, which implies the exercise of free will, but it also suggests that God's good creation has become radically evil, and that He either unjustly regards as sinful natures which have not yet themselves committed sin or else is responsible for creating evil natures. The only difference between the condition of children born now and that of Adam before the Fall is one not of nature but of environment: the former are born into a society in which evil customs and habits prevail.⁴

(7) By divine grace or aid (*gratia, adiutorium*) is meant either man's natural constitution ('the grace of creation'), by virtue of which some heathen have been perfect men, as good in every respect as perfect Jews or perfect Christians, or the law of God (an *augmentum beneficiorum Dei*) by which He has revealed to man what he ought to do, to aid man's reason darkened by sin, or else the grace of Christ, which, no less than the law, is essentially enlightenment and teaching (*illuminatio et doctrina*), working through Christ's own example, through His authoritative assurance of forgiveness to all who are baptized, and through the dogmas and mysteries of the Church. Grace, of whatever kind, is emphatically not an inward power enabling the will, for 'homo libero arbitrio emancipatus a Deo' is rather something external, which the will may grasp if it chooses to. Law and gospel are alike in operation, and men can enter the Kingdom of Heaven as well through the one as through the other.

(8) Grace is given according to men's merits; it would not be consistent with God's justice to give it to sinners.

(c) *Criticism of the system.*—Such in brief outline was the system which the Church rejected as a mischievous innovation, endangering the very essentials of the Christian religion.

How far was it an innovation?⁵ In temper and spirit it was undoubtedly in marked contrast with the instinctive religious attitude reflected in every writing of the NT and in the traditional piety of the Catholic Church. Its whole conception of human nature and of virtue was more akin to Stoicism than to the gospel; but for some of its propositions it would be difficult to find definite refutations in the writings of many of the earlier Church Fathers of repute, and the system which Augustine opposed to it may in some important respects be as justly accused of innovation. Pelagianism may be defined as Christian Stoicism, and as such it is probably to this day the undefined theology of the great majority of 'plain men,' especially perhaps in the busy, competitive conditions of modern Western civilization. 'God

¹ Pelagius taught a *possibilitas boni* as distinguished from the *possibilitas utriusque* of Julian (*de Grat. Christi*, 5, *Op. Imp.* 1, 78-81).

² *Op. Imp.* 1, 91.

³ *Ib.* 1, 78: 'Libertas arbitrii, quia a Deo emancipatus homo est.'

⁴ For infant baptism Julian had no real rationale; he accepted it as implying a certain consecration of the infant, with a reference to his future sins. Children dying unbaptized did not forfeit 'eternal life,' though they would fall to enter its fullest blessedness, the 'Kingdom of Heaven.'

⁵ For a full consideration of the previous development of the doctrine of original sin see art. ORIGINAL SIN and F. R. Tennant, *The Sources of the Doctrines of the Fall and Original Sin*.

helps those who help themselves' is a favourite proverb of the English, and expresses in rough and ready form the Pelagian doctrine of grace.

But, if it be true that genuine Christian ethics are superior to all others 'not so much through the presence or absence of particular articles, as through a view of life which substitutes submission for independence, humility for self-content,'¹ then 'Christian Stoicism' is a contradiction in terms, and Pelagianism is more pagan than Christian. Yet we must remember that Pelagianism does assert that the possibility of human righteousness and perfection originates in 'the grace of creation,' that bounty of God which endowed men with 'free will,' and so it is not fair to say that it makes righteousness a matter of human merit entirely independent of God. In practice, however, it issued in a frame of mind which set God and man over against each other as independent parties, and tended to reduce religion to the levels of merit and reward and to make of morality simply a question of copying good or bad examples.

Certain individual propositions of the Pelagian system the subsequent development of Christian thought has tended to confirm; its unwillingness to consign unbaptized infants to perdition, its readiness to recognize the possibility of good and Christlike characters being found outside the direct influences of the gospel and the Church, its insistence that the natural desires and functions of the body are in themselves in no way evil, its recognition of the fact that physical death cannot be regarded simply and solely as a lamentable outcome of human sin, but is an inevitable (and indeed beneficent) element in the general process of nature, are all points on which later thought and wider experience cannot but recognize that the Pelagians were nearer the truth than their opponents.

On the other hand, the whole Pelagian psychology of the will must be judged superficial and inadequate; its conception of sin is 'atomistic'; it ignores the phenomena of habit, and treats the growth of character as a mere succession of wholly independent and uncorrelated decisions of an abstract faculty of choice which remains quite unaffected by its choosing; it leaves the whole problem of the nature of personality unexplored, and so fails entirely to explain the possibility of temptation, and above all the reality of man's responsibility for his actions, the very thing that it set out to maintain. It is essentially self-contradictory, for, by treating personality as a bare series of states of mind, it leaves us in the last resort sceptical as to the reality and persistence of that very will the indestructible freedom of which is of the very essence of its contentions.

(d) *Augustine's doctrine of sin and grace.*—The ground of the difference between the Pelagians and Augustine is to be found in their views of the actual condition of human nature: the former thought of it as still morally sound, the latter as utterly corrupt; the former held that the faculty of choice remained unimpaired, and that men could be good if they wished, the latter insisted that the will itself was perverted and depraved at its very root, and incapable in its own strength of choosing and doing even what it knew to be good; and there can be little doubt that, with all his over-statements, Augustine was truer not only to the traditions of Christianity, but to the facts of human experience. It is when we come to consider the theory by which Augustine sought to explain the fact of this universal perversion of the will that we find that not only modern thinkers, but his predecessors among the theologians of the

¹ Cf. H. Kelly, *Hist. of the Church of Christ*, London, 1901-02, II, 296.

Church, are far from unanimous in his support. It is not merely that Augustine is the originator of the famous term 'original sin' (*peccatum originis*), or that this term is infelicitous, in so far as by 'sin' we mean an evil for which the individual who 'sins' is himself responsible, in a manner in which he cannot possibly be for anything which he simply inherits; nor is it that for the Scriptural foundation of his theory he relies on an indefensible Latin rendering of the Greek of St. Paul;¹ it is not merely that in his explanation of the universality of human sinfulness he asserts that the nature with which an infant finds itself endowed at birth is a perverted nature, inclined to sin, and that this perverted inclination—no less real because merely potential—is due to heredity, for others before Augustine had taught this, though with less lucidity;² it is that Augustine is obsessed with the idea that this inherited sinfulness consists chiefly and almost entirely in that very 'concupiscence' by which the race is propagated and increased. Such is the form in which Augustine presented his theory of original sin to Julian, and Julian naturally accented him of Manichæism. The idea was not in itself novel, it was a commonplace of Gnostic heresy; what was novel was its presence at the heart of a system which claimed to be Catholic and orthodox. Augustine, indeed, explained in reply that he did not regard marriage in itself as sin, but insisted that as things actually are it is invariably attended with passions which have the nature of sinfulness and that this is due to the radical corruption of all human nature; the general impression made by his arguments is that he himself is convinced that both in its origin and in its subsequent propagation the sinfulness now inherent in human nature manifests itself principally in this connexion.³ There can be no doubt that Augustine's personal history coloured his presentation of the character of inherited sinfulness, which practically, if not theoretically, involved him in Manichæan dualism. His contention had wide-spread and lasting influence in the development of monastic asceticism, which from his day till the Reformation was to be both officially and popularly regarded as the highest ideal of Christian conduct.

Yet it is clear that this conception of the nature of 'original sin' is not essential to the idea of an 'inherited sinfulness' as such; and, if there are weighty reasons for rejecting Augustine's theory of concupiscence, there are weightier ones for supporting his doctrine of original sin—reasons which can be adduced not only from the earlier traditions of the Church, but from the general study of human nature; and, as J. B. Mozley has pointed out, not only has it been maintained by orthodox theologians,

¹ Aug. c. duas Ep. Pelag. iv. 4, where Ro 5:12, ὅτι ὅς πάντες ἥμαρτον, is translated 'in quo omnes peccaverunt,' an impossible rendering. Ro 5:12-21 is the Scriptural locus classicus for the doctrine of original sin; but a strict exegesis, though it shows that St. Paul certainly deduced the universal prevalence of death from the effect of the sin of man's common ancestor Adam, does not show that he clearly stated any inheritance of sinful tendency from Adam, though it may be held that his argument implies this. Cf. W. Sanday and A. O. Headlam, *ICC*, 'Ep. to the Romans,'⁶ Edinburgh, 1902, pp. 130-147; Tennant, *The Fall and Original Sin*, ch. xl.; J. F. Bethune-Baker, *An Intro. to the Early Hist. of Chr. Doctrine*, London, 1903, p. 309, note 2.

² Notably Tertullian (*vitium originis, tradux peccati*), Cyprian, Ambrose in the West, and in the East Origen (in his later works) and the Cappadocians. Irenæus, Athanasius, and Cyril of Jerusalem recognize the universality of sin and the fallen state of the race as a whole, without definitely teaching inherited sinfulness; the Antiochenes, including even John Chrysostom, can be quoted as opposing this conception. None of his predecessors insisted on the utter depravity and corruption of human nature so strongly as Augustine (see Tennant, pp. 273-345).

³ Cf. his own statement of the purpose of his *de Nuptiis et concupiscentia* (l. 1): 'to distinguish between the evil of carnal concupiscence, from which man who is born therefrom contracts original sin, and the good of marriage.'

gians, but it is asserted by 'worldly philosophers and poets.'¹ Spirits so contrasted as Kant² and Shelley³ can be quoted in its support, and it is the common assumption of the thought of plain men about themselves. For who would dare say that the will of any human being was at any stage of its moral development all that it ought to be? Even those who maintain the doctrine of man's 'perfectibility' here on earth hold that it consists in the elimination of previous imperfection. And, if the will of man be thus universally perverted, what other explanation of its perversion will satisfy the facts except that which says that it is innate? The thought of the present day, fascinated with the spectacle of the marvellous ascent and progress of mankind from crude beginnings towards all that makes for a richer civilization, is indeed apt to express itself impatiently on the doctrine of the Fall; but the experience of the present day is at one with that of previous ages as to the universal prevalence of opportunities missed, of faculties misused, and of that fatal facility with which even the greatest and best of men fall short of their ideals. 'The good that I would I do not: but the evil which I would not, that I do' (Ro 7:19) is still the cry of candid self-criticism. How this 'radical evil' originated who shall confidently say? But that it is woven into the very texture of that human nature which every child inherits at its birth who will deny? The modern investigation of heredity leads us to understand more clearly than was possible for the men of the 5th Christian century the intricate solidarity of mankind, and to perceive how

'In the fatal sequence of this world
An evil thought may soil our children's blood.'⁴

It was precisely the presence of this formidable perversion of the will at work throughout the mass of humanity that led Augustine to call it *massa perditionis*,⁵ and to believe that God could be in any way responsible for or satisfied with such a state of things was rank blasphemy. Human nature as such—as it actually exists—is deserving of His displeasure: to the human race as a universal entity guilt attaches, and every particular individual sharing human nature shares in its guilt; he is born in sin, his very origin is tainted, and it is not merely a matter of legal status before the bar of divine perfection, but a matter of positive wrongness of life. The 'results of the original creation' of human nature have been so weakened and degraded that it is helpless of itself to help itself, from the very nature of the case. Hence the whole Pelagian conception of grace is hopelessly inadequate to describe what man needs if he is to escape from himself as he actually is to that perfection for which he was made. It is not enough that in Christ the ideal be displayed with all imaginable distinctness; man may see it, and may love it, but remains powerless to realize it; what

² 'The perfect accordance of the will with the moral law is holiness, a perfection of which no natural being in the sensible world is capable at any moment of his existence' (*Crit. of Pract. Reason*, tr. T. K. Abbott⁵, London, 1909, bk. ii. ch. ii. § 4, p. 218); Kant, while rejecting the traditional conception of 'original sin,' insisted on a 'radical badness' innate in human nature (cf. *Religion within the Limits of Pure Reason*, pt. I, tr. T. E. Abbott⁶, London, 1909, ii. 335 f., iii. 339).

³ *Prometheus*, act I. opening speech, act II. sc. 4; and cf. Byron, *Childe Harold*, canto iv. 128.

⁴ Tennyson, *The Ancient Sage*. On the vexed question of the origin of the soul—which has obviously a very direct bearing on the subject of 'original sin'—Augustine maintained an attitude of uncertainty, between 'Traducianism,' to which he rather inclines, not unnaturally, and 'Creationism,' which was the general assumption of the Pelagians; see his letter to Opatius (Ep. 202 bis), and his four books to Vincentius Victor (*de Anima et eius origine*). Augustine had appealed in vain to Jerome for his views on the subject (Ep. 166).

⁵ *De Pecc. Orig.* 31, *de Corrept. & Grat.* 7.

he needs is a transforming force within, at the very root of his personality, directly strengthening his will, not only putting into his mind good desires, but enabling him to bring them to good effect. And it was just such an inward transforming force that Augustine, like Paul before him, had experienced. He knew it not as issuing out of his own natural will, but as entering into it from beyond; and in his experience it was derived solely from that spiritual contact with Christ which had led him at last in spite of himself to feel it at its fullest within the fellowship of the Catholic Church.

Such were the convictions of Augustine, and, so long as Christian religious experience remains confident of the activity of a grace such as that which made all the difference to him, so long will the Christian Church reject Pelagianism.

4. The transition to Semi-Pelagianism. — (a) *Incipient criticism of Augustine.* — The Church, however, proved readier to reject Pelagianism than to accept in its entirety the system which Augustine constructed to oppose it. It recognized instinctively that Augustine's description of individual religious experience, with its unequivocal derivation of all human goodness from divine grace, was what Christian piety demanded; but, when he proceeded to elevate 'the necessary self-criticism of the advanced Christian into a doctrine, which should form the sole standard by which to judge the whole sphere of God's dealings with men,'¹ it hesitated to accept his conclusions. For Augustine's basal conviction that he had been converted and saved in spite of himself by a divine love that overwhelmed all opposition and forced him to surrender led him to assert that God's grace was irresistible, and that the human will was simply passive in the working out of its salvation. He recognized indeed a 'free will' in men, in that he held that there remained in them, perverted though they were, a faculty of choosing, itself 'poised in indifference,' a mere capacity for either part;² but he regarded this not as the core of personality, but merely as an instrument of which the personality makes use, a good personality using it well, an evil badly.³ It is not the instrument but its user that has been changed and corrupted by the Fall. The user's power of controlling his faculty of choice is what Augustine really means by 'will'; and this 'will,' he believed, could be a good will only through the operation of the irresistible grace of God;⁴ consequently the all too obvious fact that some men are being moulded by grace into Christian perfection, while others are not, was only to be accounted for in the last resort by postulating a divine choice and predestination, in the absolute and inscrutable exercise of which God extends His sovereign and irresistible grace to some, but withholds it from others.

The implications of this doctrine were as great a stumbling-block to Christian piety as were the tenets of the Pelagians, and before Augustine's death this aspect of his teaching caused many searchings of heart. Criticism first became articulate in the monasteries; at Hadrumetum the monks began to question the use of good works or of reprimanding the sinful, seeing that free will, if what Augustine taught were true, was unreal. Augustine replied in 426 or 427 with two treatises, *de Gratia et Libero Arbitrio* and *de Correptione et Gratia*, in which he endeavoured to maintain the reality of free choice and the moral effectiveness of rebuke, along with the sovereignty of gratuitous

grace; both free choice and rebuke, he argued, were means employed by grace for its redemptive purposes, and therefore as means included under God's predestination of the end; the text 'God willeth that all men should be saved' (1 Ti 2⁴) he explained by interpreting 'all men' as 'all sorts of men.'

Shortly afterwards there appeared in Carthago itself the contention which was soon to be recognized as the characteristic tenet of what its opponents later came to call 'Semi-Pelagianism.' One Vitalis was accused of teaching that the first beginning of faith was due not to the grace of God, but to man's own free choice; in other respects he was, apparently, no Pelagian. Augustine addressed to him a weighty letter (*Ep.* 217), but the same proposition was destined to call forth a fuller refutation from the great doctor before his death. Two of his most devoted disciples, the laymen Hilary and Prosper (of Riez in Provence), wrote to tell him of the state of theology in S. Gaul, especially among the monks of Marseilles, under the presidency of their founder, the well-known teacher John Cassian, formerly a deacon of John Chrysostom.

(b) *John Cassian's doctrine of grace.* — John Cassian held Augustine in great veneration; he believed in original sin and in the universal need of grace, as Augustine did; on these crucial matters he was no Pelagian. But he held:¹

(1) That the first movement of faith by which man grasps grace and profits by it is the effort of man's native capacity unaided; (2) that grace is not irresistible; man can of his own free choice reject, just as he can accept, it, though, unless he accepts it, he remains powerless to be or do good; (3) that God offers His grace freely to all men, and genuinely and literally wills all men to be saved; that all men do not profit by grace is due solely to their own rejection of it; (4) that, consequently, God's predestination, of which Scripture certainly speaks, is grounded on His foreknowledge of those who would accept or reject His grace, not on any arbitrary selection of His sovereign choice.

Cassian opposed Augustine's teaching on election and irresistible grace as tending to fatalism and dangerous to morality. It is clear that his protest had little in common with Pelagianism proper; Cassian himself had indeed been nurtured in Eastern rather than Western theology; but the principles which he formulated were also maintained by men such as Hilary of Arles, whose thought was built up with characteristically Augustinian ideas. The whole movement was occasioned by Augustine's teaching, and is not unjustly described by Harnack as 'popular Catholicism made more definite and profound by Augustine's doctrines.'²

The weak spot in the theory was its unwillingness to allow that even in the first movement of the soul towards faith the prime mover is God; Christian instinct, no less than Christian logic, insists that for this, very often its hardest task, the will needs and finds divine assistance no less than in the effort to continue faithful, and Christian piety recognizes as the outstanding element of its experience the grace of God presiding at its very inception.

It is not surprising that Augustine would have none of it; just before his death he composed a work in two parts to refute his Gallic critics, *de Predestinatione Sanctorum* and *de Dono Perseverantiae* (428-429). The writings add little of force or clarity to what he had already written; they contain the interesting confession that he had himself earlier held the views which he now rejects,³ while they deal adequately enough with the illogical nature of Semi-Pelagianism, in that, while it insists on the need of 'co-operating' grace, it denies the need of 'prevenient' or 'origin-

¹ Cassian's teaching is formulated in his *Collationes Patrum*, xiii.; cf. Harnack, v. 248, note 2.

ating' grace. They do not soften the rigours of his own theory of the irresistibility of grace, and of the absoluteness of God's predestination. Still busy with his 'unfinished work' in refutation of Julian, Augustine died on 28th Aug. 430.

(c) *The controversy after Augustine's death.*—Prosper continued the campaign against the monks of Gaul, but without convincing them, although he allowed that Augustine spoke 'too harshly,' and distinguished between 'predestination' as to salvation and 'prescience' as to reprobation. He was supported by a letter from Pope Coelestine, insisting on the need of prevenient grace, and containing a panegyric of Augustine, yet the opposition did not languish, and among the critics of predestinarianism with whom Prosper tried to deal was a certain Vincent, not without reason identified by many scholars with the famous Vincent of Lerins, author of the *Commonitorium*. This writer cannot be accused of maintaining the characteristic 'Semi-Pelagian' theory as to grace; he concentrated his criticism on the inferences which were to be drawn from a strict application of Augustine's theory of predestination and irresistible grace; here, throughout the controversy, was the real rock of offence, and we may well believe that, 'if grace had not been called irresistible, Semi-Pelagianism might never have been heard of.'¹

The controversy was continued for close on a century. About 450 two remarkable anonymous writers made their contribution to it, the conciliatory Augustinian author of the *de Vocazione Gentium* and the bitter anti-predestinarian author of the *Prædestinatus*, a cruel parody of Augustinianism. Semi-Pelagianism held its own in S. Gaul, and found its most influential champion in Faustus, bishop of Riez and formerly abbot of Lerins, a great patron of monasticism. Around his opinions the controversy revived; he insisted that original sin and free will were not mutually exclusive; that the latter, though weakened, was yet able always to co-operate with grace, which, indeed, he thought of mainly as external aid, concentrated in the doctrine and ordinances of the Church; he taught a rudimentary doctrine of merit, which was by now becoming one of the implicit conceptions of theology. He was every whit as strong in his support of original sin as he was in his antipathy to predestination.

Faustus's teaching came, after his death (c. 500), to the notice of the authorities at Rome, and of certain African bishops living exiled in Sardinia; one of these, Fulgentius of Ruspe, wrote replies to Faustus, upholding Augustinianism out and out, and in 520 Pope Hormisdas, while declining officially to condemn Faustus's writings, declared that the doctrines of the Roman Church as to sin and grace could be seen from the writings of Augustine.

(d) *The Synod of Orange (529).*—In S. Gaul the Semi-Pelagian party still maintained itself, but the ablest and most respected bishop of the times, Cæsarius of Arles, though himself a pupil of the monks of Lerins, spoke out as a vigorous champion of Augustine.² Under his presidency an important synod assembled at Orange in 529,³ composed not only of clergy but of laity; 25 canons were promulgated, and these were subsequently invested with more than local importance by the official approval accorded them by Pope Boniface II., which has caused them to be accepted by Latin orthodoxy as embodying its final decisions on the subject.⁴

The canons were based on selections made for the use of the synod by Pope Felix IV. from the writings of Augustine and Prosper. They emphatically exclude Semi-Pelagianism, in so far as they repeatedly insist on the need of prevenient grace.

E.g., 'The grace of God is not granted in response to prayer, but itself causes prayer to be offered for it' (3); 'that we may be cleansed from sin, God does not wait upon, but prepares, our will' (4); 'the beginning of faith is not due to us, but to God' (5); 'undeserved grace precedes meritorious works . . . Grace is not nature' (21); 'to love God is the gift of God' (25).

But no less significant is the absence of any definition of grace as irresistible, and of all reference to predestination and election, except an anathema against any, 'if any there were,' who should maintain a predestination to evil.¹

The Fathers of Orange cannot be held to have solved the problems of free will and determinism, but theirs is at least the credit of excluding from the traditions of Christian orthodoxy a demoralizing fatalism which did violence to men's most sacred instincts concerning the justice and all-embracing love of God, while the dictates of piety and humility were generously obeyed in their clear insistence on the supremacy of grace. The definite though modified Augustinianism of Orange became the accepted theology of Western Christendom as to sin and grace; history has proved that it can be combined all too easily with those tendencies which developed the mediæval doctrines of merit and good works and produced a type of religion which, for all the difference in its external expression, was for all practical purposes Pelagian rather than Augustinian in its effects, in that it sought to earn by acts of piety that grace which in theory it professed was freely given.

5. *Conclusion.*—Predestinarianism, like Pelagianism, dies hard; if the 'common-sense logic' of the latter still satisfies the 'plain man' so far as he concerns himself with such things, the pro-founder and more imposing coherence of the former has continued to attract ardent supporters, more especially in times of religious and intellectual stress. After an acute recrudescence in the Carolingian renaissance of the 9th cent., when Gottschalk's crude Augustinianism was combated by Rabanus and Hincmar (848-853), the controversy was quiescent for centuries. The Schoolmen were content to systematize the doctrine of grace on the basis of a recognized 'mystery'; it was enough for faith that 'God "knew" how efficaciously to incline the will, without infringing on its liberty.'² But in the turmoil of the 16th cent. the great problem of grace once more became vital: for Luther, and overwhelmingly for Calvin, predestination emerged as a foundation principle, while the Roman Catholic Church was faced with the difficulties raised by the systems of Molinos, Baius, and Jansen. In England the conflict between Calvinist and Arminian became more than academic, and in the great Evangelical Revival of the 18th cent. proved real enough to cause the separation between Wesley and Whitefield. In the 19th cent. the amazing progress of natural science seemed for a while to ensure the triumph of determinism, and suggested to the theologians affected by it strange combinations of a naturalistic conception of 'grace' with an equally naturalistic idea of predetermining 'Providence'; but Pelagius and Augustine were not thus easily to be reconciled. Meanwhile evolutionary systems of ethics and theology, no less than the scientific study of religion itself by the anthropologist, the historian, and the psychologist, are necessitating a radical reconsideration of those traditional conceptions of sin and grace and free will which were the lingua franca of the

² His most important work was the *de Gratia et Libero Arbitrio*, now lost.

³ Known officially as the Second Synod at Orange, Arausicanæ Secunda (see Hefele, iv. sect. 242).

⁴ Boniface's confirmation is in a letter wrongly dated 'Jan. 25. 530,' but written in Nov. or Dec. of that year.

¹ A further synod at Valence in 529 or 530 served only to reiterate the conclusions reached at Orange

² Cf. *ERE* vi. 363^b.

earlier controversies. Yet the problem which the study of the Pelagian controversies raises remains the same, and its solution must continue to be of the most vital interest to morality and religion; for it is concerned with the discovery of an ultimate synthesis between three basal and undying convictions—the responsibility of the individual, the solidarity of the race, and the supremacy of God.

R. G. PARSONS.

PENANCE (Roman Catholic).—Penance designates (1) a sacrament of the Roman Catholic Church, (2) a punishment inflicted for sins committed, and, more particularly, (3) an ecclesiastical or canonical punishment.

The most satisfactory method of investigating the nature and character of penance, as understood and practised in the Church, is to follow its historical development from its origin.

The very idea of the religion of Christ is that of a redemption from sin, through the sufferings of Jesus, the salutary effects of whose vicarious expiation are imparted to each individual soul at its conversion to the faith, as accompanied and evidenced by baptism and admission into the Church. As a consequence, some uncertainty in doctrine and practice was bound to result as to the attitude which the Church should observe towards those who, once regenerated through baptism, fell into sin again and applied for reconciliation.

In the Roman Catholic view the emphatic statement of Jesus bestowing on His apostles without any restriction authority to forgive sins (Mt 16¹⁹ 18¹⁸, Jn 20²¹⁻²³) left no doubt in the minds of the early Christians as to the general power vested in the Church to forgive all manner of sins. Such is at least the Roman Catholic belief reasserted in the decree *Lamentabili* (3rd July 1907), in which are condemned two modernistic propositions (46, 47) which assert that 'in the primitive Church there was no idea of the reconciliation of the Christian sinner by the authority of the Church,' and that, 'even after it came to be recognized as an institution of the Church, it was not called by the name of sacrament.'

Nevertheless in the earliest times there were three kinds of crimes considered so atrocious that they were punished by perpetual excommunication: idolatry, homicide, and adultery or fornication. This did not imply that such sins were considered unforgivable, but merely that the Church did not want to assume the responsibility of pronouncing on them, leaving them to be settled between the conscience of the sinner and God Himself. Very early, however, it came to be realized that such a rigorous attitude was more detrimental than beneficial, and already the *Pastor* of Hermas (c. 140-154) contains assurances of forgiveness for all sins except blasphemy of the Name and betrayal

of the brethren (*Sim.* ix. 19). Hermas clearly expresses at the same time that the forgiveness which he announces is in the nature of a unique concession, to be had once only and for the time being, and that those who sin afterwards will be unworthy of the grace, for 'there is but one repentance for the servants of God' (*Mand.* iv. i. 8)—a restriction which Roman Catholic authors understand of public reconciliation only.

Clement of Alexandria (*Strom.* ii. 13), Denys of Corinth (in Eus. *HE* iv. 23), and the *Didache* of the Apostles do not seem to admit of so many restrictions, and Tertullian (*de Pen.* v.-xi.) distinguishes two kinds of penance, one as a preparation to baptism and the other to obtain forgiveness of some grievous sin after baptism. In his 'peremptory edict' Pope Callistus (218-222) declares: 'I forgive the sins both of adultery and fornication to those who have done penance'—whereupon Tertullian, now become a Montanist, protests in his *de Pudicitia* against Callistus's error, that the Church could forgive all sins, and likewise takes Hermas to task for favouring the pardon of adulterers. Much rigour was still exhibited in practice; in most cases reconciliation was deferred to the moment of death, and Cyprian (*Ep.* lv. [li.] 21) expressly alludes to the 'ancient bishops' who kept adulterers for ever excluded from the Church. It seems, however, that forgiveness was everywhere granted to the sinners who had obtained the intercession of the martyrs in the shape of a *Libellus pacis*, although Cyprian at Carthage refused to recognize such an indulgence. In Spain, as late as 300, the Council of Elvira pronounced perpetual exclusion against the idolaters.

But the old time rigour began gradually to be mitigated at the example and lead of the Church of Rome. Pope Cornelius (251-253) extends forgiveness to the *lapsi* of the persecution, and reconciliation is denied only to those who have deferred asking for it until at the point of death. Against the concessions of Callistus and Cornelius, Hippolytus and Novatian (condemned in a Synod of Rome in 251) formed schisms, the latter originating a sect which lasted two centuries (see **NOVATIANISTS**). Yet Cyprian (*de Lapsis* [251]), while rebuking the *lapsi*, exhorts them to penance; for the 'forgiveness granted by the priests is acceptable to God.'

z. Public penance.—Public penance, which was necessary for the re-admission of the sinner within the pale of the Christian community, was preceded by a confession (*ἐξομολογησις*), public or private, according to the cases (Origen, *Hom. in Lev.* ii. 4 [PG xii. 418]; Augustine, *Sermo* cli.; Tertullian, *de Pen.* ix.). The confession was followed by penitential practices exercised under the supervision of the proper authority, who was in the West the bishop, and in the East a special penitentiary appointed by the bishop.

The nature of those penitential exercises varied; according to Tertullian (*de Pen.*), they consisted in prayer, fasting, prostration at the feet of the priests of the Church, dressing in sackcloth and rags, lying in ashes, using the plainest food and drink for the sole purpose of sustaining life, and harsh treatment of the body.

In the East, according to Gregory Thaumaturgus (263) and Basil (*Ep.* cxcix. 22, ccxvii. 56), a classification of penitents into four groups was observed: the *ἀκροώμενοι*, assimilated to the catechumens, and excluded from all participation in the mysteries; the *ὑποπίπτοντες*, or *γόνυ κλίνοντες*, who were permitted to attend the services kneeling; and the *συστάτες*, who attended the services, but were debarred from communion; each of those groups had its special place assigned in the Church; the fourth class was added later, the *προσκαλόντες*,

who remained outside the Church door. These distinctions seem to have been ignored in the West, where all penitents were assimilated to the catechumens. The whole penitential process was closed by a solemn function held on Holy Thursday, when, after a consultation (*concilium*) of the bishop and the clergy, the penitents received a solemn absolution from the bishop or even, in case of necessity, from a deacon (Cyprian, *Ep.* xviii.); this fact showed that such reconciliation was understood to be 'in foro externo' only, and not sacramental, although some writers hold the opposite view.

At the point of death such reconciliation, at that period, was never refused even for the most grievous sins, although sometimes communion was even then denied to apostates (cf. Leo I. [442], *Ep.* cviii. 4 [*PL* liv. 1012 f.]; also Cœlestine [428], *Ep.* iv., 'To the bishops of Vienne and Narbonne,' 2; and Nicæa [325], can. 13; Arles [314], can. 22).

Public penance could be permitted only once, as is evident from Hermas, Tertullian, Origen (*Hom. in Lev.* xv. 2), and Ambrose (*de Pæn.* ii. 10 [95]), the reason being, according to Augustine, 'lest the remedy become common' (*Ep.* cliii. 'ad Maced.' 7). The principle was renewed as late as 589 by the Council of Toledo.

The primitive discipline was severe, even extreme in some cases (Innocent, *Ep.* vi. 2 [405]), but was gradually mitigated through the subsequent period and throughout the Middle Ages. In 390 a public scandal in Constantinople induced the patriarch Nectarius to suppress the charge of penitentiary, which was followed by the abolition of public penance throughout the East. The practice was kept up in the West, but not extended to the newly-converted peoples like the Anglo-Saxons. Among those, as well as in the Eastern Church, the exomologesis is henceforth always secret.

From contemporary documents we see that the career of penance was inaugurated by the imposition of the hands and the bestowal of a hair shirt. The penitent must shave his head, wear mourning, abstain from the management of business, lawsuits, and military service, and practise perpetual continence (if married, only with the consent of his consort). Clerics guilty of a capital crime had formerly been subjected to the same penance as laymen; in the 4th cent. the custom was established of deposing them without excommunication, thereby reducing them to the lay communion (*Can. Apost.* 25). In the Roman (not, however, in the Gallican) Church they were not allowed to submit to public penance.

In the West public confession was finally suppressed by ordinance of Pope Leo I. († 461; *Ep.* clxviii. 2); but public penance was maintained.

During the contemporary period the texts of the Fathers became both numerous and explicit in the assertion of the power existing in the Church to forgive all sins; Augustine (*de Agon. Christ.* xxxi.) states that 'the Church of God has power to forgive all sins'; Ambrose († 392), rebuking the Novatians (*de Pæn.* i. ii. 6, ii. ii. 12), claims for the priests of the Church the authority 'to pardon without any exception'; Pacian of Barcelona († 390) maintained that the forgiving of sins done by the priest is 'the doing of God's own power' (*ad Sympron.* [*PL* xiii. 1057]). In the East St. Cyril of Alexandria († 447; in *Joan.* xii., on 20th [*PG* lxxiv. 722]), Chrysostom († 407; *de Sacerdot.* iii. 5 f.), and Athanasius († 373; *Frag. c. Novat.* [*PG* xxvi. 1315]) inculcate the same notion. The idea of transmission of the power of forgiving sins is clearly expressed in the *Canons of Hippolytus* (xvii.) and the *Apostolic Constitutions* (viii. 5 [*PG* i. 1073]).

2. Penitential books.—The period which wit-

nesses the gradual diminution of public penance and its supersession by the private exomologesis is also characterized by the appearance and diffusion, in both the Eastern and the Western Church, mostly from the 7th cent., of the Penitentials, or penitential books, which held sway in the practice and administration of penance until the codification known under the name of the *Decree of Gratian* (1140), and the rise of the Scholastic theology which superseded them.

Those books, the nucleus of which was the penitential canons laid down by councils and bishops, were compilations of regulations and decisions intended to guide the confessors in the practice and administration of penance. While granting the part that they played in educating the barbarian races in Ireland, England, and Frankland, we must admit that they represented no real progress, but a growing complication of the penitential discipline, and grew so numerous, sometimes conflicting and often tending to a relaxation of moral rules, that they caused in the 9th cent. a sort of reaction and hostile revulsion. Some of them had been published with the sanction of the Church and followed the ancient canonical decrees and the statutes of St. Basil, Gregory of Nyssa, and others; others were merely private works which found wide circulation, while some called for reprehension and condemnation at the hands of the ecclesiastical authorities.

Among the most important of the Penitentials may be mentioned, in the East, those of John the Faster and John the Monk, in the West the *Liber de Pœnitentia* of St. Columbanus († 615), partly based on the earlier 'canons of St. Patrick' and of St. Finian († 552), and the Penitentials of St. David († 544) and Gildas († 583). The work of St. Columbanus had considerable influence on the Continent. The *Penitentie* of Theodore, archbishop of Canterbury († 690), was of great authority in the Anglo-Saxon Church and throughout the West during the next four centuries. The Penitential of St. Cummian (8th cent.) and the *Liber Pœnitentium* of Rabanus Maurus (841) also exercised considerable influence at the time. There is no proof, so far, that there existed any real papal Penitential.

It is interesting to gather from those books some definite notions as to the rules and practice of penance throughout the period in the Celtic and Saxon Churches in England. In two so-called 'Synods of St. Patrick' it is prescribed that he who commits any of the capital sins shall perform a year's penance for each offence, at the end of which he shall come with witnesses to be absolved by the priests, and 'let penance be short, rather than long, and tempered with relaxation' (D. Wilkins, *Concilia*, London, 1737, i. 3 f.). In the Irish Church the confessor was called *anmchara*, 'soul's friend' (*animæ carus*).

The *Leabhar Breac* states that 'the soul is healed by confession and declaration of the sins, with sorrow, and by the prayers of the Church, and a determination henceforth to observe the laws . . . because Christ left to His Apostles and Church, to the end of the world, the power of loosing and binding.'

The necessity of confession before communion is expressly recommended (can. xxx.) in the Penitential of St. Columbanus, and the practice of public penance is also regulated in detail in the Penitentials. In the Anglo-Saxon Church penance was called *behreowsung*, the confessor was the *scrift*, confession the *scrift spræc*, the parish the *scrift scire*, and the Penitential the *scrift boc*. In the Penitential of Theodore it is stated that 'there is no public penance in this province'; that not the deacon but the bishop shall impose penance on the laymen; and that, while communion should be deferred to the end of the penance, it may be allowed after a year or six months. The Peniten-

tial of Egbert of York († 266) says that the bishop shall not refuse confession to those who desire it, though they be guilty of many sins (Wilkins, i. 126). For stealing Cummian prescribes that a layman shall do one year of penance, a cleric two, a subdeacon three, a deacon four, a priest five, a bishop six. For murder or perjury penance lasted from three to twelve years according to the rank of the penitent. For perjury over the gospel or holy relics Egbert enjoins seven or eleven years of penance. Usury was punished by three years, infanticide by fifteen, idolatry by ten; for violations of the sixth commandment from three to fifteen years were enjoined, and from three to twenty-five years for incest. During that period, or a specified portion of the time, the penitent was to fast on bread and water, or, if unable, to recite daily a certain number of psalms; he was, moreover, to scourge himself or perform some other penitential exercise as determined by the confessor.

During the period which extends to the end of the 11th cent. the penitential discipline was steadily mitigated, and public penance was inflicted only for public sins. On the other hand, the number of sins to be publicly expiated was notably increased, while public penance was not merely offered but enjoined and imposed by means of ecclesiastical censures and often enforced by reconre to the 'secular arm.' It took the form of fasting, exile, distant pilgrimages, scourging, claustration, etc. The Synod of Worms (868) removed the prohibition for penitents to live in the state of marriage.

The habit had been gradually introduced to redeem with alms, after the fashion of the Teutonic *Wergeld*, the various penalties. The Penitentials, from the 8th cent., enumerate the sins considered equivalent to the fasts or other austerities which the penitent could not observe. The first authentic instance of the partial redemption of public penance occurs at the Synod of Tribur (895); but soon abuses crept in, and the Council of Rouen (1048) forbade arbitrary changes in the pecuniary compensation required.

On the other hand, excommunication had grown into a general interdiction from all intercourse with the Christian world. The interdict, extended to entire districts for the first time in the 9th cent. (Gregory of Tours, *Hist. Franc.* viii. 31, ix. 15), and consisting in the suspension of all religious functions within the territory affected, is now being applied to considerable regions (Limoges, 1031); at the same time it is rendered less rigorous and absolute, private reception of baptism and of the last rites and even private celebration of the services being permitted.

In the Middle Ages the practice of redeeming penance had become general. A penitent would be excused from the prescribed works of penance at the cost, e.g., of equipping a soldier for the crusade, of building a bridge or a road, etc. The consequent diminution of the practice and spirit of personal penance resulted in the Church imposing at the Fourth Council of Lateran, on all the faithful without exception, the obligation to confess, at least once a year, to an authorized priest during Easter time, and to fulfil the penance enjoined by him. As a consequence, in the 14th cent. general public penance practically disappears, and in the 16th cent. it occurs only exceptionally.

3. The Scholastic doctrine.—The rise of the Scholastic philosophy, with its sustained effort to organize the Catholic beliefs and practices into a systematic doctrinal whole on the basis of the Aristotelian philosophy, resulted in an interpretation of the subject of penance which was received without opposition. It is to-day held by all Roman Catholics. As, however, the subsequent

rise of the Protestant Reformation with its doctrine of justification by faith alone brought into question all the theological development of the past ages, three centuries afterwards the Church saw herself forced to re-state her own beliefs and practices in answer to the new doctrine. She did this by practically defining as her own at Trent (1551) the principal conclusions of the Scholastic doctors, the definitive expression of which is found principally in the works of Thomas Aquinas, especially in the *Summa Theol.* III. qu. 84-90, supplement. qu. 1-23; and in *Sent.* IV., dist. xvii., xviii., xix. To avoid repetitions, we shall, therefore, while giving a summary of the Scholastic doctrine, indicate in parenthesis the sessions and canons of the councils which raised each individual conclusion to the dignity of a dogma of the Catholic faith.

Penance is a virtue, more probably a special virtue. It was at all times necessary for the remission of sins (Trent, sess. xiv. can. 1). In the Christian dispensation sins committed after baptism are actually and judicially forgiven by the Church in virtue of the power of the keys in a rite which is truly a sacrament of the new law, and based on the words of Christ in Jn 20²¹⁻²³:

'Receive ye the Holy Ghost: whose soever sins ye forgive, they are forgiven unto them; whose soever sins ye retain, they are retained' (ib.).

Like all conceivable things in this material world, that sacrament has its matter or quasi-matter (Florence, 1439; Trent, xiv. 2), consisting of the three acts of the penitent—contrition, confession, and satisfaction—and its form, the absolution (*q.v.*). The effect of that sacrament is deliverance from sin (Florence; Trent, *loc. cit.*), which implies remission of the guilt and the eternal punishment due to sin, but requires satisfaction for the temporal punishment into which it is commuted (Trent, xiv. 3). That sacrament is distinct from baptism (ib. 2), against the Protestant contention that it was at most a statement and declaration of the forgiveness already obtained once for all, through faith alone. While the sacrament is indispensable for the remission of mortal sins, it is not for that of venial sins which can be forgiven otherwise, but which are rightly declared in confession (Leo X., in the bull *Exsurge* against Luther's contention [H. Denzinger, *Enchiridion*¹, Freiburg, 1911, no. 753]). The only minister of that sacrament is the priest and not the laity (Martin V., against Wyclif and Hus, 1418, in bull *Inter cunctas* [Denzinger, 670]; Leo X., against Luther in bull *Exsurge* [ib. 753]; Trent, xiv. 6). The valid administration of that sacrament requires a double power (or 'key'), that of order, conferred in the sacerdotal ordination, and that of jurisdiction over the faithful, dependent on the delegation of the ecclesiastical authority, so that absolution pronounced by those not having ordinary or delegated jurisdiction was invalid and of no effect (Trent, xiv. 7). The ecclesiastical authority may limit or restrict the exercise of the said delegated jurisdiction over the faithful by reservation of cases, except at the point of death.

Being a sacrament, penance can have no effect on the unbaptized; on the baptized themselves it can have no effect of reconciliation unless accompanied by repentance. Of this there are two kinds: perfect contrition and imperfect contrition, or attrition (Trent, xiv. 4); the former is a repentance consisting in the hatred of sin as an offence to God, the latter is based on the fear of everlasting punishment. Even perfect contrition, while in itself sufficient to reconcile the soul with God, cannot do so without the actual reception of the sacrament, or, in case of impossibility, 'apart from the desire of the sacrament which it includes'

(ib.). In line with this canon is the condemnation in 1571 by Pius v. of the proposition of Baius, that, except in case of martyrdom or necessity, perfect contrition does not remit sin without the actual reception of the sacrament (Denzinger, 724), and of the proposition of Peter Martinez of Osma (by Sixtus IV. in 1479) that mortal sins are blotted out by contrition alone without reference to the power of the keys.

Imperfect contrition, while in itself insufficient to reconcile the soul with God, becomes so in the sacrament by virtue of the absolution, but never without it, even in case of necessity.

The sacrament of penance is not an institution the use of which is left to the option of the penitent; it is as necessary to baptized sinners for salvation as is baptism to those who have not yet been regenerated (Trent, xiv. 2); for confession, or the declaration of one's sins specifically and in detail (ib. 5), is indispensable for the remission of sins. There is no necessity for such confession to be public rather than private or auricular; private confession is sufficient in all cases; for public confession is neither of divine institution nor commanded of God (ib.). To obtain forgiveness it is therefore indispensable to confess at least all mortal sins, and none can be forgiven separately, so that the wilful concealment of a single mortal sin is a sacrilege that invalidates the entire confession; grievous sins inadvertently omitted must be accused in the next confession (ib. 8). The same sins can be appropriately confessed over again, each new accusation, in the view of Aquinas, resulting in a diminution of the temporal punishment due to sin.

Inviolable secrecy (except by express permission of the penitent), even at the cost of life or honour, is enjoined on the priest and on any one, interpreter or the like, who has in any manner become informed of the contents of a confession (4th Council of Lateran, ch. xxi.; Denzinger, 438). The penalty of deposition, confinement, and perpetual penance is pronounced on any transgressing confessor, be the revelation direct or indirect, and neither the care of public safety nor that of securing the fulfilment of legal justice, nor any cause whatsoever, excuses from that strict obligation. It is not even permitted to make use of any knowledge so obtained (decree of the Holy Office, 18th Nov. 1602).

Sacramental confession 'by divine right necessary and established' is not therefore a human invention devised by the Fathers of the Lateran; they only prescribed 'that the precept of confessing at least once a year should be complied with by all and every one when they reach the age of discretion' (Lateran, ch. 21).

Sins forgiven by absolution, while pardoned as to the guilt and the everlasting punishment due to them, must nevertheless be expiated by satisfaction for the temporal punishment which they leave after them; this obligation is fulfilled by the sacramental penance imposed by the priest, as well as by private good works, prayers, alms, fasting, works of merit, indulgences (q.v.), etc. Accordingly, the Council of Trent (cans. 12 and 15) expressly condemned the Protestant doctrine that the entire punishment due to sin is always forgiven with the guilt, and that it is a fiction to say that there remains to be paid a temporal penalty; for 'of all of the parts of penance, satisfaction was constantly recommended to the people by our Fathers.'

Such is, in succinct outline, the doctrine of the sacrament of penance, as elaborated by the Schoolmen and adopted by the Council of Trent. It had been in quiet possession of the whole Church for 300 years, on the admission of Calvin, before

the doctrine of justification by (fiduciary) faith alone was proclaimed by the Reformers. For supplementary information on the subject of the various parts of the sacrament see the special articles on ABSOLUTION, EXPIATION AND ATONEMENT (Christian), INDULGENCES, etc. We may, however, give here a somewhat more complete account of its most characteristic feature, viz. confession.

4. Confession. — Confession is considered by Roman Catholics (cf. Trent, *loc. cit.*) as of divine institution. That it should be a logical consequence of the interpretation of Jn 20²², in the sense defined by Trent, is admitted even by such unsympathetic historians as Lea (*Hist. of Auricular Confession*, i. 181 f.), since no judge can authoritatively loose or bind without a knowledge of the case, so that general confession without a detailed statement of sins would not answer the idea. The practice of confessing one's sins is already inculcated in Ja 5¹⁶ and 1 Jn 1⁹, and has therefore its foundation in the NT. An examination of the various texts of the Fathers which we have mentioned above will show that they understood the power of penance as distinct from that of conferring baptism, the latter being conceived and described as a spiritual rebirth, the former as a second plank after shipwreck.

The *Didache* commands individual confession in the congregation (iv. 14, xiv. 1). Irenæus (180-204) mentions the fact that some sinners 'perform their exomologesis openly also' (*adv. Hær.* i. xiii. 7 [PG vii. 591]), and Clement of Rome says: 'It is better for a man to confess his sins, than to harden his heart' (*ad Cor.* i. li. 3). Origen († 254) says: 'If they accuse themselves and confess, they at the same time vomit the sin and cast off every cause of disease' (*Hom. iv. in Ps. xxviii. 6* [PG xii. 1386]). Cyprian recommends mercy to the sinner 'because in hell there is no confession and exomologesis cannot be made there' (*Ep. li. [lv.] 'ad Antonian.'* 29), and he praises those 'who confess in sorrow and simplicity to the priests of God' (*de Lapsis*, xxviii.).

Lactantius († 330) states: 'that is the true Church in which there is confession or penance' (*Div. Inst.* iv. 80). Exhortations to confession are found in Augustinus (*in Ps. lxxvi. 6*), in Jerome, in his sermon on penance, and in Ambrose (*de Pern. i. li. 7*), and Basil (*Reg. brev. tract.* 229) refers to the priests as the only fit recipients of the avowal of the penitents.

The idea of confessing to God alone, afterwards revived by the Protestants, is swept aside by Augustine (*Sermo cccxlii. 3* [PL xxxix. 1711]): 'Was it for nothing that the keys were given to the Church?'

Leo the Great (440-461), who has often been credited with this institution of the practice, calls it an apostolic rule (*Ep. clxviii. cviii. [PL] li. 1210, 1011*). It is, moreover, to be noticed that Gregory the Great († 604, in *I. Reg. iii. 13* [PL lxxix. 207]) expressly refers to it as a well-established practice. According to Lea (i. 228), the decree of the Lateran made of the necessity of confession a new article of faith; this, however, is contradicted expressly by the Council of Trent, and by the practice of the Oriental Church, which separated from the Western as early as the 10th cent., and in which the practice of confession is both habitual and obligatory. The only doctor of the Middle Ages who does not pronounce decisively for the necessity of confession is Gratian (*Decret. ii. 'de Pœn.'* dist. 1. [PL clxxxvii. 1519-63]); with the other doctors the only question is about the origin and sanction of the obligation and the value of the Scriptural texts. That question is settled definitely by Aquinas (*c. Gentis*, iv. 72). He also interprets the decree of the Lateran as meaning that the obligation of confessing mortal sins urges, not as soon as possible after sinning (Albertus Magnus), but only during Easter time.

Such are some of the principal authorities on which the Roman Catholics base their doctrine and practice and which induced the Council of Trent to define penance as a dogma of the Church.

For the convenient and public regular exercise of penance there have been introduced, not earlier than the 16th cent., among the furniture of the Roman Catholic churches confessionals, either movable or immovable (sometimes pieces of real artistic value in woodwork). They consist essentially of seats or stalls affording a central lodge with a seat for the confessor and kneeling accommodation at the sides for the penitents, with the view and purpose of securing enough publicity and, at the same time, enough privacy for both safeguard and convenience. The canonical regu-

lations insist that they must be established 'in loco patenti' and provided with a wooden or metal partition or grate between the seat of the confessor and that of the penitents.

Their use is practically enjoined everywhere, except in the case of necessity, when hearing the confessions at least of women; and, if there may still be found churches where they are not in use, and where, *e.g.*, confessions are heard at the communion railing, these conditions must be considered as irregular and uncanonical.

With the proclamation of the principle of justification through faith alone, consisting in the external imputation of the merits of Christ, it followed as a logical consequence that justification, once obtained, was certain (according to Calvin, for the predestined alone); equal in all, and inamissible except by loss of faith (for Luther, and not even by that for Calvin); so, therefore, there could be no real wiping off of sin by any sanctifying grace as taught by the Schoolmen, nor any sacrament of penance, nor, consequently, any necessity for confession.

The Lutherans, accordingly, soon dropped the obligation of private confession altogether, through various ordinances, as in 1657 in Saxony and in Brandenburg in 1698, although the private practice was not prohibited. Since the beginning of the 19th cent. it has been somewhat revived among orthodox Lutherans.

In England the Wesleyans have Church discipline, and so had, as is well known, the Calvinistic and Presbyterian bodies, but no confession, while the Salvation Army practises and recommends public confession. The Anglicans do not prescribe auricular confession; they merely advise it, when necessary to satisfy one's conscience, and to the sick if they feel their conscience troubled. The Oxford Movement revived it to a considerable extent, and Pusey in 1878 published an adapted translation of J. J. Gaume's *Manual for Confessors*; moreover, efforts were made in 1873 to obtain from convocation the licensing of confessors, but without success; for the view 'that post-baptismal sin of a grave sort can receive forgiveness in no other way [than through confession] . . . cannot be found within the covers of the English Prayer-Book' (W. O. Burrows, *s.v.* 'Confession,' in *EB*¹¹ vi. 904^b).

When one recalls the severities of the public penance of bygone ages and contrasts with them the comparative insignificance of the sacramental penance usually inflicted nowadays, one cannot help wondering how such an extraordinary mitigation can harmonize with the theory and practice of the past. It must be remembered, however, that, if the sacramental penance has been immensely lightened, the purpose of that leniency is 'not to repel' the sinner, since repentance here on earth is much more essential than satisfaction, and since all 'unpaid debts,' in the Roman Catholic belief, will be fully discharged in the life hereafter in the purifying flames of purgatory.

E. L. VAN BECELAERE.

PENANCE (Anglican).—The words *penitentia* and *μετάνοια* are both used in each of three distinct senses: (1) the emotion or sentiment of penitence; (2) the penance, penalty, or course of humiliation assigned or undertaken; (3) the institution, ordinance, or sacrament of penance. This article is mainly concerned with penance as an institution, ordinance of grace, or sacrament of the Christian Church.

The commission of our Lord to the Apostles on which the practice of penance is based is recorded in Jn 20²¹⁻²³. The Lord breathed on them, and said:

'Receive ye the Holy Ghost: whose soever sins ye remit, they are remitted unto them; and whose soever sins ye retain, they are retained.'

This commission might be applied in two ways (Cyril Alex. *in loco*): by baptism, for those who were not yet members of the Christian Church; and by penance, for the children of the Church who had sinned and fallen from grace. Penance, which is here under consideration, has to do only with baptized Christians who have sinned after baptism.

In the history of the Church there have been extraordinary variations alike in the scope and in the methods of penance. As regards scope, there may be contrasted the prevalent conviction in the 2nd and 3rd centuries that the Church could not reconcile in this life offenders in the three capital sins of apostasy, adultery, and bloodshed; and the teaching of St. Pacian of Barcelona at the end of the 4th cent. that it was for these three capital forms of offence and only for these that penance was needed (*Paranesis ad Penitentiam*). As regards methods, the publicity of the course of penance or humiliation in the early centuries may be contrasted with the privacy of later methods as already shown in the practice of the priest penitentiary at Constantinople in the 5th cent., but not universal in the West till 1000 years of Christianity had passed. A brief survey of this varied history will be the best exposition of the subject.

In the apostolic period St. Paul exercises the commission of retaining in the case of the incestuous Corinthian. He does so with some circumstance.

'For I verily, being absent in body but present in spirit, have already, as though I were present, judged him that hath so wrought this thing, in the name of our Lord Jesus, ye being gathered together, and my spirit, with the power of our Lord Jesus, to deliver such a one unto Satan for the destruction of the flesh, that the spirit may be saved in the day of the Lord Jesus' (1 Co 5⁴⁻⁵).

St. Paul also exercises the commission of remit-

ting, whether the person forgiven is the incestuous Corinthian or another offender:

'For what I also have forgiven, if I have forgiven anything, for your sakes have I forgiven it in the person of Christ' (2 Co 2:10).

The writer of the Epistle to the Hebrews appears already to take the rigorist view as regards apostates:

'It is impossible to renew them again unto repentance' (*μετανοίας*) (He 6:8).

The story of St. John and the robber shows the Apostle ready to reconcile a bandit guilty of repeated bloodshed (Clem. Alex. *Quis dives salvetur?*, 42).

In the sub-apostolic period the first authority to notice is Hermas. In the *Shepherd* Hermas, addressing the angel of penitence (the Shepherd), says:

'I have heard, Sir, from certain teachers that there is no other *μετανοία*, but that when we went down into the water, and received remission of our former sins' (*Mand.* iv. 3). The angel replies: 'Thou hast well heard for so it is.'

The attitude taken up is that normally there is no remission of capital sins after baptism in this life. But the message to be given is that, under the exceptional circumstances of (a) an impending persecution, and (b) the approaching end of the age, one *μετανοία* after baptism may be admitted, except in the case of the more wilful apostates. This is the inception of the Church rule that only one penance after baptism might be admitted.

In the period A.D. 150-250 the principal writers—Clement of Alexandria, Hippolytus, Tertullian, and Origen—all favour rigorism. Clement holds with Hermas that the normal situation is to admit only the penitence preceding baptism, but that after baptism penance may be admitted once for sins not properly wilful (*Strom.* ii. 13). In Rome Hippolytus strongly condemns the new policy of Callistus which throws open the gate of reconciliation to offenders in the matter of purity (*Refut.* ix. 7). In Carthage Tertullian, now a Montanist, makes an attack on the same policy in his *de Pudicitia*. Origen, who may be taken as representative at once of the Churches of Syria and of Egypt, is similarly severe.

He writes of those who 'overstep the bounds of the priestly dignity in assuming to condone idolatry, and to commit adulteries and fornication' (*de Orat.* 23).

Such sins to Origen are sins incurable (*ἀνίατα*).

While the great writers are thus at one in the rigorist attitude, there was evidently at the same time a body of opinion which made for leniency or mercy. One bishop who showed the lenient temper was Dionysius of Corinth (c. A.D. 171; *Eus. HE* iv. 23). The outstanding champion of the present mercy of the Lord to the penitent offender in fleshly sin was Callistus, bishop of Rome. He admitted such offenders to reconciliation after due penance performed; and his action carried with it the mind of the Church for all future ages. The next class of capital offenders to be admitted to reconciliation was that of the apostates. It was after the Decian persecution (A.D. 250) that the question became urgent. The First Council of Carthage under Cyprian (251) ruled (a) that *libellatici* might in approved cases be restored after considerable penance, and (b) that *sacrificati* might be restored on the approach of death. The Second Council of Carthage under Cyprian (252), in view of the impending persecution under Gallus II., agreed to reconcile without delay all the penitent lapsed. At Antioch in the same year a council under Demetrianus appears to have united the East in the same policy of mercy. At Alexandria the case of Serapion shows St. Dionysius ready to restore on the approach of death (*Eus. HE* vi. 44). The homicide also was in time admitted to reconciliation before death. The Council of Ancyra (314)

regulates the penances for these offenders (canons 22, 23). Finally, the Council of Nicæa (325) ruled by canon 13 for all capital sins that reconciliation was open to penitent offenders before death.

Meanwhile the procedure of penance had been developed in much detail. The *de Penitentia* of Tertullian (ch. 9) shows a discipline in use in Carthage, and evidently also at Rome, which included (1) a sordid garb, sackcloth and ashes; (2) dietary restrictions; (3) public lamentation; (4) prostration before the presbyters; and (5) kneeling before the faithful. This course of ordered public humiliation was styled *exomologesis*. There must have been a confession of offence in words in connexion with this *exomologesis*; but there is no evidence of any public confession in detail. Half a century later, again in Carthage, the system of procedure is spoken of by St. Cyprian as *ordo* (*Ep.* 11), as *ordo disciplinae* (*Ep.* 9), as *disciplina Domini* (*Ep.* 11). It was admissible in the ordinary course 'in minoribus peccatis' (*Ep.* 9), such sins being minor as compared with the capital sins of apostasy and bloodshed, though probably including sins of impurity. It involved (a) *penitentia*, (b) *exomologesis*, and (c) the imposition of the hands of the bishop and clergy (*Ep.* 9) for the admission of the persons to communion. Confession was not made publicly, but 'apud sacerdotes,' the word *sacerdos* being at this time used of bishops only (*de Lapsis*, 23).

A few years after the Decian persecution a great missionary bishop of Pontus, St. Gregory Thaumaturgus, organized in his diocese (*τὸν ἐνθάδε τόπον*) a system of penitential discipline by grades (*Canonica Epistola*, can. 5). Five grades are commonly enumerated: (1) mourners (*ἡ πρόσκλαυσις*), (2) hearers (*ἡ ἀκοασις*), (3) fallers (*ἡ ὑπόπτωσις*), (4) bystanders (*ἡ σὺστασις*), and (5) the restored to communion (*ἡ μεθεξις τῶν ἀγιασμάτων*) (can. 11). Of these, two are not grades of penitents. The mourners are supplicants for penance, who are as yet altogether outside the Church. The final grade of restored communion is the grade of those whose penance is done. The grades which are in fact grades of penitents are those of hearers, fallers, and bystanders. The distinction of hearers and fallers may have already been in use for catechumens (Origen, *c. Cels.* iii. 51; *Council of Neo-Cæsarea*, can. 5), the provision thus made for catechumens being now utilized for penitents. The grade of bystanders seems to have been created to meet the case of advanced penitents.

The system of graded penance spread from Pontus to the neighbouring provinces of the Asian peninsula, and finds recognition in the canons of Nicæa. But it was not in force in Antioch, in Rome, or, indeed, anywhere outside of the Asian provinces. As introduced by Gregory, the terms of penance in each grade for particular sins are not yet fixed. In the *Canonical Epistles* of St. Basil a customary scale of terms of penance is shown in force. Some of the terms are of great length. Thus penance for thirty years is imposed for certain sins of impurity (can. 7). The discretion of the bishop, however, tempered this severity in practice (can. 74).

The conversion of the empire would make the application of this severe system impracticable except in limited areas. Thus, in Antioch, of 200,000 inhabitants in the time of St. Chrysostom 100,000 were Christians. St. Chrysostom repudiates the Asian system as an 'intolerable publication' (*de Incomprehensibili Dei Natura*, hom. 5). Similarly its long terms of penance have in his judgment no hidden virtue. Five days of contrition are worth years of wooden penalty (*de Beato Philogonio*, 4). The distinctive teaching of St. Chrysostom is that penance may take many forms,

and that they all reach up to heaven. Thus (1) confession, (2) contrition, (3) humility, (4) almsgiving, (5) prayer, and (6) forgiveness of others are all efficacious for the forgiveness of our sins (*de Diabolo Tentatore*, hom. 2, *de Penitentia*, hom. 2, *In Ep. ii. ad Corinthios*, hom. 4). In an enumeration employed after his advancement to Constantinople he specifies as one such means 'recourse without reserve to the priests' (*τὸ πρὸς τοὺς ἱερεῖς ἔχειν ὁκλῶς*), where the word *oklōs* appears to signify intimate or confidential intercourse. It may be noted that this was after the abolition of the priest penitentiary by Nectarius (*In Epistolam ad Hebræos*, hom. 6).

According to Socrates (*HE* v. 19), it was following on the Decian persecution that priests penitentiary came to be appointed in various churches. Up to this time the ministry of penance had been mainly in the hands of the bishops. Now a priest is empowered to hear the confessions of penitents, to assign their penances, and to give absolution. All this is seen in operation in the scandalous case related by Socrates (*HE* v. 19) and Sozomen (*HE* vii. 16), which led to the suppression of the priest penitentiary in Constantinople by Nectarius in 391. It is to be noted of the administration of the penitentiaries that not only was the confession private, but the penance and the reconciliation were also withdrawn from publicity.

These features, taken with the ministry of the priest in reconciliation, show already in use all the characteristics of the private system which in the West was not adopted till several centuries had passed. The ready acceptance of the action of Nectarius would seem to indicate that in Constantinople in 391 the penitentiary was already only a survival. From this time recourse to penance in ordinary cases was left to the conscience of the person. The words of Chrysostom imply that, though there was henceforth no penitentiary, recourse might be had to any priest.

In Rome, and in the West generally, the use of penance developed on different lines. From the days of Marcellus (A.D. 308-309) there were in Rome 25 priests of the titles of the city, and their functions included the administration of penance (*Liber Pontificalis*, ed. L. Duchesne, Paris, 1886, i. 164). They had much in common with the priest penitentiary of the East. The priest heard the confession of the offender; he admitted him to the status of the penitent; he assigned him his penance, which included both private exercises and public humiliations; and he indicated a definite duration for such penance (St. Innocent I., *Ep.* 25, 'ad Decentium'). It was, however, the bishop who on the Thursday before Easter gave effect to the judgment of the priest, and reconciled the penitent in a public function of much solemnity (*ib.*; *The Gelasian Sacramentary*, ed. H. A. Wilson, Oxford, 1874, p. xxxviii).

The distinctive features of the Roman usage were employed throughout the West for centuries to come. The confession was private, as, indeed, always and everywhere except in the case of bishops of Campania and Samnium condemned by St. Leo (*Ep.* 167. 2). But the penance was publicly performed, the penitents having their place assigned at the solemnization of the liturgy; and not only was the penance public, but the reconciliation also was a public and solemn function. The officiant in the reconciliation was throughout the West the bishop.

To the Western practice a necessary exception had to be made in the case of persons in peril of death: the works of penance had to be dispensed with, the absolution was given in the sick-room, and the minister was not commonly the bishop, but a priest. The difficulties attending public

penance in time of health had the effect that comparatively few persons came under it. Some sought it voluntarily, and on some it was imposed by authority. But the general tendency was to put off penance till death was in sight (St. Cæsarius of Arles, *Sermo* 256, in App. to St. Augustine, *PL* xxxix. 2217). It thus came about over the whole of Western Christendom that people became familiar with a system in which not only the confession, but also the penance and the absolution, were privately exercised, and in which the ministrant was a priest.

Meanwhile in the Celtic churches of the British Isles there had sprung up a procedure widely differing from the public penance of the Continental churches. It found its inception in the Celtic monastic system, which had peculiar features. The Irish monastery was a community at once of monks, students, and penitents, under the rule of an abbat, who was within the monastery supreme. The penitential books, or schedules of penances, which were first issued from these monasteries, contemplate private performance without counterpart in the public liturgy, and reconciliation by admission to communion on the completion of the penance. There is no provision for a public and solemn reconciliation, nor any recourse to the bishop. Passing over the earliest fragmentary documents, we come to the *Penitential of St. Finian* (c. A.D. 550), which shows this system at work (F. W. H. Wasserschleben, *Die Bussordnungen der abendländischen Kirche*, Halle, 1851, p. 109); and the *Penitential of Columbanus*, which is largely based on Finian, is a further development of it which, through the monasteries of the foundation of Columbanus, introduced the system on the continent of Europe (*ib.* p. 355).

Archbishop Theodore states that in the English churches of his time there was no public penance (*Penit.* i. 13). The British churches had never practised it; and it appears that the Continental missions had not introduced it. Theodore, himself of Eastern origin, frankly accepts the private procedure which he finds in use; and in the *Penitential* he puts forth an ordered system of penances superior to any penitential yet produced. The *Penitential of Theodore* is stated to contain the archbishop's replies to a series of questions addressed to him, mainly by the priest Eoda, who framed his questions from a Celtic penitential ('ex Scotorum libello') in his hands.

The significance of all these penitential books, alike the Celtic and that of Theodore, is that they are handbooks of the priest in the administration of the Celtic or private system of penance. On the continent of Europe the normal minister of reconciliation was the bishop, whose public and solemn service of reconciliation was held on the *Cena Domini*. Under the system accepted by Theodore for the whole of England there was nothing of all this. Not only was the confession private as elsewhere, but the penance and the reconciliation were private too, and the minister was not the bishop, but a priest.

The gradual extension of this system over the whole of Western Christendom may be traced in the following centuries. That an impulse of the kind should spread from the north southwards may appear *prima facie* unlikely; and scholars like Bishop Schmitz have been at much pains to show a Roman origin for the Penitentials (H. J. Schmitz, *Die Bussbücher und die Bussdisciplin der Kirche*, i., Mainz, 1883, ii., Düsseldorf, 1895). The evidence to the contrary is, however, hardly to be refuted. It will be found at length in O. D. Watkins, *A History of Penance* (in the press). The beginnings of the private system on the Continent came from the monasteries of Celtic type which,

starting with the foundations of Columbanus, were extraordinarily multiplied in the Frankish lands in the 7th century. The penitential books of these houses were extensively copied and also variously adapted, and Penitentials now came into wider use in the hands of priests outside. The so-called *Penitential Romanum* is a penitential mainly of Celtic origin, to which are appended two Roman offices of the public system. When the *Penitential of Theodore* was later on introduced from England, it obtained a great vogue, and was copied or modified as suited those who used it. Thus a variety of Penitentials based upon Theodore, but compiled in the Frankish lands, were now introduced. Next to be noted is the widespread influence of the English missionaries in the Germanic countries. Such were St. Boniface, or Winfried of Crediton, the apostle of Germany; St. Willibald, bishop of Eichstätt; St. Willehad, bishop of Bremen; St. Willibrord, archbishop of Utrecht. All these represented and gave extension to the English system of penance. Not less important is the influence of Alcuin and his little band of English scholars, who from the palace school of Aachen, or later from St. Martin's abbey at Tours, are strong supporters of the English system. The times of Charles the Great show the conflict of the two systems in the dioceses. Everywhere on the Continent the public system survives. The confession is private, but public penance is imposed in an ordered course which assigns to the penitents their place in the solemnization of the public liturgy, and the reconciliation is in every diocese an annual solemn office which takes place on the Thursday before Easter, or *Cena Domini*, and of which the bishop is the ministrant. By the side of this has grown up in the various monasteries the new system in which not only the confession, but also the penance and the reconciliation, are private, and the ministrant is a priest. The penances imposed by the penitential books tend to be much less exacting than those of the ancient public system. In the 9th cent. there comes an angry clash of the two systems. The reform councils of Charlemagne in 813 show it in course. The Council of Châlons holds that penances should be based upon (1) canons, (2) Scripture, and (3) custom, 'the books which they call penitentials being repudiated and altogether banished.' The Council of Tours, noting the variety of penances in use, recommends that the imperial assembly about to meet at Aachen shall indicate which of the penitentials is to be preferred. A little later the Council of Paris (829) rules that the bishops should 'diligently make enquiry for these same faulty documents, and should deliver them when found to the flames, so that in future unskilled priests should not by their means deceive men.' Such was the conflict of the two systems in the first half of the 9th century. But the triumph of the private system was only a matter of time and extension. So far, indeed, it was unknown in the southern lands. In Lombardy outside Bobbio and in the Italy of the popes the public system ruled. So, too, in S. Gaul, and in what remained to Christendom of Spain. But by the time of Gratian (c. 1150) the private system is in general use even in Italy, though not of obligation. Putting forward the question whether confession of sin to a priest is required, or whether contrition and secret satisfaction without oral confession will attain forgiveness, Gratian cites a long array of 89 authorities pronouncing on either side, and sums up that both opinions are well supported (*Decretum*, II., causa xxxiii. qu. 3). It is, however, only three-quarters of a century later than this that at the Fourth Council of the Lateran (1215) the edict goes forth to the whole of Western

Christendom that every Christian who has attained discretion must confess his sins at least once in every year.

Attention has now to be given to the growth of the practice of recurring or habitual confession. Penance proper, in the sense of an ordinance or sacrament for the remission of sin, is concerned only with such capital or mortal offences as have placed the sinner in a condition of sin or death from which he needs to be rescued by sacramental grace. It is to be expected that such grave sin, if it occurs at all in the case of a Christian after baptism, will be exceptional; and in the early centuries penance was admitted only once in the lifetime. In the 4th and 5th centuries this was the rule throughout the West, as at an earlier period it had been also in the East. As late as the Third Council of Toledo (589) the prohibition of a second penance is re-affirmed for Spain. While, however, in the earlier ages the mind of the Church was against the admission of repeated penance, there had grown up in the monastic societies the practice of recurring confession of offence as a habit of the devout life (Cassian, *de Cen. Inst.* iv. 9; St. Benedict of Nursia, *Regula*, 7). This was not the penance of the Church. It did not contemplate in ordinary cases the sacramental forgiveness of mortal offence. In the rule given by Donatus, bishop of Besançon, to the nuns of Joussamontier (592-651) confession is to be made to the abbess ('matri spirituali nihil occultetur'). The first notice of the extension to the lay people of the practice of confession as a habit of the devout life comes from these islands. In the *Dialogue* of Egbert, archbishop of York (between 732 and 736), the following statement is made:

'Since the times of pope Vitalian and Theodore archbishop of Canterbury a custom has obtained in the Church of the English, and has come to be held as having the force of law, that not only the clergy in monasteries, but also the laymen with their wives and families should betake themselves to their confessors' (Hadden and Stubbs, *Councils and Ecclesiastical Documents*, iii. 413).

This was to be in the twelve days before Christmas. It will be understood that under the private system of penance the old prohibitions against repetition no longer maintained their ground. Confession could be admitted as often as priest and penitent were agreed in admitting it. Such confession should not ordinarily be concerned with mortal offence; and, when it was not so concerned, even though the words of absolution were employed, it was not in the strict sense to be regarded as an exercise of the sacrament of penance. It was a practice of the devout life. But, if grave sin had in fact been committed, the priest was prepared to exercise the commission of forgiveness, and his absolution was understood to convey the grace of the Church ordinance or sacrament of penance. The spread of the private system of penance on the continent of Europe has already been adverted to. With it followed the practice of recurring confession. In the period 950-1215 the private system is found to strengthen its hold of the regions north of the Alps, and also to enter into possession of the southern lands. The partial use of it becomes a general use. Its voluntary character gives place to a sense of obligation, though without positive enactment. And this sense of duty has come to bear not only on the soul conscious of deadly offence, and in need of the loosing of the Lord; it is becoming a recognized duty for every adult Christian to confess again and again at intervals, the interval which by ecclesiastical custom should not be exceeded being the year from Easter to Easter. At last in the Fourth Council of the Lateran (1215) all this is embodied in a definite decree for the whole of Western Christendom:

'Every *fidelis* of either sex shall after the attainment of years of discretion confess his sins with all fidelity to his own priest at least once in the year.'

It was soon found necessary to relax this rule as to the requirement that the confession of the *fidelis* must be made to 'his own priest'; but the requirement of an annual confession from every *fidelis* is still the rule of the Roman Catholic Church.

In England at the Reformation the position taken up was very much that of the Church of Constantinople after the action of Nectarius in suppressing the priest penitentiary. The use of confession was left to the conscience of the Christian, and he was free to make his confession to any priest whom he might choose. The prerogative of the priest is affirmed without hesitation. The formula of the ordination of a priest has the words:

'Whose sins thou dost forgive, they are forgiven: and whose sins thou dost retain, they are retained.'

In the exhortation to be read on notice of Holy Communion the final paragraph runs:

'And because it is requisite, that no man should come to the holy Communion, but with a full trust in God's mercy, and with a quiet conscience: therefore if there be any of you, who by this means cannot quiet his own conscience herein, but requireth further comfort or counsel, let him come to me, or to some other discreet and learned Minister of God's Word, and open his grief; that by the ministry of God's holy Word he may receive the benefit of absolution, together with ghostly counsel and advice, to the quieting of his conscience, and avoiding of all scruple and doubtfulness.'

The form of absolution after private confession given in the Order for the Visitation of the Sick is one of the forms partly precatory, partly declaratory, which had come into use from the 13th century.

'Our Lord Jesus Christ, who hath left power to his Church to absolve all sinners who truly repent and believe in him, of his great mercy forgive thee thine offences: And by his authority committed to me, I absolve thee from all thy sins. In the Name of the Father, and of the Son, and of the Holy Ghost. Amen.'

On a point of much dispute in the Reformation period no pronouncement is made. It is not ruled whether a person guilty of mortal offence *ought* to have his conscience troubled till he has betaken himself to the penance of the Church. This point, which St. Augustine in the early years of the 5th cent. would answer in the stricter sense (*Sermo* 392), and which is shown by Gratian as variously answered through the centuries in his long catena of citations, is in fact dealt with by the Church of England as Nectarius had dealt with it in Constantinople. The matter is left to the conscience of the offender. In other words, if he approaches the Holy Communion, he does so at his own risk. But the Church does not bar his access. In the history of the Church of England after the Reformation confession to a priest with a view to absolution was for three centuries not greatly used, though it may be said that it never fell entirely out of use. Since the Oxford Movement there has been a considerable use of such confession.

Confession.—It has been repeatedly stated for centuries that in early times confessions were made publicly. The statement is already found in Sozomen (*HE* vii. 16), who regards such public confession as supplying the reason for the introduction of the priest penitentiary. Sozomen wrote about 200 years after the period to which he refers. He speaks of such confession as made *ἐν θρόνῳ*—the phrase of St. Chrysostom. St. Chrysostom had in view the public penance of the Asian churches; and it is to the confusion of this exomologesis with verbal confession that the long series of misunderstandings must be mainly attributed. To later writers the very word 'exomologesis' ('confession forth') seemed to imply that a confession in words was at least part of this public exercise. But by the time of Tertullian's *de*

Penitentia (c. A.D. 198) exomologesis was already even in the Latin churches the technical word for the public course of penance; and it cannot be shown that a detailed confession in words was ever part of this. The references to actual confessions are to confessions privately made. Origen (*in Lev.* hom. 2) speaks of the sinner 'who does not shrink from showing his sin to the priest of the Lord' (*sacerdoti*) in the Latin of Rufinus—not necessarily a bishop). In Cyprian's environment confessions are 'apud sacerdotes,' *sacerdos* here meaning a bishop. St. Basil (*Ep. Can.* ii. 34) states that the admitted practice in the case of 'adulteresses who had made confession through pity or whose sin was otherwise proved' was to permit the penance to be commenced in the grade of bystanders, so that the offence should not become matter of public knowledge. St. Gregory of Nyssa (*Ep. Can.* 6 [*PG* xlv. 233]) deals with the case of secret theft when the offender has confessed to the priest (*δι' ἐξαγορεύσεως τὸ πλημμέλημα αὐτοῦ τῷ πρεβι φανερώσας*). St. Innocent I. (*Ep.* xxv. 10) says that it is the office of the priest to attend to the confession of the penitent. In Africa St. Augustine states that those doing public penance must have committed grave offences, as adultery, homicide, or sacrilege, from which it may be inferred that mere was unknown to him (*Sermo* 252). There is one exception. St. Leo Magnus, writing to the bishops of Campania, Samnium, and Picenum, states (*Ep.* 168) that he has heard of the practice by some in those districts of public confession. He rules that it must be brought to an end:

'I mean that in the matter of the penance which is demanded of the faithful there should be no public recitation of the nature of particular sins, such profession being written in a statement (*libellus*). For it suffices that the accusation of conscience be indicated to the priests (*sacerdotibus*) alone in secret confession.'

With Leo *sacerdos* is not confined to bishops.

From this time onwards, so far as is known, confessions have always been private whether they were made (1) as a preliminary to public penance and episcopal absolution, (2) on the sick-bed, or (3) in connexion with the system of private penance and absolution by a priest. When, under the private system of penance, confession to a priest became largely used, some preparation for this ministry on the part of the clergy was seen to be called for. Thus in the 9th cent. it is repeatedly laid down that the clergy should be prepared to distinguish the eight principal vices (*c.g.*, Council of Rheims, A.D. 813)—an enumeration which had come down from Cassian. An early directory for the penitent is that of Othmar, abbat of St. Gall (A.D. 759). This is published in *Wasserschleben*, p. 437.

Absolution.—The absolution of the penitent has in history been conveyed externally in four modes, used separately or in combination: (1) by the laying on of hands, (2) by precatory forms of words, (3) by declaratory forms of words, and (4) by admission to communion.

(1) The laying on of hands by the bishop was used (c. A.D. 260) in the Syrian Church of the *Didascalia* (ch. 10 [tr. from the Syriac by Margaret Dunlop Gibson, London, 1903]), and is found in the *Apostolic Constitutions* (ii. 41), reproducing the *Didascalia*. No other evidence is forthcoming of its use for absolution in the churches of the East. In the churches of the Asian provinces, while there was an elaborate ceremonial for the imposition of hands upon penitents in the course of the liturgy (Council of Laodicea, can. 19), there is no indication of the use of such imposition or of any other outward symbol or expression for the purpose of effecting reconciliation. Nor has any mention been found of the laying on of hands for absolution at Antioch or at Constantinople. In

the West the African churches employed the laying on of hands for absolution in a public and solemn function alike in the times of St. Cyprian and in those of St. Augustine. In S. Gaul the first Council of Orange (A.D. 441) knows of a 'reconciliatory imposition of the hand' which should be given in a public function, after the fulfilment of penance, to a penitent who had already been admitted to communion in time of sickness. The usage of Rome is not easily determined. There is repeated evidence of some imposition of hands in the course of penance, and also of the employment of such imposition in the reconciliation of heretics, but there is no mention found of the imposition of hands as used in the public and solemn reconciliation of ordinary penitents by the bishop on the Thursday before Easter.

(2) The verbal expression of absolution or reconciliation was in the early centuries usually made in the form of prayer. No verbal absolution in any form but that of prayer is known to have been preserved. The reconciliatory prayers employed in Rome are given in the *Gelasian Sacramentary*. In the Eastern churches the supplicatory forms of absolution have been retained to modern times (J. Goar, *Euchologion*, Paris, 1647, p. 666).

(3) No indicative form of absolution as 'Ego te absolvo' is known to have come down from the early centuries. It cannot, however, be certainly affirmed that no such form was ever used. St. Ambrose writes:

'For neither do they remit sins in their own name, but in the name of the Father, and of the Son, and of the Holy Ghost. They ask, the Godhead grants: the service is human, but the munificence is of supernal power' (*de Spiritu Sancto*, lii. 18).

The asking is the prayer of remission; but, if the clergy remitted sins in the name of the Father and of the Son and of the Holy Ghost, it is difficult to see how this could be done except in some form of direct pronouncement. The description given by St. Ambrose would apply exactly to the composite forms of absolution—half prayer and half pronouncement—which have been generally used since the first half of the 13th century. St. Thomas Aquinas, in his 22nd *Opusculum*—a short treatise addressed to the master-general of the Dominicans on the subject of the form of absolution, in which he defends and indeed requires the indicative form—mentions the statement made by some of those with whom he is arguing that only thirty years had passed since all used the precatory form beginning 'Absolutionem et remissionem.' St. Thomas does not deny this, but merely notes that none could speak for all. It may be understood that precatory forms were in general use in W. Europe till about the middle of the 13th century.

(4) It was not in every case that any formal expression of absolution found place before the admission of the person to communion. Thus in Egypt the viaticum was sent to the dying Serapion by means of a messenger lad. Serapion thereupon proceeded to make his communion. Dionysius of Alexandria, the bishop, remarks that Serapion had been kept alive till he was absolved (ἔως λυθῆναι [Eusebius, *HE* vi. 44]). How was the absolution conveyed? Certainly not by imposition of hands, or by a prayer of reconciliation said over him by the priest, or by any pronouncement of absolution in his presence. Serapion's was the extreme case of a lapsed person who had been debarred from communion till death should be imminent. When at last he is absolved, the procedure in fact adopted is simply admission to communion. Again, when in the 13th canon of the Nicene Council it is ruled that on the approach of death all persons in penance may be admitted to communion, there is no suggestion of formal absolution before such

communion. Again, in the Asian provinces penances were severe and prolonged; but, when the penance was fulfilled, the person was to 'proceed to communion,' to 'partake of the sacred things,' to undertake 'the communion of the good' (St. Gregory of Nyssa, *Ep. Can.* [PG xiv. 229. 232]). The impression conveyed is that, when the person had fulfilled his penance, he simply stood no longer bound. Communion was open to him. The same may have been originally the practice of the Irish monasteries (cf. *Penitential Vinniai*, §6: 'altario reconciliatur,' §§ 15, 21, 35: 'jungatur altario,' §14: 'restituatur altario,' §53: 'intradum ad altare' [Wasserschleben, p. 108 ff.]).

It should, however, be stated with all clearness that nowhere and at no time in the history of the Church has the Holy Eucharist been regarded as the actual means of absolution. It was not open to any person who had not found forgiveness to approach Communion in order that the Holy Eucharist, coming into touch with the unabsolved sinner, might thereby absolve him. Of the cleansing power of the Eucharist to wash the forgiven sinner 'more and more,' of the yearning that so 'our sinful bodies may be made clean by His Body, and our souls washed through His most precious Blood,' the Church is ever conscious. For the unreconciled is the warning that 'the danger is great if we receive the same unworthily. For then we are guilty of the Body and Blood of Christ our Saviour; we eat and drink our own damnation, not considering the Lord's Body' (*English Prayer Book*).

LITERATURE.—See list under PENANCE (Roman Catholic). J. Morin, *Comment. hist. de disciplina Penitentia*, Paris, 1651, a monument of learning, remains the most complete treatise on the subject; N. Marshall, *The Penitential Discipline of the Primitive Church for the first four hundred Years after Christ*, London, 1714, interesting as representing the Anglican position in the time of Queen Anne, is largely indebted to Morin (reprint in Library of Anglo-Catholic Theology, Oxford, 1844); P. Batiffol, 'Les Origines de la pénitence,' in *Études d'histoire et de théologie positive*, i., Paris, 1902, pp. 45-222, is an excellent presentation of modern historical results. On exomologesis see E. B. Pusey, note L in the Tertullian vol. of the Library of the Fathers, London, 1854, p. 377. On the penitentials, F. W. H. Wasserschleben and H. J. Schmitz as in Literature of preceding art.; for English and British penitentials, A. W. Haddan and W. Stubbs, *Councils and Ecclesiastical Documents*, 3 vols., Oxford, 1869-78; for St. Columbanus, A. Malnory, *Quid Luxovienses monachi discipuli sancti Columbani ad regulam monasteriorum atque ad communem Ecclesiam profectum contulerint*, Paris, 1894. For Anglican practice, E. B. Pusey, *Advice on Hearing Confession* (adapted from J. J. Gaume), with Preface embodying English Authorities on Confession, Oxford, 1877-80; O. D. Watkins, *A Hist. of Penance*, now in the press, is a series of studies of primary authorities, of which a full collection will be found printed in the original languages.

OSCAR D. WATKINS.

PENITENCE.—Penitence is a sorrow for sin as an offence against God, and involves a purpose of amendment. A regret for sin not based on its intrinsic sinful character, viz. its offensiveness towards God, would not be penitence; and a regret not involving the purpose of amendment, or a resolve of amendment without hatred of sin, would not be penitence. On the other hand, a purpose of expiation or satisfaction does not seem to be of the essence of true penitence, except in so far as such satisfaction is inseparable from the process of amendment itself. Thus, a murderer may sincerely repent for homicide, be firmly resolved not to commit it again, and yet endeavour to evade the punishment if he can.

Accordingly, the common Protestant view of penance or repentance for sins is that, as a conversion of a soul to God, it involves, by the mercy of God, complete forgiveness both of sin and of the penalty due to sin, without the necessity of works of penance or expiation, for which the satisfaction of Christ is considered fully sufficient.

In the Roman Catholic doctrine penitence is considered a distinct virtue or disposition of the

soul. The Council of Trent (1551) defines (sess. xiv. can. 1) that it was at all times before Christ necessary for the remission of grievous sins, and that in the Christian dispensation sins committed after baptism are actually and judicially forgiven by the Church, in virtue of the power of the keys, through a rite which is truly a sacrament of the New Law, and based on the words of Christ (Jn 20²¹⁻²³):

'Receive ye the Holy Ghost: whose soever sins ye forgive, they are forgiven unto them; and whose soever sins ye retain, they are retained.'

Cf. Penance.

PERCEPTION.—Simple as perception may appear as set forth in a psychological system, yet in the history of speculation its discussion has raised the deepest questions in philosophy. We need not recall the answers to the question of the possibility of knowledge, on the supposition that mind and matter were separated by the whole diameter of being. It would mean writing a history of philosophy—at all events from the time of Descartes. It would mean writing the story of Scottish philosophy, and an account of the Scottish answers to Hume, especially the answer of Reid. For these answers relate to the question, What do I perceive? What is the object before me when I perceive? Is it always a state of my consciousness, an idea, which is not external to me, but only somehow related to an external reality? Materialism, idealism, and realism give their answers to the question each in its own way.

Science in its speculative moods has been busy with the question. Those who approach it from without, and are mainly concerned with the natural and physiological processes which precede and influence the act of perception, seek to show that perception is conditioned by the constitution of the whole world. The simplest act of perception, they say, involves for sight all the properties of the ether and all the laws of optics; and for hearing they indicate what are the laws of sound, and how these condition the act of hearing. After showing the conditions imposed by the constitution of the external world on the process which issues in perception, they proceed to investigate and describe the conditions imposed by what may be called the physiological procedure of the body. This usually describes the sense-organs, the afferent and efferent nerves, and the connexions of the surface of the body with the central nervous system and the brain. It is not usually contended that the subject is conscious of the strains and stresses of the nervous system or of the movements in the brain which accompany sensation and perception. But it is often implied that consciousness results from and is conditioned by those nervous movements. On the whole, it may be said that, taking into consideration the material conditions imposed by the external world and those imposed by the constitution of the sense-organs, the outcome is to regard consciousness as an effect, and an effect to be explained by the convergence of physical and physiological antecedents to the possibility of having a sensation. It may be admitted that sensation is impossible apart from these physical and physiological conditions. Sight needs both the ethereal vibrations which we call light and the nervous system with all its complications. But, while these are necessary conditions of vision, vision itself implies something more.

It is necessary to make another preliminary remark. After we have studied, as far as we may, the external conditions of the possibility of sensa-
